WASHINGTON
1914

VOLUME LI, PART XVII.

CONGRESSIONAL RECORD,

SIXTY-THIRD CONGRESS, SECOND SESSION.

APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

Eastern Waterway Needs.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 1, 1913.

Mr. GOLDFOGLE. Mr. Speaker, I ask unanimous consent to print in the RECORD the address of our associate, Mr. MOORE of Pennsylvania, as president of the Atlantic Deeper Waterways Association at the sixth annual convention in Jacksonville, Fla., November 18, 1913.

The SPEAKER. Is there objection? The Chair hears none.

Mr. MOORE said:

"Ladies and gentlemen of the convention, in submitting his annual address for the sixth time, your president congratulates the association, its members and sympathizers, upon the marked progress that has been made in promoting the Atlantic coastal waterway since the movement was organized in 1907. As was to be expected, there have been some delays and disappointments, but each of the six years of agitation has brought us nearer the goal, and the year just ended finds us in possession of full reports by the United States Army engineers upon every section of the project from New England to Florida. The recommendations accompanying the reports, while not conceding all we sought, favor as worthy and urgent, the immediate construction of certain of the sections upon which we based our strongest claims. The Federal survey authorized by the river and harbor act of March 3, 1909, has been amply justified, and the faith we then had in the merit of our undertaking has been vindicated by the official returns. Hence we are no longer 'visionaries' and 'dreamers,' as our forefathers had been for more than a century, but promoters rather of a rational and practical plan of national development, the humanitarian and commercial value of which is proven beyond dispute.

ADVANTAGE TO EASTERN STATES.

"At the New London convention of 1912 we were able to show an increasing interest in eastern waterway projects. Since then an even greater activity has manifested itself in all the States along the line, with the result that the river and harbor act of March 4, 1913, like its immediate predecessors, responded more generously to eastern claims than for many years past. The necessities of the people along such rivers as the Merrimac, the Taunton, and the Connecticut in New England; the Hudson, the Passaic, and the Delaware in the Middle States; the Potomac, the James, the Cape Fear, the Savannah, and the St. Johns in the Southern States, are beginning to be better understood, and the awakening is having its effect in Congress. Our agitation for the trunk line, therefore, has been of direct advantage to all the States affected, accelerating the movement for needed local improvements. The cohesive influence of the main project, proposing, as it does, to obtain a safe and standard inland waterway from New England to Florida, connecting with the Great Lakes and the Mississippi River via the Hudson and the Erie Canal on the north and with the Mississippi and the Rio Grande via the proposed Gulf route on the south, has quickened interest in hundreds of collateral projects, some of which may be over ambitious, but many of which, like the Connecticut, the upper Delaware, and the Susquehanna, if properly developed, would be capable of splendid public service.

ENGINEER REPORTS FAVORABLE.

"As to the main project, from Boston to Beaufort, N. C., and from Beaufort to Florida, we have to acknowledge the industry and intelligent direction of the Army engineers, headed by Gens. Bixby, Rossell, and Kingman. All of them, as division engineers or as engineers in chief, have had to do with the surveys. Before retiring from office Gen. Bixby hastened to Congress, through the War Department, comprehensive reports, the recommendations of which as to feasibility have uniformly been favorable and generally favorable as to expediency. The final report on the Boston-Beaufort section, presented in August last, was an unqualified indorsement of the Chesapeake and Delaware link as worthy of immediate improvement to a depth of 12 feet, at a cost of $8,000,000 plus the purchase cost of $2,500,000.

"The report also approved the construction of the Delaware and Raritan link across New Jersey at a cost of $20,000,000. Then in September the final report was made upon the section from Beaufort, N. C., south to the St. Johns River, inside of Cape Lookout and Cape Fear and the dangerous shoals extending beyond them. Here again the feasibility as well as the commercial and life-saving properties of the inside passage were approved. The depth suggested was 7 feet and the cost $14,400,000. Unfortunately, neither of these final reports was in hand when the last river and harbor bill was before Congress, so that the effort then made to provide for the taking over of the Chesapeake & Delaware Canal as contemplated by the New London resolutions was unsuccessful. Another opportunity to press this matter will soon be presented, however, and if the positive indorsement of the War Department is duly supported by the commercial and industrial bodies along the coast, the long-expected and long-deferred approval of Congress should permit the work to be started at once. This is one of the urgent problems to which the convention should direct its energies.

VITAL LINK TO THE CHESAPEAKE.

"So much does the success of the entire project depend upon the cut across the Delaware and Maryland peninsula that we can not too strongly emphasize its importance. First of all, it is the cheapest and, from an engineering point of view, the easiest section to construct. It is the very center of the busiest transportation belt in the United States. The existing canal is a relic of 1829, and it is so limited in depth and width as to discourage its use by modern vessels. It is owned by a private corporation whose toll charges are substantially equivalent to those by rail. In a traffic area far exceeding that of the Panama Canal, it tends to retard rather than promote trade. The Government has acquired the Chesapeake & Albemarle Canal, which opens the Atlantic coastal trunk line from the Chesapeake Bay and Norfolk south to below Cape Hatteras; it has opened and improved other waterways in harmony with the project, north and south, and the next step, and the logical step, is to cut the Chesapeake and Delaware barrier and let the commerce through. It is essential to an interchange of the commodities of the coastal States at a moderate cost to the people, and considered in connection with the Delaware and Raritan section, indorsed by President Wilson when he was governor of New Jersey, it carries the inland project on to New England. Whether or not the New Jersey section is provided for at the next session of Congress, as we hope it may be, the free and open passage across the States of Delaware and Maryland ought not be longer halted. Opened up and made free it will serve as important a function in cementing commercial bonds of two sections of the country as the Panama Canal can possibly do in wedding the two oceans.

THE CASE HAS BEEN PROVEN.

"Responding, therefore, to the usual requirements of Congress and of the River and Harbor Committee before appropriations are made, we now submit, in addition to the various other arguments that have been presented in support of the continuous coastal waterway, the reports and recommendations of the

273542

United States Army engineers. In his address to our convention at Norfolk, President Taft said:

"When you have made your case, then I am sure the Government and Congress will respond to it. That the case can be made, I doubt not. * * * the justification of which can be shown by reference to the business now done or the business which certainly will be furnished.

"In making this statement the President of the United States was merely voicing the views so often dominating Congress. We have complied with the conditions he laid down. We have proven our case, not only by the records of terrific losses of life and property at sea, not only by evidence of traffic congestion limiting our commercial, industrial, and agricultural output, but by what is usually considered 'the last word' in the domain of rivers and harbors—the favorable report of the Army engineers.

OUR PRODUCTIVE CAPACITY LIMITED.

"Is our productive capacity limited in the East? For answer we recur to recent data of the Census Bureau. The area we seek to improve by better water facilities is the area of the thirteen original States, to which we may now be permitted to add the 'Land of Flowers.' The extent of this area is only one-twelfth of the total area of the country. The scene of our activities, therefore, is barely more than a thumb mark upon the map of the United States. In that area we have 40 per cent of the entire population of the United States and 50 per cent of all the wage earners. We produce 53 per cent of all the manufactures of the United States and 60 per cent of all the coal. We do most of the import and export business of the country, and at the four ports of Boston, New York, Philadelphia, and Baltimore we collect four-fifths of all the customs revenues. We have assisted in financing railroad enterprises affording competition for every other section, but for our own vast enterprises and responsibilities we have only 23 per cent of the total railroad mileage of the country. Let me emphasize that. Here, where industry is most productive, where our shipments are greatest, where we have one-third of the population in one-twelfth of the area, we are compelled to do business on less than one-fourth of the railroad mileage of the United States. We have suffered this handicap not only in the matter of railroads, but it has been necessary for us to keep off the waterways because of the limitations of harbor depths, the destruction of our canals, and the neglect of our rivers. Figures like these, and the process of reasoning logically deducible therefrom, are ample apology for the agitation and the vigilance of the Atlantic Deeper Waterways Association and the warning it sounds along the coast.

THE PRODUCER AND HIS MARKET.

"In consequence of our limited area, the density of our population, and the magnitude of our industries we are obliged to pay heavily for every commodity which enters into the cost of living. We have only 18 per cent of the farm area of the United States east of the Appalachian chain, yet we have so much vacant land that if it were opened up it would aid materially in solving the problems of profitable employment and cheaper food for the people. The Federal cost of protecting lands that are subject to overflow in the lower Mississippi has been quoted at $8 per acre, and it has also been stated that the difficult work of making western lands available for cultivation by irrigation costs approximately $40 per acre. In certain sections of Virginia, North and South Carolina, Georgia, and Florida we have lands of natural richness and fertility that could readily be purchased at figures ranging between the per acre cost of flood prevention and the cost of irrigation. For the price of irrigating lands it is possible to obtain abandoned or even occupied farms in Pennsylvania, New York, and New England.

"The problem of the owners of neglected eastern lands is chiefly the problem of transportation. It is the problem of the ability of the producer to get to market, a problem resulting from the concentration of population and business activity along the lines of the railroads, while vast stretches of country have suffered abandonment because the waterways that formerly served them well were not kept up to modern standards.

WHY HESITATE TO SEEK REDRESS?

"The cruel neglect of waterways and the consequent curtailment of commercial opportunity is what the Atlantic Deeper Waterways Association protests against. To remedy these conditions and to put the Atlantic seaboard on a par in transportation facilities relatively with other sections of the country has been the mainspring of our movement. We have been too complacent because we were prosperous. We did not care that the financial resources of the country were slipping away from us, but now we know that gradually and surely they have been leaving us without facilities to successfully compete with our business rivals. We were dull while the hustling brethren of the West, who had sprung from our loins, were busy as bees. We paused perchance to admire their enthusiasm and applaud their energy. We sympathized with them when the floods poured down the Mississippi Valley and inundated their farms and their cotton fields, and we voted them money for relief, but the fierce and devasting storms which swept the Atlantic seaboard, carrying precious lives and valuable property to the bottom of the sea, we permitted to pass as a one day's wonder.

"Somewhere in the Good Book it is written that 'he that provideth not for his own house is worse than an infidel.' We have been called effete along the Atlantic seaboard, but we ought not to tolerate the charge of infidelity. While we have been suffering the effects of the late October storm, for which the people in common are paying, our friends of the lower Mississippi region have been pressing a bill, which the next Congress will be asked to pass, providing an appropriation of $60,000,000 to construct levees to protect farm lands from overflow in the Mississippi Delta. The Mississippi problem has already cost the Government about half of all the appropriations that have been made for commerce and navigation the whole country over. Though there are floods and great losses of life and property due to storms in other sections of the country, we still treat the Mississippi as a problem of commerce and navigation. We gave it a special permanent commission in 1879, and since then its needs have been reported regularly as of increasing importance. In each of the last two river and harbor bills we provided $6,000,000 per annum for levee work along the Mississippi, without respect to the navigation projects, which have already mounted up to the hundreds of millions. And yet the commerce upon the mighty Mississippi itself is only a little more than twice as much as that developed upon the St. Johns in Florida.

"If our annual appropriations for rivers and harbors are not to attain the hoped-for $50,000,000 demanded by the National Rivers and Harbors Congress, and we are to continue our enormous appropriations for flood prevention and levee construction, when is the rest of the country to obtain consideration for that commerce and navigation for which it is presumed the river and harbor funds are to be expended?

FLOOD PREVENTION A SEPARATE PROBLEM.

"We concede the wisdom of dealing with the Mississippi flood problem on a national and comprehensive scale. We have agreed to that as a legislative proposition since the Mississippi River Commission was authorized by Congress 34 years ago, but we do not concede that because the problem has not yet been solved that further costly experimental operations should be continued at the expense of coastal commerce and navigation. We look to commerce and navigation as creative and revenue-producing elements in our domestic and political economy. We can not dispense with them without draining the very lifeblood of the Nation. Therefore they should be encouraged and the funds set apart, for their development should be adequate and capable of expenditure without waste. The regulation of rivers to prevent floods should be treated separately and with a definite view to completion.

"Floods are periodical and may not be anticipated by Congress, but commerce is perpetual and Congress can readily estimate with respect to it. If in its wisdom Congress should appropriate $60,000,000, as is now proposed in Washington, to erect works in accordance with plans approved by the Army engineers to hold the waters of the Mississippi in leash, perhaps the country would approve it. The specific purpose of the appropriation would be understood; but if Congress continues, as heretofore, and especially since 1879, to appropriate moderate sums in river and harbor bills 'for commerce and navigation' and a large proportion of them is diverted each year from 'commerce and navigation' to 'flood prevention,' it is patent that eastern commercial waterways will continue to be neglected, and that the flood problem of the Mississippi will continue to eat up the Nation's river and harbor revenues without securing the results our Mississippi Valley friends are striving for. We certainly hope to see the day when the untractable waters of the Mississippi, the Ohio, and the Missouri may be safely harnessed up to the uses of commerce and navigation, but we do protest that worthy eastern projects should not be suspended until that desirable object is attained.

INFLUENCE OF THE PANAMA CANAL.

"There is another phase of this question to which I shall briefly refer. We are approaching the completion of the Panama Canal, the greatest of modern waterways, and a glorious proof of American skill in engineering. The estimated cost of the canal is $400,000,000. The benefits of our enterprise in this tremendous undertaking will accrue largely to Great Britain and Germany, who are our principal international competitors for South American trade. We have not made our vast expenditure on the Isthmus without a corresponding decrease in the

supply of funds available for river and harbor improvements at home—to this extent have we yielded our necessities to our patriotism—nor were these funds removed from home centers of circulation without reducing the home supply of ready cash. This has added to the increase in the cost of living. If we had spent $400,000,000 improving the rivers and harbors of the United States, we would have secured many of the improvements of which we now stand in need, and we would ourselves have derived the benefit of our enormously increased circulation of capital, with its inevitable employment of labor at a profitable wage; but since we have constructed the Panama Canal and are proud of it, it is fair to assume that we shall now be able to obtain greater attention for our home necessities, and that, in all reasonableness we shall soon be able to increase our appropriations for important projects within the borders of the United States. Therefore we should prepare 'to provide for our own.'

STRONG REASONS FOR WATERWAY IMPROVEMENT.

"Southern rivers along the Atlantic seaboard are seeking appropriations with the view of being deepened so that they may compete with northern ports for European trade and trade expected via the Panama Canal. Because they do not now have sufficient depth of water to accommodate the larger vessels that are being constructed, the tendency is to monopolize business at one or two ports.

"The problem of dry docks and dredges is also one of increasing importance. We are sadly in need of both.

"The Alabama coal fields are capable of service to southern industrial cities, but they are handicapped for want of proper transportation facilities.

"Motor boats which ply upon inland waters have increased until there are now perhaps 300,000 of them, representing an expenditure of from $200,000,000 to $300,000,000.

"Cities like Albany and Troy on the Hudson; Haverhill and Lowell on the Merrimac; Springfield and Holyoke on the Connecticut; Wilmington, Philadelphia, and Trenton on the Delaware; Paterson and Newark on the Passaic; New Brunswick on the Raritan; Pawtucket and Providence on the Providence; Fall River and Taunton on the Taunton; Baltimore on the Patapsco; Richmond on the James; Elizabeth City, Washington, and Newbern on the North Carolina rivers; Wilmington on the Cape Fear; to say nothing of Charleston, Savannah, Brunswick, and Jacksonville—some of them more favored by natural conditions than others—are demanding adequate outlets to the sea. They have only to point to inland European cities, like Manchester, Antwerp, Amsterdam, and Hamburg, to prove at once the wisdom of providing canals or waterways to supplement the work of the railroads and to afford competitive relief for the output of our farms and factories.

TRANSPORTATION PROBLEM ACUTE.

"The eastern transportation question is acute. It is the result of eastern indifference to the get-there and get-something qualities of our western representatives. We have no word of criticism for those who have been successful in obtaining appropriations for projects of less importance than our own. The fault lies with ourselves. We have not understood the situation or we have utterly ignored it. We have been brought to realize it only because of our own necessities. If, as is frequently the case, it takes 5 days to ship freight from Philadelphia to Chester, a distance of 13 miles, or 6 days to Trenton, a distance of 34 miles, or 13 days to New York, a distance of 90 miles, it is evident the railroads need relief. It takes an hour and a half only to ship from Philadelphia to Chester by water, 4 hours to Trenton, and overnight to New York. Why, then, should the eastern business man not be provided with water transportation? Or let us instance Paterson, N. J., a thriving manufacturing city, 16 miles beyond the city of New York. Recently a cargo of freight shipped from Michigan arrived in New York in 3 days, but more than a week elapsed before it reached its destination in Paterson. The distance from Baltimore to Paterson is 190 miles, and yet a consignment of merchandise leaving Baltimore June 14 did not reach Paterson through the railroad route until June 28, or 14 days from the date of shipment. We could cite innumerable instances of this sort of delay.

EASTERN STATES AS REVENUE PRODUCERS.

"These are but a few of the disadvantages confronting commerce in the East. We have had with us always, for want of Federal appropriation, the dangers of Cape Cod. Only last month its toll of wreckage and disaster horrified the country. On one day seven lives were lost with the vessels trying to round the cape. Fortunately a private enterprise is completing a Cape Cod canal, which will be opened to traffic next year. It is noteworthy that Massachusetts, while not contributing to the Cape Cod project, is spending $9,000,000 to improve the port of Boston. Through Massachusetts the Federal Government collects in customs and internal revenue approximately $35,000,000 every year. The State was admitted to the Union in 1787, and its population exceeds 3,300,000. In all its history, with its tragic story of unchecked disaster along the coast, all it has received from the Federal Government for river and harbor improvements is less than $20,000,000. Yet Texas, the great Lone Star State, admitted to the Union in 1845, with a population only slightly in excess of that of Massachusetts, collecting customs and internal revenues amounting to less than $4,000,000 per annum, has received for rivers and harbors approximately $32,000,000. Surely, under these circumstances, the people who do business on the Atlantic coast are entitled to greater consideration than they have received for the rivers and harbors of Massachusetts. Improvements such as we are advocating will tend to liberate the thriving industrial cities of New England from a traffic thraldom unequaled in any other section of the country.

A PROTECTED WATERWAY HAS BEEN EARNED.

"The Army engineers have recommended a free and open waterway across the State of New Jersey and across the States of Delaware and Maryland, at a cost for one of $20,000,000 and a cost for the other of $10,500,000. The greatest congestion of commerce in the United States and the densest population would be affected for the better by these improvements. They would save life and property; they would give employment to labor; they would encourage industry and agriculture and they would raise revenue for the Government. The total cost of these two vital links in the Atlantic coastal chain, carrying New England's commerce inland behind Cape Cod and Cape Hatteras and carrying the cotton and raw products of the South to the northern industries and consumers, would be $30,500,000. Why hold up so promising an investment? Massachusetts alone yields $35,000,000 per annum to the Government. Pennsylvania yields $46,000,000 per annum. New York yields $255,000,000.

"And why should not New Jersey and Maryland be considered in this transaction? They have been faithful servants of the Government. New Jersey was admitted to the Union in 1787. It is a great industrial and agricultural State, with a population of 2,500,000. It yields in revenue to the Government every year more than $10,000,000. All the Government has paid back for rivers and harbors since 1787 is $7,000,000, less for 126 years than a single year's receipts. And why should Maryland not be considered? Maryland was admitted to the Union in 1788. It has a population of 1,300,000. Every year Maryland yields to the Federal Government upward of $13,000,000. All that Maryland has received from the Government for rivers and harbors since its admission to the Union is about $10,000,000. Yet Oregon and Washington, glorious stars in the brotherhood of our Union, one admitted in 1859 and the other in 1889, have received for river and harbor improvements for those brief periods approximately $33,000,000. The combined Federal collections from these two States is less than $5,000,000 per annum. It is not that Oregon and Washington are not worthy of all they get; the presumption is that they are. The wonder is that we of the East have been satisfied to get along with so little.

LIFE AND PROPERTY AT STAKE.

"I shall not pursue this inquiry further. Some of my colleagues object to it in Congress, and I find it raises criticism as smacking of the sectional. It is not sectional, nor is it intended so to be. It is simply a statement of facts which statesmen and patriots must recognize. Our friends in other sections are averse to being classified as 'infidels' who 'provide not for their own house,' and we ought not to be less considerate of our own welfare.

"The recommendations of the Army engineers show that we can obtain the two sections of our intracoastal waterway south of New England for $30,500,000. They have reported that the southern link from Beaufort, N. C., to the St. Johns River can be completed for $14,400,000. A 7-foot channel along the coast of South Carolina through Georgia into Florida is now assured in certain parts, but the link running from Beaufort Inlet, below Cape Hatteras, is not complete, and Cape Lookout and Cape Fear, with Frying Pan and Diamond Shoals, are still terrors to the mariner.

"The Almighty has pointed the way through the sounds and rivers He has provided along the seaboard, and it seems a mockery to continue to send our small craft—naval, merchant marine, or pleasure vessels—into the unknown perils of the deep. Statesmen from the mountain tops and the valleys far removed from the surf and storm, the bars and shoals, glibly tell us the ocean 'is only a biscuit throw away.' They do not know.

THE BARGE THAT SAILS THE SEA.

"The morning papers of Tuesday last—November 10—in 10-line dispatches from Beaufort, N. C., make the announcement that 'without a soul aboard, the barge *J. R. Tell*, lumber

laden, was dashed ashore at Cape Lookout Beach to-day during a raging southwest gale. The vessel's boat was lashed to the cabin top, and it is believed that the crew was taken off at sea by the tug that had her in tow.' Another dispatch informs us that the *Tell* was bound from Jacksonville to Philadelphia or New York. This brings the incident home direct to this convention. Why was this lumber-laden barge driven into the sea? The people of the Northern States are consumers of southern lumber, of southern cotton, and of southern naval stores. These are not perishable goods that have to be delivered overnight. Why, then, was this lumber-laden barge sent to sea, risking the lives of the crew and involving a property loss to both producer and consumer? The question is not sectional nor does it pertain to any State. The business that these barges do upon the high seas is interstate and national—surely as national and interstate as the construction of levees for flood prevention or for the irrigation of arid lands or for the reclamation of swamps. It is not a business proposition to send these barges to sea, whether they be laden with coal or with lumber or with farm products, because the cost of barge service by the outside route from between points like Wilmington, N. C., and New York is from $5 to $5.50 per thousand feet of lumber, whereas the cost of delivery by the inside route, through the North Carolina Sounds to Baltimore or Philadelphia, is quoted at approximately $2.50 per thousand feet. Nor does it comport with our human instincts to send these tows to sea when they could move up and down the coast more safely and more expeditiously by an inland passage; but the passage is barred by its undredged link. That is the reason the barge must go to sea.

"We are loath at this stage of our progress to believe that even the railroads which own or control the ocean-going steamships are in favor of delay.

"The record is too strong for even the sophisticated to counteract. Let me reiterate it: The toll of the sea along the Atlantic coast in the 10 years from 1900 to 1910 was 2,200 lives. The disasters numbered 5,700, involving property losses in excess of $40,000,000. That property loss alone, with a paltry few millions added, would be sufficient to link up Jacksonville with Cape Cod, in accordance with the recommendations of the Army engineers.

FLORIDA'S STRONG MEN IN CONGRESS.

"My friends, we have assembled on this occasion in the State which marks the southern extremity of the Atlantic coastal waterway—a State which stands as much in need of waterway development as any other in the Union, and much to its great credit, be it said, it has been applying to this work largely of its own resources. In addition, it is fortunate in having in Congress a delegation which has been insistent upon obtaining proper recognition by way of Federal appropriations. There is no other State, perhaps, which is quite so fortunate in this respect. Amongst its Representatives in the lower House is one who has long and diligently studied the problem of waterway transportation here and in Europe. By reason of his faithful and distinguished service he has become the chairman of the all-important Committee on Rivers and Harbors. I refer to my colleague, the Hon. STEPHEN M. SPARKMAN. In the other body, which is sometimes called the "upper House," Florida has a place upon the Committee on Commerce, which deals with the river and harbor bills. So far has this distinguished Member evinced his appreciation of the importance of a wholesome and vigorous agitation for better transportation facilities that he serves as president of the Mississippi to Atlantic Inland Waterway Association. I allude to the Hon. DUNCAN U. FLETCHER, senior United States Senator from Florida. To these gentlemen, as to our delegates and visitors, we are speaking frankly of our eastern needs, with every assurance of friendship for every other section, and with the feeling that the interests of Florida are coequal with ours and theirs. We have not drawn contrasts as between sections to injure any, but rather to aid all, for the prosperity of one section of the country can not well be advanced without every section being prospered, nor can the burdens of congested transportation be laid upon one section without ultimately affecting all."

REPORT OF THE COMMITTEE ON RESOLUTIONS OF THE ATLANTIC DEEPER WATERWAYS ASSOCIATION.

We, the delegates and members of the Atlantic Deeper Waterways Association in sixth annual convention assembled in the city of Jacksonville, Fla., congratulate the business interests of the entire Atlantic seaboard upon the favorable reports of the Government engineers with respect to the projects advocated by this association.

Six years ago we formed our organization in order to work for a better recognition of eastern waterways in the National Congress. Elsewhere in the world there existed no chain of natural bays and sounds along the coast line comparable with those extending along the Atlantic coast of the United States from New England to Florida; navigable by deep draft barges and freight carriers of every description and requiring nothing more than a few short connecting artificial waterways to bring them all together into one great transportation system with all its attendant advantages in the economical carriage of bulk cargoes, in reducing the cost of maintenance, insurance, and power, and in relieving the needs of the busiest and most closely settled portion of our country.

The construction of these short connecting waterways and their dedication to public use was urged by our association from its beginning. The feasibility of the plan was self-evident; small canals had been built in the infancy of the Republic over routes closely approximating those we advocated; but, unfortunately, having been acquired by other interests unfriendly to their development, or having been unable to form such connections as would permit the issuance of through bills of lading they had remained in their original state, while the progress of commerce and industry left them far behind, utterly unsuited to modern traffic requirements.

We called upon Congress for instructions to the Army engineers to survey and report upon routes for an intracoastal waterway to run from Boston, Mass., to Key West, Fla., passing through the bays and sounds and connecting into one system the many great navigable rivers that drain the Atlantic slope.

The reports of the engineers have confirmed our judgment as to the feasibility and desirability of the Atlantic intracoastal waterway, and have recommended that the project be undertaken by the United States Government.

The several links in the intracoastal chain of waterways from Long Island Sound to St. Johns River, Fla., have all been favorably reported upon, and it now only remains for the people and the commercial interests of the Atlantic seaboard to insist that Congress shall follow the recommendations of the engineers and authorize the construction of these several links.

One of the links, that from Norfolk, Va., to Beaufort, N. C., has been adopted by Congress. One of the early canals, the Chesapeake and Albemarle, constituting a section of this link between the Elizabeth River, Va., to Albemarle Sound, N. C., has been purchased by the Government and is now being operated as a free waterway. This Norfolk-Beaufort link is to have a minimum depth of 12 feet with appropriate widths.

With this recital of facts, the desires of the Atlantic Deeper Waterways Association for immediate progress toward the realization of its purpose are formulated in the following preamble and resolutions:

Whereas the Chief of Engineers, United States Army, has reported to Congress that "it is advisable for the United States to buy the Chesapeake & Delaware Canal, at a cost not exceeding $2,514,290, and to then enlarge it to a sea-level canal 12 feet deep and 90 feet bottom width, with the least interference practicable to existing traffic, at a cost of $8,000,000," with provision for subsequent enlargement to 25 feet depth and 125 feet bottom width; and

Whereas the Chief of Engineers has further recommended to Congress that it provide for the construction of "a lock canal of 12 feet depth and 90 feet bottom width across the State of New Jersey from New York Bay to Delaware River, provided the State of New Jersey will promptly secure and donate to the United States all rights of way necessary for a 125 feet bottom width, 25 feet depth sea-level canal along the same route, and provided that the 12 feet depth canal construction work be carried on in such a way as to allow of a greater development to a 25 feet depth canal whenever such development is found advisable; and

Whereas the State of New Jersey has provided by law an appropriation of $500,000 for acquiring the necessary right of way and has caused the same to be surveyed and marked; and

Whereas by the completion of the New York Barge Canal at a cost approximating $130,000,000 and the Cape Cod Canal at a cost of $12,000,000, which are expected to be opened to traffic during the years 1915 and 1914, respectively, New England waters and the Great Lakes will be connected by inland waterways with New York Bay; and by the completion of southern projects recommended and authorized similar communication will be opened northward as far as the head of Chesapeake Bay, and the early connection of these great waterway systems is imperatively called for:

Resolved, That we demand of Congress the immediate acquisition of the Chesapeake & Delaware Canal at the price fixed by the Chief of Engineers, and, in default of an agreement of sale by the present owners, the acquisition thereof to be promptly effected by condemnation proceedings.

Resolved, That we demand the insertion of an item providing for this purchase in the next rivers and harbors act, with a sufficient allowance for beginning the work of improvement.

Resolved further, That we demand of Congress the approval of the New Jersey Canal project and the insertion in the next rivers and harbors act of an item sufficient to begin the work and to secure the donation of the right of way from the State of New Jersey.

Resolved, That we approve as an essential part of the intracoastal waterway the improvement of the East River and the construction of the Harlem or Bronx Kills Channel, as heretofore recommended in the report of the Army engineers.

Resolved, That we urge the early completion of the improvement heretofore authorized of the upper section of the Hudson River between Hudson and Troy, so that the same shall be completed at least contemporaneously with the completion of the Erie Barge Canal. We further recommend that Congress authorize a supplemental survey of the upper section of the Hudson River, with a view of providing a still deeper channel up to the city of Troy. We further recommend the improvement of the Hudson River from Spuyten Duyvil, at the entrance of Harlem River, to the Battery, heretofore recommended by the Army engineers.

Resolved, That we recommend the construction of a canal between Fishers Island Sound and Bissells Cove, on Narragansett Bay, thereby avoiding the dangers of navigation around Point Judith and affording a safe inside route between Narragansett Bay and Long Island Sound.

Resolved, That this association is committeed to the construction of an intracoastal waterway from the St. Johns River to Key West as an integral part of the system, and as a part of such route it recommends the purchase of the existing canal of the Florida Coast Line Canal and Transportation Co., in so far as the interests of the United States may be subserved by the purchase of such canal and its appurtenances.

Resolved, That we commend to the entire Nation the paramount importance of the Atlantic intracoastal waterway among the engineering projects now under consideration by Congress as a necessary factor in the economic development of that section which is most thickly populated, has the greatest industrial output, uses the greatest bulk of raw materials, and needs the greatest supply of food from distant points.

Resolved, That the present condition of neglect in the matter of eastern waterways, the high cost of transportation due to obstructive tolls and inadequate facilities, the great loss of life and property in

coastwise traffic, the prohibitive rates of marine insurance and shrinking tonnage of coastwise shipping, alike call for immediate approval of the Atlantic intracoastal waterway and rapid progress of the work through generous appropriations by Congress.

Resolved, That we call upon business interests and trade organizations throughout the United States, and especially in the seaboard States, for such united and persistent support and agitation of these demands as will result in their sure recognition at the next regular session of Congress.

JOHN H. SMALL, *Chairman.*
WILFRED H. SCHOFF, *Secretary.*

International Neighborliness.

EXTENSION OF REMARKS
OF
HON. JAMES L. SLAYDEN,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 2, 1913.

Mr. SLAYDEN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by Hon. A. J. MONTAGUE, made at a dinner given to the New York State Bankers' Association by the Bankers' Association of Canada and the Dominion Government on June 12, 1913, at Ottawa, Canada.

The address above referred to is as follows:

"Your Excellency, Ladies, and Gentlemen: The gracious hospitality of the Government and the bankers and the people of Canada is very satisfying to your southern guests who have journeyed to this beautiful capital of your Dominion.

"This meeting of international neighbors has inevitably revealed many expressions and signs of international good will. These copious and gratifying tokens of mutual regard come naturally and almost unconsciously from the common sources of our civilizations and the many common ideals of our Governments—sources and ideals recalled so obviously and distinctly by the fraternal associations of this occasion.

"From the first permanent abode of the English race on this hemisphere, at Jamestown in 1607, in my own State of Virginia, which State was also the first 'dominion' of Great Britain on this continent, to this hour and place there is a luminous record of the progress and achievement of a common race without parallel in the history of the world. Surely, therefore, I may gratefully and proudly affirm in this presence that North America is England's greatest gift to the progress of mankind and her greatest contribution to the civilization of the world.

"It is interesting and appropriate here to recall that in the first and early days of our struggles upon these new shores the English race was cooperative and unified. No lines then separated us; we were then the subjects of the same Government; we were then brothers all. Your wars—those of King William, of Queen Anne, of King George, of the French and Indian—called to us of the South as they called to you of the North. When the farseeing statesmanship of France undertook to encompass a great empire from Quebec to New Orleans our English blood became 'thicker than water.' Whatever may have been the glories of his later days, the first sparks of the genius of the great Washington were struck out as a gallant officer under the British flag at Fort Duquesne, now Pittsburgh, where, in reverent imagination, the resounding eloquence of her patron saint, the majestic Pitt, is still heard above the roar of her vulcan hammers.

"Historically we know, however, that the voice of Pitt and of Burke did not prevail. Divisions came amongst us, eventually to be marked by the bloody point of the sword. Ethnic forces did not seem applicable to the same people living in different worlds, and readjustments, even though belligerent, were inexorable. But the War of 1776 no longer carries bitterness of memory or passion of resentment. The English race has been accustomed to internecine strifes, but surviving them nearly always as a hardier and more united people. Who now remembers who wore the rose of York or the rose of Lancaster? Who was the cavalier or who the round head? Who followed grim Cromwell or foolish Charles? Indeed, Bunker Hill, Valley Forge and Yorktown, Lake Erie and New Orleans, are chiefly the signs of the courage and sacrifice of brave men, struggling to make supreme the different standards and ideals of our race.

"War has not been the supreme ambition of our race. We have fought among ourselves, but shake hands, and each then turns anew to his own immediate duties and tasks. Our race's civilization is founded upon liberty and law, indissolubly bound together. These are the chief ends of free governments. So at the end of our struggles we quickly set our faces to the healing lights of freedom and order. We therefore sought and applied the law of nations. We made treaties to express and perpetuate our better selves. One hundred years, lacking one, have come and gone since as two nations we set our solemn hands to the great document at Ghent. But we turn to our neighbor, Canada, this child of our common mother, as the most perfect and practical example of how treaties can be wrought and observed.

"We look in vain upon the Great Lakes, the great inland seas, for one frowning prow. We listen in vain for one sounding cannon. Why? Because we have kept faith with each other; we have observed our agreements, our conventions, and our treaties, submitting all differences arising thereunder to the instrumentalities of justice, of reason, of tradition, and of peace. Hear, for example, the words of the great agreement negotiated in April, 1817, at Washington by the Right Hon. Charles Bagot, for and in behalf of His Britannic Majesty, and Richard Rush, Esq., for and in behalf of the United States:

"The naval force to be maintained upon the American lakes by His Majesty and the Government of the United States shall henceforth be confined to the following vessels on each side; that is—

"On Lake Ontario, to one vessel not exceeding 100 tons burden and armed with one 18-pound cannon.

"On the Upper Lakes, to two vessels not exceeding like burden each and armed with like force.

"On the waters of Lake Champlain, to one vessel not exceeding like burden and armed with like force.

"The naval force so to be limited shall be restricted to such services as will in no respect interfere with the proper duties of the armed vessels of the other party.

"This agreement is one of the most extraordinary and serviceable understandings ever reached between two nations, for resulting therefrom no ship of war roams these seas and no armed soldier treads the boundary line between our two countries, extending for nearly 4,000 miles. Indeed, under this extraordinary agreement it is almost impossible to have any armed ships whatever upon the Great Lakes, for in the development of navies there are no longer warships of the descriptions prescribed. So really we contracted further than we saw, but we live to bless and not to regret our action.

"Nor have we forgotten the art of treaty making; nor have we lost the virtue of treaty observance. In 1909 there was perfected between our Governments a memorable treaty, to which is attached the name of one of the greatest, if not the greatest, man England ever sent to Washington, and who has just left, to the regret of every American. [Great applause.] The other signature is that of a now distinguished Senator from the State of New York, then a great Secretary of State of the United States, who for sagacity, exactness of thinking, vigor of expression, and farseeing powers has perhaps no superior in the United States. Such a treaty, made by such men as James Bryce and ELIHU ROOT [applause], must, as it does, embody practical wisdom, sound justice, and the highest international conveniences.

"Let us consider for a moment its notable and beneficent objects. Among them is the establishment of a commission with power to decide all questions concerning the use, obstruction, or diversion of the boundary waters between Canada and the United States; the jurisdiction to investigate and report on any question arising between the United States and Canada along their common frontier at the request of either country; and the further jurisdiction to hear and determine any question whatever arising between the two countries when consented to by both. Therefore the three great purposes of the treaty seem to be, first, to prevent disputes in relation to the use of boundary waters; second, to settle all questions now pending between the two contracting powers, involving the rights and interests of either in relation to the other, or to the inhabitants of the other, along this common frontier; third, to make provision for the adjustment and settlement of all such questions as may hereafter arise. This treaty substantially establishes an international tribunal of juridical qualities, an Americo-Canadian court, beneficent in conception, and practicable in administration.

"May I be permitted to tax the patience of this goodly company by calling their attention to another special agreement made between the United States and Great Britain in relation to pecuniary claims? This agreement submits to arbitration all claims outstanding between the United States and Great Britain, and at this time there is in session in this city three arbitrators, who are adjudicating and determining with diligence and justice many of these claims.

"We can not speak or think of these treaties as mere paper documents. Greater than treaties is the spirit and character of the people between whom they are made and among whom

they are to be enforced. We two peoples of the same blood, of the same language, literature, laws, and traditions, will easily observe treaties, as we will with exuberant happiness celebrate in the coming year a century's duration since our last war and our hopes for a future of unending peace.

"The Government and people of Canada have their problems as we to the south of you have ours. You have more homogeneity of race than your southern neighbor. You have practically only the French infusion—a blood full of enthusiasm, refinement, art, science, courage, glory, and achievement. It is well that they are with you. Our task is more complex. The unification in America requires more wisdom, a larger knowledge of economic and social forces, and a deeper understanding of ethnic influences, in some cases so antagonistic, to venture dogmatic prophecy. But we hope to work out in peace and righteousness the burdens and blessings of freedom and law, and we will watch with intense interest your experiments and your triumphs.

"In conclusion permit me to associate myself with the citizens of New York in felicitating ourselves in having this opportunity of meeting so many eminent, worthy, and attractive Canadian people. Many of the troubles in this world are due to the fact that we do not know each other. Commerce, transportation, bank exchanges, telegraph, and telephone make acquaintances of one people with another, but meeting face to face and hand with hand make friends." [Applause.]

Regulation of Commerce.

EXTENSION OF REMARKS
OF
HON. JEFFERSON M. LEVY,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 2, 1913,

On the bill (H. R. 9394) to amend section 6 of the act entitled "An act to regulate commerce," approved February 4, 1887, and amendments thereto.

Mr. LEVY. Mr. Speaker, in order that the railroads of the United States might receive prompt and early decisions from the Interstate Commerce Commission in all rate cases, to which they are justly entitled the same as in any suit pending before the courts of this country, I recently introduced H. R. 9394, to amend the "act to regulate commerce." In many of the judicial branches of this Government the limit for a decision is 60 days, and, in my opinion, the railroads should receive a decision from the commission within that period, as withholding it ties up an enormous amount of money and capital.

From time to time, after the railroads have made application to the commission for either increase or reduction in rates, we notice that many large and important cases are suspended six months before a hearing is accorded, and it usually takes one year before the commission finally decides the case. This is very unjust to the railroads and is interfering with the prosperity of the country. At the present time the railroads of this country are carrying mails at a great loss. Freight earnings on three of the large railroads of this country—Pennsylvania, Baltimore & Ohio, and New York Central—have increased from $340,000,000 in 1904 to $550,000,000 in 1913, an increase of $210,000,000, while the receipts from mail carried has decreased during the same period from $13,088,000 to $13,077,000, a reduction of $11,000. The prosperity of the railroads is the prosperity of the people. About 33 per cent of the inhabitants of this country are either directly or indirectly affected by the earnings of the railroads in the way of wages and income.

The gross earnings of the Pennsylvania system for 10 months of this year were $328,254,692, and for the same period of 1912 they were $308,204,788, an increase of $20,049,904. The net earnings, after deduction of taxes, for the 10 months of this year were $61,840,965, and for the same period of 1912 they were $70,213,336, showing a decrease of $8,372,371 for this year. The gross earnings of the New York Central system for 10 months of this year were $250,968,117, and for the corresponding period of 1912 were $230,127,819, an increase of $20,568,298. The net earnings, after deduction of taxes, for the 10 months of this year were $53,199,687, and for the corresponding period of 1912 were $57,433,444, a decrease of $4,233,757 for this year. These figures show the necessity of prompt action by the Interstate Commerce Commission on the application of the eastern railroads for increase of rates.

High Cost of Living.

EXTENSION OF REMARKS
OF
HON. CHARLES G. EDWARDS,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 10, 1913.

Mr. EDWARDS. Mr. Speaker, to correct what I believe to be a great evil and to stop a great waste I have introduced a bill which provides as follows:

That after the passage of this act it shall be unlawful and a misdemeanor for any person or corporation to buy, sell, ship, or accept for shipment any female calf or calves, commonly known as heifer calves, under the age of 18 months, for transportation in interstate commerce or for transportation into foreign countries, slaughtered or for the purpose of being slaughtered.

RESOURCES AND SUPPLIES.

We hear a great deal about the high cost of living. It is due largely, in my opinion, to the wasteful and extravagant habits of the American people. It is due, too, in my opinion, to our failure to properly conserve the resources and supplies with which nature has blessed us.

I doubt seriously if Congress could pass a bill preventing slaughter of heifer calves under 18 months of age that would be constitutional; but Congress can pass a bill preventing the interstate and foreign shipment of heifer calves slaughtered, or for the purpose of being slaughtered, that will be constitutional.

It is my opinion that the States could pass measures that would prevent the slaughtering of heifer calves under 18 months of age. At any rate, if this bill is passed the evil practice of shipping heifer calves for food purposes will be stopped and the evil will be cured to a large extent.

In my opinion, if this bill passes, it will not be many years before the beef supply, as well as the milk, cheese, butter, and leather supplies, will be greatly increased, which will, of course, reduce the price of beef, milk, cheese, butter, and leather to our people. If this can be done, we have, to a measure, aided in the reduction of the high cost of living.

WASTE AND EXTRAVAGANCE.

This idea of veal for food is one of immense waste and extravagance. To satisfy the taste of people who are perhaps not suffering from the high cost of living the great packing houses of the country and the butchers are compelled to carry veal in stock. To get veal they have to kill calves. If the heifer calves are slaughtered, there is waste of beef in the life of the animal slaughtered and in the loss of the animals she would produce if permitted to live. This can not even be estimated in pounds of flesh nor in dollars and cents. Then there is the waste that comes from cutting off the milk that could be gotten after they reached the milking age, which carries with it the great waste of cheese and butter.

The packers and butchers of the country are able to buy up young calves at low prices. They are butchered and sold for veal at exorbitant figures to people who think they are getting a real delicacy, when in point of fact they are not getting as good food values as they would get from the meat of the same animal if killed later in life, and which they would be able to get at a much less price.

STOCK RAISING SHOULD BE ENCOURAGED.

The passage of this bill would not interfere with the shipment of male calves, nor would it interfere with the shipment of heifer calves for stock-raising or dairy purposes. In point of fact, the shipment of cattle for stock and dairy purposes should be encouraged in every possible way. Cattle raising should be encouraged. Beef is one of the necessities of life, so is milk, so is butter, so is cheese, and so is leather. People everywhere should encourage cattle raising, and should unite in an effort to stop the great waste that is going on in the slaughter of young calves for veal. Where a few mouths are satisfied with veal, on account of the waste entailed by furnishing veal to such consumers many other mouths are going hungry for beef, milk, cheese, and butter because of its being so scarce and high in price. This is a matter of vital interest to the American people, and will be a step toward the solution of the question of high cost of living.

FARMERS FEED AND CLOTHE THE WORLD.

The charge that the American people are wasteful is undoubtedly true, and the fact that this calf slaughter is permitted is good evidence of it. If our more wealthy brethren will begin to set lessons in economy and if the rest of us will quit trying to

"ape" the more wealthy, and if we all will endeavor to practice economy, and if we will conserve the great supplies and resources nature has given us, and if we will encourage the farmers of this country, who really feed and clothe the world, we will not be long in solving this high cost of living problem. It must be solved, too, for it is getting out of the question for people to live on moderate incomes. It is getting serious. The present administration is doing much to solve this question. The tariff bill will tend to do its part to reduce the cost of living, because it is the best tariff bill for the great masses that has passed Congress since the War between the States. The tariff, when it becomes effective, will mean an era of prosperity and give much-needed relief to the people throughout the country.

MORE TO EAT AND WEAR.

The high cost of living can not be entirely solved by the tariff, even though it will have much to do with it. There are many other things that enter into it. Largely there is the question of supply and demand. It is to increase the supply of beef, milk, butter, and cheese, as well as the supply of leather for harness and shoes, that I have introduced this bill. We can not hope to see results immediately, nor in a few months, but the results will be apparent in a few years; and it undoubtedly means, after it has time to take effect, cheaper beef, cheaper milk, cheaper butter, cheaper cheese, cheaper harness, and cheaper shoes.

If we will begin to correct our extravagant and wasteful ways in this country, there will be more for everybody to eat and wear and the prices will be less.

ROADS, RURAL MAILS, AND EDUCATION.

Just a few words about the farming industry. It is the oldest and most honorable pursuit of man. Idle farms are like a vaulted money. "A vaulted money is a dead money." Millions of acres of land that will produce abundantly are idle in this country and are producing nothing. The population is steadily increasing, which daily increases the demand for food and clothing. Farming must be encouraged. Our country could do no better thing than begin appropriations with which to build good roads—not great interstate or national highways, but good roads for practical purposes—so that the great mass of producers will be benefited. It can do no better thing than to make appropriations for the better education of those who are going to follow farming as a livelihood. It can do nothing, in my opinion, that will bring better results than to set aside large sums of money each year with which to furnish schoolbooks free of cost to those unfortunate children in this country who are unable to buy them. An educated people are an independent people. I do not mean educated in colleges and universities, but fitted for the various vocations they are to follow. An educated farmer, one who knows his soil and knows the science of agriculture, is more apt to be able to get better results through improved and modern methods than one who is not so well informed. The Government needs to lend a helping hand in this regard, and it is lending a helping hand. We must see that the farmers of the country are given a "square deal" and that the great agricultural industry is not discriminated against. We must encourage American boys and girls into liking farm life. We must find some way to stop the tendency of our young people to move to the cities. Good roads, good schools, good churches, good mail facilities, improved farm methods, and better farm equipment will all help to do it. I was reared on a farm. I know whereof I speak. Among my people I am known as the "Plowboy from Tattnail." I am proud of this nickname. I am glad I was reared on a farm and that I have been a plowboy. It enables me to keep close to the great heart of the people I represent and to know their customs and ways, to know their needs, and to better serve them, for a great portion of the district I represent is an agricultural section.

FARMERS MUST HAVE "SQUARE DEAL."

Good mail service, especially the rural mail service, adds much to the blessings of country life. The Government ought never stop until every farm home has mail delivered daily at its door. This brings the mail with letters, papers, and magazines, not to mention the privileges of the parcel-post feature, to brighten the lives of those upon whose shoulders rests the great burden of producing the food and clothing for the world. To those tillers of the soil, to those who toil that others may live, every possible consideration should be shown, and the Government ought to throw about them and about their business a strong arm that will help and encourage them.

ECONOMY NEEDED.

Our people need to know and practice economy. What saves to our people enriches the Nation. Our farms and the products from them keep the balance on the right side of the ledger on the question of exports and imports and bring foreign gold to fill our Treasury. We are greatly indebted to the farming element which is doing so much to make our country rich and great. The country can not do too much in return for this sturdy element of its citizens. The Nation and the world owe the farmer a huge debt that accumulates with new obligations each day which can not be fully paid. Let us, therefore, be mindful of this great obligation, and see to it that more encouragement is given to agriculture and to those who are engaged in its pursuit.

Pacific Coast Terminals and Review of Recent Legislation by Congress for the Development and Encouragement of Water Transportation.

EXTENSION OF REMARKS

OF

HON. CHARLES F. CURRY,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 11, 1913.

Mr. CURRY. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include an address by Hon. JOSEPH R. KNOWLAND, of California, before the Tenth Annual Convention of the National Rivers and Harbors Congress, Washington, Thursday, December 4, 1913.

The address above referred to is as follows:

An address by Hon. JOSEPH R. KNOWLAND, of California, before the Tenth Annual Convention of the National Rivers and Harbors Congress, Washington, Thursday, December 4, 1913.

Mr. President and ladies and gentlemen, to the gentleman from Pennsylvania, Congressman KELLY, who a few moments ago spoke so eloquently of that State, and to the chief executive of New York, Gov. Glynn, who has just taken his seat after fairly staggering us with an enumeration of the big things being accomplished by the Empire State—to these gentlemen I would say that I hail from the great State of California, whose beauties and wonders are indescribable. Had the ancestors of these gentlemen first landed upon the shores of that Pacific wonderland, the great Eastern States mentioned would to-day, I fear, be deprived of the valuable services of their two most able champions. Should I attempt to describe the resources of my native State, or endeavor to enumerate the great things we are accomplishing, my time would be exhausted before I touched the subject to which I am supposed to address myself. We hope, however, to welcome the delegates of this convention to California in 1915, so that you may see for yourselves what words are inadequate to describe.

Referring but briefly to the criticisms by Gov. Glynn of the expenditure of $6,000,000 and more at the Mare Island Navy Yard, located in California, I will say that modesty prevents me from directing attention to the fact that I have, until very recently, represented the district in which that yard is located, and that during my term a great part of the large sum was appropriated. Should I reply I might be compelled—although of course it would greatly embarrass me—to direct attention to the fact that the large and generous appropriations demonstrated the advisability of sending live men to Congress. Just a word, however, touching the utility of the Mare Island Navy Yard and the efficiency of its working force. Several ships have been built there, and during recent years three naval colliers or fuel ships. Sister ships in two instances were under construction at the same time at the New York Navy Yard, and when the Navy Department figured up the cost, the plans being identical, it was found that the Mare Island Navy Yard, way out in California, had built both ships for less money. But I must get to my subject.

PACIFIC COAST PORTS PREPARING FOR OPENING OF PANAMA CANAL.

The people of the Pacific coast are fully alive to the tremendous importance of immediately enlarging and otherwise improving the terminal facilities at the various ports to meet the increased demands of commerce expected with the opening, in the almost immediate future, of the Panama Canal.

Experience extending over a period of many years has demonstrated the advantages and necessity of State or municipal control as contrasted with that of corporations and individuals. This awakening has, in many localities, resulted in the institution of actions in the courts and in insistent demands for legislation aimed to place the ownership and administration of terminals in the hands of the people, where they belong, so as to accord to the smallest shipper the same advantages and facili-

ties which heretofore and in too many instances were enjoyed exclusively by favored corporations and large shippers.

CONGRESS LEGISLATES TO PREVENT THROTTLING OF WATER COMPETITION.

In so far as it exercises jurisdiction, the Congress of the United States has endeavored to assist in the movement to provide for the fullest utilization by all the people of the great rivers and harbors of the country, upon which there has been expended by the Government nearly $700,000,000. Not only has Congress provided the funds for improvement, but it has gone a step further and enacted legislation to prevent the throttling of these watercourses, the great highways of the people, where exclusive franchises and rights of way can not be granted. Much of this recent legislation aimed to maintain the competitive value of these waterways has emanated from the Committee on Interstate and Foreign Commerce of the House of Representatives. As a member of this committee and an enthusiastic advocate of the fullest development of our waterways, I am proud to say that in the framing of some of this legislation I have taken at least a small part. Before discussing the terminal facilities of Pacific coast ports, I will refer very briefly to a few of the recent legislative enactments aimed to aid in the Nation-wide movement, led by the National Rivers and Harbors Congress, for a maximum utilization of the facilities for water transportation.

LEGISLATION TO PROTECT WATER TRAFFIC PROPOSED IN BILL OF 1910 AMENDATORY OF INTERSTATE COMMERCE ACT.

In 1910, when the bill creating an interstate commerce court and amendatory of the then existing interstate commerce act was pending before the Committee on Interstate and Foreign Commerce, it contained a proposed section, known as section 12, which provided that no railroad corporation which was a common carrier subject to the act to regulate commerce should hereafter acquire, directly or indirectly, any interest of whatsoever kind in the capital stock of any railroad, or purchase or lease any railroad with which it was directly and substantially competitive. I proposed an amendment in committee adding water carriers to the inhibition, which the committee adopted. The bill as then amended provided that railroads could not acquire competing water carriers or water carriers purchase competing railroads. On the floor this section was stricken out, and I need not here mention the influences that were responsible for its elimination.

While this same bill was pending in the House I proposed the following amendment, which was adopted by a vote of—ayes 106, noes 77:

> Whenever a carrier by railroad in competition with a water route or routes shall reduce the rates on the transportation of any kind of traffic it shall not be permitted to increase such rates unless after hearing by the Interstate Commerce Commission it shall be found that such proposed increase rests upon changed conditions other than the elimination of water competition.

PANAMA CANAL ACT PROTECTS SHIPPERS.

With but slight change in phraseology this amendment remained in the bill and is now a part of the interstate-commerce law. Its effect has been generally beneficial, but it did not go far enough to meet conditions that it was believed would exist with the opening of the Panama Canal. This is why there was written into the Panama Canal act, at the insistence of Pacific coast shippers, the section that prevents railroad-owned ships from passing through the Panama Canal where they "compete" with their rail lines for business. Such "competition" is fake competition aimed to minimize the competitive value of this great waterway. This provision does not deny, as some charge, railroad owned or controlled ships access to the canal when engaged in foreign trade. In line with what I regard as sound public policy, it prevents railroads from practically paralleling their own rail lines by boats, which should not be permitted if the canal is to be of any real value to shippers throughout the United States.

While we were not successful in 1910 in writing into the law an amendment preventing railroads from owning competing water lines, the Panama Canal act of 1912 squarely meets the situation. The act provides, in section 11, that after the 1st day of July, 1914, it shall be unlawful for any railroad company or common carrier, subject to the act to regulate commerce, to own, lease, operate, control, or have any interest whatsoever in any common carrier by water, operated, not only through the canal but elsewhere, with which such railroad does or may compete for traffic. It also confers upon the Interstate Commerce Commission power to extend the time during which railroads may operate such water lines if, after investigation, they are convinced that such water service is being operated in the interest of the public and is of advantage to the convenience and commerce of the people. This extension, however, can not be granted to railroads coming under this provision, which would operate through the Panama Canal, applying only to other localities.

The framers of this act, anticipating conditions likely to prevail with the opening of the canal, conferred upon the Interstate Commerce Commission additional powers, enabling that body to establish physical connections between railroads and the docks of water carriers. The commission was also empowered to establish through routes and maximum joint rates between rail and water lines; to establish maximum proportional rates by rail to and from the ports to which traffic is brought or from which it is taken by the water carrier.

If interstate railroads enter into arrangements with water carriers operating from a port in the United States to a foreign country, through the Panama Canal or otherwise, for the handling of through business between interior points of the United States and such foreign country, the Interstate Commerce Commission may require such railroad to enter into similar arrangements with any other steamship.

Vessels permitted to engage in the coastwise or foreign trade of the United States are prohibited, under this act, from passing through the canal if such ships are owned or controlled by persons or companies violating the Sherman antitrust law. The provision granting free tolls through the Panama Canal to American coastwise ships is in the interest of the water shipper.

Thus it can be seen that Congress has taken advanced steps that should give an impetus to the movement for the public control of water terminals. The Pacific coast is moving rapidly in this direction, as I shall attempt to show.

PORT OF SAN FRANCISCO.

Practically the entire harbor front of San Francisco, approximately 8 miles in length, is under State control and administered by a board of three State harbor commissioners appointed by the governor. The port of San Francisco receives no appropriations from the State or city. The State law requires that the harbor must be self-supporting, the cost of improvements, including the building of wharves, dredging, and the construction of sea walls, together with the expenses of administration, to be provided for out of the receipts. There is also a provision stipulating that harbor charges shall not exceed such rates as necessary to meet the cost of construction, operation, and maintenance. In private hands returns would be demanded upon the total value of the property and improvements, with the result that much higher rates would be charged. The belt railroad is controlled by the board. Practically no long leases have been granted, and every shipper can obtain accommodation at reasonable rates.

Prior to 1911 the State had control of the water front and tidelands of the chief harbors of California, namely, San Francisco, Oakland, Los Angeles, San Diego, and Eureka. At the session of the legislature which convened that year the State of California transferred these water fronts and tidelands, with the exception of San Francisco and Eureka, to the respective cities upon which they border.

Among the commercial bodies of San Francisco there has been considerable agitation in favor of turning over to that city the control of the water front, the claim being made that San Francisco has no voice in its management. Now, when it is desired to issue bonds for improvements on the San Francisco water front, it is first necessary to appeal to the legislature to submit to the people a bond issue, which the voters of the entire State must approve at the next general election. Even when this is done the State does not pay the interest on the bonds or retire them at maturity, although the credit of the State is pledged, which possibly makes the rate of interest less. Under the State law these bonds must be taken care of out of the funds accumulated from harbor receipts. It is charged that it might be possible for localities interested in rival harbors to retard the development of San Francisco's water front; that it is sometimes difficult to explain to the voters of the State that the large bond issues for San Francisco Harbor improvements are not a burden upon the State. It may be stated, however, that so far there has been a disposition on the part of the people of the State to grant the necessary authority for the issuance of bonds to develop California's chief port. For instance, a $9,000,000 bond issue is now available for improvements which are rapidly being made, and another issue of $10,000,000 is contemplated.

At present the piers and bulkhead wharves on the San Francisco water front offer about 5 miles of berthing space. In a recent report of the board of State harbor commissioners the statement is made that dock facilities may be so enlarged as to give 44 miles of berthing space.

OAKLAND HARBOR.

Directly across the bay from San Francisco, and on the continental side, lies Oakland Harbor, with 20 miles of available shore line. The city of Oakland has fought for years to regain control of its water front. In the early fifties the then town of Oakland made some unfortunate grants of valuable rights on the harbor to an individual. These were later transferred to a railroad corporation. It has only been within recent years that the city has obtained substantial control of its entire water front. This has been due to court decisions, legislative acts, and favorable compromises. The city has already voted $2,500,000 for improvements and has under way the building of reenforced concrete wharves and a quay wall 3,700 feet in length equipped with railroad tracks, steel warehouses, and machinery for the handling of freight. There is also being built a retaining wall across the key route basin, on the western water front, where most extensive improvements are contemplated. The city plans to eventually expend $20,000,000. The municipal belt railway system as planned will extend around the entire city front, connecting with every railroad that enters the city—three transcontinental railroads now entering Oakland—and with every wharf, with spurs leading to manufacturing plants. Under the proposed development of the water front there will be 46,000 feet of municipally owned docks and 46,000 feet of privately owned.

Col. Thomas H. Rees, the Government engineer in charge of the Oakland district, has just reported a most comprehensive plan for the fullest development of this western water front, a project that will allow of such expansion as to meet fully the growing demands of the future.

HARBOR OF RICHMOND.

The Rees plans for the east San Francisco Bay district include the harbor of Richmond lying north of Oakland. The enterprising people of this growing community have set an example of liberality in cooperating with the Government that many localities might well follow. The city has already voted $1,170,000 to be used for harbor improvements. In addition, the city has authorized the submission of another bond issue, which provides for the payment of $75,000 per annum for a period of five years to be applied toward defraying the expense of Government dredging. Part of the receipts from the harbor will be set aside for a like purpose. The entire inner harbor will be municipally controlled.

Richmond, fast becoming a manufacturing center, will offer, when the present plans are completed, fully 13 miles of berthing space. At least 7 miles of the water front will be municipally controlled.

LOS ANGELES HARBOR.

If by chance there is in this assemblage an individual hailing from a locality which nature has provided with harbor possibilities, but where there is an apparent disinclination to develop these facilities which lie at its doors, I would direct this individual's attention to the city of Los Angeles, that wonderfully enterprising community in southern California. The city of Los Angeles was originally 20 miles from the ocean. Appreciating the impossibility of bringing the great Pacific to its doors, but realizing the necessity for a water terminal, this city, with the nerve to tackle big projects, did the next best thing by extending its boundaries 20 miles to the ocean by annexing cities bordering on the water and strips of connecting territory, and did all this in order that it might vote bonds to improve the harbor now known, if you please, as the harbor of Los Angeles. Already the city has voted five and a half million dollars and has agreed to expend an additional five millions in the near future, with larger sums to follow.

The port of Los Angeles is controlled entirely by the municipality, which, through a board of harbor commissioners, makes all rules and regulations for the government of the harbor, fixes all pilotage, dockage, wharfage, and handling charges, and operates the port as a municipal enterprise.

The city owns 394 acres in the outer harbor of what was originally submerged land. Of this, 154 acres was leased by the former city of San Pedro to private parties, who have reclaimed it and improved it with wharves and warehouses. Of the balance, the city has just completed reclaiming 66 acres, which are being improved with reinforced concrete wharves and steel transit sheds, and plans are under way for reclaiming 138 acres more.

Approximately 1,300 acres of tide and submerged lands in the inner harbor were originally covered by tideland patents, the validity of which was disputed by the city and are in litigation, the city winning its suits in the superior court of Los Angeles County, and the case is now pending in the California Supreme Court.

There are now 24,905 feet of privately owned wharves along the water front held under franchises or permits, and the city has 1,985 feet of municipal wharves, most of which have been recently built. It also has under construction 3,590 feet of additional wharf, of which 2,520 feet will be of reinforced concrete, costing approximately $176 a linear foot.

The city also is constructing 1,800 feet of steel transit sheds and 1,530 feet of wood frame transit sheds, besides doing a large amount of dredging.

Because of the involved condition of titles to some of the property covered by railway terminals at the harbor and the desire of the city to open the harbor to access by all railroads, as well as by paved streets, a terminal agreement has been agreed upon which virtually makes the railroad companies and the municipality copartners in the terminal, with the city in control.

There are on present Government harbor lines approximately 20¾ miles of water front, most of it unimproved. This can be greatly increased by dredging slips, but only a few such slips have yet been definitely determined upon. The possibilities of the harbor, as shown by E. P. Goodrich, the consulting engineer for that city, will afford more than 100 miles of water front when fully developed.

SAN DIEGO HARBOR.

The legislature of 1911 granted to the city of San Diego control of its entire water front. The city has already voted a million dollars for a municipal pier, which is now nearing completion. This pier will be equipped with railroad tracks and every facility for expeditiously handling freight. The total length of bulkhead at San Diego is 50,500 feet, giving a total deep-sea dockage of 13 miles and a total coaster dockage of 6 miles. Very extensive plans have been prepared by the municipality for the future development of the harbor to meet the needs of increasing commerce. The importance of San Diego Harbor will be greatly increased with the opening of the Panama Canal, as it will be the first Pacific port in the United States for ships bound north after passing through the great waterway. The municipal wharves now under construction will be of concrete and steel. Private wharves are leased from the city, the administration of its entire harbor front being under a board of municipal harbor commissioners.

HARBOR OF CITY OF PORTLAND.

Portland is now paying dearly for its past mistakes in permitting railroads and private interests to gain control of practically its entire water front. The result is that the city is now struggling to regain control of this valuable property by condemnation proceedings. Already $2,500,000 has been voted to purchase and improve water-front property acquired by this method. It is estimated that $25,000,000 will eventually be expended. The water-front terminal property within the limits of the city of Portland extends 16 miles. Of this, 29 per cent is owned by railroads and the city owns 2½ per cent; giving a balance in private ownership. Fifteen miles of additional water frontage extends from the city's lower limit to the mouth of the Willamette River. About 3 per cent of this is owned by railroads and the balance in private ownership.

SEATTLE HARBOR.

Seattle claims to have one of the freest ports in the world. The present shore line of the harbor is 12 miles. This is soon to be greatly increased by improvements on Duwamish River at an expense of $1,300,000. A ship canal from Puget Sound to Lake Washington, via Lake Union, is nearing completion, this canal to cost $3,625,000. It will greatly enlarge Seattle dock frontage and afford fresh-water anchorage.

Of the 43 piers in Seattle, 20 are owned by the railroads. Of the remaining 21, 3 are owned by the Port of Seattle Commission, 1 by the city, and 17 by individuals. The Lake Washington development will afford a large additional frontage to be controlled by the municipality.

TACOMA.

Water terminals in Tacoma are owned practically by railroad companies, although the city operates a system of municipal docks for handling both freight and passenger steamers. The city owns 2,500 feet of water front in the inner waterway, on 1,000 of which municipal docks are now being constructed. In addition to the frontage on the inner waterways, the city controls, under a long lease from the State, 14 acres of deep-water frontage for ocean-terminal purposes, which is being made ready for quick development if necessary.

CONCLUSION.

From this brief review of conditions on the Pacific coast it can be seen that, with characteristic western energy and enterprise, we are preparing for that long-looked-for day when the Panama Canal will be opened. With a determination that is worthy of emulation the people of those cities on the western border of the continent, which enjoy such splendid harbor ad-

vantages, are fighting to regain control of terminal facilities of incalculable value which corporations and private individuals in too many instances have acquired, and while it is realized that all the mistakes of the past can not be rectified in a day, it is both gratifying and encouraging that I have been able to record that most substantial progress is being made along the right lines. It is a great fight, and I am certain that I voice the unanimous sentiment of the assembled delegates when I declare that all our sympathies are with these localities which are engaged in this mighty struggle—a struggle waged not alone on behalf of the people of to-day, but of equal concern to the generations of the future.

Is the Trade of Pan America Worth Having?

EXTENSION OF REMARKS

OF

HON. JOHN J. ROGERS,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 12, 1913.

Mr. ROGERS. Mr. Speaker, the subject to which I wish to call the attention of the Members of the House for a few moments is so closely connected with a resolution which I have recently introduced into the House that I venture, at the outset, to incorporate this resolution as a part of my remarks:

Joint resolution (H. J. Res. 167) to enable the Government of the United States to hold in 1915, in connection with the Panama-Pacific International Exposition, the second Pan-American Scientific Congress.

Resolved, etc., That the President be, and he is hereby, authorized and requested to invite the Governments of the American Republics to be represented by delegates at the second Pan American Scientific Congress to be held in Washington, D. C., or in San Francisco, Cal., as he may deem preferable, at such time in the year 1915 as he may designate, in connection with the Panama-Pacific International Exposition.

SEC. 2. That for the necessary expenses for clerks, printing (including the publication of the proceedings of the congress in English and Spanish), stationery and supplies, and other incidental expenses, including rent, and for the entertainment of the delegates, the sum of $50,000, or so much thereof as may be required therefor, is hereby appropriated out of any moneys in the Treasury not otherwise appropriated, the same to be expended under the direction of the Secretary of State.

To the casual reader this resolution may seem to be devoid of especial significance—may seem to be but one in the apparently unending series of attempts to extract from the House a greater or lesser sum of money for some convention or other. But I will venture to say that an analysis of the fundamentals upon which the resolution is based will convince any Member of this House that he will have scarcely any measure of more far-reaching importance than this to consider during the remainder of the Sixty-third Congress. The possibilities for permanent good attendant upon the passage of this resolution are enormous; the possibilities for evil attendant upon our failure to pass it are even more tremendous. I repeat to you with all emphasis that in this simple resolution—commonplace, even, in appearance—may hang the balance of the industrial and commercial prosperity or the industrial and commercial adversity of this country for many years to come. A more perfect illustration of a "multum in parvo" can not well be conceived.

But in order to realize to the full the potentiality of the resolution it is necessary to glance back at some of the events of the last decade or so.

The first impulse to the holding of scientific congresses on the part of the American Republics was given by the Argentine Scientific Society, of Buenos Aires. In 1896 this society decided to celebrate its twenty-fifth anniversary by calling together a scientific congress of the Latin-American Republics. This congress met in Buenos Aires in April, 1898, and most of the Latin-American countries were represented in the 10 days' sessions. At this congress it was decided to hold the next congress in Montevideo in 1901, and a committee of 13 prominent Uruguayans was appointed to perfect the details. The Montevideo congress held its sessions in March, 1901; it was much larger and more successful both in point of delegates attending and in respect to the number of scientific papers presented than its predecessor in Buenos Aires. The third Latin-American Scientific Congress was held at Rio de Janeiro in August, 1905, and was still more successful along practical lines than its forerunners. At the closing session it was decided to hold the fourth congress at Santiago de Chile. The month of December, 1908, was selected and an organization committee of distinguished Chilean scientists was appointed.

While the arrangements for this fourth Latin-American congress were progressing, in 1906, Senator ROOT, then Secretary of State, made his noteworthy tour of the South American Republics. Largely because of the good feeling which resulted from this tour, but also because it was becoming manifest that the United States had quite as large an interest in the scientific problems considered as any Latin-American country, it was determined to broaden the scope of the Chilean congress and to make it Pan American instead of merely Latin American. The invitation sent forth by Chile to attend the 1908 conference was cordially received by the United States, and the inclusion of our country met with a warm response in all the Latin-American countries. In a memorandum submitted by the Secretary of State, Mr. Root, to the President, dated December 19, 1907, the acceptance of the invitation of Chile was strongly urged. Mr. ROOT said:

The Government of Chile has invited the Government of the United States to join in and to be represented by delegates at the Pan American Scientific Congress, which is to assemble under its auspices at the capital city of Santiago during the 10 days beginning December 1, 1908. The work of the congress will comprehend nine sections, devoted, respectively, to pure and applied mathematics, physical sciences, natural sciences, engineering, medicine and hygiene, anthropology, jurisprudence and sociology, pedagogics, and agriculture and animal industry.

Latin-American scientific congresses were held in 1898 at Buenos Aires, in 1901 at Montevideo, and in 1905 at Rio de Janeiro. Growing out of these previous conferences the congress of 1908 will be for the first time Pan American. It will study and discuss many great subjects in which all the American Republics have in common special interests, and its aim is to bring together the best scientific thought of this hemisphere for the scrutiny of many distinctively American problems and for an interchange of experience and of views which should be of great value to all the nations concerned.

It is therefore eminently appropriate that the United States should be adequately represented at this important first Pan American Scientific Congress and should embrace this opportunity for cooperation in scientific research with the representatives of the other American Republics. It is worthy of consideration that in addition to the purely scientific interests to be subserved by such a congress, and in addition to the advantages arising from an interchange of thought and the intercourse of the scientific men of the American countries and the good understanding and friendly relations which will be promoted, there are many specific relations arising from the very close intercourse between the United States and many Latin-American countries incident to our expanding trade, our extending investments, and the construction of the Panama Canal which make a common understanding and free exchange of opinion upon scientific subjects of great practical importance.

To make our representation possible, I have the honor to recommend that the Congress be asked to appropriate the sum of $35,000, or so much thereof as may be necessary, to enable the United States to send a number of delegates corresponding to the number of sections into which the congress is to be divided, together with a secretary and disbursing officer, and to pay other necessary expenses.

Inasmuch as it is desired that all communications or scientific works to be presented to the congress be received before September 30, it is much to be hoped that provision for the participation of this Government may be made at an early date and that the appropriation be made immediately available.

Mr. Roosevelt, who was then President, sent a special message to Congress transmitting the memorandum of the Secretary of State and urging upon Congress that it make provision for the expenses of the official delegation. The message of the President, dated December 21, 1907, is as follows:

I transmit herewith for the consideration of the respective Houses of the Congress a report of the Secretary of State representing the appropriateness of early action in order that in response to the invitation of the Government of Chile the Government of the United States may be enabled fittingly to be represented at the First Pan American Scientific Congress, to be held at Santiago, Chile, the first 10 days of December, 1908.

The recommendations of this report have my hearty approval, and I hope that the Congress will see fit to make timely provision to enable the Government to respond appropriately to the invitation of the Government of Chile in the sending of delegates to a congress which can not fail to be of great interest and importance to the Governments and peoples of all the American Republics.

Congress accordingly in the sundry civil bill which was approved May 27, 1908 (35 Stat. L., p. 380, public 141), appropriated the sum of $35,000 for the purposes indicated in the above memorandum. A committee of 10 distinguished scientists of the United States was named to constitute the United States delegation, and in addition to these gentlemen about 12 or 15 others were sent as representatives of the various American universities.

At an organization meeting of the official delegation, held in the diplomatic room of the Department of State on June 15, 1908, Dr. L. S. Rowe, of the University of Pennsylvania, was chosen chairman of the delegation, and Dr. Paul S. Reinsch, of the University of Wisconsin, vice chairman.

The Secretary of State, who attended the organization meeting, pointed out that the forthcoming congress was scientific and not diplomatic, and that therefore he, representing the Department of State, had no binding instructions to give to the delegates. In his remarks, however, he brought out in a most forceful way the potential importance of the occasion to every

element in the United States. His words are so applicable to the present moment that I venture to quote a few sentences:

I am not going to keep you very long, for the errand on which you are going is scientific and not diplomatic. There is one aspect of it, however, that I want to impress on your minds. It is that in many ways the interests of the United States are very much concerned in the advance of the other American countries. The advance of knowledge and improvement of practice among them in all sanitary matters is of great practical importance to us. Closer cooperation in commercial arrangements, in the administration of the ports, of customs, and of the machinery of trade intercourse, is of great practical moment. The increase of the prosperity of all the other American countries, which gives them greater purchasing power, is of advantage to us. There are great differences in the advancement of different American countries, and it is for the interest of all of them to have the highest standard, the most complete experience, and the greatest skill attained in anyone, made the common property of all. The congress to which you are to go will afford this opportunity largely because being a congress of representatives of all the countries, the conclusions which are reached, the lessons which are learned, the things that are said there, will go to each country, not as coming from a schoolmaster, an alien schoolmaster, whose dictation or assumption of superior knowledge would be resented, but from a body in which all concerned are represented. Such a meeting affords an avenue of access to the minds of all the peoples of all the countries which can not be obtained in any other way. * * *

You know, I dare say, that there have been a number of these scientific congresses in Latin America, but hitherto they have been exclusively Latin American. For the first time, under the influence of the new Pan American entente, an all-American—a Pan American—congress is to be held, and it is very desirable that we should contribute our fair share and that the work which you do and the associations which you form should contribute toward the establishment of permanently good relations and continue the work of doing away with the misapprehensions, jealousies, and suspicions which have so largely influenced the views entertained of this country in some of the Latin-American countries. I have no doubt that your experience there will be useful in that direction.

It is not my purpose to trace the detailed progress of the preliminary arrangements or of the congress itself. It is sufficient for this purpose to say that the congress was a great success on scientific lines as well as in its more general and perhaps its more permanent side, namely, the fostering of cordial relations between the United States and the Latin-American countries. The United States delegation was handsomely entertained by the Government of Chile and every possible courtesy and attention were shown the members. Chile expended officially a sum estimated at from $100,000 to $125,000 for the purpose of the convention. The proceedings thereof, which lasted from December 25, 1908, to January 5, 1909, are recorded in 16 large volumes, which are accessible at the Congressional Library.

At the closing business session of the congress, held on the afternoon of January 4, 1909, it was decided, as an evidence of the friendliness felt toward the United States, to hold the next congress in Washington in 1912. At the farewell meeting the next day Chairman Rowe of the delegation, referring to the selection of Washington, said, in part:

The honor conferred upon my country through the designation of Washington as the next meeting place of this great assembly is the more significant because of its spontaneous character. For this demonstration of confidence, good will, and fraternal solidarity I want to thank you, not only in the name of the delegation of the United States of America, but also on behalf of that larger body of scientists and investigators who are imbued with the same spirit that has actuated this congress, and who now look forward to the privilege of welcoming to our shores the men upon whose efforts the progress of our American civilization depends. We can not hope to surpass the hospitality of this great Republic, but we can assure you that the welcome will be no less sincere and the determination to place every possible facility at your disposal no less effective than has been the case here in Chile.

Viewed in its proper perspective, this congress has been one of the most extraordinary assemblages of modern times; more extraordinary in many respects than either The Hague or the Pan American conferences. That a large group of men, representative of every section of a great continent, should be able to get together and, casting aside all petty prejudices, freely and frankly exchange the results of their careful investigations and ripe experience is not only a tribute to the culture of this continent, but is also an indication of the extent to which our ideas have advanced beyond those which we inherited from our European mother countries. * * *

And now, in closing, let me again extend the thanks of the delegation of the United States of America to you, the members of the organizing committee, for your broad grasp of the purposes of the congress and the skill with which these purposes have been made real and effective; to you, our colleagues, for your cordial reception of newcomers in your midst; and, finally, to the Government and people of Chile for the warm-hearted hospitality which we have enjoyed.

The president of the congress, in response, said:

Gentlemen, in our session yesterday we decided that the next congress shall be held in Washington in the year 1912. There, under the banner of liberty, will this congress continue its work of civilization; there, where useful science is supreme, where the enlightenment of its citizens and resourcefulness of its people every day find new fields for development; there we shall take advantage of the lessons taught by a long and laborious experience in order to attain the object of these congresses. Let us prepare therefore to carry with us to the Second Pan American Scientific Congress all the elements necessary to the betterment of our social condition.

The official report of the delegation, dated April 23, 1909, referring to this decision to hold the congress in the United States, said:

The Latin-American countries will send their leading scientists and investigators to attend this congress. It is important therefore that the program of the forthcoming congress be formulated with as little delay as possible, in order that special investigations may be undertaken, the results of which may be submitted to the congress and made the basis for the sectional discussions. Thus the Second Pan American Scientific Congress can be made one of the most potent influences in fostering closer intellectual ties between the northern and the southern sections of the continent and in strengthening the feeling of continental solidarity.

What has been done to make good the obligation thus imposed upon the United States upon every ground of hospitality and self-respect? Absolutely not one thing. An appropriation for the purpose has been inserted in one or more appropriation bills, but it has never become law, although the time set for the holding of the Second Pan American Scientific Congress has now passed. On April 12, 1912, Senator ROOT, in discussing an amendment to the appropriation bill then pending, said (CONGRESSIONAL RECORD, vol. 48, pt. 5, p. 4646):

For many years the South American countries have been having a conference, an annual or biennial conference, in which they discuss a great variety of questions that are of common interest to the different countries—sanitary questions, international sanitary questions, quarantine, the protection of countries from disease, the attempt to do away with disease that is likely to be communicated to other countries, the simplification of customs laws and of the regulations which impede intercourse, and a great variety of questions that are of very great practical importance. * * *

Some three or four or five years ago, acting under a newborn impulse of friendliness to the United States which arose about that time, they resolved to ask the United States to become a party to this regular meeting, and Congress authorized it and made an appropriation to enable the United States to take part. We sent down to Chile at that time a very strong representation, leading Americans from all parts of the country. They were very much pleased; indeed, our participation in that Congress had a very marked effect in convincing the people of South America of our respect and regard for them and our desire to cooperate with them in a friendly way, so much so that at the close of the congress it passed a resolution to meet here next.

Mr. CURTIS. May I add that 21 countries have already accepted the invitation?

Mr. OVERMAN. I am very glad to receive that information. I am heartily in favor of doing everything in our power to encourage friendly relations with South American countries, but from this language I could not understand whether the congress was ordered to be held here or whether we are now promoting it. It seems from the remarks of the Senator from New York that a resolution for the assembling of the congress has already passed, and I have no objection to the item.

Mr. ROOT. They responded in the most generous and friendly spirit to our advances, and this is to enable us to be polite and friendly toward them.

Mr. JONES. I should like to ask the Senator from New York if this conference is composed of persons officially appointed by the different Governments?

Mr. ROOT. Yes. It includes representatives officially appointed by the Governments, and it also includes representatives of the leading universities and scientific institutions of the different countries.

Mr. JONES. It is not composed purely of individuals voluntarily coming together?

Mr. ROOT. Oh, no; it is official.

Mr. WARREN. Our appropriation in 1908, let me say to the Senator from North Carolina, was $35,000. It was on the sundry civil appropriation act.

Mr. OVERMAN. I am very glad to have the information from the Senator from New York, because I think it is a very important conference, and I heartily indorse the whole proposition.

The VICE PRESIDENT. Without objection, the amendment is agreed to.

Similarly an amendment was offered by Mr. ROOT on January 9, 1913, to the diplomatic and consular appropriation bill (CONGRESSIONAL RECORD, vol. 49, pt. 2, p. 1258), to appropriate $50,000 to enable the Government of the United States to participate in the Second Pan American Scientific Congress, to be held in Washington, D. C., October, 1914. This amendment was referred to the Committee on Appropriations, but nothing ever came of it.

You will readily observe the embarrassment which this most inexcusable failure on the part of the United States to act has brought about; not only does it savor of the most extreme churlishness and lack of appreciation for courtesy and hospitality extended, but it makes an inextricable confusion as the months and years slip by, since the appointed time when the convention should have been held, as to what the future course of these conventions is to be. Prof. Hiram Bingham, of Yale University, who was one of the members of the official United States delegation to the 1908 convention, said recently:

Another unfriendly act was the neglect of our Congress to provide a suitable appropriation for the Second Pan American Scientific Congress. Latin-American scientific congresses had been held in Argentina, Brazil, and Uruguay. In 1908, when it came Chile's turn, so kind was her feeling toward Secretary ROOT, the United States was asked to join in making the Fourth Latin-American Scientific Congress become the first Pan American. Every one of the four countries where the international scientists met had made a suitable, generous appropriation to cover the expenses of the meeting. Chile felt that it was worth while to make a very large appropriation in order suitably to entertain the delegates, to publish the results of the congress, and to increase American friendship. Everything was done to make the "Yanki" delegates feel that bygones were bygones and the days of Pan American brotherhood had come.

This First Pan American Scientific Congress selected Washington as the place for the second congress, and named October, 1912, as the appointed time for the meetings. But when our State Department asked Congress for a modest appropriation of $50,000 to meet our international obligations for this Pan American gathering, our billion-dollar Congress decided to economize, and denied the appropriation. When the matter came up again during the Congress that has just finished its sessions, the appropriation was recommended by the Com-

mittee on Foreign Affairs, but was thrown out on a technical point of order.

Now, you can not make Latin Americans believe that the United States is so poor that we can not afford to entertain international scientific congresses as Argentina, Brazil, Uruguay, and Chile have done. They argue that there must be some other reason underlying this lack of courtesy. No pleasant words of profuse professions of friendship and regard can make the leading statesmen and scientists throughout Latin America forget that it was not possible to hold the Second Pan American Scientific Congress, because the United States did not care to spend the money that was involved in assuming her international obligations. Nor will they forget that Chile spent $100,000 in entertaining the First Pan American Scientific Congress, and that the 10 official delegates from the United States Government enjoyed the bounteous Chilean hospitality, and were shown every attention that was befitting and proper for the accredited representatives of the United States.

It is perfectly easy to see just how sensitive peoples like our Latin-American brothers have viewed and will view this sort of action on the part of the United States. It inevitably, in their minds, is an overt attack, a deliberate affront, and an inexcusable insult. If this were the first of such incidents, perhaps it might be passed over; but, at least in the eyes of the Latin Americans, it is but one of a long series of evidences of unfriendliness on the part of official United States.

I can refer only very hastily to some of the causes for such suspicions—and whether or not these suspicions be groundless does not enter into this phase of the discussion: The Chilean episode of 1891, which culminated in the attack upon our sailors at Valparaiso; the Bluefields incident in Nicaragua in 1894; the Venezuela boundary dispute in 1895; the Cuban protectorate and Porto Rican annexation, growing out of our war with Spain in 1898; the taking possession of the Canal Zone, until then a part of the Republic of Panama, in 1903; the Alsop controversy with Chile in 1909; all these are but scattered instances, and many more might be adduced, out of which has grown the settled opinion of South and Central American Republics that the attitude of the United States is rather predatory than unselfish, that it seeks to come among its smaller sisters as a conqueror and not as a friend. Of course, the recent Mexican policy, whether right or wrong—the so-called ultimatum to Huerta, especially—but emphasizes these convictions. Similarly, the announcement given wide publicity in the press of this country early this week that the United States would ultimately exercise a protectorate over all the countries of Central America but strengthens these convictions. It makes no difference whether the United States is right or wrong, so far as the feeling of the Latin Americans is concerned. It makes no difference whether they are rightly or wrongly informed. The important circumstance in this connection is that they have a feeling of suspicion, and I think we can agree that it is not unnatural that they should have such a feeling. Take the case which has been referred to in the newspapers but a day or two ago relative to the Dominican elections. Santo Domingo is not satisfied with the attitude of the United States in seeking to control its elections, and yet in spite of its protest it is left without redress.

I quote briefly from two or three newspapers. The New York Times of December 8 says:

Despite a protest received from the Santo Domingo Government objecting to American interference with the island's internal affairs, the State Department is not modifying its plan to watch the conduct of the elections which take place there on December 15.

Three officials selected for this purpose—Hugh Gibson, until recently secretary of legation at Habana; J. H. Stabler, of the Latin-American Division of the State Department; and Fred Sterling, recently Chief of the Near Eastern Division of the department—left Washington to-day for Santiago, Cuba, whence they will go to Santo Domingo on the cruiser *Nashville*.

Once in Santo Domingo, their duties will be largely guided by developments, though it is not expected that they will do more than watch for irregularities and report through Minister Sullivan to the State Department.

The American Minister, James M. Sullivan, has advised the Dominican Government of the coming to Santo Domingo of the American commissioners to observe the municipal elections. The Dominican Government has entered an energetic protest against any foreign intervention in its internal affairs.

The Associated Press under the same date says:

It was made plain at the legation that the presence of American agents in an official capacity would be as unwelcome to those who oppose the present Government as to the administration itself.

There are 66 election districts in the island Republic, and an official at the legation asked how 3 State Department agents, or any number less than 66, could, to quote Mr. Bryan's message to President Bordas, bear "undeniably impartial witness to exactly what happened."

Meanwhile, Messrs Stabler, Gibson, and Sterling, of the State Department, are supposed to be speeding across Cuba to Santiago, whence they will be taken aboard the gunboat *Nashville* and carried to Santo Domingo city.

And, again:

An immense meeting in favor of free and legal elections in the Dominican Republic was held in the public square here yesterday under the auspices of the committee of the Independence Party. Perfect order prevailed while patriotic speeches were being delivered by both men and women. At the same time a protest against the supervision of the elections by American commissioners was put in circulation for signatures by members of the audience.

On top of all these incidents comes the deliberate refusal on the part of the United States to recognize the sacred obligation of hospitality, to fail to live up to the declarations of its officially accredited delegates to the 1908 congress. Small wonder that the Latin Americans view us as rapacious and not benevolent, as selfish and not unselfish, as wolves in sheeps' clothing. Lay aside, if you please, our responsibility and our obligations in this matter; lay aside our duties as decent citizens, as a decent nation, and consider the economics of the question. Is the trade of Central and South America not worth our while as an industrial and commercial nation? Do we not realize that in that great region, great in trade to-day, greater in potentialities of trade to-morrow, is our most natural and most fertile field for the extension of our commerce?

On October 26 last the Department of Commerce issued a most illuminating statement relative to Latin-American commerce and the participation therein by the United States. This statement is so important and so brief withal that I desire to include it verbatim in these remarks:

Exports from the United States to Latin America in the calendar year 1913 will approximate $335,000,000, against $123,000,000 in 1903 and $87,000,000 in 1893. The growth in the decade just ending was $212,000,000, while in the decade from 1893 to 1903 the growth was $36,000,000. In the term "Latin America" are included all of South America, except British and Dutch Guiana, the Central American Republics, Mexico, Cuba, Haiti, Santo Domingo, the French West Indies, and French Guiana.

That the trend in the export trade of the United States has been in recent years distinctly toward American countries is illustrated by the fact that our exports to Latin America increased 183 per cent in the decade ending with the fiscal year 1913, while our exports to all other parts of the world meantime increased but 64 per cent. To Argentina the exports in 1913 were in round terms $53,000,000 against $11,500,000 in 1903; to Brazil, $42,500,000 against $11,000,000 in 1903; to Chile, $16,000,000 against $4,000,000 in 1903; to Mexico, $54,500,000 against $42,000,000 in 1903; and to Cuba, $70,500,000 against $21,750,000 in 1903, the figures in each case relating to fiscal years.

This growth of 183 per cent in our exports to Latin America is apparently, however, a result of the increased consuming power of those countries rather than an increase in the share which the United States supplies of their imports. Figures just completed by the Bureau of Foreign and Domestic Commerce, Department of Commerce, taken from the official reports of the countries in question, show that the share which the United States is supplying of the imports of the Latin-American countries was in 1911 no larger than a decade ago. The official publications of the various countries in this group showing their total imports and their imports from the United States indicate, when aggregated for the latest year for which statistics are available (in most cases 1911), that but 23 per cent of the imports of the group were drawn from the United States, while similar calculations covering certain earlier years show, for 1909, 24 per cent drawn from the United States; for 1905, 24 per cent; and for 1900, 23 per cent; thus indicating that, while the growth in exports from the United States to Latin America during the decade has been large, it has merely kept step with the general growth of the importations of those countries.

The total imports of the Latin-American countries in 1911 were $1,166,000,000 against $927,000,000 in 1909, $725,000,000 in 1905, and $452,000,000 in 1900. Of the $1,166,000,000 worth of merchandise imported by the group in 1911, those of Argentina were $354,000,000; Brazil, $257,000,000; Chile, $127,000,000; Mexico, $91,000,000; Uruguay, $47,000,000; and Central America as a whole, $36,000,000. The annual imports of the entire Pacific frontage of Latin America, so far as ascertainable from the latest official figures, are about $220,000,000 in value, or approximately 20 per cent of the total importations of the group designated as Latin America, and are distributed as follows: Into Chile, $127,000,000; Peru, $31,000,000; Bolivia, $23,000,000; Ecuador, $8,000,000; and Pacific ports of Colombia, Central America, and Mexico, approximately $30,000,000

Of the seventy-odd per cent of the imports of Latin America drawn from countries other than the United States, a very large proportion is from Europe—the United Kingdom ranking first, Germany second, and France third in the list of European countries from which their imports are drawn.

The significance of these figures lies, first, in their emphasis upon the magnitude and upon the rapid rate of increase of Latin-American commerce, and, second, in the striking fact that, although Latin-American imports are advancing by leaps and bounds, the share of the United States therein has, relatively, for the last 15 years remained at a dead standstill, being less than one-quarter of the total.

I have assembled from various reports of the Department of Commerce figures showing in detail the trade of the United States with the other Republics constituting the Pan American Union. The first table is culled from a pamphlet issued by the Department of Commerce and Labor in July, 1909, entitled "Statistical Record of the Progress of the United States, 1800–1908, and Monetary, Commercial, and Financial Statistics of Principal Countries," pages 48 and 49. Especially noteworthy is the large balance of trade against the United States revealed by these figures. It should be further noted that the three greatest Republics of South and Central America—Argentina, Brazil, and Chile—derive, respectively, but 13, 12, and 10 per cent of their imports from the United States. Discreditable as this table is to American commerce, it would be much more so if Mexico and Cuba, which receive from the United States approximately one-half of their very large imports, were left out of account.

Table showing total annual imports and exports of countries in Pan American Union, also total annual imports of these countries from United States and exports to United States, and percentage which imports from United States and exports to United States bear to total imports and exports.

Year is in most cases 1907, but is occasionally a year earlier or later.

	Imports.	Imports from United States.	Per cent.
Brazil	$196,694,000	$25,105,000	12.8
Costa Rica	7,036,000	3,165,000	45.
Bolivia	8,931,000	754,000	8.4
Venezuela	10,186,000	2,876,000	28.2
Argentina	275,856,000	37,483,000	13.6
Uruguay	35,626,000	3,473,000	9.7
Chile	105,451,000	11,360,000	10.8
Guatemala	7,317,000	4,244,000	58
Dominican Republic	4,949,000	2,657,000	53.7
Peru	26,838,000	5,760,000	21.5
Colombia	12,089,000	3,109,000	8.2
Honduras	2,332,000	1,562,000	67
Paraguay	6,267,000	171,000	2.7
Panama	9,564,000	5,197,000	54.3
Nicaragua	3,409,000	1,915,000	56.2
Ecuador	9,587,000	2,286,000	23.8
Haiti	3,871,000	2,747,000	71
Salvador	4,164,000	1,322,000	31.7
Mexico	110,325,000	58,383,000	52.9
Cuba	104,461,000	51,309,000	49.1
Total	944,953,000	224,838,000	23.8

	Exports.	Exports to United States.	Per cent.
Brazil	$262,939,000	$84,605,000	32.2
Costa Rico	9,103,000	5,282,000	58
Bolivia	12,995,000	27,000	.2
Venezuela	14,627,000	5,194,000	35.5
Argentina	285,837,000	10,558,000	3.7
Uruguay	34,538,000	2,064,000	6
Chile	101,264,000	9,087,000	9
Guatemala	10,174,000	2,311,000	22.7
Dominican Republic	7,628,000	3,319,000	43.5
Peru	27,971,000	6,418,000	22.9
Colombia	13,791,000	6,466,000	46.8
Honduras	2,012,000	1,808,000	89.9
Paraguay	2,695,000	7,000	.3
Panama	1,961,000	1,681,000	85.7
Nicaragua	4,231,000	2,492,000	58.9
Ecuador	11,148,000	2,927,000	26.3
Haiti	5,000,000	1,171,000	23.4
Salvador	6,527,000	1,216,000	18.6
Mexico	120,884,000	84,722,000	70.1
Cuba	104,069,000	90,775,000	87.2
Total	1,039,394,000	322,130,000	31

The next table illustrates in a general way the progress which was made in the years from 1907 to 1911. The percentage of the United States in both exports and imports increased somewhat during that period, a fact which was due in part, possibly, to the visit of Secretary ROOT and the friendliness engendered by the first Pan American Scientific Congress. This table is culled from the August, 1913, bulletin of the Department of Commerce of the same series as the one above cited. (See pp. 800. 801.)

The following table compiles the same figures as before, except that the year taken is here, in most cases, 1911, but is occasionally a year earlier or later:

Countries.	Imports.	Imports from United States.	Per cent.
Brazil	$256,771,000	$28,854,000	11.2
Costa Rica	8,838,000	4,093,000	46.3
Bolivia	23,057,000	3,897,000	16.9
Venezuela	20,396,000	6,236,000	30.6
Argentina	353,972,000	50,521,000	14.3
Uruguay	46,638,000	5,953,000	12.8
Chile	127,381,000	15,776,000	12.4
Guatemala	6,514,000	2,696,000	41.4
Dominican Republic	6,950,000	4,120,000	59.3
Peru	31,006,000	6,078,000	19.6
Colombia	18,109,000	5,220,000	28.8
Honduras	3,178,000	2,393,000	75.3
Paraguay	6,306,000	171,000	2.7
Panama	9,897,000	5,123,000	51.8
Nicaragua	2,864,000	1,585,000	55.3
Ecuador	8,018,600	2,263,000	28.1
Haiti	7,948,000	6,656,000	83.7
Salvador	5,284,000	1,925,000	36.4
Mexico	90,965,000	49,011,000	53.9
Cuba	118,937,000	62,429,000	52.5
Total	1,153,029,000	264,990,000	30.0

Countries.	Exports.	Exports to United States.	Per cent.
Brazil	$324,920,000	$115,731,000	35.6
Costa Rica	8,890,000	4,902,000	55.1
Bolivia	32,639,000	277,000	.8
Venezuela	25,732,000	8,368,000	32.5
Argentina	313,333,000	23,450,000	7.5
Uruguay	43,877,000	1,588,000	3.6
Chile	123,894,000	19,609,000	15.8
Guatemala	10,982,000	3,297,000	30.0
Dominican Republic	11,005,000	5,761,000	60.4
Peru	36,119,000	10,202,000	28.2
Colombia	22,376,000	9,894,000	44.2
Honduras	3,087,000	2,730,000	89.0
Paraguay	4,700,000	36,000	.8
Panama	2,863,000	2,576,000	90.0
Nicaragua	4,556,000	1,557,000	34.2
Ecuador	13,657,000	4,087,000	29.9
Haiti	18,554,000	813,000	4.4
Salvador	8,406,000	2,925,000	34.8
Mexico	148,411,000	111,608,000	75.2
Cuba	146,676,000	122,947,000	83.8
Total	1,304,647,000	452,358,000	34.7

The following table, also from the reports of the Department of Commerce, shows the extent of the commerce of the United States with the various countries of the Pan American Union for the year ending last June. Figures showing the total commerce of these countries are not yet available, so that a complete comparison can not yet be made. The figures, however, show a fair increase in exports to the Latin-American Republics, though a slight falling off from 1911 in imports from the same countries, but the balance of trade is still heavily against the United States. Fractions of 1,000 are omitted.

Foreign commerce of United States, year ended June 30, 1913.

Countries.	Imports.	Exports.
Brazil	$120,155,000	$42,638,000
Costa Rica	3,098,000	3,514,000
Bolivia	350	940,000
Venezuela	10,852,000	5,737,000
Argentina	26,863,000	52,894,000
Uruguay	2,470,000	7,522,000
Chile	27,655,000	16,676,000
Guatemala	3,106,000	3,658,000
Dominican Republic	3,728,000	5,862,000
Peru	9,666,000	7,341,000
Colombia	15,992,000	7,397,000
Honduras	3,200,000	3,195,000
Paraguay	58,000	187,000
Panama	4,234,000	24,562,000
Nicaragua	1,437,000	2,925,000
Ecuador	3,037,000	2,553,000
Haiti	874,000	6,640,000
Salvador	1,371,000	2,389,000
Mexico	77,543,000	54,571,000
Cuba	126,088,000	70,581,000
Total	441,407,350	323,119,000

It is plain from even the most casual examination of these figures that the United States is not getting anything like its proper share of the commerce of these Latin-American Republics, great and small. And everyone knows that their commerce of to-day is but a tiny fraction of their commerce of to-morrow.

I do not for one moment minimize the importance to civilization of these Pan-American scientific congresses, considered on their merits alone. They are well worth your encouragement from the standpoint of intrinsic value. They are vastly more worthy of your encouragement from the standpoint of the political and commercial results which may well flow from them in favor of the United States, by linking up to this country the sympathies and the affections of Pan America. But they are of supreme importance at this time when the United States, by every dictate of conscience, hospitality, and decency is committed to act as host.

I have said more than once that Latin America is sensitive. You will recall that a Crimean war resulted from the failure of the Emperor of the Russias to address a reigning Latin as "My brother." What may the consequences be of so serious a slight as we have been showing Latin America for the past two or three years in this connection? A great Secretary of State has referred, as I have shown, to the "misapprehensions, jealousies, and suspicions which have so largely influenced the views entertained of this country in some of the Latin-American countries." The Mexican policy of the United States, whether right or wrong, is certainly calculated to increase these apprehensions and suspicions that the United States seeks ultimately to be the dictator, if not the despot, of Pan America. We know

that the United States has no such purpose, but we must all admit that it is not sensationalism or yellow journalism to point out that such is the feeling and such is the fear of Latin America.

The resolution to which I urge your attention is a little acorn, but from it a great oak may, if it be nurtured, cast its benevolent shadow over the industries of the United States. Let us hasten to undo so far as we can the breach of hospitality and of friendliness already shown. Let us welcome to our shores the second Pan American Scientific Congress.

Additional District Judge of the United States for the State of Georgia.

EXTENSION OF REMARKS

OF

HON. CHARLES G. EDWARDS,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 19, 1913.

Mr. EDWARDS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include some data concerning a bill that I introduced this morning for an additional United States district judge in the State of Georgia.

The matter referred to is as follows:

IN THE MATTER OF THE APPOINTMENT OF AN ADDITIONAL DISTRICT JUDGE OF THE UNITED STATES FOR THE STATE OF GEORGIA.

The undersigned committee begs leave to submit the inclosed resolutions and draft of a bill to be introduced in the Congress of the United States.

In the opinion of this committee the time has arrived when it is absolutely necessary, in order that the business of the United States courts shall be properly and promptly dispatched, that an additional district judge should be appointed for Georgia. We recognize fully that this is not a local question, and we desire to make our appeal for support in this movement as wide as possible.

Georgia in area is the largest State east of the Mississippi River, and stands tenth in population in the United States. The State is now divided into two judicial districts, the northern and the southern. The State of Florida, with a population of 757,139, as against Georgia's 2,609,121, has two district judges, and the State of Alabama, with a population of about 450,000 less than Georgia, has three judicial districts and three district judges.

The Northern District of Georgia has five divisions, the United States courts being held in Atlanta, Athens, Rome, Columbus, and Gainesville. The Southern District of Georgia has the same number, courts being held at Macon, Augusta, Savannah, Albany, and Valdosta. The Southern District of Georgia comprises 75 counties, which stretch entirely across the State and cover an area of more than one-half of the State.

The United States Court for the Eastern Division of the Southern District of Georgia is held at Savannah, and the eastern division comprises the counties of Appling, Bryan, Bulloch, Camden, Chatham, Effingham, Emanuel, Glynn, Jeff Davis, Liberty, McIntosh, Montgomery, Screven, Tattnall, and Wayne. This division comprehends the entire seacoast of Georgia, and in it are the two important Atlantic seaports of Savannah and Brunswick. In consequence thereof all cases coming within the admiralty jurisdiction of the United States courts are necessarily heard and determined in the eastern division of the Southern District of Georgia.

Under rule 6 of the new equity rules promulgated by the Supreme Court of the United States it is contemplated that the judge of a district court of the United States shall hold a motion day once a month in each division of his district. Under this rule the judge of each district in Georgia must necessarily devote five days of each month to visiting the divisions of his district and holding the motion day contemplated by the rule. On account of the fact that the divisions in each district are far apart, it must necessarily follow that at least a week out of each month will be devoted to this purpose, if the rule is complied with.

In addition to this, rule 46 of the new rules makes a wide departure from the old equity practice in providing that the testimony of witnesses shall be taken orally save in matters of account, in which case a reference to a master is provided for by rule 59. This will impose upon the judges of the United States courts in this State a much greater burden than has hitherto existed, where it has been the universal practice to have the testimony taken by a master.

Under these conditions it is practically impossible for two district judges to take care of the business of the State of Georgia and at the same time to comply with the spirit of the new equity rules. It is now a practical impossibility for the judge of the Southern District of Georgia to attend the terms of the courts in his district. The terms are as follows:

At Savannah, second Tuesday in February, May, August, and November.

At Macon, first Monday in May and October.

At Augusta, first Monday in April and Third Monday in November.

At Valdosta, second Monday in June and December.

At Albany, third Monday in June and December.

The circuit courts having been abolished by the new judicial code, and the jurisdiction of these courts having been vested in the district courts, in view of that fact and also of the population, territorial extent, commercial activity, and rapid growth of the State, we are entitled as a matter of right to at least three district judges.

If conditions permitted, the State ought to be divided into three judicial districts, equalized as far as possible according to population and area. However, as it is impracticable at this time to subdivide the State into three judicial districts, then we maintain that an additional judge should be located at Savannah, where the necessity is greatest, for the following reasons.

Reasons for location of district judge at Savannah:

The district judge of the Southern District of Georgia resides at Macon, which is about 200 miles from Savannah. It is well known to practitioners in the admiralty courts, where the judge is the sole judge both of the law and the facts, that it is of the supremest importance that the court should, as far as possible, hear the testimony orally. There is probably no branch of the law wherein the conflicts in the testimony of the witnesses for the opposing sides is as sharp and direct as in admiralty matters. If the testimony is taken by deposition alone, the judge loses the great advantage of observing the witnesses' conduct and manner of testifying which is derived from an oral hearing before him.

In addition to this, in the great majority of instances, as the pleadings in admiralty are speedily made up, it is possible to produce before the court witnesses which otherwise speedily become inaccessible. The ultimate aim of the admiralty law, on account of the fact that most of the witnesses are transients, is to secure a speedy hearing, which can only be done where a judge is on the ground.

There is not a port of the United States of the importance of Savannah which is cut off for almost the entire year from the services of an admiralty judge. The maritime interests of Savannah and Brunswick alone are sufficiently important and extensive to require the location of a district judge at Savannah.

Savannah is the largest port for the export of cotton on the Atlantic seaboard, and the second largest in the world, and it is the largest naval-stores port in the world.

Its maritime importance is exhibited by the following statistics.

Relative position of principal export ports of the Atlantic coast; also gain and loss of commerce for the fiscal year ended June 30, 1912, compared with 1909:

Exports.	1912	1909	Per cent of gain.
New York	$812,894,414	$807,239,481	33⅓
Savannah	104,288,887	50,900,156	104½
Baltimore	92,034,875	77,550,658	18½
Philadelphia	68,875,300	84,286,440	[1] 18⅓
Boston and Charlestown, Mass	69,667,494	76,157,558	[1] 8½

[1] Decrease.

In the whole country Savannah was the fourth in exports for the year ended June 30, 1912, New York being first, New Orleans second, and Galveston third

The imports at Savannah for the fiscal year ended June 30 were:

1909	2,152,441
1910	3,855,373
1911	5,296,746
1912	5,130,979

The arrival book in United States customs office at Savannah shows total arrivals of vessels in port for year ended August 31, 1912—1,354, which is an average of 113 vessels each month.

The tonnage and valuation of commerce at the port of Savannah was:

	Short tons.	Value.
1911	2,954,814	$246,678,077
1912	2,920,060	224,512,410

Coastwise steamship lines with regular schedules, passengers and freight, ply three ships each way weekly between Savannah and New York; and two ships each way weekly between Savannah and Boston; three ships each way weekly between Savannah, Jacksonville, and Baltimore; and three ships weekly between Savannah and Philadelphia. An extensive shipping business is carried on with the ports of the United Kingdom and the Continent of Europe. The Central of Georgia Railway Co., the Seaboard Air Line, and the Atlantic Coast Line have extensive docks and terminals covering about 3,000 acres of land, and many millions of dollars have been spent in their creation.

The United States Government has spent more than $8,000,000 in the improvement of the Savannah Harbor.

We have not at hand the figures showing the imports and exports of the city of Brunswick, but suffice it to say it has a splendid harbor and a large and flourishing commerce, and its shipping interests are very great.

It being apparent, therefore, that as matters now stand it will be almost impossible for the judges to hold the terms of their courts and the motion days as required, and it being the spirit and intent of the bill submitted herewith that the present judges should be aided in their labors by the new judge for whose appointment we are asking, and it being further apparent that the proper dispatch of the admiralty business would alone justify the residence of a judge at Savannah, we earnestly contend that the necessity of the measure is clearly demonstrated.

It may be urged that this is an unnecessary expense to impose upon the people. However, this expense is borne by the General Government, and will only entail an additional appropriation of $6,000 a year, the salary of the judge. In this connection it is to be noted that there is covered into the Treasury of the United States every year from fees arising from litigation in the State of Georgia, in excess of the emoluments of officers of court a sum exceeding $7,500. This is a direct tax on the people of this State and goes into the general funds of the Government.

We therefore urge the passage by Congress of the bill which we present herewith, and we earnestly request its support by the people of this State as a measure necessary to their interests.

Respectfully submitted.

SAMUEL B. ADAMS.

T. M. CUNNINGHAM, Jr.

MAY 17, 1913.

Resolutions unanimously passed at a meeting of the bar of the city of Savannah, held May 17, 1913.

"*Resolved*, That this meeting hereby indorses the movement for the appointment of an additional district judge of the United States for the State of Georgia, who shall reside at Savannah and preside over the eastern division of the southern district.

"*Resolved*, That the attached bill embodies the views of this meeting as to the proper bill to be introduced in Congress, and that the same is hereby approved, ratified, and confirmed, and that the following gentlemen, who composed the committee who recently appeared before the Senators and the Representatives of Georgia in Congress, to wit, S. B. Adams, P. W. Meldrim, W. W. Osborne, A. P. Wright, J. Ferris Cann, T. M. Cunningham, jr., and A. A. Lawrence, be, and they are hereby, constituted a committee from this meeting and charged with securing the introduction of said bill in Congress or any modification thereof which the committee may find expedient, and shall take such steps as may be necessary to secure its passage.

"*Resolved further*, That we invite the cooperation of our brethren of the bar in other sections of the State.

"*Resolved further*, That we invoke the assistance of our Representative in Congress, the Hon. CHARLES G. EDWARDS, of the Senators from Georgia, and of the congressional delegation from Georgia, and that a copy of these resolutions shall be forwarded to the Hon. CHARLES L. BARTLETT, chairman of the congressional delegation from Georgia."

I hereby certify that the foregoing resolutions were unanimously passed at a meeting of the bar of the city of Savannah, held May 17, 1913.

FRANK P. MCINTYRE, *Secretary*.

[Copy of bill by Mr. EDWARDS, December 19, 1913.]

A bill providing for an additional United States district judge for the State of Georgia.

Be it enacted, etc., That the President of the United States, by and with the advice and consent of the Senate, shall appoint a district judge for the northern and southern judicial districts of Georgia, who shall possess and exercise all the powers conferred by existing law upon the judges of the district courts of the United States, and who shall possess the same powers and perform the same duties within the said northern and southern judicial districts of Georgia as are now possessed by and performed by a district judge of the United States in any of the judicial districts established by law, and he shall receive the same compensation now or hereafter prescribed by law in respect to other district judges of the United States: *Provided*, That after appointment the judge appointed under this act shall reside at Savannah in the State of Georgia, and shall hold the district courts of the eastern division of the southern district of Georgia: *And provided further*, That the judge appointed under this act may be assigned by the senior circuit judge of the fifth circuit, or any circuit judge within the State of Georgia, to preside in any other division of either district in Georgia whenever the public interest may require.

Linking the Atlantic and the Ohio—A Dream of Washington.

EXTENSION OF REMARKS

OF

HON. ARTHUR R. RUPLEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 19, 1913.

Mr. RUPLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address on Linking the Atlantic and the Ohio—A Dream of Washington, delivered by Representative M. CLYDE KELLY, of Pennsylvania, before the National Rivers and Harbors Congress, in Washington, D. C., Thursday, December 4, 1913.

The address above referred to is as follows:

Address on "Linking the Atlantic and the Ohio—a dream of Washington," delivered by Representative M. CLYDE KELLY, of Pennsylvania, before the National Rivers and Harbors Congress, in Washington, D. C., Thursday, December 4, 1913.

The originator of the idea of a great waterway system connecting the Middle West with the Atlantic seaboard was George Washington, who was truly immortalized as being first in peace as well as in war and in the hearts of his countrymen.

As soon as the Revolutionary War had been brought to a successful conclusion he gave himself wholly up to this commercial problem. In 1783 he made a long and dangerous journey through Pennsylvania, New York, Virginia, and the territory west, with a view to determining the best possible water routes. After thoroughly inspecting the different routes available he declared that the one preeminent plan was that of connecting the Potomac River with the Ohio, a waterway system which could be made to furnish a means of transportation between the Great Lakes and the Atlantic as well as the Gulf of Mexico.

Washington's journal of that trip states that the Monongahela River and its tributary, the Youghiogheny, form much the shortest and best route between the Ohio and the tidewater of the Atlantic. The survey made by himself shows a distance of 303 miles between Alexandria and Pittsburgh, using these two rivers as part of the connecting system.

His insistence on the improvement of the Potomac resulted in the matter being brought before the Virginia Legislature in 1784. As a result, Washington, Gen. Gates, and Col. Blackburn were named as a commission to secure concurrent action by Maryland.

A conference was held, and the outcome was a plan to form a company, Virginia and Maryland to take 50 shares each, and to "encourage individuals to embark in the enterprise." The Cheat River was named by the conference, because the colony of Pennsylvania was regarded as hostile to the undertaking on account of its probable effect in diverting traffic from Philadelphia. However, the conference report clearly shows that if it were available the Youghiogheny River route would be the much more preferable one.

The Potomac Co. was accordingly formed and the books opened in 1785. At the first meeting 403 shares, representing £40,300, were subscribed, and George Washington was made president. The problem presented by Great Falls in the Potomac was a perplexing one, and the task was found greater than anticipated. Stockholders did not pay their assessments promptly and difficulties were encountered in dealing with workmen. The old records show that at one time an unusual allowance of rum was demanded by the workmen, and after considerable parleying it was granted by the company.

In 1787 the financial situation had become acute, and some of the stock, remaining unpaid, was advertised at auction, but not a bid was received. Then, on April 30, 1789, Washington became the first President of the United States, and his withdrawal from the Potomac Co. resulted in a complete cessation of work.

For many years nothing was done to accomplish the realization of this dream of Washington, but in 1821 the Virginia Legislature appointed a commission to investigate the situation. It reported that $729,380 had been expended in the effort to improve the Potomac River, and that little had been accomplished.

In 1823 the Potomac Co. expressed its willingness to surrender its charter to a new company. A commission was appointed to examine the old route across the Alleghenies marked out by Washington. A noted civil engineer, James Shriver, was sent out, and his report was a strong recommendation that the canal be completed to connect with the Youghiogheny, and thence to Pittsburgh via the Monongahela.

This report aroused great enthusiasm, and a convention was held in Washington, D. C., November 6, 1823, with delegates present from Maryland, Virginia, Pennsylvania, and the District of Columbia. Resolutions were adopted beginning:

Whereas a connection of the Atlantic and western waters by means of a canal leading from the seat of general government to the Ohio River, regarded as a local object, is one of the highest importance to the States immediately interested therein, and considered in the national view is of inestimable consequence to the future union, security, and happiness of the United States, etc.

At a banquet, which concluded the convention, John Quincy Adams, John C. Calhoun, James Shriver, and a number of other notables enthusiastically indorsed the proposal to build the canal, and urged the formation of the Chesapeake & Ohio Canal Co.

This company was accordingly incorporated in Virginia in 1824 and the next year in Maryland and Pennsylvania. It was capitalized at $6,000,000, divided into 60,000 shares at $100 each. The stock and debts of the old Potomac company were accepted at par value for stock in the new company.

The National Government appointed a commission to survey the route, and the Army engineers made a voluminous report, giving $22,000,000 as the probable amount necessary to complete the canal to Cumberland. This sum dampened the ardor of the enthusiasts, but those who visioned the future and saw the development possible in the territory continued their efforts with unabated energy. Three and a half million dollars were subscribed, and Charles F. Menes, chairman of the Committee on Roads and Canals in the National House of Representatives, was elected president.

Then came the incorporation of the Baltimore & Ohio Railroad in 1827, backed by merchants of Baltimore, who feared the effect of the canal upon the commercial supremacy of that city. A bitter warfare was begun, which has continued to the present time. The railroad company secured $4,000,000 in paid-up capital, and Phillip E. Thomas, a prominent merchant of Baltimore, was made president.

In 1828 both companies were at work, and on July 4 of that year rival celebrations were held. At Washington the ground was broken for the canal in the presence of a great crowd, and at Baltimore the foundation stone was laid for the railroad in the midst of equally enthusiastic demonstrations.

In 1836 Maryland appropriated $3,000,000 to the canal, and in 1838 the company asked for still more funds with which to

carry on the work. The response was another appropriation of $1,375,000. Still the amount was not sufficient, and in 1840 the company issued its own scrip to the amount of $555,400. A year later, when further assistance was necessary, it was refused by Maryland and work was stopped by the end of the year, not a man being engaged between Dam No. 6 and Cumberland, a distance of 18 miles.

However, in the next few years other appropriations were made and, after many discouragements, the canal was finally completed to Cumberland in 1851. It covered a distance of 185.7 miles, and the total cost was $11,071,176, or $59,618 per mile.

The completed canal came under the control of the State of Maryland, and the officials were appointed by the board of public works, thus becoming political positions, subject to many and sudden changes.

In 1889, after freshets had damaged the canal, a corrupt conspiracy was planned between railroad interests and members of the legislature and a measure was actually passed selling the canal to the West Virginia Central Railroad. However, the bondholders petitioned the courts to prevent the sale and succeeded in having the act set aside. In 1891 the trustees, under mortgage of the Chesapeake & Ohio Canal Co., began to operate the canal and have continued ever since.

That is the history of the canal to the present day, and the first question to be considered in the proposal to extend it to its original termination at Pittsburgh via the Youghiogheny and Monongahela Rivers is the one of feasibility.

That phase has been settled by the decision of every board of engineers, private and official, that has surveyed the route. United States engineers went over the ground in 1824 and again in 1876 in accordance with action by Congress. I have read these official reports in the Government records and have noted the insistence of the engineers that the plan is practicable from every standpoint. Gen. A. A. Humphrys, Chief of Engineers, United States Army, in 1876, in his report, makes the statement:

> There can be no doubt of the practicability of extending the Chesapeake & Ohio Canal to Pittsburgh.

The report of that year takes up the separate phases of water supply, the summit level, inclined planes and locks, aqueduct bridges, passage of the narrows above Cumberland, and gives in full detail the proper methods to meet each contingency as it arises.

The canal proper, in the various divisions as given by the engineers, would be as follows: From the guard lock of the canal at Cumberland to Cooks Mills railroad bridge, a distance of 8.54 miles; thence to Bridgeport, 5.44 miles; thence to Southampton, 6.45 miles; thence to the summit level, 8 miles; the summit level at Meyersdale, 6 miles; thence to Garrett, 4.39 miles; thence to Mineral Point, 7.75 miles; thence to Castleman, 3.2 miles; thence to Pinkerton Tunnel, 4.5 miles; thence to Confluence, 11.45 miles; thence to Ohio Pyle, 11.25 miles; thence to Indian Creek, 9.3 miles; and thence to Connellsville, on the Youghiogheny River, a distance of 7.37 miles. The total distance from the guard lock at Cumberland to the river at Connellsville would be 95.04 miles.

Chief Engineer Humphrys gives his estimate for the cost of the entire project as follows:

Summing up the estimates, we have as follows for the total cost of a first-class canal from Cumberland, Md., to Connellsville, Pa., and of a system of locks and dams on the Youghiogheny River from the latter place to McKeesport, Pa., from which city there is a slack-water system in actual operation to Pittsburgh:

Canal proper	$21,176,795
New terminal at Connellsville	75,245
Summit reservoirs	600,000
Inclined planes	1,134,000
Total cost of canal	22,986,040
Slack-water system on Youghiogheny River	1,254,040
Total cost of project	24,240,080

The chief engineer also states that he has estimated in all cases in excess rather than below the probable cost and for dimensions larger than those of the existing canal.

The project is entirely feasible, and the next consideration is its advisability. Viewed from the standpoint of service and development, it is advisable as a simple business proposition, or, rather, as a better business proposition. This is the day of better business. Recent legislation shows that we are getting away from the idea that American business is better and stronger if hot housed and encouraged to substitute legislative conspiracies for efficiency.

I claim that anything which blocks industrial progress is a commercial calamity, and anything which will advance it is a good thing. There is no way to increase the volume of the enriching lifeblood of commerce in this Nation to compare with a comprehensive and connected system of waterways. Commerce and industry have been compelled to wait on transportation or have had unjust burdens laid upon them simply because adequate waterways were not provided.

Better business means cheapened production, and that means increased production, and that in turn means increased prosperity for all. Transportation is one of the chief factors in the cost of production. The situation of the territory along this proposed extension of the Chesapeake & Ohio Canal simply means that unnecessary burdens are placed upon production, not only in the district itself, but in almost every factory in America.

At present the railroads are transporting the coal and coke and raw materials that originate along the route of this waterway at rates which are excessive and burdensome, being at least three times greater than would be the case if the waterway system were established.

Records show that a dollar will send a ton of freight 127 miles on a railroad and 1,250 miles on a waterway. One horsepower will move 15 tons in a car on a railroad track and 100 tons in a barge on a waterway, so that the estimate of one-third is highly conservative.

The Pittsburgh and Connellsville districts produce the fuel that turn the wheels of a nation's industries. Coal and coke are especially adapted for water transportation, on account of their size and bulk. Ninety million tons of coal are handled annually in the Pittsburgh district alone, and yet less than one-tenth is carried by water. If that tonnage could be handled entirely by water, it would mean an annual saving of many millions, and counting only the difference between rail and water rates to Pittsburgh and not the difference on the tonnage shipped east from Pittsburgh.

Taking the shipments of coke from the Connellsville district and using the figures for 1912, we have the following:

	Tons.
Shipments to Pittsburgh	6,931,020
Shipments west	11,288,953
Shipments east	1,780,900
Total	20,000,873

Figuring the shipments to Pittsburgh and points west at 75 cents a ton, the lowest rail rate to Pittsburgh, and at 25 cents, the maximum estimated waterway charge, we would have a clear saving of $9,109,987 for one year. Figuring the shipments east at $2.15, the rate to tidewater, and at 70 cents, the estimated water cost, there would be a clear saving of $2,582,305, or a total saving of $11,692,292 a year solely on the coke shipped from the Connellsville district.

It is surely worth while to furnish economical and adequate facilities for the transportation of this product, especially in view of a statement recently made in an address by General Freight Solicitor Truesdale, of the Pennsylvani.. Railroad. He said:

> We have in the Connellsville region a total of 40,281 ovens, with 2,218 in the course of construction. An acre of coal will produce 12,000 tons of coal or 8,000 tons of coke. Figuring on 40,000 acres of unmined coal in the Klondyke region alone, we can count on getting a total coke tonnage of 320,000,000 tons. This will require 8,648,645 cars carrying an average of 37 tons, making 192,192 train loads of 45 cars each. At the present price of coke this immense tonnage represents an almost inconceivable sum.

It is an inconceivable sum, and so would be the amount saved if this vast tonnage were handled by water as it should be. That saving would be sufficient to build the extension to the Chesapeake & Ohio Canal several times over; it would make a reduction in the cost of operation in countless plants that would mean a real reduction of the high cost of living, and it would make possible a substantial increase in the income of every man and woman and child concerned in the production of these materials—and these are all concerned in the desire for better business.

But the service given by the railroads in the vast district which borders this proposed canal extension is not only inadequate and uneconomical, but it is also unsafe, and does not meet the requirements of an aroused public conscience interested in the things of humanity, and which puts the miner above the mine, the railroader above the railroad, and the man above the money. I quote from an editorial in the Connellsville Courier, recognized as the official publication of the coke district. In its issue of December 5, 1912, it says:

> The disastrous runaway wreck on the Connellsville division of the Baltimore & Ohio Railroad is unfortunately not a new experience. It is a ghastly repetition of others. These runaway accidents have been appalling in the loss of life and the destruction of property, and their net results indicate that some radical changes are necessary in the operating plans or the grades and curves of this portion of the division.

Then, after an official investigation had been made, the Courier summed up the results, in its issue of December 26, as follows:

> The investigation of the Baltimore & Ohio wreck proved rather unsatisfying. The investigators were not hunting for a victim, but for a

cause, and their efforts were defeated largely because death had sealed the lips that were most likely to reveal the reasons why the air brakes refused to work.

I believe that if the railroads were half as much interested in transporting traffic safely as they are in throttling every movement looking toward legitimate competition they would be able to render more decent public service. In any case, I can not see the slightest reason for giving them a complete monopoly of the transportation of products which they can not possibly handle to the best advantage of the public.

It is a question of service, and the railroads have not met and can not meet all the demands of an adequate transportation system. They are levying an annual tribute of $151 upon every family of the United States, and their gross income this year would pay every expenditure of every township, city, county, and State in the Union, besides all the expenses of the Federal Government itself. Still they do not secure sufficient revenues, and the Interstate Commerce Commission is being deluged with pleas from the railroads for a 5 per cent increase in rates. They admit that they can not meet the present demands of transportation.

Mr. Daniel Willard, president of the Baltimore & Ohio Railroad, appearing before the Interstate Commerce Commission on November 24, on behalf of the railroads who are seeking the advance in rates, set forth his plea as follows:

> The immediate and all important question is, "How shall these railroads obtain the new capital necessary if they are to provide the needed facilities and furnish the high-class service which the public demands and to which the public is properly entitled?"

In view of the fact that 66 per cent of the tonnage carried by the Baltimore & Ohio Railroad is the product of mines, almost every ton of which could and should be water-borne business, I would say that the all-important question is much different. It is rather "How shall waterways be provided so that the railways may devote their attention to the traffic which is legitimately theirs and which they can handle with the best advantage to the public?"

But again, this proposed extension of the Chesapeake & Ohio Canal is advisable because it will furnish an Atlantic waterway for the Pittsburgh district, which is not only the workshop of the world but also the natural gateway between the East and the West. The day when we can say that Pittsburgh taps the world by rail and water will be a red letter day for America.

This Nation of ours is an entity, bound together by a thousand ties of common interest. As the great West develops an increasing demand comes to the East for its products. The more prosperous the people of the Mississippi Valley and the Pacific coast the greater the necessity for those things in which the manufacturing districts of the East excel by reason of natural causes. The greater the triumph of our manufacturers in the markets of the world the better the conditions for every American citizen.

Do you realize what the Pittsburgh district means to the commercial prosperity of this Nation? Other lands count hundreds of millions of dollars well spent in order to give facilities to manufacturing districts as much inferior to Pittsburgh as the candle is to the arc light.

Pittsburgh is the greatest port in the world, its tonnage of 168,000,000 tons being twice as much as that of New York, London, Hamburg, and Marseille combined. It is seven times as much as the tonnage through the Suez Canal and more than the entire tonnage of all the Great Lakes.

Pittsburgh produces 35 per cent of the steel output of the country. It produces 30 per cent of the total production of pig iron, 60 per cent of the tin plate, 41 per cent of the structural shapes, and 60 per cent of the glass.

That district produces 45 per cent of the raw material for the hardware business of the country, 37 per cent of the raw material for the manufacture of machinery, 44 per cent of the raw materials for the plants that manufacture agricultural implements, and 45 per cent of the raw materials for the automobile industry.

It produces more coal than the combined output of Ohio, Indiana, and West Virginia, while the Connellsville district, 40 miles away, produces half the coke of the world.

Yes, I want to emphasize the fact that when you afford better facilities for the Pittsburgh district you confer a distinct and direct benefit upon the entire Nation.

I am proud to hail from that district, with its cities and towns of smoke and smudge that soil the horizon, where the sun shines feebly through a murky haze, where the unresting traffic rattles at midnight as at midday, where flaming furnaces belch out their blazing blasts, and the red-ore dust casts its hue on all the landscape.

You may talk of its grime and grossness, but I would point you to its vigor and its virility. On its breast it bears the efficient enterprises of an empire. Ten million wheels whirl endlessly by the power of its coal, cities in every clime glow with the light born of its dynamos, its weaving rails bind ocean shores together, over its wires flash the messages of the world, and the hands of mankind grasp its tools in earth's utmost ends.

I am proud of all that, and still prouder because there the world's toilers perform miracles greater than were dreamed by the fairy-tale writers of old. There brain and brawn unite to pour out with lavish hand the countless commodities that make for greater comfort and a happier humanity. And over its army of workers, mightier and nobler than any army in all the annals of history, floats a banner on which the words are wrought, "For service."

I tell you that the prosperity of this Nation depends, in a large degree, upon the faithful toil of those who serve in the Pittsburgh district, and their highest development and that of the people of America demands that the necessaries of life exist within their reach without a single unnecessary burden; and one great step in that direction, one that will, at least, help to remove the burden of excessive transportation charges, which enter into the cost of every article of daily use, will be an adequate, comprehensive system of waterways to supplement the railways and the highways.

There are objections made to this extension of the Chesapeake and Ohio Canal, just as there are objections to every other plan with the same end in view; but in the main these objections come from those who desire a monopoly of transportation and are minimized by the selfish interests of those making them. History gives many instances of a similar attitude on the part of those controlling transportation.

In the fifteenth century the Arabs controlled the overland routes from India to the Mediterranean, and thus monopolized the spice trade. When Vasco De Gama had discovered his water route to India, however, Portugal sent out a fleet of trading ships to secure some of this commerce. The Arabs bitterly opposed the traders and put every possible obstacle in their way, and without doubt argued that they were intensely interested in serving the public welfare; but the Portuguese traders succeeded in securing cargoes of spices and brought them to Europe. The prices immediately fell off one-half and there was still considerable profit, for the Portuguese left records that they sold them at a clear profit of 600 per cent.

Those spices were only purchased by the wealthy and it was not so much a matter of public concern. But to-day, when transportation charges enter into the cost of everything the humblest citizen eats or wears, it is decidedly a matter of public interest; and still those who control transportation to-day fight every effort to afford better and cheaper facilities in order that they may lay a monopolistic toll upon all the articles of commerce.

The railroads and allied interests declare that the Chesapeake and Ohio Canal and other waterway improvements have proven failures. Their argument is like that of the heathen who was told that feathers make soft pillows. He found a feather along the road the next day, placed it on a stone, and lay down to try its luxury. His experience was disappointing and he declared the statement was a lie. He had tried a feather pillow and it was not soft.

The Chesapeake and Ohio Canal has not been proved a failure. There has not been enough of it to give it a trial.

Railroad interests have sought to block its progress ever since that day when the first shovelful of earth was removed from its channel. Legislative corruption, contemptible business practices, unfair competition have all been used to discredit this waterway and to make its success impossible. After the survey from Cumberland to Pittsburgh was made in 1824, the Pittsburgh & Connellsville Railroad purchased its right of way over the entire distance, mile by mile, covering exactly the route mapped out by Army engineers for the canal.

No; the railroads do not believe their own prophecies of failure. They know that with a fair opportunity this canal will prove an unqualified success, and that explains their bitter opposition to its completion.

I do not desire to attack the railroads, for I believe that they have a large place in the best transportation system. But I contend that there are other ways for transporting merchandise than railroads, and that the waterways are infinitely their superior in certain well-defined lines of transportation.

A fully developed waterway system would not injure the railroads. In other countries, without exception, the busiest and most profitable railroads are those which are closest to and cooperate most fully with the waterways. This country will have

the same experience once the experiment is carried into practice. It will be another benefit forced upon the railroads, just as the rate-regulation policy, so vigorously denounced by them at its inception, is now universally admitted to have worked to their benefit and advantage. Improvement of waterways will be another instance of kicking the railroads upstairs.

But I will say that I favor the extension of this canal and other just plans for waterways, even if it did mean lessened profits for the railroads. This entire question of transportation is one of development, not of dividends; of service, not of shekels. The railroads, like everything else in God's world, must meet the test of efficiency. The American people are going to have something to say about this transportation problem. They pay the whole bills of the railroads, the promoters and the frenzied financiers, the presidents and the employees, and the bills of the shippers. They are beginning to see that if dividends are paid on watered stock, if lawmakers are bribed to give franchises, and if high-priced publicity artists wield their dexterous pens for the railroads and against all competition, it all costs money and in the end increases the cost of transportation and the price of every commodity of life.

The people want their commodities moved safely, promptly, and at the least possible expense, and if they can not secure such service through private enterprises they will take over the public highways themselves and operate the railroads along with the waterways and highways solely with the purpose of advancing the common welfare.

But, then, there are those who oppose any governmental expenditure whatever on canals and improvement of waterways, on the ground that such action is an intrusion upon private enterprise, and that the Government should keep its hands off everything of the kind.

It is scarcely worth while to mention such objections, for those who make them are hopelessly out of tune with the spirit of true Americanism, which demands not that the Government shall keep its hands off everything but the preservation of peace, but that the Government shall put its hands on everything that will promote the common good of all.

The Government puts its hands on the public schools and spends about five hundred millions a year to educate the coming generations for the duties and responsibilities of citizenship. It puts its hands on the highways and spends eighty millions a year for good roads. It puts its hands on the streets of cities and spends stupendous sums every year for paved thoroughfares.

Surely the railroads, even though they be private enterprises, have secured assistance enough from the Government. They have been granted areas greater than that of the thirteen original States, having a value at the time of at least $1,000,000,000, and vastly more to-day. They have been given rebates on the tariff on imported rails; they have been given franchises by States and cities; they have been exempted from taxation levied on other property; they have been given a helping hand in their every venture; and yet they did not complain of paternalism.

But this canal and other waterways will be owned by the Government and made to serve only the welfare of the people. Such action is not paternalism; it is simply self-help in action. It is the long-considered, deep-rooted determination to make the Government an instrument to promote the common good, and, after all, that is the only just function of any government.

The wedding of the Atlantic and the Ohio was the magnificent dream of Washington. Our part is to put reality into that dream, foundation under that air castle.

The fruition of mighty conceptions has always followed the same course—"first the blade, then the ear, after that the full corn in the ear." The blade was sprouted in the dawn of a nation's morning, a century and more ago, before steel and stone and rail and river had become abundant avenues of progress, crowning the work of human hands.

But the triumphant thrust of a stupendous plan of development and service can not be brushed aside. It commands consideration through the barrier of years and over the protests of selfish interests. It forces its way through tradition's broken crust and proclaims itself invincible because it meets the test of usefulness to human kind. It is a conscience debt from another century, and we propose that the obligation shall be liquidated at the earliest possible moment by the fulfillment of the task.

We may well be thankful for the opportunity of having a part in this accomplishment, worthy of an age that flings its challenge to countless realms of conquest. In this day, when men speak strong for brotherhood and peace and contentment, and are thinking thoughts of service, we may well crave the chance to perform deeds of service. Not the least of these, I am convinced, will be the completion of the mighty task begun by the Father of his Country—the full corn in the ear being reserved for this day and generation—a continuous waterway from the Atlantic to the Gulf, which, to use the still timely language of the Pennsylvania charter of 1824—

will extend and multiply the means and facilities of internal commerce and interweave more closely all the mutual interests and affections that are calculated to consolidate and perpetuate the vital principles of the Union.

"Corn Boys and Girls" of Ohio.

EXTENSION OF REMARKS

OF

HON. TIMOTHY T. ANSBERRY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 19, 1913.

Mr. ANSBERRY. Mr. Speaker, I desire to have read in the RECORD of this day's proceedings an editorial from the Columbus Dispatch, one of the progressive newspapers of the great State of Ohio. It is only a sample of many other references of a like character which for the past two or three weeks have been made by the newspapers of the State of Ohio relative to the visit to the Nation's Capital of the "corn boys and girls" of Ohio. These boys and girls were here as the guests of agricultural societies and of individuals who were interested in the solution of the problem of increasing the food supply of the country; as such guests they were enabled to spend a few days in Washington, enjoying the many interesting experiences which can be had upon a visit to the public buildings and institutions in this beautiful city, and added zest was given this pleasure because these boys and girls won this privilege in a contest of brain and brawn with other boys and girls of their neighborhood.

A few years ago the president of the State Board of Agriculture of Ohio conceived the idea of having contests of this character for the purpose of stimulating the interest of the boys and girls on the farm in scientific agriculture, with the hope that this interest, once aroused, would result in more of them remaining on the farm. This effort, it seems to me, is a very good way to a partial solution of the cry of which we have heard much of late, "Back to the farm"; of course the desired effect being to keep the boys and girls on the farm. Under this plan, in 1912, 92 boys produced an average of over 100 bushels per acre, and 510 boys made an average yield of 85 bushels per acre, and 300 boys and 75 of their older friends and parents made the trip to the National Capital in 1912 as a result of this contest. In 1913 contests were being held in every township in Ohio, and the girls for the first time took part in them. This year 2,650 boys and girls were busily engaged in tilling the soil with a view to winning one of the prizes. Of these, 1,210 stayed until the finish, filed their reports, and their acre of corn was passed upon by the judges appointed for that purpose. These 1,210 boys and girls raised 94,127 bushels of corn on 1,210 acres of land, or something over 77.8 bushels to the acre. One hundred and seven of them raised over 100 bushels per acre, the prize winner raising 131.7 bushels—this despite the fact that the past season was an exceptionally bad one. Flood, hail, and windstorm had put a good many of the contestants out of the race. During July and August a drought decreased the yield per acre to a great extent, as this was during the earing time, and a great many contestants reported the stalks being barren due to the lack of moisture in the soil. The district which I have the honor to represent had a goodly number of contestants, and one of them won the second prize by raising 131.52 bushels of corn on his acre of ground; and my own county has the honor of being the home of the winner of the first prize for girls, Miss Audrey Margaret Smith, the young lady in question having raised something over 116 bushels on her acre of ground, and I am willing to state here now that by reason of this accomplishment, when she arrives at her majority, she should be entitled to vote, as she has clearly demonstrated in a practical manner that she is in many respects man's superior.

I need not point out the value to Ohio or to the country at large of the lesson taught by these boys and girls, who have demonstrated beyond question that while about 37 bushels to the acre was the average yield in Ohio this year, this average can be materially increased by adopting the best modern methods of corn culture.

It is not my purpose to read to the farmers of the United States or the farmers of my own great State a lecture on corn raising; indeed, they know much more about this subject than I do, but it is plain to the ordinary observer and everyone who was permitted the opportunity of seeing these 700 boys and 60 girls who were enjoying a trip to the Nation's Capital, which they had earned by physical labor and by the application of their brains to the raising of corn, must conclude that if these boys and girls could raise from 2½ to 4 times more corn per acre than could their fathers on the selfsame land, it is time for fathers to sit up and take notice, and if the good example made their parents by their children is followed out next year, the State of Ohio should produce 150,000,000 bushels of corn instead of 109,000,000 bushels, which it produced this year, and if they do this, the lesson will have been well worth the price.

Doubtless these boys and girls brought all that was in them to this task and exhausted every method that could be suggested for the improvement of their particular acre, for it is well known that had they pursued the methods of their fathers they never could have accomplished these results.

THE OHIO CORN BOYS AGAIN.

The average yield of corn to the acre in Ohio is 37 bushels. But 200 or more boys have proved, by their achievements in the corn-growing contest, that twice that yield is easy and that 131 bushels to the acre can be produced. This exhibit in intensive farming is most important. It shows, as nothing else has recently shown, that the average farmer is not doing his best and that, in practically every portion of the State, there are opportunities for profit that have not been fathomed. The offer of prizes by the State board of agriculture and individuals who sympathize with the effort has not only brought to the winning boys a great delight, but it has pointed the way for all who till the soil. Not everybody who farms with intelligence and zeal can win a money prize or get a trip to Washington, but everybody who so farms can get the crops, and that ought to be a sufficient reward. To proclaim that truth is, of course, the purpose of these annual corn-growing contests.

Currency.

EXTENSION OF REMARKS

OF

HON. JOHN JACOB ROGERS,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 23, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. ROGERS. On September 18 last this House passed the currency bill and sent it on that long and wearisome road through the Senate, from which it has just returned. In voting at that time against a measure of such importance I deemed it proper to state why I was reluctantly forced to the conclusion that the bill was fraught with the gravest dangers to sound banking methods and to the people of the United States. Was my conclusion justified? The months of labor in the Banking and Currency Committee of the Senate, resulting, according to Senator O'GORMAN, a Democratic member of that committee, in the retention of but a little over 40 per cent of the House measure, seem to prove that it was. And the repeated and emphatic utterances of the best-informed Democratic Senators, including "regulars" like O'GORMAN and REED and the "irregular" HITCHCOCK, establish beyond all question that the House measure was a monument of unsoundness and menace.

Senator O'GORMAN, predisposed as he was to a measure having the administration tag, said as late as December 2 last:

Many manifestly unwise and injudicious features of the House bill were eliminated. * * * Yet there were those on the 18th day of September who advised, who urged, who recommended that this House bill be passed as a matter of form; that it was a perfect measure, when no intelligent man in public life to-day will now assert that it was a wise or a judicious measure. Every critic who has had an opportunity to examine it is agreed that it would bring about as great a calamity to this country as ever visited the United States if that bill had not been subjected to the acid test of improvement, correction, and elimination.

I caused my speech of October 18 to be circulated throughout my district as widely as possible, and, although I stated categorically my reasons why I believed the bill unsound, I have yet to hear from anyone, either in Massachusetts or in Washington, who has suggested that my position was in any respect untenable.

But now comes the question of whether the bill is to-day worthy of nonpartisan support. As I have repeatedly stated, I had much rather than not support this bill, which doubtless represents in the main the conscientious and painstaking endeavor of the majority Members of both branches of the Congress. I shall do no more than allude to the vicious caucus system which has characterized the consideration of this bill in the Senate even more than in the House. The same Bryanesque influence, with the snap of the patronage whip, was observable, though perhaps to a less degree, in the Senate.

I happened to hear a Democratic Senator say, in the course of debate last Friday—

In frankness I must say that I am not at liberty to vote for everything I favor.

The newspapers of this morning tell graphically how in the midnight struggles of the conference committee a telephone message from the White House was occasionally necessary to bring recalcitrants into line.

But this is all by the way. The great question which the seeker for light must ask himself is, Does the measure in its final form promise to work for the increased and permanent prosperity of the American people? We in the East can hardly fail, of course, to be impressed with the danger likely to result from the Bryan ascendancy. We all know that, although the voice is the voice of GLASS or OWEN, the hand is the hand of Bryan. But even this only causes us to examine more closely the actual provisions of the bill to see whether the menace of greenbackism, of free silver, or of unsound money of any kind is there; it is by no means, in and of itself, a reason for opposing it.

How did the bill as it came from the Senate three days ago compare with the bill as it left the House October 18? Let us hear what Mr. GLASS had to say. Speaking of the bill in the form in which it passed the Senate, he said last Saturday on the floor of the House:

Within six months after the passage of this bill there would be a veritable saturnalia of inflation in this country.

Again:

It would be a grave error to concur in the Senate amendments. * * * I do not believe that the bill as returned from the Senate would be a workable law.

I know there are some things in it that ought not to be in * * * contains crudities and contradictions * * * safeguards swept aside—

And so on.

Then the conference committee went to work. We have already seen what the Democratic Senate leaders thought of the House bill and what the Democratic House leaders thought of the Senate bill. We all know the functions of a conference committee; its duty is not to relegislate, but merely, where differences exist, to select either the Senate form or the House form. With these points in mind, and the haste with which the committee "agreed," can we have much hope of the result achieved? As if to sweep away whatever hope we have, Mr. GLASS is quoted in this morning's newspapers as having said that the bill had passed "without a single fundamental alteration." Whether the form thus adhered to is the House draft or the Senate draft does not appear, but in view of the attitude of the Democratic leaders it seems to be a case of Scylla and Charybdis.

As I have hitherto stated, I voiced my objections to the House measure, setting forth seven grounds of criticism which seemed to me fundamental. I am not a banker or versed in banking methods, and it may be that I overemphasized some of the points and underemphasized others. If I did, however, it has not been called to my attention. Let us see to what extent, and for better or for worse, the measure in its final form has been altered.

As objection 1, I stated:

The bill virtually makes the United States Government itself a banker, with all the duties and obligations which this status entails. The history of this country and of other countries proves this dangerous. The United States should regulate, supervise, and even control banking much as, through an Interstate Commerce Commission, it regulates railroads; it should not manage or operate.

The bill has not been improved in this respect. In some respects the United States is more of a banker than before.

As objection 2, I stated:

By section 2 "every national bank * * * shall be required to subscribe" to the capital stock of its Federal reserve bank, on pain of dissolution. There is a very great doubt of the constitutionality of this provision in the first place, but aside from that its expediency is for obvious reasons more than questionable.

This provision is substantially unchanged. See section 2.

As objection 3, I stated:

Section 11 puts enormous powers into a "Federal reserve board, which shall consist of seven members, including the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency * * * and four members chosen by the President * * * (of whom) not more than two shall be of the same political party and at least one shall be a person experienced in banking." The powers

given this board are, as above indicated, too varied and too broad, savoring of ownership rather than of regulation; but aside from that its personnel puts a premium upon partisanship, upon ignorance, or upon inefficiency. Five of the seven will usually be of one party, and but one of the seven will necessarily know anything of the practical side of banking.

See sections 10 and 11 of the bill as passed. The new provisions are an improvement in that the Secretary of Agriculture is eliminated and that "at least two" shall be experienced in banking or finance. But it is positively worse in that it also eliminates the requirement that both political parties shall be represented. What a power to give to some Executive who may be weak, uninformed, or misled!

As objection 4, I stated:

Section 17 authorizes the issuance of Federal reserve notes and provides (p. 29, line 19) that they shall be "obligations of the United States." This saddles upon the United States the ultimate responsibility for these notes, and in time of war or panic might, as history shows, lead to grave complications. It, in effect, makes the United States Government a bank of issue.

This provision remains unchanged. See section 16.

As objection 5, I stated:

Section 17 provides (p. 29, lines 21 and 22) that these Federal reserve notes "shall be redeemed in gold or lawful money," and (p. 30, line 20) for a special reserve against these notes of "gold or lawful money." These provisions resemble an insidious attempt to strike down the gold standard and a return to the free-silver heresies of 1896; it may be that the eleventh-hour amendment to section 29 tends to obviate this difficulty. I fear, however, that such amendment merely results in a conflict between the two portions of the bill. At all events there can be no sound objection to the striking out of the words "or lawful money" in the two places above mentioned.

In two places in the law as enacted does the "or lawful money" heresy persist. See section 16. Section 29 in the quotation is now section 26.

As objection 6, I stated:

The number of Federal reserve banks can not by section 2 (p. 3, line 4) be less than 12 and may be more. While I recognize the danger of having but 1 Federal reserve bank, as was provided by the Aldrich Act, there can be no such objection to a plan calling for 3, 4, or 5 of such banks. The difficulty of requiring at least 12, each with a capital (p. 4, line 1) of at least $5,000,000, is that some of the 12 will be weaker than is consistent with an entirely sound fabric, and the weaker ones will be a serious burden and drag upon the stronger and upon the public.

The final form is an improvement in one respect—it makes 12 banks the maximum instead of the minimum. But as if to counterbalance this desirable change, it reduces their minimum capital from $5,000,000 to $4,000,000, potentially weakening by just so much these institutions, which should be as strong in fact and in the minds of the people as the Rock of Gibraltar.

As objection 7, I stated:

Section 26 (p. 44, lines 3 and 4) provides that certain banks "may make loans secured by improved and unencumbered farm land." Admitting the propriety of authorizing such loans, why the discrimination against other classes of real estate? Is farm land the only safe real estate security?

This provision is not broadened (sec. 24).

The net result of all this is to show that no one of my seven objections have been met; and where, as in two cases, a desirable modification has been made, an undesirable one has been coupled with it. Add to all these the presence of the specter of inflation which in the minds of many competent judges is lurking in every page of this bill, consider the unsound money doctrinaires who are known to have been interested in its conception and birth, and I confess I am at a loss to see how intelligent nonpartisan support can be accorded the bill.

The one reason which occurs to me is the vote cast in its favor by a distinguished Republican Senator deeply versed in the intricacies of the subject. But he himself stated that, in his opinion, it was "25 per cent bad." Is that a reason for a favorable vote? Do we usually eat an egg because it is only 25 per cent bad? When the prosperity of every man, woman, and child in the Nation hangs in the balance we should see to it that the germs of untold evil which may lurk in that 25 per cent should be eliminated.

Mr. Speaker, I am not a calamity howler. I hope that the bill may work weal and not woe. But I believe that if it does, it will be because of the wise administration of its provisions and not because of the bill itself. And if it be true that a wise administration can make the bill a success, so it must follow that an unwise one may involve it in failure. Yet no one can gainsay that a measure of this supreme importance should be so drawn as not to be capable of failure even in the presence of human frailty or incompetence. But we shall all, regardless of party, gladly unite in altering the bill in those respects which experience shows to be necessary. And we shall all, regardless of party, pray for the peace and prosperity under its provisions of the people of this land.

Currency Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM L. LA FOLLETTE,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. LA FOLLETTE. Mr. Speaker, this bill as presented to the House from the conference committee may be, as the chairman of the House Committee on Banking and Currency [Mr. GLASS] says, "essentially in form as originally passed by the House," but the form is about all it does retain which bears any similarity to the original measure.

I voted against the bill as originally passed by the House on account of its many drastic and, in my judgment, unwise features. The bill has been so modified in the Senate and in conference that I feel it to now be an experiment worthy of trial, with a guaranty of elasticity that our present system seems to lack and which has occasioned much merited criticism. And while I feel, and have maintained, that we can not contrive a currency system so elastic, or gymnastic, as to take care of illegitimate stock and market gambling, I do think that probably a system such as is contemplated under this bill may, to some extent, protect the innocent public from the blighting effect of panics brought on by reckless stock and market gambling and unholy manipulation.

I maintain, Mr. Speaker, that the legitimate transactions of this or any other country never were responsible for a panic. I regret that the conferees saw fit to eliminate the deposit-guaranty feature of the Senate bill. I will grant that the guaranty provision was not as wisely considered and as efficient as the subject warrants, but it was a step in the right direction and any better enactment could have repealed the existing provision. I sincerely hope that the assurance we have received of a bill being speedily introduced and passed with an adequate guaranty to depositors may materialize, but confess that I am skeptical. I fully believe in the guaranty of bank deposits, but wish it understood that I differentiate between a guaranty by the Government and one from the banks themselves. Nothing would better insure safe and conservative banking than for every bank to have to contribute to a fund for the guaranty of deposits. Such a law would stimulate every honest banker to keep a watchful eye on the methods of his fellows.

The Senate committee in framing its bill very pertinently, in my opinion, modified the provision of the House bill requiring all national banks to subscribe 20 per cent of their unimpaired capital stock, one-fourth to be paid in cash and one-fourth within 60 days after such subscription was made, the remainder to become a liability subject to call. I feel certain that this provision was too drastic, placing a burden upon the banks that would have caused a further contraction in the already tense and panicky finances of the country.

The present bill only requires a 6 per cent subscription, paid up in homeopathic doses, that should not work a hardship at all.

To supplement the capital subscribed by banks the Senate bill provided that in case the bank subscriptions should be insufficient to provide the required amount of capital for contemplated Federal reserve banks the organization committee may offer to public subscription at par such stock as they should deem necessary to raise the required capital, the public stock subscription being subject to the same conditions as to payment and stock liability as provided for member banks, no individual, copartnership, or corporation other than a member bank of its district being permitted to hold at any time more than $10,000 par value of stock in any Federal reserve bank. This amount has been increased by the conferees to a $25,000 limit.

Mr. Speaker, the provision up to this point was wise, I think, and no doubt would have been instrumental in providing capital for Federal reserve banks were it not for the restrictions placed on this character and class of stockholders in a subsequent provision. This class of stock shares equally all liabilities, but is absolutely, under the conferees' agreement, prohibited from any voice directly or indirectly in the management of the reserve bank to the capital of which they are subscribers.

I think this is unfair, unwise, and un-American, and will practically defeat the raising of capital in that way. But there is yet another balm in Gilead and a chance for sufficient capital to inaugurate these banks. The Government itself is allowed to subscribe, or have allotted to it, such an amount of stock as the organization committee may determine as necessary to establish any Federal reserve bank. With this provision in the law there will not be any doubt as to the establishment of these Federal reserve banks, and I am also satisfied that with the liability nonvoting feature of the law as to private subscribers, the Government will long be a partner in these Federal reserve banks. The wisdom of this partnership is only conjectural and remains to be proved or disproved by demonstration and operation.

Mr. Speaker, on September 17, when the currency bill was under discussion, I offered an amendment to the bill, attempting to change the provision in section 26, which read:

That any national banking association not situated in a reserve city or central reserve city may make loans secured by improved and unincumbered farm land, but no such loan shall be made for a longer time than 12 months nor for an amount exceeding 50 per cent of the actual value of the property offered.

My amendment was to strike out "12 months" and insert in lieu thereof the words "5 years," and I offered the further amendment that "commercial paper so secured shall be subject to rediscounts by Federal reserve banks at all times."

Mr. Speaker, under the caucus-controlled majority an agreement had been reached to vote down all amendments offered by other than the committee having the bill in charge, and my amendments were promptly voted down by the caucus terrified and intimidated majority.

Mr. Speaker, when this bill came back from the other end of the Capitol it contained my first amendment as to the 5-year clause instead of the 12-months' provision carried in the House bill, and what did we witness here, Mr. Speaker? We saw the majority party in this House, when not trammeled by the caucus, overwhelmingly instruct the House conferees to insist that the 5-year clause be not eliminated. This is in itself a salient commentary on the unwise and vicious caucus control.

Mr. Speaker, I regret exceedingly that the body at the other end of the Capitol did not also insert my second amendment making farm-secured paper subject to rediscount. It is the safest and best security in the world, and if subject to the rediscount feature would have conferred a real benefit on the farmer, and while I do not agree with my colleague [Mr. MOORE] that this provision is a gold brick to the farmer I do think its benefits have been greatly minimized by failure to give these loans a rediscount status.

Mr. Speaker, I fully realize that economic and financial changes evolute slowly, and I do not believe in rejecting a thing in toto because it does not in my judgment accomplish everything at one time, and I am content to accept the best obtainable at his time with the expectation and hope that further legislation looking toward the financial betterment of our great rural population will be enacted in the not too-distant future.

Currency.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. GREENE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. GREENE of Massachusetts. Mr. Speaker, I think it important to present the views of Mr. Lincoln at this time, because at that early period in the history of our country he favored the establishment of national banks. A few months more than 21 years later he had been inaugurated President of the United States, and he became the instrument whereby the national banking system was established; and under the wise guidance of Mr. Lincoln and his official associates the Congress and the successors of Mr. Lincoln in the presidential office since that time have successfully carried out the policies which he proclaimed early in his public career.

Mr. Speaker, this great speech of the martyred President was presented to me by the late Thomas J. Henderson, a former Member of this House from the State of Illinois, who said that the pamphlet copy had been preserved by him from his boyhood.

I am a native of the State of Illinois, and the late President Lincoln practiced law in the town in which I was born, and possibly it was on this account that Gen. Henderson gave to me the remarkable document which I have the honor to present to the House.

The speech referred to is as follows:

Speech of Abraham Lincoln, at a political discussion, in the hall of the house of representatives, December, 1839, at Springfield, Ill.

Fellow citizens: It is peculiarly embarrassing to me to attempt a continuance of the discussion, on this evening, which has been conducted in this hall on several preceding ones. It is so, because on each of those evenings there was a much fuller attendance than now without any reason for its being so, except the greater *interest* the community feel in the *speakers* who addressed them *then*, than they do in *him* who is to do so *now*. I am indeed apprehensive that the few who have attended have done so more to spare me of mortification than in the hope of being interested in anything I may be able to say. This circumstance casts a damp upon my spirits, which I am sure I shall be unable to overcome during the evening. But enough of preface.

The subject heretofore and now to be discussed is the subtreasury scheme of the present administration as a means of collecting, safe-keeping, transferring, and disbursing the revenues of the Nation as contrasted with a national bank for the same purposes. Mr. Douglas has said that we—the Whigs—have not dared to meet them—the Locos—in argument on this question. I protest against this assertion. I assert that we have again and again during this discussion urged facts and arguments against the subtreasury, which they have neither dared to deny nor attempted to answer. But lest some may be led to believe that we really wish to avoid the question, I now propose, in my humble way, to urge those arguments again, at the same time begging the audience to mark well the positions I shall take and the proof I shall offer to sustain them, and that they will not again permit Mr. Douglas or his friends to escape the force of them by a round and groundless assertion that we "dare not meet them in argument."

Of the subtreasury then, as contrasted with a national bank, for the before enumerated purposes, I lay down the following propositions, to wit:

First. It will injuriously affect the community by its operation on the circulating medium.

Second. It will be a more expensive fiscal agent.

Third. It will be a less secure depository of the public money.

To show the truth of the first proposition, let us take a short review of our condition under the operation of a national bank. It was the depository of the public revenues. Between the collection of those revenues and the disbursements of them by the Government the bank was permitted to and did actually loan them out to individuals, and hence the large amount of money annually collected for revenue purposes, which by any other plan would have been idle a great portion of time, was kept almost constantly in circulation. Any person who will reflect that money is only valuable while in circulation will readily perceive that any device which will keep the Government revenues in constant circulation instead of being locked up in idleness is no inconsiderable advantage.

By the subtreasury the revenue is to be collected and kept in iron boxes until the Government wants it for disbursement, thus robbing the people of the use of it while the Government does not itself need it, and while the money is performing no nobler office than that of rusting in iron boxes. The natural effect of this change of policy, everyone will see, is to *reduce* the quantity of money in circulation.

But again, by the subtreasury scheme the revenue is to be collected in specie. I anticipate that this will be disputed. I expect to hear it said that it is not the policy of the administration to collect the revenue in specie. If it shall, I reply that Mr. Van Buren, in his message recommending the subtreasury, expended nearly a column of that document in an attempt to persuade Congress to provide for the collection of the revenue in specie exclusively, and he concludes with these words: "It may be safely assumed that no motive of *convenience* to the *citizen* requires the reception of bank paper." In addition to this, Mr. Silas Wright, Senator from New York and the political, personal, and confidential friend of Mr. Van Buren, drafted and introduced into the Senate the first subtreasury bill, and that bill provided for ultimately collecting

the revenue in specie. It is true, I know, that that clause was stricken from the bill, but it was done by the votes of the Whigs, aided by a portion only of the Van Buren Senators. No subtreasury bill has yet become a law, though two or three have been considered by Congress, some with and some without the specie clause, so that I admit there is room for quibbling upon the question of whether the administration favor the exclusive specie doctrine or not; but I take it that the fact that the President at first urged the specie doctrine, and that under his recommendation the first bill introduced embraced it, warrants us in charging it as the policy of the party until their head as publicly recants it as he at first espoused it—I repeat, then, that by the subtreasury the revenue is to be collected in *specie*. Now, mark what the effect of this must be. By all estimates ever made there are but between sixty and eighty millions of specie in the United States. The expenditures of the Government for the year 1838, the last for which we have had the report, were forty millions. Thus it is seen that if the whole revenue be collected in species it will take more than half of all the specie in the Nation to do it. By this means more than half of all the specie belonging to the 15,000,000 of souls who compose the whole population of the country is thrown into the hands of the public officeholders and other public creditors, composing in number perhaps not more than one-quarter of a million, leaving the other fourteen millions and three-quarters to get along as they best can with less than one-half of the specie of the country and whatever rags and shinplasters they may be able to put and keep in circulation. By this means every officeholder and other public creditor may, and most likely will, set up shaver; and a most glorious harvest will the specie men have of it, each specie man, upon a fair division, having to his share the fleecing of about 59 rag men.[1] In all candor, let me ask, was such a system for benefiting the few at the expense of the many ever before devised? And was the sacred name of Democracy ever before made to indorse such an enormity against the rights of the people?

I have already said that the subtreasury will reduce the quantity of money in circulation. This position is strengthened by the recollection that the revenue is to be collected in specie, so that the mere amount of revenue is not all that is withdrawn, but the amount of paper circulation that the forty millions would serve as a basis to is withdrawn, which would be in a sound state at least one hundred millions. When one hundred millions or more of the circulation we now have shall be withdrawn, who can contemplate without terror the distress, ruin, bankruptcy, and beggary that must follow.

The man who has purchased any article—say, a horse—on credit, at $100, when there are two hundred millions circulating in the country, if the quantity be reduced to one hundred millions by the arrival of pay day, will find the horse but sufficient to pay half the debt, and the other half must either be paid out of his other means, and thereby become a clear loss to him, or go unpaid, and thereby become a clear loss to his creditor. What I have here said of a single case of the purchase of a horse will hold good in every case of a debt existing at the time a reduction in the quantity of money occurs, by whomsoever and for whatsoever it may have been contracted. It may be said that what the debtor loses the creditor gains by this operation; but on examination this will be found true only to a very limited extent. It is more generally true that *all* lose by it. The *creditor*, by losing more of his debts than he gains by the increased value of those he collects; the *debtor*, by either parting with more of his property to pay his debts than he received in contracting them or by entirely breaking up his business, and thereby being thrown upon the world in idleness.

The general distress thus created will, to be sure, be *temporary*, because whatever change may occur in the quantity of money in any community *time* will adjust the derangement produced; but while that adjustment is progressing all suffer more or less and very many lose everything that renders life desirable. Why, then, shall we suffer a severe difficulty, even though it be *but temporary*, unless we receive some equivalent for it?

What I have been saying as to the effect produced by a reduction of the quantity of money relates to the *whole* country. I now propose to show that it would produce a *peculiar* and *permanent* hardship upon the citizens of those States and Territories in which the public lands lie. The land offices in those States and Territories, as all know, form the great gulf by which all, or nearly all, the money in them is swallowed up. When the quantity of money shall be reduced, and consequently everything under individual control brought down in proportion, the price of those lands, being fixed by law, will remain as now. Of necessity it will follow that the *produce* or *labor* that *now* raises money sufficient to purchase 80 acres will *then* raise but sufficient to purchase 40, or perhaps not that much. And this difficulty and hardship will last as long, in some degree, as any portion of these lands shall remain undisposed of. Knowing, as I well do, the difficulty that poor people *now* encounter in procuring homes, I hesitate not to say that when the price of the public lands shall be doubled or trebled, or, which is the same thing, produce and labor cut down to one-half or one-third of their present prices, it will be little less than impossible for them to procure those homes at all.

In answer to what I have said as to the effect the subtreasury would have upon the currency, it is often urged that the money collected for revenue purposes will *not lie idle* in the vaults of the Treasury, and, further, that a national bank produces greater derangement in the currency, by a system of contractions and expansions, than the subtreasury would produce in any way. In reply, I need only show that experience proves the contrary of both these propositions. It is an undisputed fact that the late Bank of the United States paid the Government $75,000 annually for the *privilege* of using the public money between the times of its collection and disbursement. Can any man suppose that the bank would have paid this sum annually for 20 years and then offered to renew its obligations to do so if in reality there was no *time* intervening between the collection and disbursement of the revenue, and consequently no privilege of *using* the money extended to it?

Again, as to the contractions and expansions of a national bank, I need only point to the period intervening between the time that the late bank got into successful operation and that at which the Government commenced war upon it, to show that during that period no such contractions or expansions took place. If before or after that period derangement occurred in the currency, it proves nothing. The bank could not be expected to regulate the currency either *before* it got into successful operation or *after* it was crippled and thrown into death convulsions by the removal of the deposits from it and other hostile measures of the Government against it. We do not pretend that a national bank can establish and maintain a sound and uniform state of currency in the country in *spite* of the National Government, but we do say that it has established and maintained such a currency, and can do so again, by the *aid* of that Government; and we further say that no duty is more imperative on that Government than the duty it owes the people of furnishing them a sound and uniform currency.

I now leave the proposition as to the effect of the subtreasury upon the currency of the country and pass to that relative to the additional *expense* which must be incurred by it over that incurred by a national bank as a fiscal agent of the Government. By the late national bank we had the public revenue received, safely kept, transferred, and disbursed not only without expense, but we actually received of the bank $75,000 anu-

[1] On the 4th of January, 1839, the Senate of the United States passed the following resolution, to wit:

"*Resolved*, That the Secretary of the Treasury be directed to communicate to the Senate any information he may recently have received in respect to the mode of collecting, keeping, and disbursing public monies in foreign countries."

Under this resolution the Secretary communicated to the Senate a letter, the following extract from which clearly shows that the collection of the revenue in *specie* will establish a sound currency for the officeholders and a depreciated one for the people, and that the officeholders and other public creditors will turn shavers upon all the rest of the community.

Here is the extract from the letter, being all of it that relates to the question:

"HAGUE, *October 12, 1838*

"The financial system of Hamburg is, as far as is known, very simple, as may be supposed from so small a territory.

"The whole amount of Hamburg coined money is about four and a half millions of marks current, or $1,282,500; and except under very extraordinary circumstances *not more than one-half that amount is in circulation*, and all duties, taxes, and excise must be paid in Hamburg currency. *The consequence is that it invariably commands a premium of 1 to 3 per cent.* Every year 1 senator and 10 citizens are appointed to transact the whole of the financial concern, both as to receipt and disbursement of the funds, *which is always in cash* and is every day deposited in the bank to the credit of the chancery; and on being paid out the citizen to whose department the payment belongs must appear personally with the check or order, stating the amount and to whom to be paid. The person receiving very seldom keeps the money, *preferring to dispose of it to a money changer at a premium*, and taking other coin at a discount, of which there is a great variety and too large amount constantly in circulation, and on which in his daily payment *he loses nothing*, and those who have payments to make to the Government apply to the *money changers again for Hamburg currency*, which keeps it in constant motion; and I believe it frequently occurs that the bags which are sealed and labeled with the amount are again returned to the bank without being opened.

"With great respect, your obedient servant,

"JOHN CUTHBERT.

"To the Hon. LEVI WOODBURY,
"*Secretary of the Treasury, Washington, D. C.*"

This letter is found in Senate document, page 113, of the session of 1838–39.

ally for its privileges while rendering us those services. By the subtreasury, according to the estimate of the Secretary of the Treasury, who is the warm advocate of the system, and which estimate is the lowest made by anyone, the same services are to cost $60,000. Mr. Rives, who, to say the least, is equally talented and honest, estimates that these services under the subtreasury system can not cost less than $600,000. For the sake of liberality, let us suppose that the estimates of the Secretary and Mr. Rives are the two extremes and that their mean is about the true estimate, and we shall then find that when to that sum is added the $75,000 which the bank paid us, the difference between the two systems, in favor of the bank and against the subtreasury, is $405,000 a year. This sum, though small when compared to the many millions annually expended by the General Government, is, when viewed by itself, very large, and much too large, when viewed in any light, to be thrown away once a year for nothing. It is sufficient to pay the pensions of more than 4,000 Revolutionary soldiers or to purchase a 40-acre tract of Government land for each one of more than 8,000 poor families.

To the argument against the subtreasury on the score of additional expense its friends, so far as I know, attempt no answer. They choose, so far as I can learn, to treat the throwing away $405,000 once a year as a matter entirely too small to merit their democratic notice.

I now come to the proposition that it would be less secure than a national bank as a depository of the public money. The experience of the past, I think, proves the truth of this. And here, inasmuch as I rely chiefly upon experience to establish it, let me ask, How is it that we know anything—that any event will occur, that any combination of circumstances will produce a certain result—except by the analogies of past experience? What has once happened will invariably happen again when the same circumstances which combined to produce it shall again combine in the same way. We all feel that we know that a blast of wind would extinguish the flame of the candle that stands by me. How do we know it? We have never seen this flame thus extinguished. We know it because we have seen through all our lives that a blast of wind extinguishes the flame of a candle whenever it is thrown fully upon it. Again, we all feel to *know* that we have to die. How? We have never died yet. We know it because we know, or at least think we know, that of all the beings just like ourselves who have been coming into the world for 6,000 years not one is now living who was here 200 years ago.

I repeat, then, that we know nothing of what will happen in future but by the analogy of experience, and that the fair analogy of past experience fully proves that the subtreasury would be a less safe depository of the public money than a national bank. Examine it. By the subtreasury scheme the public money is to be kept, between the times of its collection and disbursement, by treasurers of the Mint, customhouse officers, land officers, and some new officers to be appointed in the same way that those first enumerated are. Has a year passed since the organization of the Government that numerous defalcations have not occurred among this class of officers? Look at Swartwout, with his $1,200,000; Price, with his $75,000; Harris, with his $109,000; Hawkins, with his $100,000; Linn, with his $55,000; together with some 2,500 lesser lights. Place the public money again in these same hands, and will it not again go the same way? Most assuredly it will. But turn to the history of the national bank in this country and we shall there see that those banks performed the fiscal operations of the Government through a period of 40 years, received, safely kept, transferred, disbursed, an aggregate of nearly $500,000,000, and that in all that time and with all that money not one dollar nor one cent did the Government lose by them. Place the public money again in a similar depository, and will it not again be safe?

But, conclusive as the experience of 50 years is that individuals are unsafe depositories of the public money, and of 40 years that national banks are safe depositories, we are not left to rely solely upon that experience for the truth of those propositions. If experience were silent upon the subject, conclusive reasons could be shown for the truth of them.

It is often urged that to say the public money will be more secure in a national bank than in the hands of individuals, as proposed in the subtreasury, is to say that bank directors and bank officers are more honest than sworn officers of the Government. Not so. We insist on no such thing. We say that public officers, selected with reference to their capacity and honesty—which, by the way, we deny is the practice in these days—stand an equal chance, precisely, of being capable and honest, with bank officers selected by the same rule. We further say that with however much care selections may be made there will be some unfaithful and dishonest in both classes. The experience of the whole world, in all bygone times, proves this true. The Saviour of the world chose twelve disciples, and even one of that small number, selected by superhuman wisdom, turned out a traitor and a devil. And it may not be improper here to add that Judas carried the bag, was the subtreasurer of the Saviour and his disciples.

We then do not say, nor need we say to maintain our proposition, that bank officers are more honest than Government officers, selected by the same rule. What we do say is that the *interest* of the subtreasurer is *against his duty*—while the *interest* of the bank is *on the side of its duty*. Take instances—a subtreasurer has in his hands $100 000 of public money. His *duty* says, "You ought to pay this money over," but his *interest* says, "You ought to run away with this sum and be a nabob the balance of your life." And who that knows anything of human nature doubts that in many instances interest will prevail over duty, and that the subtreasurer will prefer opulent knavery in a foreign land to honest poverty at home? But how different is it with a bank? Besides the Government money deposited with it, it is doing business upon a large capital of its own. If it proves faithful to the Government, it continues its business; if unfaithful, it forfeits its charter, breaks up its business, and thereby loses more than all it can make by seizing upon the Government funds in its possession. Its *interest*, therefore, is on the side of its duty—is to be faithful to the Government, and consequently, even the dishonest amongst its managers have no temptation to be faithless to it. Even if robberies happen in the bank, the losses are borne by the bank, and the Government loses nothing. It is for this reason, then, that we say a bank is the more secure. It is because of that admirable feature in the bank system which places the *interest* and the *duty* of the depository both on one side; whereas that feature can never enter into the subtreasury system. By the latter the *interest* of the individuals keeping the public money will wage an eternal war with their *duty*, and in very many instances must be victorious. In answer to the argument drawn from the fact that individual depositories of public money have always proved unsafe, it is urged that even if we had a national bank the money has to *pass through* the same individual hands that it will under the subtreasury. This is only partially true in fact and wholly fallacious in argument.

It is only partially true, in fact, because by the subtreasury bill four receivers general are to be appointed by the President and Senate. These are new officers, and consequently it can not be true that the money, or any portion of it, has heretofore passed through their hands. These four new officers are to be located at New York, Boston, Charleston, and St. Louis, and consequently are to be the depositories of all the money collected at or near those points, so that more than three-fourths of the public money will fall into the keeping of these four new officers, which did not exist as officers under the national-bank system. It is only partially true, then, that the money passes through the same hands under a national bank as it would do under the subtreasury.

It is true that under either system individuals must be employed as collectors of the customs, receivers at the land offices, and so forth, but the difference is that under the bank system the receivers of all sorts receive the money and pay it over to the bank once a week when the collections are large, and once a month when they are small, whereas by the subtreasury system individuals are not only to collect the money, but they are to *keep* it also, or pay it over to other individuals equally unsafe as themselves, to be by them kept, until it is wanted for disbursement. It is during the time that it is thus lying idle in their hands that opportunity is afforded and temptation held out to them to embezzle and escape with it. By the bank system each collector or receiver is to deposit in bank all the money in his hands at the end of each month at most, and to send the bank certificates of deposits to the Secretary of the Treasury. Whenever that certificate of deposit fails to arrive at the proper time the Secretary *knows* that the officer thus failing is acting the knave, and if he is himself disposed to do his duty he has him immediately removed from office and thereby cuts him off from the possibility of embezzling but little more than the receipts of a single month. But by the subtreasury system the money is to lie month after month in the hands of individuals; larger amounts are to accumulate in the hands of the receivers general and some others, by perhaps ten to one, than ever accumulated in the hands of individuals before. Yet during all this time, in relation to this great stake, the Secretary of the Treasury can comparatively know nothing. Reports, to be sure, he will have, but reports are often false, and always false when made by a knave to cloak his knavery. Long expe-

rience has shown that nothing short of an actual demand of the money will expose an adroit peculator. Ask him for reports and he will give them to your heart's content. Send agents to examine and count the money in his hands, and he will borrow of a friend merely to be counted and then returned, a sufficient sum to make the sum square. Try what you will, it will all fail till you demand the money—then, and not until then, the truth will come.

The sum of the whole matter I take to be this: Under the bank system, while sums of money, by the law, were permitted to lie in the hands of individuals, *for very short periods only*, many and very large defalcations occurred by those individuals. Under the subtreasury system *much larger sums* are to lie in the hands of individuals *for much longer periods*, thereby multiplying *temptation* in proportion as the sums *are larger;* and multiplying *opportunity* in proportion as the periods *are longer* to, and for, those individuals to embezzle and escape with the public treasure; and, therefore, just in the proportion that the *temptation* and the *opportunity* are greater under the subtreasury than the bank system, will the peculations and defalcations be greater under the former than they have been under the latter. The truth of this, independent of actual experience, is but little less than self-evident. I therefore leave it.

But it is said, and truly, too, that there is to be a *penitentiary department* to the subtreasury. This, the advocates of the system will have it, will be a "*king-cure-all.*" Before I go further may I not ask if the *penitentiary department* is not itself an admission that they expect the public money to be stolen? Why build the cage if they expect to catch no birds? But to the question how effectual the penitentiary will be in preventing defalcations. How effectual have penitentiaries heretofore been in preventing the crimes they were established to suppress? Has not confinement in them long been the legal penalty of larceny, forgery, robbery, and many other crimes in almost all the States? And yet, are not those crimes committed weekly, daily, nay, and even hourly in every one of those States? Again, the gallows has long been the penalty of murder, and yet we scarcely open a newspaper that does not relate a new case of that crime. If, then, the penitentiary has ever *heretofore* failed to prevent larceny, forgery, and robbery, and the gallows and halter have likewise failed to prevent murder, by what process of reasoning, I ask, is it that we are to conclude the penitentiary will *hereafter* prevent the stealing of the public money? But our opponents seem to think they answer the charge, that the money will be stolen, fully, if they can show that they will bring the offenders to punishment. Not so. Will the punishment of the thief bring back the stolen money? No more so than the hanging of a murderer restores his victim to life. What is the object desired? Certainly not the greatest number of thieves we can catch, but that the money may not be stolen. If, then, any plan can be devised for depositing the public treasure, where it will be never stolen, never embezzled, is not that the plan to be adopted? Turn, then, to a national bank and you have that plan, fully and completely successful, as tested by the experience of 40 years.

I have now done with the three propositions that the subtreasury would injuriously affect the currency, and would be more *expensive* and *less secure* as a depository of the public money than a national bank. How far I have succeeded in establishing their truth is for others to judge.

Omitting, for want of time, what I had intended to say as to the effect of the subtreasury to bring the public money under the more immediate control of the President than it has ever heretofore been, I now only ask the audience, when Mr. Calhoun shall answer me, *to hold him to the questions.* Permit him not to escape them. Require him *either* to show that the subtreasury *would not* injuriously affect the *currency*, or that we should in some way receive an equivalent for that injurious effect. Require him *either* to show that the subtreasury *would not be more expensive* as a fiscal agent than a bank or that we should, in some way, be compensated for that additional expense. And particularly require him to show that the public money *would be as secure* in the subtreasury as in a national bank, or that the additional *insecurity* would be overbalanced by some good result of the proposed change.

No one of them, in my humble judgment, will he be able to do; and I venture the prediction, and ask that it may be especially noted, *that he will not attempt to answer the proposition that the subtreasury would be more expensive than a national bank as a fiscal agent of the Government.*

As a sweeping objection to a national bank, and consequently an argument in favor of the subtreasury as a substitute for it, it often has been urged, and doubtless will be again, that such a bank is unconstitutional. We have often heretofore shown, and therefore need not in detail do so again, that a majority of the Revolutionary patriarchs whoever acted officially upon the question, commencing with Gen. Washington and embracing Gen. Jackson, the larger number of the signers of the Declaration and of the framers of the Constitution who were in the Congress of 1791 have decided upon their oaths that such a bank is constitutional. We have also shown that the votes of Congress have more often been in favor of than against its constitutionality. In addition to all this we have shown that the Supreme Court—that tribunal which the Constitution has itself established to decide constitutional questions—has solemnly decided that such a bank is constitutional. Protesting that these authorities ought to settle the question ought to be conclusive I will not urge them further now. I now propose to take a view of the question which I have not known to be taken by anyone before. It is that whatever objection ever has or ever can be made to the constitutionality of a bank will apply with equal force in its whole length, breadth, and proportions to the subtreasury. Our opponents say there is no *express* authority in the Constitution to establish a *bank*, and therefore a bank is unconstitutional; but we, with equal truth, may say there is no *express* authority in the Constitution to establish a *subtreasury*, and therefore a subtreasury is unconstitutional. Who, then, has the advantage of this "*express authority*" argument? Does it not cut equally both ways? Does it not wound them as deeply and as deadly as it does us?

Our position is that both are constitutional. The Constitution enumerates expressly several powers which Congress may exercise, superadded to which is a general authority, "to make all laws necessary and proper," for carrying into effect all the powers vested by the Constitution of the Government of the United States. One of the express powers given Congress is "to lay and collect taxes, duties, imposts, and excises; to pay the debts and provide for the common defense and general welfare of the United States." Now, Congress is expressly authorized to make all laws necessary and proper for carrying this power into execution. To carry it into execution it is indispensably necessary to collect, safely keep, transfer, and disburse a revenue. To do this a bank is "necessary and proper." But, say our opponents, to authorize the making of a bank the *necessity* must be so great that the power just recited would be nugatory without it, and that that *necessity* is expressly negatived by the fact that they have got along *10* whole years without such a *bank*. Immediately we turn on them and say that that sort of *necessity* for a *subtreasury* does not exist, because we have got along *40* whole years without one. And this time it may be observed that we are not merely equal with them in the argument, but we beat them *40* to *10*, or which is the same thing—*4* to *1*. On examination it will be found that the absurd rule which prescribes that before we can constitutionally adopt a national bank as a fiscal agent we must show an *indispensable necessity* for it will exclude every sort of fiscal agent that the mind of man can conceive. A *bank* is not *indispensable*, because we can take the *subtreasury;* the *subtreasury* is not *indispensable* because we can take the *bank*. The rule is too absurd to need further comment. Upon the phrase "*necessary and proper*" in the Constitution it seems to me more reasonable to say that *some* fiscal agent is *indispensably necessary;* but inasmuch as no *particular sort* of agent is thus *indispensable* because some *other* sort might be adopted we are left to choose that sort of agent which may be most "*proper*" on grounds of expediency.

But it is said the Constitution gives no power to Congress to pass acts of incorporation. Indeed! What is the passing an act of incorporation but the *making of a law?* Is anyone wise enough to tell? The Constitution expressly gives Congress power "*to pass all laws necessary and proper*," etc. If, then, the passing of a bank charter be the "*making a law necessary and proper*," is it not clearly within the constitutional power of Congress to do so?

I now leave the bank and the subtreasury to try to answer in a brief way some of the arguments which on previous evenings here have been urged by Messrs. Lamborn and Douglas. Mr. Lamborn admits that "*errors*," as he charitably calls them, have occurred under the present and late administration, but he insists that as great "*errors*" have occurred under all administrations. This we respectfully deny. We admit that errors may have occurred under all administrations, but we insist that there is *no parallel* between them and those of the last two. If they can show that their errors are no greater in number and magnitude than those of former times, we call off the dogs.

But they can do no such thing. To be brief, I will now attempt a contrast of the "errors" of the two latter with those of former administrations in relation to the public expenditures

only. What I am now about to say as to the expenditures will be in all cases exclusive of payments on the national debt. By an examination of authentic public documents, consisting of the regular series of annual reports made by all the Secretaries of the Treasury from the establishment of the Government down to the close of the year 1838, the following contracts will be presented.

First. The last *17* years, under Gen. Jackson and Mr. Van Buren, cost more money than the first 27 did (including the heavy expenses of the late British War), under Washington, Adams, Jefferson, and Madison.

Second. The last year of J. Q. Adams's administration cost, in round numbers, 13 millions, being about $1 to each soul in the Nation; the last (1838) of Mr. Van Buren's cost 40 millions, being about $2.50 to each soul, and being larger than the expenditure of Mr. Adams in the proportion of *5* to *2*.

Third. The highest annual expenditure during the late British War being in 1814, and while we had in actual service rising 188,000 militia, together with the whole Regular Army, swelling the number to greatly over 200,000, and they to be clad, fed, and transported from point to point with great rapidity and corresponding expense and to be furnished with arms and ammunition, and they to be transported in like manner and at like expense, was no more in round numbers than *30* millions, whereas the annual expenditure of 1838, under Mr. Van Buren, and while we were at peace with every government in the world, was 40 millions, being over the highest year of the late and very expensive war in the proportion of *4* to *3*.

Fourth. Gen. Washington administered the Government *eight* years for 16 millions; Mr. Van Buren administered it *one* year (1838) for 40 millions, so that Mr. Van Buren expended *twice and a half* as much in *one* year as Gen. Washington did in *eight*, and being in the proportion of *20* to *1*, or, in other words, had Gen. Washington administered the Government *20* years at the same average expense that he did for 8 he would have carried us through the whole *20* for no more money than Mr. Van Buren has expended in getting us through the single *1* of 1838.

Other facts equally astounding might be presented from the same authentic document, but I deem the foregoing abundantly sufficient to establish the proposition that there is no parallel between the "*errors*" of the present and late administrations and those of former times, and that Mr. Van Buren is wholly out of the line of all precedents.

But Mr. Douglas, seeing that the enormous expenditure of 1838 has no parallel in the olden times, comes in with a long list of excuses for it. This list of excuses I will rapidly examine and show, as I think, that the few of them which are true prove nothing, and that the majority of them are wholly untrue in fact. He first says that the expenditures of that year were made under the appropriations of Congress, *one branch of which was a Whig body*. It is true that those expenditures were made under the appropriations of Congress, but it is *untrue* that either branch of Congress was a *Whig* body. The Senate had fallen into the hands of the administration more than a year before, as proven by the passage of the expunging resolution, and at the time those appropriations were made there were too few Whigs in that body to make a respectable struggle in point of numbers upon any question. This is notorious to all. The House of Representatives that voted those appropriations was the same that first assembled at the called session of September, 1838. Although it refused to pass the subtreasury bill, a majority of its members were elected as friends of the administration and proved their adherence to it by the election of a Van Buren Speaker and two Van Buren clerks. It is clear, then, that both branches of the Congress that passed those appropriations were in the hands of Mr. Van Buren's friends, so that the Whigs had no power to arrest them, as Mr. Douglas would insist. And is not the charge of extravagant expenditures equally well sustained, if shown to have been made by a Van Buren Congress, as if shown to have been made in any other way? A Van Buren Congress passed the bill, and Mr. Van Buren himself approved them, and consequently the party are wholly responsible for them.

Mr. Douglas next says that a portion of the expenditures of that year was made for the purchase of public lands from the Indians. Now, it happens that no such purchase was made during that year. It is true that some money was paid that year in pursuance of Indian treaties, but no more, or rather not as much as had been paid on the same account in each of several preceding years.

Next he says that the Florida War created many millions of this year's expenditure. This is true, and it is also true that during that and every other year that that war has existed it has cost three or four times as much as it would have done under an honest and judicious administration of the Government. The large sums foolishly, not to say corruptly, thrown away in that war constitute one of the just causes of complaint against the administration. Take a single instance. The agents of the Government in connection with that war needed a certain steamboat; the owner proposed to sell it for $10,000. The agents refused to give that sum, but hired the boat at $100 per day and kept it at that hire till it amounted to $92,000. This fact is not found in the public reports, but depends with me on the verbal statement of an officer of the Navy, who says he knows it to be true. That the administration ought to be credited for the *reasonable* expenses of the Florida War we have never denied. Those *reasonable* charges, we say, could not exceed one or two millions a year. Deduct such a sum from the 40-million expenditure of 1838 and the remainder will still be without a parallel as an annual expenditure.

Again, Mr. Douglas says that the removal of the Indians to the country west of the Mississippi created much of the expenditure of 1838. I have examined the public documents in relation to this matter and find that less was paid for the removal of Indians in that than in some former years. The whole sum expended on that account in that year did not much exceed one-quarter of a million. For this small sum, although we do not think the administration entitled to credit, because large sums have been expended in the same way in former years, we consent it may take one and make the most of it.

Next Mr. Douglas says that 5 millions of the expenditures of 1838 consisted of the payment of the French indemnity money to its individual claimants. I have carefully examined the public documents, and thereby find this statement to be wholly untrue. Of the 40 millions of dollars expended in 1838, I am enabled to say positively that not $1 consisted of payments on the French indemnities. So much for that excuse.

Next comes the Post Office. He says that 5 millions were expended during that year to sustain that department. By a like examination of public documents I find this also wholly untrue. Of the so-often-mentioned 40 millions, not $1 went to the Post Office. I am glad, however, that the Post Office has been referred to, because it warrants me in digressing a little to inquire how it is that that department of the Government has become a *charge* upon the Treasury, whereas under Mr. Adams and the Presidents before him it not only, to use a homely phrase, cut its own fodder, but actually threw a surplus into the Treasury. Although nothing of the 40 millions was paid on that account in 1838, it is true that 5 millions are appropriated *to be so expended* in 1839, showing clearly that the department has become a *charge* upon the Treasury. How has this happened? I account for it in this way: The chief expense of the Post Office Department consists of the payments of contractors for carrying the mail. Contracts for carrying the mails are by law let to the lowest bidders after advertisement. This plan introduces competition and insures the transportation of the mails at fair prices so long as it is faithfully adhered to. It has ever been adhered to until Mr. Barry was made Postmaster General. When he came into office he formed the purpose of throwing the mail contracts into the hands of his friends to the exclusion of his opponents. To effect this the plan of letting to the lowest bidder must be evaded, and it must be done in this way: The favorite bid less by perhaps three or four hundred per cent than the contract could be performed for, and consequently, shutting out all honest competition, became the contractor. The Postmaster General would immediately add some slight additional duty to the contract, and under the pretense of extra allowance for extra services run the contract to double, triple, and often quadruple what honest and fair bidders had proposed to take it at. In 1834 the finances of the department had become so deranged that total concealment was no longer possible, and consequently a committee of the Senate were directed to make a thorough investigation of its affairs. Their report is found in the Senate Documents of 1833-34, volume 5, Document 422, which documents may be seen at the Secretary's office, and I presume elsewhere in the State. The report shows numerous cases of similar import, of one of which I give the substance. The contract for carrying the mail upon a certain route had expired, and of course was to be let again. The old contractor offered to take it for $300 a year, the mail to be transported thereon three times a week, or for $600 transported daily. One James Reeside bid $40 for three times a week, or $99 daily, and of course received the contract. On the examination of the committee it was discovered that Reeside had received for the service on this route, which he had contracted to render for less than $100, the enormous sum of $1,999. This is but a

single case. Many similar ones, covering some 10 or 20 pages of a large volume, are given in that report. The department was found to be insolvent to the amount of half a million and to have been so grossly mismanaged, or, rather, so corruptly managed in almost every particular that the best friends of the Postmaster General made no defense of his administration of it. They admitted that he was wholly unqualified for that office, but still he was retained in it by the President until he resigned voluntarily about a year afterwards. And when he resigned it what do you think became of him? Why, he sunk it to obscurity and disgrace, to be sure, you will say. No such thing. Well, then, what did become of him? Why, the President immediately expressed his high disapprobation of his almost unequaled incapacity and corruption by appointing him to a foreign mission, with a salary and outfit of $18,000 a year. The party now attempt to throw Barry off and to avoid the responsibility of his sins. Did not the President indorse those sins when on the very heel of their commission he appointed their author to the very highest and most honorable office in his gift and which is but a single step behind the very goal of American political ambition?

I return to another of Mr. Douglas's excuses for the expenditures of 1838, at the same time announcing the pleasing intelligence that this is the last one. He says that ten millions of that year's expenditure was a contingent appropriation, to prosecute an anticipated war with Great Britain on the Maine boundary question. Few words will settle this: First, that the ten millions appropriated was not *made* till 1839, and consequently could not have been expended in 1838; and, second, although it was appropriated, it has never been expended at all. Those who heard Mr. Douglas recollect that he indulged himself in a contemptuous expression of pity for me. "Now he's got me," thought I; but when he went on to say that five millions of the expenditure of 1838 were payments of the French indemnities, *which I knew to be untrue;* that five millions had been for the Post Office, *which I knew to be untrue;* that ten millions had been for the Maine boundary war, *which I not only knew to be untrue, but supremely ridiculous also;* and when I saw that he was stupid enough to hope that I would permit such groundless and audacious assertions to go unexposed, I readily consented that on the score both of veracity and sagacity the audience should judge whether he or I were the more deserving of the world's contempt.

Mr. Lamborn insists that the difference between the Van Buren Party and the Whigs is that, although the former sometimes err in *practice*, they are always correct in *principle*, whereas the latter are wrong in *principle;* and the better to impress this proposition he uses a figurative expression in these words: "*The Democrats are vulnerable in the heel, but they are sound in the head and the heart.*" The first branch of the figure—that is, that the Democrats are vulnerable in the heel—I admit is not merely figuratively but literally true. Who that looks but for a moment at their Swartwouts, their Prices, their Herringtons, and their hundreds of others scampering away with the public money to Texas, to Europe, and to every spot of the earth where a villain may hope to find refuge from justice, can at all doubt that they are most distressingly affected in their *heels* with a species of "*running itch.*" It seems that this malady of their heels operates on these *sound-headed* and *honest-hearted* creatures very much like the cork leg in the comic song did on its owner, which, when he had once got started on it, the more he tried to stop it the more it would run away. At the hazard of wearing this point threadbare I will relate an anecdote which seems too strikingly in point to be omitted. A witty Irish soldier who was always boasting of his bravery when no danger was near, but who invariably retreated without orders at the first charge of an engagement, being asked by his captain why he did so, replied: "Captain, I have as brave a *heart* as Julius Cæsar ever had, but somehow or other, whenever danger approaches, my *cowardly* legs will run away with it." So with Mr. Lamborn's party. They take the public money *into* their hand for the most laudable purpose that *wise heads* and *honest hearts* can dictate, but before they can possibly get it *out* again their rascally "*vulnerable heels*" will run away with them.

Seriously, this proposition of Mr. Lamborn is nothing more or less than a request that his party may be tried by their *professions* instead of their *practices*. Perhaps no position that the party assumes is more liable to or more deserving of exposure than this very modest request, and nothing but the unwarrantable length to which I have already extended these remarks forbids me now attempting to expose it. For the reason given I pass it by.

I shall advert to but one more point.

Mr. Lamborn refers to the late elections in the States and from their results confidently predicts that every State in the Union will vote for Mr. Van Buren at the next presidential election. Address *that* argument to *cowards* and to *knaves;* with the *free* and the *brave* it will effect nothing. It *may* be true; if it *must*, let it. Many free countries have lost their liberty, and *ours may* lose hers; but if she shall, be it my proudest plume, not that I was the *last* to desert, but that I *never* deserted her. I know that the great volcano at Washington, aroused and directed by the evil spirit that reigns there, is belching forth the lava of political corruption in a current broad and deep, which is sweeping with frightful velocity over the whole length and breadth of the land, bidding fair to leave unscathed no green spot or living thing, while on its bosom are riding like demons on the waves of hell the imps of that evil spirit and fiendishly taunting all those who dare resist its destroying course with the hopelessness of their effort; and knowing this, I can not deny that all may be swept away. Broken by it, I, too, may be; bow to it I never will. The *probability* that we may fall in the struggle *ought not* to deter us from the support of a cause we believe to be just; it *shall not* deter me. If ever I feel the soul within me elevate and expand to those dimensions not wholly unworthy of its Almighty Architect it is when I contemplate the cause of my country, deserted by all the world beside, and I standing up boldly and alone and hurling defiance at her victorious oppressors. Here, without contemplating consequences, before high Heaven and in the face of the world, I swear eternal fidelity to the just cause, as I deem it, of the land of my life, my liberty, and my love. And who that thinks with me will not fearlessly adopt the oath that I take. Let none falter who thinks he is right and we may succeed. But if, after all, we shall fail, be it so. We still shall have the proud consolation of saying to our consciences and to the departed shade of our country's freedom that the cause approved of our judgment and adored of our hearts, in disaster, in chains, in torture, in death, we NEVER faltered in defending.

A pamphlet copy of this speech, printed soon after its delivery, in December, 1839, and from which this *reprint* was made, was preserved by me from my boyhood.

THOS. J. HENDERSON.

WASHINGTON, D. C., *March 5, 1907.*

Finance Forty Years Ago and Now.

EXTENSION OF REMARKS

OF

HON. ISAAC R. SHERWOOD,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report on the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. SHERWOOD. Mr. Speaker, on February 7, 1874, almost 40 years ago, when I was on earth the first time representing the same congressional district I am trying to represent now, I made a speech on this historic floor on finance and currency. This was immediately following the disastrous money panic of 1873, caused by a contraction of the currency. I avail myself of the special rule of the House to reprint the vital portions of that 1874 speech. At that time the national banks were limited to the aggregate issue of $344,000,000, as I remember. The Republican Party as an organization and all the leading journals east of the Allegheny Mountains held that no more paper money should be issued. It was held that no matter how great the demand for currency might be, sound finance demanded that there should be no additional paper money supply, unless the Government and the banks held sufficient "coin of the realm"—gold and silver—to redeem every paper dollar, either at the United States Treasury or over the counters of the banks.

In 1874 the so-called sound-money devotees opposed free banking. They held that no more national banks should be organized, and that the national banks already organized should not be allowed to issue any additional currency.

All those who opposed this so-called sound-money scheme were denounced as "rag-money lunatics," and they were very

generally driven out of public life. And now, after 40 years of experience in fiscal economics, with two disastrous money panics fresh in memory—1893 and 1907—we have just enacted a banking and currency law that provides for more inflation of paper currency than even the wildest "rag-money lunatics" of 1874 ever advocated, either in or out of Congress. I rejoice to know that I have lived through to the end of these 40 years to find myself now a "sound-money man," measured by my adolescent utterances on this floor in 1874.

And I had the pleasure and satisfaction 40 years after my speech in Congress as a "rag-money lunatic" to vote for a wholesome currency bill providing for more real rag-money inflation than I ever dreamed possible in the troubled days of 40 years ago; and I heard 298 yeas and only 60 nays uttered on the floor of Congress for this continental relief measure by the advanced students of fiscal economics of to-day, and no one said "rag-money lunatic" once.

Forty years ago the "sound-money" devotees, then in absolute control of Congress, held that the volume of paper money circulated must be limited to the amount of gold and silver that could be dug out of the earth. Now we have reached a period of sanity and sense, when we recognize that money is only a convenient agent for the exchange of all other values, and that the volume of paper money in circulation should be limited to the business and commercial needs of a rapidly growing country.

After wandering 40 years in the wilderness I am now in the "Promised Land" as a sound-money fiscal economist without changing my views on this distractful question.

I take a fair degree of satisfaction in reproducing from the CONGRESSIONAL RECORD the speech of February 7, 1874:

The House had under consideration the bill (H. R. 1572) entitled "An act to amend the several acts providing a national currency and to establish free banking, and for other purposes."

Mr. SHERWOOD. Mr. Speaker, my constituents need more banking facilities and more money, and my convictions are they ought to have both.

First, let me say I regard the obligation of the Government to redeem the greenback as binding, and I will vote for no measure to either depreciate the value of the greenback or impair the Government credit.

Congress in 1869, after the hue and cry of the western Democrats for repudiation had somewhat subsided, passed an act to strengthen the public credit. This act binds the Government to redeem the greenbacks at the earliest moment practicable.

At present specie redemption is not practicable. It is not even possible. The people who own the greenbacks and who are the sole judges of the question of practicability do not demand it now. The greenback is more popular than ever before, and it holds its value unimpaired amid all the clamors of all its detractors.

Upon all questions affecting the value of money legislation should be conservative. All legislation which disturbs existing values is immoral.

I represent a people whose wealth is to be realized not by loaning acquired capital but by developing our resources, a large agricultural constituency that has not yet reached its maximum development, and a commercial city—Toledo—of wonderful activity. We have all the elements of wealth. We want low taxes and cheap credits.

The Government can carry our obligations for 5 and 6 per cent. We can not assume our shares of these obligations less than 10 and 12 per cent. Our policy, therefore, is to let the Government carry our obligations until we become stronger and give us the benefit of this 4 and 5 per cent profit. We have tried to pay our debts too rapidly. The people of all sections need rest.

THE INJUSTICE OF CONTRACTION ILLUSTRATED.

Let me illustrate the injustice of contraction. In May, 1869, I borrow of a money lender in Hartford, Conn., 1,000 greenback dollars, payable in five years, at 10 per cent interest. This so-called $1,000 was worth the day it was borrowed $689 in gold. Specie payments are resumed, and in May, 1874, when my note is due, the value of the dollars I borrowed have increased 45 per cent, and besides paying my 10 per cent interest in gold or its equivalent I am also compelled to pay this Connecticut money lender $311 in gold, for which I have received no value whatever. Do I pay this money justly or am I cheated by a trick in legislation? Or say that a greenback dollar is worth 90 cents in gold to-day and I borrow 1,000 of these dollars, receiving 900 gold dollars in value, payable in one year, at 10 per cent. In the meantime specie payments are resumed, and next April, when my note is due, I am compelled to pay $1,100 in gold value for the use of $900 one year. I am thus swindled out of $100 principal and $100 interest; that is, I have paid $200 for the use of $900 one year, or over 22 per cent.

These cases illustrate the injustice the contractionists would perpetrate upon the entire debtor class of the country. There is no system of business morals or political economy that can successfully defend such a policy. It will not answer now to argue in justification that the credit class was robbed by the legal-tender act when the law was passed. That was a law of necessity and only defended as a war measure. There is no code of ethics by which the borrower of a gold dollar discharges his moral obligations by paying in a greenback worth 50 cents. The credit class was robbed in 1862, 1863, 1864, and 1865 through the necessities of war, but what can be the pretense to rob the debtor class in 1874, 1875, and 1876?

Nearly every city, town, and corporation in Ohio have contracted debts and negotiated bonds upon a depreciated currency. To elevate the standard of value now is to largely increase these obligations.

Measured by its effects, elevating a depreciated currency is more immoral than depreciating it, because the loss in the first instance, falls upon those able to bear it, while in the latter case it strikes down the struggling classes, by paralyzing trade and manufacture causes suffering to the laboring poor. The rights of both classes, debtor and credit, are sacred, and Congress has no moral right to increase the obligations of one or impair the obligations of the other.

FREE BANKING INDORSED.

A national free-banking law, with proper guards and checks, can not depreciate the value of the greenbacks. The Government debt is not increased nor are additional obligations incurred by the issue of currency based upon Government bonds already sold.

Again, the money circulation of this country should be divorced as far as possible from the control of a political majority in Congress. The question of the value of a dollar should not be debated on the stump and decided anew with every ballot. The bill holder being secured and the value of a dollar fixed, the money supply should be regulated by the immutable laws of trade. Agriculture, commerce, and manufacture should each be the sole judges of its moneyed necessities.

OUR MONETARY SYSTEM DISCUSSED.

Much is read and said here by those who desire a contraction of the currency about our gross violation of the laws of political economy. Let us examine this matter with due deference.

The Government of the United States has undertaken the critical duty of supplying the moneyed necessities of the people. It has, by imposing excessive taxes upon State banks, driven them out of existence and to-day the money supply of this country is a monopoly.

For the past five years we have been increasing and extending the business of the country with marvelous rapidity; at the same time we have been withdrawing our money supply. This precipitated a panic with immense loss of property and general paralyzation of trade.

Now, what is the remedy? I believe it lies in supplying the element, the lack of which produced the panic. Others argue that a continuance of the cause which produced the panic will work its cure.

Here we join issue. Bleeding is not prescribed by physicians for debility in the patient caused by the loss of blood. The money circulation of a country is like the blood circulation of the individual. In order to promote a wholesome life and a healthful activity it must not only be sufficient in quality and quantity but it must permeate and penetrate the remotest extremities of being.

THE FUNCTIONS OF MONEY.

What is this vital element called money, and what are its functions? Money is but a generalized agent for the exchange of values. Its potential requisites are: First, absolute solvency; second, universal recognition of its value. Our present currency is solvent. It has the complete confidence of the entire business world; but it is not equitably diffused, nor is it sufficient in volume to perform all its functions.

INEQUALITIES OF OUR SYSTEM.

Look at our condition in the West. Ohio is not the worst sufferer, and yet the lack of currency there is most seriously felt. We have credit, capital, magnificent agricultural resources, immense mineral deposits of coal and iron, central location, with markets in every direction, yet we have not adequate banking facilities. Our State banks are taxed out of existence. The General Government declines to aid us, and we are in the grasp of a money monopoly.

During the progress of this debate all history has been ransacked by contractionists for evidence to fortify their positions. All the obscure pamphleteers of the last century whose works have drifted down through cheap auctions to the Congressional

Library have been dusted out and doctored and brought to the front. I have no objection to this resurrection of these dead voices, but in the light of the experience, knowledge, genius, and practical statesmanship of to-day why should we seek oracles of obscure tombstones?

We have learned something of transportation since Moses traveled for 40 years in the wilderness. We have learned something of electricity since Franklin touched the womb of the lightning, and I believe we have learned something of government and finance since George III and Adam Smith.

McCullough, in his able contribution to the Encyclopedia Britannica, in speaking of Adam Smith and other writers so often quoted here, says:

> The opinions and theories of the eminent professors who have written on political economy have impeded the progress of the science and created a popular distrust in its established conclusions.

POLITICAL ECONOMISTS REVIEWED.

If we admit that the eminent scholars and patrons of English nobility, who have fortified the English system with their speculations, thoroughly understood the subject of finance, we have but one duty to perform—bend all the energies of legislation to secure enough of the gold of King Solomon to say to every emaciated greenback, "Thy redeemer liveth."

But while recognizing the fact that political economy is a science we do not thereby admit that the celebrated Englishmen thoroughly understood it. Political economy is the science of the laws that regulate the production, distribution, and consumption of the products of industry, called "wealth." Political economy is not the science of speculation, but of fact and experiment. The political economy of the books assumes that no medium for the exchange of commodities or values is competent to produce wealth, but some substance which of itself has value. It is argued that the greenback is a mere promise to pay money; that it only represents debt.

A distinguished Senator defines a greenback to be—

> A mendicant which the Government quarters upon its creditors in times of peace simply by assuring them that when they meet a creditor they may in turn transfer the mendicant upon him.

John Stuart Mill says:

> Paper currency is not money, because it is not a legal tender and does not close transactions.

The same author, in the same chapter, says:

> Bills of exchange and checks circulate as money and perform all the functions of money.

These are remarkable distinctions without a difference.

The paper currency described by Mill is based upon the assumption that the holder of the note can obtain the gold by presenting it at the bank of issue; the bill of exchange assumes that the holder may obtain the gold by presenting it where payable. And yet, according to Mill, the one performs all the functions of money and the other does not.

Amasa Walker, in his Wealth of Nations, says:

> Our legal-tender money transfers debts, but can not pay them. The creditor may accept the promises of the Government in place of that of an individual, but he receives no value.

Mann, in his admirable work on Paper Money, says this statement is erroneous in not recognizing the vital fact that—

> Such notes are as much money in the United States as gold in other countries.

Money derives its force from common consent. If men or governments choose to coin credits instead of gold and this credit performs all the functions of money, it is as potent to discharge debt and to produce wealth as coined gold. The same remarkable Walker, just referred to, puts a perfect nightmare of statistics into column to prove that when money is plenty interest is high. Consequently scarce money means cheap interest. On this theory a short apple crop means cheap cider and the hog cholera is the forerunner of cheap hams. If the grangers can only be made to see it, the true solution of the cheap transportation problem is to make a bonfire of about half the freight cars on our railroads, thereby reducing the freight tariff 50 per cent.

Whether we denounce the greenback as a mendicant or renounce it as a dishonored promise, it was a potent element in war, and is to-day the great mainspring moving all the machinery of Government. As an element of civilization it has taught us that there are other elements than gold and silver by which the affairs of men and nations may be conducted. And it is bound to stay with us in defiance of all the economics of all the Englishmen. Our own country, in war and peace, for the past 10 years has been conducted in defiance of every principle of military strategy and political economy laid down by the books.

The Declaration of Independence was not written in accordance with English precedent; and when the young Republic was started, as a feeble contribution to a new system of political economy, there was no celebrated Englishman to give it a send-off or a godsend with a book. And to-day, with nearly a century of successful history behind us—a century born the year Adam Smith sent into the world his Wealth of Nations—how marvelous it is that not one Englishman has fortified the Republic with a book. And yet we have not seriously felt the loss.

PAPER MONEY OF REVOLUTIONARY GOVERNMENTS.

The French assignats, the Continental money of the Revolution, and Confederate scrip are cited as evidence that money issued upon credit must eventually collapse. The French assignats, issued upon the confiscated property of the church, were the offspring of the French Revolution. They depreciated when the Austrian and Prussian veterans prepared to cross the French frontier; and when England joined the alliance, of course they went down. The Continental money of the American Revolution was born of necessity and utterly failed, because it was fortified with no central government and represented no property. The Confederate money never promised to pay anything until six months after the treaty of peace, and the treaty of peace has not yet been signed.

The John Law schemes and the South Sea Island bubbles that are injected into this discussion to illustrate the ultimate collapse of our greenback currency are not even respectable scarecrows.

The greenback is fortified by all the powers of a strong central government, and its redemption is pledged by the united property and resources of 40,000,000 people with over thirty billions of realized wealth. The greenback has been the most potent element in the march of empire, and the voice that seeks to dishonor it is inspired by the sordid greed of those who would speculate upon the misfortunes of their countrymen.

The abuses to which paper money has been subjected in times past by revolutionary and unstable governments is brought forward now as an argument against the greenback. Because the issue of paper money is liable to abuse is not a wholesome objection to our system. The power of the people to make laws through Congress often leads to unwholesome legislation; yet this is no valid argument against a Republic.

MONEY PANICS CONSIDERED.

If there had never been a money panic before the advent of the "greenback," the present howl and scowl of the book economists would be better heeded.

Adam Smith, in his Wealth of Nations, in commending a system of banking based upon gold, says of the Bank of Amsterdam, which failed soon after the book was published:

> At Amsterdam no point of faith is better established than that for every guilder circulated as bank money there is a corresponding guilder of gold or silver to be found in the treasures of the bank.

When Adam Smith wrote this, the bank which he commended and whose system of political economy he indorsed had been in a bankrupt condition for 50 years. The deposits of the bank in 1775, four years before it failed, and at the time Adam Smith wrote, amounted to thirty-five millions, and its annual business was four thousand millions.

If Adam Smith were living in this age of newspaper audacity and had ever commended Jay Cooke's system of banks, whose failure has not entailed a tithe of the loss and suffering caused by the failure of the Bank of Amsterdam, he would now be quoted as a profound scoundrel rather than as a profound thinker or political economist. There were more bank failures in this country under the old system, based upon gold, than bank-note reporters could record, and the power to detect wildcat and counterfeit money was an important feature in a business man's education, and there was never a decade without a panic.

ENGLAND'S SYSTEM DISCUSSED.

The English system of finance is held up here by the contractionists as a model, and yet England had panics in 1784, in 1793, in 1810, in 1819, in 1825, in 1837, in 1847, in 1857, in 1862, and in 1866. Still it is no fair criterion to compare this Nation with England. England is a credit nation; we are a debtor Nation. The wealth of England is realized; ours is hidden in soil and mine and is to be developed. England has been full of gold for two centuries and is constantly augmenting her supply from Australia, South America, and the United States; we are constantly parting with our already meager supply to pay our debts.

Until recently England made iron for half the world, and for nearly a century she enjoyed almost a monopoly in manufacture. During all the period of her war with France, from 1797 to 1815, England preserved the mastery of the seas, and during all that time she supplied the Continent of Europe with her manufactured articles. We must not forget that about this time science and engineering were just coming to the front with the steam engine, the spinning jenny, and the power loom.

These inventions, so successfully applied, gave England a mastery over all the nations of the Continent that defied both fate and fortune. She had within her reach the raw cotton of America, the flax of Russia, the sugar and coffee of the West Indies, and the rich commerce of the exhaustless East. She had her American, her African, her Australian, her Asiatic empires, all contributing to her wealth, all pouring gold and treasures into her lap.

The notes of the Bank of France are slightly depreciated, notwithstanding the fact that less than $600,000,000 of these notes are in circulation and the other important fact that she has $800,000,000 of gold coin.

In this country there has never been a time when we had 20 per cent of gold and silver to circulation. The percentage of specie to circulation in 1859, two years after the disastrous panic of 1857, was less than 15 per cent, and the percentage of specie to circulation that year exceeded that of any year since 1842.

CONCLUSION.

Let us put aside as unworthy of consideration the threadbare assertion that a wholesome money supply will demoralize the people by engendering speculation. This argument is based upon the theory that the business men of this country can not be trusted with their own business.

Currency is credit. This credit Webster defined as the vital air of modern commerce. The West to-day, with untold wealth to be developed, stands pleading for this credit. With this credit confidence will be restored, trade will revive, industry will start again her busy fingers, and the car of progress roll onward as before. Without it the solemn proclamation must go forth that we have reached the highest limit of our development.

Currency.

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. SABATH. Mr. Speaker, about 10 weeks ago, when the conference report on the tariff bill was being considered, I stated on the floor of this House that I considered the tariff bill then before us one of the most equitable and just tariff measures ever enacted and one that would bring about untold benefits to the American people, and that within a short space of time it would greatly reduce the high cost of living and thereby relieve the masses from the oppression of the protected interests.

During the debate some of the gentlemen on the other side, having the interests of their party nearer their hearts than the interests of their constituents and the people of the country, and not being able to criticize the provisions of that bill in any way, endeavored in each and every way possible to create in the minds of the American people the impression that the enactment of that bill would be bound to bring about a panic. No doubt they had in mind the fact that all of the special interests that have grown rich and accumulated millions and millions at the expense of the American consumer would come to their aid to bring about such conditions, but try as they might they have not succeeded.

That day on the floor of this House I also predicted that within a very short space of time the Democratic Party now in power would give the country currency legislation, which has been demanded of the Republican Party for over 20 years. I am pleased to see my prediction fulfilled. The currency measure which within 24 hours will become the law of the land is one of the greatest pieces of constructive legislation ever enacted by an American Congress.

It is true that a few of the Wall Street bankers and their understudies in other cities have endeavored to poison the minds of the American people against this legislation, believing that with their methods they would be able to defeat the honest efforts of the greatest President that ever occupied the White House and the efforts of the Democratic Congress, but they have been unsuccessful.

Mr. Speaker, for months, in their endeavor to stifle and to prevent this legislation, which will eventually free the commerce of this country from the domination of the Money Trust, these bankers have not hesitated to use all the power and influence at their command, and nothing has been too low or too mean for them to stoop to in their efforts to accomplish their purpose.

I know from my own personal experience that for over four months every bank in the United States controlled by the New York combination has waged a crusade against the credit of this country, and were it not for the timely warning and aid given by the Secretary of the Treasury they might have succeeded, as they did in 1907, in throwing the country into a panic that would have meant ruin to thousands upon thousands of business men and manufacturers of this country and disaster and hardship and misery to millions of laboring people. Their scheme was to call in all their loans, refuse to make new ones, advise their depositors against any investments, against entering into any enterprise, and refuse credit; it mattered not how good was the security offered by those seeking loans, nor how good their standing and credit had been in the past. By these unholy and damnable methods they aimed to wield such influence upon the Democratic Party that it would be forced to bow to the will of the Money Trust and refuse to enact this much-needed legislation.

Mr. Speaker, I am proud that the efforts of these money pirates were futile and that the Democratic Party has remained true to its pledges and promises and has gone ahead with this legislation, notwithstanding the scheming on the part of the New York gang of Wall Street financiers, and has passed a measure which the independent and honest bankers and business men of the country realize and recognize will release them from the clutches of the Wall Street monsters.

Representing, as I do in part, the greatest city in the world—not, perhaps, the largest in population, but the greatest in every other respect—and one which has been instrumental in forcing our commerce into every nook and corner of this globe, and to which in a great measure is due the daily increase in our exports and the fact that they now exceed our imports by more than $600,000,000 every year, I am in a position to judge the effect which the passage of this bill will have on our business. The live, energetic, and enterprising business men of our city, who have made possible its wonderful growth and progress, believe, with only a few exceptions, that this currency bill is legislation in the right direction and that it is much-needed legislation, which will bring about to our Nation new and lasting prosperity and make it free and independent of the evil influences of the past. They have the utmost confidence in its wise provisions, and so have I, and they are of the opinion that the special interests and the Money Trust will not be able in the future to prevent the honest business men and honest manufacturers from securing money at all times for legitimate enterprises and at reasonable rates.

The men who have devoted years and years of their lives to the study of the currency problem are nearly unanimous in the opinion that under this wise and prudent law panics will be a thing of the past.

Some gentlemen opposed to this legislation, as they are to all that is proposed in the interest of the people, appear to have become unduly alarmed over the fact that the Government retains so much power, for they claim that it is dangerous to the country for the Government to have control of the regional banks. In answer to this contention I will say that I would rather trust the great mass of the American people than leave the power of the regulation and control of the money of this country in the hands of a few Wall Street financiers.

I have the utmost confidence not only in President Wilson but in any man who is placed in the presidential chair by the American people, and I have the utmost faith that he, or whoever may succeed him, will not appoint as members of this reserve board men who would disregard the rights of the American people or be guilty of any act which would tend to bring about business depression or a panic. I regret to say that this is not true of the men who to-day control the money market of this country, and these latter are the very men who are seeking to create in the minds of the American people distrust of this currency reform.

Mr. Speaker, I entertain, with others on our side, the fondest hope that within a very short space of time we will be able to prove to the country beyond any doubt that no mistake has been made and that the interests of the people have been safeguarded and protected and that this law will not only restore confidence, but bring about still greater prosperity than ever before in the history of our Nation.

In conclusion, let me advise our Republican friends that instead of trying to bring about distrust and unrest they should join with us in trying to bring about peace, happiness, and

prosperity for all time to come, not only for the few but for all the people of this great and glorious country of ours.

Believing that it will be of interest, I take the liberty of inserting below a prepared statement which, in a measure, shows the most important features and provisions of the bill:

The first steps to be taken to bring into operation the Nation's new financial system will be through an organization committee consisting of the Secretary of the Treasury, Secretary of Agriculture, and Comptroller of the Currency. Banks have 60 days within which to file their applications for membership in the new system and one year's time is allowed before the Government will compel the dissolution of any national bank that refuses to join.

LOANS ON FARM MORTGAGES.

The new law will make little direct change in the operation of the present national banks, except to allow them to loan a certain amount of their funds upon farm mortgages.

Its chief purpose is to add a new piece of machinery to the banking system that will "take up the slack" during the changing business conditions of each year; that will give the banks a place to convert quickly their assets into cash in time of need; and that will bring out a new Federal currency when it is needed and retire it when money becomes "cheap."

Banks are now required to keep a certain percentage of their deposits as "reserves," part in cash in their own vaults and part of which may be redeposited in the banks of New York, Chicago, St. Louis, and other designated cities.

In times of sudden financial demands, when banks have loaned up to the full limit of their resources, these reserves furnish little relief, because if they are paid out to meet demands the banks are left in a precarious condition.

The basic principle of the new law is to get these reserve funds out into circulation when necessary without lessening the safety of any bank, and to provide a place to which local banks may rush in a crisis and get cash for the "prime commercial paper" they hold in their vaults.

This is to be accomplished through a chain of regional reserve banks or "reservoirs of reserves," in which all banks shall deposit a stated part of the money they are required to hold as reserves.

Under the new system when a financial flurry comes the banks can take commercial paper, such as notes, drafts, and bills of exchange, to these "reservoirs" and secure the use of their own reserves, or, if necessary, even the reserve of other banks, by depositing this security.

CASH FOR EMERGENCIES.

The new regional banks will receive about one-half of the bank reserves of the country. They in turn will be permitted to loan back to the banks all but 35 per cent of these reserves, so that in case of emergency millions of cash can be brought out into circulation quickly.

Banks will have to pay for a loan from any local bank, and this charge is expected to prevent the too free use of the reserves held by the regional banks.

A new form of paper currency is also provided for, to come out in case of emergency, and which is expected to go back into the hands of the Government when times are normal. These "Treasury notes" will be printed by the Government and issued through each regional reserve bank, and will bear the guaranty both of the regional bank and the Government.

If the demand for currency in any section of the country exceeds the supply of circulating money, a regional bank can secure this new money from the Government and put it into circulation, but a gold reserve of 40 per cent and commercial paper equal to the full value of the note must be held as a reserve behind each note so issued. This provision is expected to be the influence that will drive the new money back into retirement when it is no longer needed.

The following analysis presents the details of the new law without adhering closely to the technical division or language of the measure:

At the head of the system will stand a Federal reserve board at Washington, appointed by the President, and to consist of the Secretary of the Treasury, the Comptroller of the Currency, and five other members. Two of these shall be expert bankers, but none shall have banking affiliations or own bank stock during their service. This board will exercise general control over the entire system.

REGIONAL RESERVE BANKS.

The temporary "organization committee" or the Federal reserve board will select from 8 to 12 cities where regional reserve banks shall be located, and will divide the entire country geographically with these cities as the centers of districts.

All national banks in a district will be required to subscribe for the stock of the regional reserve bank in that district and to keep a portion of their reserves there.

Local banks will be known as "member banks," because they will own the stock of the regional reserve bank of their district. Each member bank will be required to take capital stock of the regional reserve bank equal to 6 per cent of the member bank's capital and surplus.

The capital of the regional bank will increase or decrease so that it always represents 6 per cent of the combined capital and surplus of all the banks of the district that have joined the system.

National banks are compelled to join, and State banks are permitted to if they bring their reserve requirements up to the standard set for national banks and submit to national examinations.

Public ownership of the stock of the regional reserve banks is permitted only in case enough banks do not join in any district to provide a capital stock of $4,000,000. In such event the public may purchase the stock in quantities limited to $25,000 for each individual, but the voting of this stock will be placed in the hands of Government representatives on the board of directors of the regional reserve bank.

EARNINGS TO BE FROM LOANS.

The regional reserve banks may do business only with their member banks, not with the public, except that certain "open-market operations," such as the purchase and sale of gold, Government or municipal bonds, and certain forms of bills of exchange are permitted. These banks will make their earnings from the loans made to member banks and from the purchase and sale of bonds and foreign bills of exchange.

Member banks will be compelled to put up in cash only one-half of their subscription to the capital of the new banks; the rest can be called for if needed by the regional bank. Dividends of 6 per cent will be paid on this stock to the member banks, and the stock will be nontaxable.

After these dividends are paid one-half of the surplus net earnings goes to create a regional surplus fund, and when this has reached 40 per cent of the regional bank's paid-in capital these earnings are to go into the United States Treasury. The remainder of the net earnings is to be paid to the United States as a franchise tax.

With the machinery thus created for a new banking system that is supplementary to the commercial banks of the country the law provides for a gradual transfer of part of the bank reserves to these new "reservoir" banks. In order not to disturb business conditions, or to withdraw too suddenly the heavy deposits of country banks in the large cities, the law provides that three years may be consumed in shifting these balances, and that, if necessary, part of the reserves transferred to the regional banks may consist of commercial paper.

THE REQUIRED RESERVE.

The amount of reserve required from every bank under the new law and the place where it must be kept are as follows:

Country banks: Total reserve required, 12 per cent of demand deposits and 5 per cent of time deposits. Five-twelfths must be kept in the bank's vaults for two years and four-twelfths after that time. For the first year two-twelfths must be kept in the regional bank, increasing one-twelfth each six months thereafter until it reaches five-twelfths of the total reserve. For three years the unallotted part of the reserves may be kept in the banks of reserve cities; after that time it must be kept either in the country bank vaults or in the regional reserve bank.

Reserve city banks: Total reserve required, 15 per cent of demand and 5 per cent of time deposits. Six-fifteenths must be kept in the bank vaults for the first two years and five-fifteenths after that time. Three-fifteenths must be kept in the regional reserve bank for the first year, increasing one-fifteenth every six months thereafter until it reaches six-fifteenths. For three years the unallotted portion of the reserve may be kept in other banks, in its own vaults, or in the regional bank; after that time, in one of the latter two places.

Central reserve city banks (New York, Chicago, and St. Louis): Total reserve required, 18 per cent of demand and 5 per cent of time deposits. Six-eighteenths must be kept in the bank's own vaults, seven-eighteenths in the regional reserve banks, and the remaining five-eighteenths in either place the bank may choose.

These immense funds of reserves from "member banks," together with Government moneys, will make up the deposits of the regional reserve banks. Each of these banks will be ad-

ministered by a board of 9 directors, 6 of whom will be elected by the banks and 3 appointed by the Federal reserve board.

The regional reserve banks may rediscount; that is, buy at a discount from its member banks "prime commercial paper" when the member banks desire to convert these assets into money. The exact terms of this important provision as to the character of paper upon which the regional reserve banks may furnish cash are as follows:

Upon the indorsement of any of its member banks, with a waiver of demand notice and protest by such bank, any Federal (regional) reserve bank may discount notes, drafts, and bills of exchange arising out of actual commercial transactions—that is, notes, drafts, and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used or are to be used for such purposes, the Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount within the meaning of this act.

Nothing in this act contained shall be construed to prohibit such notes, drafts, and bills of exchange secured by staple agricultural products or other goods, wares, or merchandise from being eligible for such discount; but such definition shall not include notes, drafts, or bills covering merely investments or issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities, except bonds and notes of the Government of the United States.

RULES TO DISCOUNT PAPER.

Notes, drafts, and bills admitted to discount under the terms of this paragraph must have a maturity at the time of discount of not more than 90 days: *Provided*, That notes, drafts, and bills drawn or issued for agricultural purposes or based on live stock, and having a maturity not exceeding six months, may be discounted in an amount to be limited to a percentage of the capital of the Federal (regional) reserve bank, to be ascertained and fixed by the Federal reserve board.

The regional banks may also discount "acceptances based on the importation or exportation of goods."

The new Treasury notes, which are to furnish the "elastic" element in the currency system, and to add to the country's circulating money in time of need, will come into use in the following way:

The notes will be printed by the Government, with a distinctive style for each regional reserve bank. One of the three directors named by the Federal reserve board for each regional reserve bank will be known as the "Federal reserve agent" for that bank, and a supply of the notes will be placed in his custody.

Should a regional bank desire to pay out more money than its cash resources will permit, the law provides that it may put some of its rediscounted commercial paper into the hands of the Federal reserve agent and receive in return the new Treasury notes.

PROTECTION BEHIND MONEY.

For each note that it puts out into circulation the regional reserve bank must set aside in gold 40 per cent of the value of the note as a guaranty for its redemption. This gold, with the commercial paper held by the Federal reserve agent, is the protection behind the new money; but these notes will also be guaranteed by the Government, and may be redeemed in gold at the United States Treasury.

Each regional bank, under the act, must keep a reserve of 35 per cent of the deposits it has received besides the 40 per cent gold reserve behind the Treasury notes it issues. If the gold reserve behind the notes falls below 40 per cent, a heavy tax is imposed on the bank, which in turn adds the tax to the rate it charges member banks for rediscounts.

This was designed to stop an overexpansion of currency. In times of sudden stress the Federal reserve board can suspend these reserve provisions in order to furnish quick relief to any community.

One regional bank can not again pay out the notes of another, except under a heavy tax. These notes are expected to return to the regional banks and be withdrawn from circulation when the need for their use passes.

None of the existing forms of currency, except the national bank notes, will be disturbed by the new law. The United States bonds, now used to secure the issue of national-bank notes, are to be taken up at the rate of $25,000,000 a year by the regional reserve banks, and new Treasury notes or short-term 3 per cent bonds will take their place. National-bank currency is expected gradually to retire.

CONTROL OVER THE SYSTEM.

The Federal reserve board will exercise final control over the entire operation of the system. It can compel one regional bank to loan another in time of need; can suspend all restrictions surrounding the reserves which regional banks must hold, and can remove directors of regional reserve banks whenever it is believed necessary.

While the banks retain control of the boards of the regional reserve banks, their connection with the Federal reserve board is only through an advisory council, made up of one representative from each Federal reserve district.

This council will meet in Washington, to confer with the Federal reserve board "on general business conditions" and to make recommendations and suggestions concerning discount rates, note issues, and reserve conditions.

An important change in national banking methods embraced in the new law will permit all national banks, except those in New York, Chicago, and St. Louis, to make direct loans on five-year farm mortgages, or up to one-third of their time deposits.

Another provision in the law permits national banks having a capital of $1,000,000 or more to open foreign branches. Similar authority is given to the regional reserve banks, the purpose being to facilitate the development of American trade abroad.

The Currency Bill.

EXTENSION OF REMARKS

OF

HON. JEFFERSON M. LEVY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. LEVY. Mr. Speaker, in publicly announcing my purpose on September 12 of this year to vote for the currency bill as it passed the House I closed my remarks with these words:

I trust my colleagues will give due consideration to the suggestions I have made, for my earnest purpose is to see the bill, when enacted into law, receive so hearty indorsement from the whole country as to advance the material prosperity of all interests, redound to the fame and glory of its authors, and mark an epoch in the successful administration of the triumphant Democratic Party.

That day has arrived, and it affords me unbounded pleasure to cast my vote for the measure as it has come from the conference committee.

Undoubtedly some improvements were made in the Senate amendments to our bill, but, on the other hand, there were other amendments made which, except for the tact, the perseverance, and the firm decisiveness of the chairman of our House committee, supported as he was by our illustrious President and efficient Secretary of the Treasury, would have defeated the benefits we sought to give to the country through a true currency-reform measure based on sound economic principles, a measure to encourage, protect, and advance all business interests and add to the general prosperity.

I hail the chairman of the House Banking and Currency Committee as a leader. Under his leadership we have given to the country a measure which will redound to his everlasting fame and add to the unquenchable glory of the Democratic Party. In the words of the distinguished senior Senator from my own State, though he condemned this measure, I will say that we do "confidently expect" the benefits of this bill to be "available to send the lifeblood into the enterprise of every quarter of our vast country, available to enable all the young and hopeful and energetic Americans, East and West and North and South, to embark in business ventures which will lift them up from the hard conditions of daily toil." This is true democracy, and we glory in it. If it comes from "easy money," then God be praised that "easy money" can be made by our action.

And why does this distinguished and learned Senator condemn our measure? He calls the issuance of Federal reserve notes "fiat money" and rightfully pictures in glowing eloquence the unbounded evils which the teachings of history prove to us always result from the immoderate use of "fiat money."

No one can condemn in more unmeasured terms than I do the issuance and use of "fiat money," and I fully indorse the opinion of the distinguished Senator as to the dire results which may follow from such issuance. But if he had read the Federal reserve act carefully and then consulted the standard works on economics and banking, or even looked into his Century Dictionary, he could never have fallen into such an egregious error as to put Federal reserve notes and "fiat money" in the same class, and he might have thus saved himself from the agony of soul he must have endured and the depths of despair into which he entered when he contemplated the suffering and

decay and the dire disasters to which his country is doomed under the operations of this bill.

The Century Dictionary defines the word "fiat" as "a command that something be done as if from divine or creative power," giving as indisputable authority for its definition no less than the third verse of the first chapter of Genesis, in the Vulgate, "Dixitque Deus fiat lux." It defines "fiat money" as "paper currency issued by a government as money, but not based on coin or bullion."

Do reserve notes issued by the Federal reserve banks come under this definition? Is there any command or mandate connected with their issuance? Are they issued for governmental purposes? Is it not provided that 40 per cent gold reserve shall be held inviolate for their redemption? Can you imagine anything further removed from "fiat money," in the way of things used as money, than are these Federal reserve notes? Indeed, a close analysis of the provisions of the bill shows that though these notes are nominally called a governmental issue, they have none of the attributes of a Government currency, and are in reality a true bank currency, with the Government as ultimate guarantor.

I confess I do not approve of this Government guaranty. Though the notes are so well secured under this law that there is no possibility of any loss, the objection is that it encourages in the minds of men the fallacious idea that the Government can create money or value by legislation, an idea which, carried to its ultimate conclusions, would be destructive of all values, if not of the Government itself.

The Government can not issue these notes for its own purposes; they have no existence as a "credit instrument" until paid out by the banks; the banks are required to provide the gold for their redemption and to redeem them when presented out of their own assets. The governmental function with reference to their issuance is to regulate the quantity measured by commercial demand, and to require the segregation of the evidences of such demand, in the form of commercial paper, to be pledged and held as collateral security.

I am the more enthusiastic over this bill in the final form in which it is to be enacted into law, because while it does not adopt in entirety the forms of the remedial legislation I suggested in the bill I introduced, H. R. 1937, at the beginning of the extra session, and reintroduced at the regular session, H. R. 27139, it follows the principles of that bill—principles I announced as those which must be followed in any sound legislation.

I stated the problem which was to be solved, in these words: "To legislate whereby the debts of the banks may be safely substituted by the people for coin, in their daily interchange of property and service, with a reasonable profit to the banks."

To solve this problem I stated the three essential requisites to be as follows:

First. To restore the bank function of note issue.

Second. To remove from our statutes the evidences of fruitless efforts to create values by legislation.

Third. To provide some reserve source of credit.

The Federal reserve act does all these things, and hence has my hearty approval.

First. It restores the bank function of note issue, in that it provides that such issue may be made in response to a commercial demand, and limits such issuance to such demand, throwing around the circulating note such safeguards in the way of gold reserve, and the form of collateral security required prior to issuance, as to prevent any dangerous expansion, and by its requirements for redemption secures contraction, the other element of elasticity.

Second. It removes from our statutes, after a short lapse of time—in order to allow gradual adjustment—the iniquitous practice of allowing banks to convert their own debts and the debts of other banks into reserve money through the fiction of counting balances "due from reserve agent" as such reserve money.

Third. It furnishes a reserve source of credit through the Federal reserve banks, thereby constituting in each of the several districts a bank performing the same functions for its member banks that the ordinary bank performs for its customers—that is, furnishing a debt which the member banks may safely substitute for coin, either in the form of a credit on its books, which the banks may transfer in settlement of balances or a circulating note which the member bank may obtain when wanted by its customers, this substitution not being limited by capital stock nor by United States bonds required as security, but limited only by legitimate trade demands and the requirements of business.

Thus we can have no more financial panics, no dearth of currency for performing the ordinary exchanges of commodities and service and, above all, no suspension of solvent member banks.

These three essentials are thus provided, and provided in a manner giving evidence of constructive ability of a high order, for which the Banking and Currency Committees of both Houses are to be strongly commended.

In some minor provisions which I had the honor to suggest the bill is in full accord with my views, though I do not claim these provisions were made as the result of my suggestions.

Among these may be mentioned—

First. The extension of the life of the act of May 30, 1908, and providing for the reduction of the tax on the circulating notes which may be issued thereunder.

Second. Providing for the deposit of excessive Government revenues in banks, as the usual and ordinary course of business, so that the volume of the currency in circulation shall not be affected by the fiscal operations of the Government.

Third. Provision for foreign branches of banks so as to facilitate and encourage foreign commerce.

Fourth. Allowing country banks to loan to a limited extent on the security of real estate, not because it is an attribute of commercial banking, but because the great majority of country banks demanded this privilege that they might compete on fairly equal terms with State organizations.

Fifth. Requiring the public transfer of funds without charge, and requiring the banks to discontinue exchange charges for checks deposited when drawn on other banks.

This latter provision is one of the greatest benefits the Federal reserve act will confer upon the people. It gives to the deposits in the banks the same freedom of circulation at par through the medium of checks as now possessed by the circulating notes of the banks, thus giving us a parity of exchange on that portion of the circulating medium which now performs 95 per cent of the daily transfers among the people of commodities and service.

Except for the clear-cut, analytical mind of the chairman of our Banking and Currency Committee, and his persistent determination to stand for the general good, irrespective of the specious arguments of interested opponents, the country would have lost the benefit of this most valuable provision.

There was one suggestion I made which has not been incorporated with this measure, and that is the limitation of the liabilities of each bank in some proportion to its capital stock and surplus. That this is sound in principle there can be no doubt, as it fixes a point beyond which extension of credit facilities or expansion may not go. The time will come when it will be added as an amendment to the Federal reserve act, and in the meantime there are so many good things in that act, and it is such a vast improvement on the present banking system, that I cordially and heartily lend it the support of my vote and predict, as I said heretofore, that it marks the beginning of an era of great prosperity, industrial growth, and independent development of the several Federal districts, making for the whole of our beloved country a preeminence in commerce, trade, and agriculture far beyond the most sanguine expectation of its authors.

In conclusion I wish to say what I have before said in substance, that I deplore the tendency shown by some Members on this floor to decry and condemn the financial supremacy of New York City. Some of my colleagues seem to have the idea that if they can curb the influences of New York City they benefit the country, but with some confusion of thought they do not differentiate between the speculative excesses of a class known as "operators" on the New York Stock Exchange and the members of that association who as a class are men of the highest standard for probity and honor. "Wall Street" is not New York City, nor are the gamblers in stock-exchange securities necessarily members of the stock exchange nor residents of New York City. The stock exchange is what its name implies—a place or mart where stocks and other securities are exchanged or transferred; that is, a place where they are bought and sold. This operation fixes the price according to the law of supply and demand. Here sellers and buyers of the whole world meet in open market to fix the price of the securities there dealt in, and the members are merely the agents or brokers to execute the orders.

Without this fixing of price, how could values be determined? How would the capital of the country be utilized to build our steam railroads or our steamships or our trolley lines, or how could any of the great enterprises of industrial development which require large combinations of capital be financed?

Though the stock exchange performs most important functions, it is but a small part of New York. There are hundreds and thousands of men in the city who never go near the stock exchange, who are as ignorant of its operations as some Mem-

bers on this floor, being engaged in commercial and industrial pursuits and in manufacturing enterprises in which that great city excels.

There must be some commercial and financial center in every country, and the preeminence and development of such center should be the glory and pride of every citizen.

You may rest assured that New York will take the lead in the organization, operation, and influence of the Federal reserve banks. I predict that every national bank in the city and many others will become members of the Federal reserve system, and that the conservatism which has always characterized the management of the leading banks will set an example to the rest of the country by not reducing the required legal reserve to the minimum allowed by the law, but that the New York Clearing House will fix a higher standard for its members.

I tell you that New York is so far ahead in the race for supremacy that she will always maintain it, and it should be a part of our duty and our pride to assist in her development and grandeur, feeling that in doing so we are adding to the general prosperity of our great country and assisting her in her ambition to have under the Stars and Stripes the grandest, proudest, richest, and predominant city of the civilized world.

"Fiat justitia ruat coelum."

The New Banking and Currency Law.

EXTENSION OF REMARKS

OF

HON. HORACE M. TOWNER,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. TOWNER. Mr. Speaker, the importance of the passage of the new banking and currency act makes it pertinent to outline briefly the events leading up to its enactment, to summarize its leading features, and to make some comment on its characteristics and the conditions on which its success will depend.

EARLY HISTORY.

The Colonies went into the Revolutionary War, many of them with paper money already in circulation, all of them making issues for the expenses of military preparations. When the Continental Congress assembled it began to issue paper. Nine millions were issued before depreciation began. From that time the descent was rapid. As Washington said, "it took a wagonload of money to buy a wagonload of provisions." In 1780 Indian corn sold in Boston for $150 a bushel; tea, $90 a pound; coffee, $12; sugar, $10; and a barrel of flour cost $1,575. The money soon ceased to circulate, debts could not be collected, and business was carried on chiefly by barter. To say a thing was not "worth a continental" became the strongest possible expression of contempt.

The Pennsylvania Bank, which was organized in Philadelphia during the Revolutionary War, was founded for the purpose of facilitating the operations of the Government in transporting supplies for the Army. It began its useful work in 1780, and continued in existence until after the close of the war.

But the need was felt of a national bank which should not only aid the Government but should also extend facilities to individuals, and thereby benefit the community as well as the State. Through the influence and exertion of Robert Morris, then superintendent of finance for the United States, the Bank of North America, at Philadelphia, was organized. It was incorporated by Congress in 1781 and by the State of Pennsylvania a few months later. Its success was immediate and complete. It not only rendered valuable and timely aid to the United States Government and to the State of Pennsylvania but it greatly assisted in restoring confidence and credit to the commercial community, and afforded facilities to private enterprise that were especially welcome.

THE FIRST BANK OF THE UNITED STATES.

On the organization of the Government under the Constitution in 1789 the lead in constructive statesmanship was taken at once by Alexander Hamilton. His plan "included a financial institution to develop the national resources, strengthen the public credit, aid the Treasury Department in its administration, and provide a secure and sound circulating medium for the people." On December 13, 1790, he sent to Congress a report on the subject of a national bank. Washington's Cabinet was divided on the proposition. Jefferson opposed it as unconstitutional. Washington, however, favored it, and through his influence the plan was adopted. February 25, 1791, the Bank of the United States was incorporated by Congress. The capital stock was placed at $10,000,000, the Government subscribing for $2,000,000. The chief bank was placed in Philadelphia, with eight branches in other cities. The bank was well managed and paid dividends to its stockholders of 8½ per cent. It received and kept the Government deposits, collected the revenue, and made payments. Its charter expired in 1811. A renewal was refused principally because foreigners had secured and held a large part of its stock.

Financial disturbance began at once following the dissolution of the bank. State banks were organized in excessive number, and issues of paper were pushed to the extreme of possible circulation. The war with England came and with it general demoralization. The Government itself could not collect its deposits. All the banks south and west of New England suspended specie payment. Mr. Dallas introduced a bill in January, 1815, to establish a second national bank. The bill passed Congress, but was vetoed by President Madison. Conditions grew worse, however, and Mr. Dallas again, in December, introduced a bill, which passed and was approved by the President.

THE SECOND BANK OF THE UNITED STATES.

March 3, 1816, the Second Bank of the United States was chartered by Congress. The capital was $35,000,000, of which the Government held $7,000,000.

When the bank opened for business in January, 1817, the country was on the brink of a great monetary crisis. No influence the bank could bring could stay the crash which followed. For two years specie payments were suspended and conditions were deplorable. The management of the bank during its first years was unwise, and aggravated rather than helped the situation. After a time wiser counsels prevailed, specie payment was resumed, and a period of financial solvency and general prosperity followed. This continued until 1829, when President Jackson, in his annual message to Congress, again raised the question as to the constitutionality of the bank. From that time the bank was in politics. A life and death struggle between Jackson and the bank ensued. It was almost the sole issue in the campaign of 1832, which ended in the triumphant reelection of Jackson and the complete defeat of the bank. The charter expired in 1836 and was not renewed.

1837–1863.

For 26 years the United States was without any national system of banking and currency. Anticipating the death of the Second Bank of the United States, State banks of issue had sprung up all over the country. An era of wild speculation followed, which soon reached a climax. The banks suspended specie payment and a disastrous panic ensued. The legislatures of the States were called in extraordinary session to devise methods of relieving the situation. Some of the States adopted wise banking laws, but many directly or indirectly fostered "wild-cat" currency and unrestrained banking. For the most part banks were unsound and the currency unsafe. It is a wonder the country managed to do business at all under the conditions that existed. In 1837, 1857, and 1861 all the State banks suspended specie payment. A bank bill good one day was worthless the next. The failure and repudiation of banks was so common as not to occasion remark.

1863–1914.

For 51 years the country has been operating under the present national banking system. It was inaugurated in 1863, under pressure of the Civil War. It was adopted on the recommendation of Salmon P. Chase, then Secretary of the Treasury, and the bill was formulated by Senator John Sherman, of Ohio. The primary objects were to furnish a stable and guaranteed currency, to provide a market for Government bonds which were to be the basis of the currency issued, and to provide an independent system of banking subject to Government control and supervision.

The system thus inaugurated not only served the country well during the period of the war, but it has grown and developed with the progress of the country until it has become the largest and in many respects the best unified system of banking in the world.

There are now about 7,500 national banks in the country. They have a combined capital and surplus of over $1,700,000,000. Their deposits are over $6,000,000,000. They are located in almost every city and town in the United States. They have over $700,000,000 in currency now in circulation, every dollar of which is redeemable in gold at any bank counter in the world.

DEFECTS OF THE PRESENT NATIONAL BANKING SYSTEM.

But while the existing system was admirably adapted in many respects, it had some grave defects which seemed impossible to remedy by mere amendments. A demand arose for an entire revision or reorganization of our banking and currency system. The subject became of great interest. It was the theme of numerous writers in the economic, banking, and financial journals as well as in the newspapers and general periodicals. It was discussed by bankers' associations and commercial bodies all over the country. Resolutions were passed denouncing the existing system as outworn and absurd, as a constant menace to the business interests of the country, and as the direct cause of panics. In these articles, addresses, and resolutions conditions were exaggerated, but enough remained of fact to form a basis for the assault. As a result a public opinion was created for currency and banking reform.

This opinion was greatly strengthened by the panic of 1907. It came under such conditions as to lead to the conclusion that our defective banking and currency system was directly responsible. It came at a time of peace and plenty. There were no dangers threatening, either external or internal. At no previous time had business of all kinds been more active and prosperous. The railroads were unable to handle the great crops; factories were running at their full capacity; workingmen were all employed at good wages. It came like a bolt out of a clear sky and greatly increased apprehension.

Following this came an imperative demand for legislation that should prevent a recurrence of such panics and protect the business interests of the country from such calamities.

LEGISLATION OF 1908.

In 1908 two acts of legislation were passed to remedy existing conditions—the Aldrich-Vreeland emergency law and the establishment of the Monetary Commission.

The object of the emergency law was to relieve any exceptional stringency in the money market and thus lessen the danger of a panic. Under its provisions banks may issue additional notes by the deposit of approved State, county, or municipal bonds up to 90 per cent of their value. Currency associations could be formed consisting of not less than 10 banks which could take out additional circulation based upon securities of a general character, including commercial paper. The total issue is limited to $500,000,000. To prevent a permanent inflation of the currency the notes thus issued were subject to a tax of 5 per cent for the first month and 1 per cent increase for each additional month outstanding until a maximum of 10 per cent is reached. This law still remains unrepealed, but is modified by the law just passed. No currency has ever been issued under its provisions, principally because no emergency has arisen and because the tax was too high.

The National Monetary Commission was created to investigate conditions and report to Congress "what changes are necessary or desirable in the monetary system of the United States or in the laws relating to banking and currency." The commission was composed of nine Members of the Senate and nine Members of the House. They made a very elaborate investigation, extending over a period of three and a half years. Their final report was filed January, 1912. The report was signed by 16 Senators and Representatives—10 Republicans and 6 Democrats—or by every member then remaining on the commission. The report proposed a plan for a banking and currency system, a text of a bill to put it into effect, and an analysis and argument in its support. It received the approval of nearly all of the bankers in the country, and most of the economists and specialists in finance and political economy approved it. In a general way the plan was approved by the business interests of the country. There were parts of it criticized, and sometimes the advisability of such a complete change in the existing system was questioned, but on the whole it was generally indorsed.

The new law, approved December 23, 1913, is in principle much the same as the plan proposed by the Monetary Commission. In fact, it is largely a rewriting of the law proposed by the commission. Large parts of the identical language are transferred to the new law. There are many changes, but the new law is built on the commission plan, and never could have been formulated as it is but for the work that had preceded.

THE NEW FEDERAL RESERVE ACT.

The principal provisions of the new law may be summarized as follows:

FEDERAL RESERVE DISTRICTS.

The bill provides that the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency shall constitute an organization committee. This committee shall select not less than 8 nor more than 12 cities to be known as Federal reserve cities. The tributary districts shall be apportioned with due regard to the convenience and customary course of business and need not follow State lines.

Every national bank in the country is required and every eligible bank is authorized to signify in writing within 60 days from December 23, 1913, its purpose to organize and operate under the new law.

When the Federal reserve banks are designated, each bank desiring to enter the new system must subscribe to the capital stock of such Federal reserve bank 6 per cent of its paid-up capital stock and surplus, one-sixth to be paid on call, one-sixth within three months, one-third within six months, and the remainder on call, payments to be in gold or gold certificates.

The member banks are responsible for all debts, contracts, and engagements of the Federal reserve banks to the amount of their subscriptions in addition to the amount subscribed.

Any national bank failing to signify its acceptance within 60 days shall cease to act as a reserve agent upon 30 days' notice.

Any national bank failing to become a member bank within one year shall forfeit its charter rights.

Should the amount subscribed to the capital stock of any Federal reserve bank be insufficient, then the organization committee may offer to public subscription enough of stock to make up the deficiency. No individual, copartnership, or corporation shall be permitted to purchase or hold more than $25,000 of such stock, other than a member bank.

Should the amount of capital stock still prove insufficient, the United States shall take enough to make up the deficiency.

Stock not held by member banks shall not be entitled to voting power.

No Federal reserve bank shall commence business with a subscribed capital of less than $4,000,000.

FEDERAL RESERVE BANKS.

When the minimum amount of capital stock of any Federal reserve bank shall have been subscribed and the organization completed, the said Federal reserve bank shall become a body corporate and shall have power—

1. To adopt and use a corporate seal.
2. To have succession for a period of 20 years.
3. To make contracts.
4. To sue and be sued, complain and defend, in any court of law or equity.
5. To appoint by its board of directors its officers and define their duties.
6. To make by-laws regulating its business.
7. To exercise the powers granted in the act.
8. To deposit bonds of the United States and receive circulating notes therefor equal to their par value under the conditions now prescribed with relation to notes issued by national banks.

Every Federal reserve bank shall conduct its affairs by a board of directors, which shall consist of nine members. Three shall be chosen by the member banks. Three shall be chosen by the member banks and shall be persons actively engaged in their district in commerce, agriculture, or other industrial pursuit. Three shall be chosen by the Federal reserve board. One of these shall be designated as chairman of said board. No Senator or Representative in Congress shall be a member of the Federal reserve board or an officer or director of a Federal reserve bank.

DIVISION OF EARNINGS.

Stockholders shall receive, if earned, an annual dividend of 6 per cent. Net earnings above that amount shall be paid to the United States, except that one-half of the net earnings shall be paid into a surplus fund until it shall amount to 40 per cent of the capital stock.

Federal reserve banks shall be exempt from all taxation, except taxes upon real estate.

Any bank organized under Federal or State law having capital sufficient to become a national bank under existing law may be converted into a national banking association under the provisions of this law.

STATE BANKS AS MEMBERS.

Any State bank may apply to subscribe for stock in a Federal reserve bank. Under regulations prescribed by the Federal

reserve board they may be admitted upon compliance with the terms of this act.

FEDERAL RESERVE BOARD.

A Federal reserve board is created to consist of seven members, including the Secretary of the Treasury and the Comptroller of the Currency; five to be appointed by the President and confirmed by the Senate. These five members shall devote their entire time to the business of the board and shall receive a salary of $12,000 and traveling expenses. Two of the five shall be experienced in banking or finance. The term is 10 years. The board shall have power to levy an assessment on the Federal reserve banks to pay expenses and the salaries of its members and employees; to examine Federal reserve and member banks and require from them statements and reports; to require one Federal reserve bank to rediscount the discounted paper of other Federal reserve banks on the vote of five members; to suspend the reserve requirement and provide a tax upon a deficiency; to supervise and regulate the issue and retirement of Federal reserve notes; to suspend or remove any officer or director of any Federal reserve bank; to require the writing off of doubtful or worthless assets of Federal reserve banks; to suspend for violation of its duties any Federal reserve bank, take possession thereof, and if necesary administer, reorganize, or liquidate such bank; to make regulations to safeguard and carry out the provisions of this act.

FEDERAL ADVISORY COUNCIL.

Every Federal reserve district shall select a member of a Federal advisory council, which shall meet in Washington four times each year, to confer with the Federal reserve board on general business conditions, make representations concerning matters within the jurisdiction of said board, and to call for information and make recommendations regarding the affairs of the reserve banking system.

POWERS OF FEDERAL RESERVE BANKS.

Any Federal reserve bank may receive from any of its member banks and from the United States deposits of current funds in lawful money, checks, and drafts.

It may discount notes, drafts, and bills of exchange drawn for agricultural, industrial, or commercial purposes, having a maturity of not more than 90 days on general commercial paper and 6 months on agricultural and live-stock paper.

It may purchase and sell in the open market cable transfers, bankers' acceptances, and bills of exchange; deal in gold coin; buy and sell bonds of the United States or of the banks, counties, or municipalities, and establish accounts for exchange purposes.

GOVERNMENT DEPOSITS.

The general funds and current revenues of the United States may be deposited in the Federal reserve banks, which shall, upon direction of the Secretary of the Treasury, act as the fiscal agents of the Government.

NOTE ISSUES.

Federal reserve notes, to be issued at the direction of the Federal reserve board, are authorized. The said notes shall be obligations of the United States, and shall be receivable for all taxes, customs, and public dues. They shall be redeemed in gold on demand at the Treasury Department, at Washington, or in gold or lawful money at any Federal reserve bank.

Any Federal reserve bank may make application for such notes, accompanied by a tender of collateral equal in amount to the sum applied for, such collateral to be notes and bills accepted for rediscount under the provisions of this act.

Every Federal reserve bank shall maintain reserves in gold or lawful money of not less than 35 per cent against its deposits, and reserves in gold of not less than 40 per cent against its Federal reserve notes in circulation. The Federal reserve board may require banks issuing currency to pay such rate of interest on its outstanding currency as the board shall fix, and a paramount lien is established on all the assets of the bank for their redemption.

Collateral deposited as a basis for Federal reserve notes may be withdrawn upon the substitution of other approved collateral.

Federal reserve banks shall receive on deposit from member banks or from Federal reserve banks checks and drafts drawn upon any of their depositors. Nothing herein contained shall be construed as prohibiting a member bank from charging its actual expense in collecting and remitting funds, or for exchange sold to its patrons.

The Federal reserve board shall make regulations governing the transfer of funds and the charges therefor among Federal reserve banks and their branches, and may exercise the functions of a clearing house for the Federal reserve banks, or may designate a Federal reserve bank to exercise such functions, and may also require each such bank to exercise the functions of a clearing house for its member banks.

REFUNDING BONDS.

After two years from the passage of this act and at any time within 20 years thereafter any member bank desiring to retire in whole or in part its circulating notes may file an application to sell for its account, at par with accrued interest, United States bonds securing circulation to be retired. The Federal reserve board may, in its discretion, require the Federal reserve banks to purchase such bonds, not to exceed $25,000,000 each year.

The Federal reserve banks purchasing such bonds shall be permitted to take out an amount of circulating notes equal to the par value of such bonds.

BANK RESERVES.

A member bank shall hold and maintain reserves equal to 12 per cent of its aggregate demand deposits and 5 per cent of its time deposits, as follows:

In its vaults for 36 months five-twelfths and permanently thereafter four-twelfths.

In the Federal reserve bank for 12 months two-twelfths, and for each succeeding month one-twelfth until five-twelfths are thus deposited.

For 36 months thereafter balance may be held in their own vaults or in Federal reserve banks or in national banks in reserve or central reserve cities.

After 36 months balance of reserves may be held in its own vaults or in Federal reserve banks.

Other provisions are made for banks in reserve cities and in central reserve cities.

LOANS ON FARM LANDS.

Any member bank not in a central reserve city may make loans secured by improved and unencumbered farm land for not longer than five years and not exceeding 50 per cent of the actual value. Not to exceed 25 per cent of its capital and surplus may be thus loaned.

EMERGENCY CURRENCY.

The present law, enacted in 1908, providing for an emergency currency, is extended to June 30, 1915, and the tax on currency reduced as follows: For three months, 3 per cent, and one-half of 1 per cent each month thereafter until 6 per cent is reached, and 6 per cent thereafter.

COMMENT ON THE LAW.

The bill as originally introduced in the Senate and House is not now considered as a wise measure by anyone. It was greatly improved in its passage through the House, but as it emerged from that body, as we now see, the bill was an absolutely unworkable scheme. It was greatly improved in its passage through the Senate. Even at that time it contained provisions which were denounced as dangerous in the extreme. As it came from conference some of its most dangerous features were eliminated. In the form in which it became a law it was better in very many respects than at any previous time during its consideration.

I could not give my approval to the bill, even in its final form, for it still contains provisions which I think unnecessary and unwise. It is not my purpose to discuss now what I believe to be the defects of the law. If I am correct in my belief as to these imperfections, they will be made manifest in the administration and practical operation of the law. As they are disclosed, they can be corrected by amendments. If I am mistaken in my judgment, that also will be made apparent. As it is, it certainly contains many of those provisions which bankers and financiers unite in regarding as essential to real banking reform.

As I regard it, the law must depend for its success in large measure upon two things—the character of the Federal reserve board and the cooperation of the bankers. For the first we must depend upon the President. If he shall appoint men able, high-minded, and patriotic, who will regard their duty to the people as superior to every other consideration, much will be done toward making the system successful. As for the cooperation of the bankers, the indications are that such cooperation will be given without reserve. As this legislation is in answer principally to their demand, they owe it to the country to do all in their power to carry it to success.

The time for criticism has passed. It should now be considered a patriotic duty to do all that is possible to put the law into successful operation, to uphold it, and to make it an instrument of good in the progress and development of the Nation.

Suspension of Naval Construction Program.

SPEECH

OF

HON. EDWARD W. SAUNDERS,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 6, 1913.

The House had under consideration the resolution (H. Res. 298) to authorize the President to cooperate with the United Kingdom of Great Britain to the end that naval construction may be suspended for a period of one year.

Mr. SAUNDERS. Mr. Speaker, this debate has made one thing at least very clear, and that is that the gentlemen who are for peace by the battleship route, and to that end are eager to pay any price that an ambitious naval program may impose, are averse to securing peace without money, and without price, by the way of amicable arrangement, and international agreement.

These colleagues of ours who lean over the rim of the future, and see all the wonders that are to be, who would make the Atlantic Ocean a great American lake, with a mighty American fleet floating thereon, equal in all respects to the greatest armada that Germany may put forth, who would make the Pacific another and even greater American lake, patrolled by an imposing array of warships flying the Stars and Stripes, and bidding defiance to the utmost forces of Japan, have visions of "a far-flung battle line," and a policy of staggering responsibility which a mere commonplace mortal like myself, who does not dream dreams, or worship the new god, "equilibrium," is most unwilling to assume, in the absence of a more sufficient demonstration of its necessity.

The philosophy of the gentleman from Pennsylvania [Mr. MOORE] is not difficult to understand. Apparently he favors the construction of battleships as an economic policy, apart from any imputed military utility. How else can we interpret his language of yesterday, when he said:

I want to take up the question that is recounted in this resolution, that the construction of warships is a burden to the people. It is not a burden upon the people. It is an assistance to the people. It is an assistance to the farmers of the country. It is an assistance to the workingmen of the country, to the industrialists, and to the mechanics.

The gentleman's meaning is not far to seek. Battleships in the building call for timber from the forests, and iron from the mines. The processes of construction afford employment to labor, and thus complete the circle of benefaction. Hence in this view, a Congress that provides for additional battleships is a body of enlightened statesmen who richly deserve the plaudits of the country. The key that would unlock the unfailing fountains of prosperity has long been sought with much travail of spirit. At last this key has been found. The simple formula for national welfare, is: Build battleships, and be peaceful, secure, happy, and prosperous. Take the view of the gentleman from Pennsylvania that the construction of these ships, is not a burden upon, but an assistance to the people, and the whole aspect of the problem is immediately changed. Other speakers favorable to a great navy have sought to place their attitude on the ground of military necessity, but our friend strikes a bolder note. It may be true that he regards warships as safeguards, but that is merely one line of his defense. Drive him from that position, and he is ready to maintain that if they are not needed as instruments of war, their value as works of utility, affording employment to labor, and a market for materials, fully justifies their continued construction, on an increasing scale.

On one point at least I will not take issue with the gentleman, but will freely agree as a matter of course, that the expenditure of the vast sums required for the construction and maintenance of battle fleets, carries with it a measure of benefit to the men who toil in and about them, whether in the yards, or on the ships.

But while I concede this much to the gentleman from Pennsylvania, the concession will avail him but little. Should he rest his argument for a navy on this ground, in whole or in part, the entire fabric of his contention tends to become ridiculous. For it is apparent that the same course of reasoning would justify any form of Government enterprise, however absurd in conception, prodigal in execution, and barren of results. One and all these enterprises would furnish employment, and afford wages.

A navy is required for purposes of offense, or defense, or not at all. It is not intended either primarily or secondarily, to provide employment, or to furnish a market for the products of the mine, or the forest. It is a purely military creation, and the measure of its magnitude, may be found in the necessity which calls it into being. Exceed the limits fixed by this necessity, and the additional ships constitute a criminal waste, and a vicious extravagance.

I listened with interest to my friend from Minnesota, Mr. STEVENS, who contributed his mite of antagonism to the passage of this resolution. He stated with emphasis that Mr. Churchill, the English statesman who proposed to Germany that if she would defer the building of two battleships for one year, England in perfect good faith would defer for a like period, the construction of four ships called for by her program, had subsequently receded from this attitude. But the gentleman from Minnesota is mistaken. The Guildhall speech of Mr. Churchill, which is cited in part by the gentleman from Minnesota, affords a complete refutation of the charge that the English minister, has in anywise changed his attitude toward a cessation in naval construction. It is true that Mr. Churchill referred to the fact, that under the pressure of "unbroken development of the German and other navies," a proportionate development in the British fleet would be provided for in the estimates for the coming year, but that statement on his part in nowise justifies the conclusion that he has changed his attitude toward the propriety of a naval holiday.

So long as Germany holds unshaken to her program, England will abide by her traditional two-nation policy of naval construction, and this destructive competition will continue to the bitter end. Mr. Churchill's statement carries no other meaning. If Germany stands pat, England will do likewise. But I call the attention of the gentleman from Minnesota to the fact that Mr. Churchill was careful to add, after adverting to the necessity for an increase in his next estimates, due to his failure to come to a temporary agreement with Germany, that his Majesty's Government would ask on every opportunity for the cessation of the competition in naval armaments, the bane, and the reproach of modern times.

In other words, while he declared that Germany's action compelled him, for the time being, to ask for greater supplies of men, and money, he announced that he intended to continue the fight for a naval holiday. So that our friend from Minnesota was mistaken when he said that Mr. Churchill's attitude has been reversed. Now what is the purpose——

Mr. STEVENS of Minnesota. May I ask the gentleman a question?

Mr. SAUNDERS. Certainly.

Mr. STEVENS of Minnesota. If the gentleman had read my remarks correctly he would realize I stated it had been abandoned, and it has been abandoned necessarily, the gentleman will find, because nobody else will agree to it.

Mr. SAUNDERS. I have read the remarks of the gentleman, but do not agree with his conclusions. It is true that as a result of the action of Germany, England feels compelled to continue and provide for her two-nation policy of construction in the forthcoming estimates. The British minister makes this very clear in his speech, but in the same connection he indicates his fixed purpose to renew his pacific proposals. The controversy between me and the gentleman from Minnesota, as to Mr. Churchill's attitude, may be readily settled by allowing the latter to speak for himself, in the following brief quotation from his Guildhall speech:

But his Majesty's Government will express upon, and ask on every opportunity for the cessation of the competition in naval armaments, which is the bane and reproach of modern Europe.

Does a declaration on the part of Mr. Churchill that he will press his proposition "on every opportunity," indicate a reversal of attitude, or justify the statement of the gentleman from Minnesota, that the English Government, or the spokesman of the English Government, had "practically abandoned a position which he had previously twice taken"?

We ought to be careful in these matters to keep the record straight. Still we are not so much concerned with the attitude of Mr. Churchill, as with our own. Concede that the gentleman from Minnesota is right in this matter, and that the English minister has practically abandoned his position, does that recession on his part, afford any reason why the United States should not take up this great rôle of "peacemaker," and bring to pass "Peace on earth, good will to men," among the nations of the world? [Applause.]

Would that we could take the lead in this great movement, but for the time being we must be content to serve as allies in the cause, for Mr Churchill insists that he intends to press his suggestion on every opportunity. So be it. We can powerfully second this noble proposal. The passage of this resolution will advise the English minister that we are ready to uphold his

hands, and afford him not only moral support, but active and sympathetic cooperation. Our unqualified concurrence in the Churchill plan for naval reduction, will give impulse and virility to this movement to disenthral the nations, and divert into a hundred channels of utility, the treasures now wasted upon the machinery of destruction.

Mr. Speaker, the opponents of this resolution have carried the discussion far afield in their efforts to defeat by ridicule this hopeful scheme to reduce the burdens of armed peace. The gentleman from Alabama has not overlooked this opportunity to sound the tocsin of impending war, and proclaim the necessity for renewed activities in our navy yards. He views with alarm our supine indifference to portents of danger in various quarters. In particular he deplores our indisposition to provide a Navy that will at least equal the combined navies of Germany, and Japan. With such a Navy to keep watch and ward over our coasts, he feels assured that the country will be reasonably secure against fears within, and foes without, and airily waves aside as a trifling detail in this imperial program of armed peace, the prodigious cost of this mighty armament.

Mr. Speaker, above all things I would see my country thrice armed against any real danger. The safety of the Republic is the supreme law, and the one prime consideration. To secure our liberties, maintain our institutions, uphold our traditions, and keep our flag in the van of civilization, and progress, I am ready to make any sacrifices, and support any policy of necessary defense. But the advocates of peace, or pacificists as they are derisively styled by the militants, firmly believe that the continued increase of armaments, is not only not necessary to safeguard our interests, but is a distinct menace to the peace of the world, and an intolerable burden upon the taxpayers.

The character of the men who hold this view, directs attention to their attitude, and compels respect for their opinion. They are neither visionaries, nor fools, but constitute a body of hard-headed, clear-thinking, patriotic citizens. They are opposed to war, but are willing to vote millions for defense. They are ready to support any policy justified by a prudent regard for present conditions, and a reasonable forecast of the future, but are unwilling to squander any portion of the public funds in elaborate preparations against chimerical dangers. Their attitude is the result of a patient study of present-day problems. They are not fixed in that attitude. They are careful to preserve open minds, but they are not reeds to be blown about by every wind of fiery declamation, or furious invective. The mere fact that others hold an opposing view, or that timid people are moved to groundless alarms by the parade of fantastic theories of possible attack, does not convince them that the dangers are real, or justify a change of attitude. Nor are they unmindful of the further fact that much of this outcry for an increase in military and naval appropriations, proceeds from a thrifty patriotism which finds its ultimate reward in the material form of fat contracts. The suggestion often made that the United States is the richest Nation in the world—and for that reason ought to build the biggest navy, is a spurious appeal to our vanity—and an adroit effort of the militants to place the argument for a big navy on some other ground than that of the necessities of national defense. If the biggest navy is appropriate to our wealth and standing among the nations, why not for the same reason the biggest army in the world?

Mr. Speaker, I do not doubt that there are many men, moved thereto by a variety of reasons, who sincerely believe that the United States should maintain a mighty Navy. I do not question the sincerity of my colleagues who contend that this country is endangered by the naval programs of the countries of the Old World, and insist that our interests require that we become an entrant in this hateful competition. I do not question the sincerity of the gentlemen who proclaim that Germany, and perchance other nations, intend to challenge the supremacy of the Monroe doctrine, and who announce, with apparent confidence, that the duration of this doctrine is imperiled, unless we build more, and bigger battleships. I am unable to follow the reasoning by which these gentlemen have convinced themselves that the increase in the German navy is a challenge to our policies, or a menace to our interests in the Western Hemisphere, but what of that? Men have believed stranger things, than that we should lay aside many fruitful projects of domestic development, in order to equip ourselves against the supposed menace of Germany's navy. There are many sincere and patriotic men in Russia who believe with all their heart, that the Jews murder Christian boys to obtain their blood for ritual purposes, but the fervor and sincerity of that belief does not establish the existence of the practice. Something more is needed. The burden is on the man who affirms that the necessities of our national self-defense require increased appropriations for military purposes. Why should the men who hold a different view, abandon their cherished convictions, merely because their adversaries dogmatically assert that these appropriations are required? We challenge the militants to take the lessons of history, fairly deduced, and applying them to the actual conditions of our present relations with the world, make good in the court of reason, the contention that our liberties, or material welfare, require either a great Army, or a mighty Navy, for their maintenance.

The disconnected and unrelated facts of history may be used to justify any policy, however monstrous, or absurd. The advocates of armed peace are always cocksure of their ground, and a little disdainful of opposition. From the confidence with which they announce the secret purposes of other nations, one would gather that they had been admitted into the shrines of foreign diplomacy, and allowed to withdraw the veil from their innermost policies. At times they affect the mysterious, and intimate that if only the real facts were known, the pacificists would no longer hesitate over a mere matter of paltry dollars, or set considerations of base economy against the safety of the Republic. When called upon to produce these facts, in order that we may be acquainted with the real conditions, they produce nothing that is not within the common knowledge of all well-informed men, or which upon any fair consideration, justifies the attitude which they have assumed.

It is often urged that the maintenance of the Monroe doctrine requires a great Navy. Not at all. This doctrine has been effective from the day that it was first put forward, although it was formulated at a period when this country was ill able to maintain the same against any serious challenge by the Holy Alliance of European monarchs which constituted a positive menace to the growth of popular government, and republican institutions in the New World. In addition the Republics of the Western Hemisphere intended to be protected, were at the time puny weaklings, distracted by internal strife, incapable of union for a common defense against external attack, and but dimly aware of their interest in the maintenance of the new principle. Such were the untoward conditions surrounding the announciation of this world-shaking doctrine. Apparently the circumstances called for feverish activity in military and naval preparations to maintain our bold challenge to the autocrats and despots of the world. Nothing of the sort took place. Neither the Army, nor the Navy was increased in contemplation of possible trouble. Such was the moral strength of our attitude, that without firing a gun, or calling out a soldier, we established a principle that has changed the whole course of history. Having in mind the essentially changed conditions since this doctrine was announced, the growth of our own power, the increasing strength of the Republics of South America, the absolute lack of impelling motive on the part of the countries of the world to put this doctrine to a trial of armed strength, it is an insult to reason to place the argument for a greater Navy on the pretense that this doctrine is in peril.

It has remained unreserved and unshaken to the present time. Never again will the argument for the creation of a great Navy to meet some supposed need of this country, find such a foundation of apparent necessity, as was afforded in the circumstances which surrounded the birth of the Monroe doctrine, a doctrine which was promulgated in an era when might made right, and no policy that was not backed by armed force seemed likely to endure.

It was not considered in those days that the new doctrine called for an increase in our military and naval establishments, or emphasized the necessity of preparedness for war on a large scale. But now when our strength is beyond measure, our riches beyond computation, our people as the sands of the sea, our resources illimitable, we are assured by the Army and Navy experts that this principle is in grave danger of overthrow, unless our fighting strength on the high seas is increased to a material degree. This is a warrior's dream. There are many things that are possible, but which are so unlikely that no nation can afford to order its policies with regard to them. It is possible that within the next 10 years Canada may be an independent republic, and England and Germany may combine to attack the United States, to capture the Panama Canal, and overrun our foreign possessions. Stranger and more unlikely things have been recorded in the history of the nations. But the man who would gravely put forward a naval program designed to meet such a contingency, and seriously insist that this country should adopt it, would be regarded as little better than a lunatic. Still we are building ships to protect ourselves against dangers that are no more real. The war games that are played by the experts afloat and ashore, are well enough in their way, and afford an innocent and harmless amusement to the participants. But they are not to be taken too seriously,

even though their conclusions may furnish scare heads for the sensational press. It may be that in these games it is demonstrated that Germany can land a force of 100,000 men at some point on the Atlantic coast, or that her navy after crossing the ocean, can overtake and crush the American fleet, but this does not mean that we are in the slightest danger, reasonably speaking, that the landing will be effected, or our fleet destroyed, or that we need lie awake at nights, devising ways, and means to avert these dreadful possibilities.

I asked the gentleman from Alabama if it was not true that the United States had made the Monroe doctrine effective throughout its entire history, without resort to arms. He demurred to this, and as an illustration to the contrary, cited Maximilian's meteoric effort to found an empire in Mexico. The citation was most unfortunate. Whatever may have been Napoleon's dreams of conquest in that unhappy Republic, he did not try a conclusion of arms with this country, but withdrew his forces at our demand. Napoleon's initial acts may have been a challenge of the Monroe doctrine, but the challenger retired discomfited, leaving the doctrine intact. Of course the gentleman from Alabama relates this withdrawal to the menace of the American Navy, then fresh from its achievements in the Civil War. But he is totally at fault in this deduction. Napoleon's action was due to quite other causes than the strength of our Navy. He had taken a gambler's chance on the issue of the stupendous Civil War then raging, in the hope that the termination of that struggle would leave a once united people divided in twain, and two hostile republics established above the Rio Grande. But when the flag of the Confederacy went down, and the flag of the Union rose triumphant over a people destined to be united forever more, Napoleon's tawdry dream of empire was rudely terminated, his high hopes faded, and the wretched Maximilian was abandoned to his untoward fate. The mere fact that the Confederacy had been overthrown, was sufficient to cause the evacuation of Mexico. If the outcome of our war had been two republics established upon the ruins of the United States, Napoleon could have pursued his schemes in Mexico unhindered, and unchallenged. Neither one of the surviving republics, under the burden of new responsibilities at home, would have been in a position to undertake the maintenance of the Monroe doctrine. But the issue of Appomattox determined Napoleon's course, and that course would have been the same, if the Atlantic had been crowded with French men-of-war, and the Navy of this country had consisted of a catboat, manned by one small boy, armed with a bow and arrow, or a popgun of generous dimensions.

The teachings of history advise us, that it is only within recent years, that our responsibility to maintain the Monroe doctrine has been put forward as an argument in favor of a greater Navy. One curious feature of this argument is, that the further we get away from the likelihood that the doctrine will be challenged, and therefore from the apparent necessity to provide a force for its maintenance, the more insistent becomes the demand in certain quarters for more battleships. At no time in our history was our ability to maintain this doctrine without a great naval force, more clearly indicated than in the famous Venezuelan incident. We were in no condition at that time to match our naval strength against that of Great Britain, with any hope of ultimate victory. But neither force, nor the threat of force, was required to bring the controversy to a happy termination. While President Cleveland's note was curt, and really offensive in its terms, Great Britain did not take umbrage, but readily agreed to remit her controversy with Venezuela to arbitration. Once again the Monroe doctrine, and its limitations upon the powers of the older world, was manifested in effective operation. I dismiss without discussion the so-called landing of Germany in Venezuela, an incident which has been cited by Mr. HOBSON as indicating an intent on the part of that nation to challenge the Monroe doctrine. There is nothing whatever in the facts of that incident to justify any reflection upon the good faith of Germany, or to indicate that she had the slightest intention of putting the Monroe doctrine in issue. But whatever may have been her secret intentions, and a reckless intimation of a sinister purpose, is a cruel charge to bring against a friendly nation, she certainly committed no overt act from which any injurious conclusions could be drawn.

Much less should the trifling circumstances of that incident, be used to project this country into the reckless rivalries in naval construction which are piling new millions of burdens upon the taxpayers of Europe, and dwarfing their capacities for social betterment. In its conception, the Monroe doctrine was a doctrine of peace. It was designed to keep the armed forces of Europe, and the operations of the Holy Alliance on the other side of the Atlantic, and allow the Republics of the western world, thus freed from the fear of foreign intervention, to work out the slow processes of popular government, and treading the ways of pleasantness, and the paths of peace, flower in time into mighty nations. But while this doctrine was intended to secure the blessings of peace for the Western Hemisphere, it seemed well calculated at the time to provoke war. It was the enunciation of a strong foreign policy. "It was a defi to the whole formidable array of Old World monarchies, far more defiant and sweeping than Jefferson's defi to Great Britain, in July 1776." It was a proclamation of "hands off," to the military rulers of Europe. It drew a ring around the Western Hemisphere, and plainly said to the Holy Alliance of crowned heads, "Keep on your side of the line." In terms, if not in words, President Monroe clearly intimated that an infraction of the new rule on the part of the powers included within its inhibitions, would be a casus belli. The men who talk the jargon of diplomacy, and juggling with words, call the process, statecraft, are fond of saying that a strong foreign policy requires an ample backing of force in the form of a great army, or a great navy, or both. What country ever played a bolder card than the United States, when she warned away the powers of Europe, singly and collectively, from this portion of the globe?

Having issued its ultimatum, this country, by every rule of the game, was presumably prepared to support the same against all comers. Let us see what were the fighting strength, and material resources of the baby Republic that thus dared to defy the Empires of the Old World, and forbid their intervention in the domestic concerns of the countries of this hemisphere. In 1823 our entire population, including the Indians, was not over 10,000,000. Our entire Army was less than 10,000. Our Navy was comparatively insignificant, including a few men-of-war, frigates, sloops, brigs, and schooners, not over 30 in all. Our commerce and manufactures were relatively insignificant.

So that neither in ships, in men, nor in money, were we prepared to make good our undertaking to keep this portion of the world clear of European complications. If nothing goes but force, then the Monroe doctrine was apparently foredoomed to failure. The Navy of that day was maintained at an annual cost of less than $1,000,000. To-day the aggregate value of our Navy is several hundred millions of dollars, and its annual cost is something like $140,000,000. It is a powerful and imposing fighting force. Still the Navy League, and the parrots that repeat its cries, are insistent upon more ships. We are at peace with the world. Our policies are the policies of peace. They are not in conflict with the hopes, the ambitions, the aspirations of other nations, whether of the Old, or the New World. We do not propose to acquire another foot of territory by armed force. It would be insanity, ruin, a blunder that would be a crime, for any nation, civilized or uncivilized, to challenge us to a trial of arms. There are other nations that have greater armies, but they can not undertake to land them on our shores. There are other nations that have greater navies, but they can not afford to risk them in a duello to the death with this country. In our relations with the world there is nothing in present contemplation, or in the reasonable likelihood of the future, that requires us to increase our military budget.

The time has come for this Nation to realize that there is no occasion for it to become a military nation, and that we are already spending upon the Army and Navy, many millions that are not required, save by the demands of an insane militarism. It is this spirit, and not the necessity to preserve the Monroe doctrine, that calls for more men, and more ships. What has been behind the Monroe doctrine at all times? What has been the sustaining and compelling force that has given it vitality, and made it effective through all the periods of our national weakness? The answer is easy. It was the moral strength of our attitude, and the lack of adequate motive on the part of the nations to challenge the new principle. To-day a new sanction has been added to this doctrine, the unparalleled might and resources of this country, a potentiality of strength that will give any power, or aggregation of powers, pause, even should an adequate motive for war exist. Such a motive is not found in the Monroe doctrine. The militarists are so fiercely resolved on the policy of a greater Navy for the United States, that they are unwilling, or unable to draw plain conclusions from the facts that they put forward. For instance, the gentleman from Minnesota, in the course of his elaborate argument against the passage of the Hensley resolution, stated that it was idle to invite Germany to participate in a naval holiday, for the reason that conditions at home compel the German Government to maintain a large military and naval force.

Concede it to be true that Germany is so ringed about by ancient enemies, that her real dangers are in Europe, then it follows that her naval preparations are for self-defense, and

do not concern this country. This is a sufficient answer to the argument often made, that our naval policy in the Atlantic should be determined by the ships building in the German navy yards, and that an increase in the battle fleet of that country, is a matter of serious import to the United States, calling for a revision of our naval program. The fact is, that an increase in the carrying trade, and merchant fleet of Germany, is a matter of far greater moment to us. A trade war with that country is more to be feared than the menace of her battleships. It is patent that if the German fleet is imperatively required in European waters to preserve the integrity of the Empire against the danger of attack from contiguous countries, ordinary prudence would forbid its use in a bootless and hazardous war with a powerful and friendly country like the United States. Such a war, prosecuted in our waters would require the full strength of the German Navy. A defeat would be ruinous. A victory would be at best of a Pyrrhic character, and entail such losses of ships and guns, as would put Germany out of the running in the naval competition now in progress between the countries of Europe. Under no conceivable circumstances of victory, could Germany strike the United States in a vital point, or secure an indemnity to discharge the terrifying cost of such a war. The continued prosecution of the struggle would introduce intolerable disorders into the commerce of that country, and on the financial side, require loans of staggering proportions. Germany realizes the inevitable outcome of a war with the United States, as well as we do, and in that fact is our assurance that she is not arming against this country. Hence we are not concerned with her naval program. This being so, Germany should be eliminated from consideration in the determination of our naval policy. As to Japan, there is even less reason than in the case of Germany, to consider her as a possible enemy. That Empire is on the verge of bankruptcy, and only a long era of peace, and industrial expansion, will place her on her financial feet. She would be utterly unable to finance a war with this country, and no one knows that fact better than the able statesmen who direct her affairs. Moreover the adequate motive for war is lacking. Japan has no clashing interests with this country, such as made her war with Russia inevitable. Having achieved a wonderful victory in that contest, and at an immense expenditure of blood and treasure, obtained an overflow area on the Asian Continent, she must husband her strength to conserve the fruits of that victory. The retention of her territory in Asia, is absolutely conditioned on the maintenance of peace with this country. In addition her trade with the United States is too valuable to be lightly thrown away. This country is her best customer, taking one-third of her exports.

A war with the United States, with the inevitable attendant losses, and bankruptcy following, would leave that country helpless before her recent antagonist, the Russian Bear, and enable him to retake at his leisure, without risk, and without loss, the coveted territory from which he was driven by the armies of the Mikado. The militarists in their efforts to arouse this country against Japan, and by that means cultivate a national sentiment for a colossal Navy, frequently intimate that she has designs upon the Philippines. Would that we could give her these islands, but the intimation that she contemplates their acquisition by force, is absurd, though it finds credence in certain quarters. If Japan is disposed to play the rôle of a modern land pirate, there are many islands in the Pacific, more desirable than the Philippines, which are ready to her hand, and may be taken with comparatively little effort, and no risk. Why should she incur the chances of a great war with the United States, to secure an undesirable possession, when she could overrun Dutch Borneo, or Java, or Sumatra without any risk of reprisals, since Holland has no navy worthy of the name, and if ravished of her territory would be compelled to endure the wrong in pathetic helplessness. As Luke Wright, one-time minister to Japan, sententiously remarked, "This talk of a war with Japan, is not even respectable nonsense." There are no sufficient occasions of war between us and Japan. Over 6,000 miles of water separate the two countries. Our wealth and material resources exceed hers twenty times over, while our population is at least twice as great. Both Germany and Japan have interests and dangers nearer home, to which their policies of naval construction are closely related. Neither country can afford to risk the costly vessels constructed with reference to those immediate dangers, in a perilous venture across the heaving oceans that respectively separate us, or rashly enter upon a war that will yield neither glory, nor any solid fruits of victory. It is well to bear these considerations in mind when we are feverishly urged to arm ourselves against the German, or the yellow peril. Mr. Speaker, the militarists tell us that as there has always been war, so there will always be war. Many persons accept this statement as a truism, and regard the burdens of military and naval preparation as necessary and inevitable. The fact is, that this so-called aphorism is simple nonsense. "War is inevitable only when we are so weak as to allow the armament makers, the scare mongers, and the men who make war their business, to direct our policies." The teachings of history are far from indicating that in the future, as in the past, the world will be a theater of continuous war, a horrid orgy of cruelty, blood, rapine, and destruction. On the contrary, they justify a very different forecast, and presage the speedy advent of the reign of universal peace. Each nation must order its affairs as it reasonably and intelligently interprets the present, and spells out the future. If it sees war ahead, it should prepare for war; if the forecast indicates peace, military and naval burdens should be steadily reduced. It is not an inevitable conclusion that the facts of the past will be repeated in the future. Mere dogmatic assertions to that effect ought not to carry conviction. I am not unmindful that the immortal Henry declared on a memorable occasion, that there is no lamp by which the feet of nations may be guided, save the lamp of experience.

Nor would I omit the use of this lamp, but there is no method of solution for present day problems more pernicious and misleading than that which settles those problems by the analogy of the past, without regard to new and modifying circumstances. The causes of war, the authorities that declare war, the motives and occasions of war, have either been completely changed, or radically altered. Public opinion has reversed itself as to the elements that constitute the true foundations of national prosperity, or the real greatness and glory of a nation. "The cause of peace has moved forward through the enlightenment of the people." Wars are no longer waged to gratify the whims and caprices, or to avenge the wounded pride of the paramours of reigning monarchs, nor are they conducted to enslave the inhabitants of conquered territory, or to furnish booty and loot for savage marauders. The future holds its own problems, but the irruptions of Huns, Goths, Tartars, and Saracens will not be repeated. The Attilas, the Tamerlanes, the Genghis Khans, those terrors of the ancient world, are a vanished type. They will not reappear, and the dangers to civilization will not take that, or kindred forms. The delimitations of frontiers are practically settled the world over. At least any readjustment on a large scale is so remote, that we need not concern ourselves with it, or seek to anticipate and provide against the same by maintaining a military establishment so onerous and oppressive, that the chances of war will be preferable to the burdens of armed peace.

The great governments of to-day are slowly turning away from war, and this will be an increasing tendency, for the reason that with the spread of knowledge, and accumulation of experience, they have all learned the lesson that in destroying the purchasing power of any one of the sisterhood of nations, they strike a deadly blow at the roots of their own prosperity. The business of a great nation, is linked with the business of all other nations. The commerce of such a nation enriches all its customers, and it is not good for business, as Benjamin Franklin once observed in his pithy fashion, to knock one's customers on the head. A few days ago, President Wilson declared in his message to Congress, that the "United States is at peace with all the world, and many happy illustrations multiply about us of a growing sense of community of interest among the nations, foreshadowing an age of settled peace, and good will." If the President has correctly taken the horoscope of the future, the dreadful forebodings of the gentleman from Alabama, and the dismal prophecies of all the adherents of that school of thought, are at fault. Manifestly both forecasts can not be correct, and in the exercise of our personal judgment, we may choose between the two opposing views, and fix our attitude toward the problems of the present, and the future, in conformity with our convictions.

If the gentleman from Alabama is right in his forecast of what the future holds in store for us, then this country is in imminent danger, and other interests must be sacrificed, in order that the United States may be placed on a basis of adequate military preparedness, as speedily as possible.

If the President has drawn the proper conclusions from present conditions, including in his survey the factors of international relationship, then the time is auspicious for a reduction in our military budget, and the military budgets of all the nations. Multiplying evidences of an era of peace, and good will, do not call for feverish activity in our navy yards, or the multiplication of superdreadnoughts. These are the appropriate equipment of a nation preparing to go forth to war, and

have no place in the program of a country seeking to adjust itself to new and hopeful conditions of universal peace, and to beat its spears into pruning hooks.

A few years ago Mr. Bryan made a notable speech at the Lake Mohonk Conference. In the course of that speech he said:

I do not believe that this Nation ought to wait for any other nation to agree to do what is right. If this Nation announced to the world that it would not spend its money in getting ready for wars that ought not to come, that as it was not going into the burglar's business, it would not equip itself with burglar's tools, do you think our Nation would suffer for that? The building of these great battleships, these preparations for Christian nations to fight one another, is a challenge to the Christian civilization of the world. I believe this Nation could stand before the world to-day, and tell the world that it did not believe in war, that it did not believe that it was the right way to settle disputes, and that it had no disputes that it was not willing to submit to the judgment of the world. If this Nation did that, it would not only not be attacked by any other nation on the earth, but it would become the supreme power of the world.

Yea verily, every man of heart will assent with a loud amen, to the concluding thought of this extract from a memorable address. There is no nation so appropriately situated as the United States, to second Mr. Churchill's stirring call for a reduction in naval armaments. Well in advance of the splendid declarations of the British Government, this country of its own volition, and without waiting to make agreements with other countries, has twice cut down the battleship program within the last two years. This was a strong and courageous action on the part of a Democratic Congress, and one for which the country has given us due credit. It was carried over the opposition of a Republican Executive, and has been fully justified by the people at the polls.

No right-thinking man believes that this step, taken upon due deliberation, has imperiled our national safety one whit. "The Nation was never so safe and so sound as it is to-day." "No existing nation could do us any injury comparable to the injury to itself arising from the loss of our friendship and our trade." So far from this being an inauspicious time, to second the memorable proposals of Mr. Churchill, as intimated by the gentleman from Minnesota, it is the psychological moment to take this step.

These resolutions undoubtedly have the full approval of the President. They will have the earnest approval of the thoughtful American public; and this is the time for our thoughtful public to speak with power. No occasion has recently offered itself as a more propitious one for united demonstration in favor of calling a halt to the world's present insanity in the matter of naval armaments and appropriations.

An arrangement of the character proposed must soon come, else, "every citizen, figuratively speaking, will be carrying a soldier on his back." Mr. Speaker, a mere civilian like myself, or the gentleman from Missouri, Mr. HENSLEY, exposes himself to a very easy and flippant criticism, at the hands of the militarists, when he inveighs against the horrors of war, or challenges the wisdom of a militaristic policy for this country. But the voice of this criticism is stilled when the gentleman from Ohio, Gen. SHERWOOD, rises to address the House. There is no occasion to ask who he is, or whether he has knowledge whereof he speaks. The reek of the smoke of many battles still hangs about his garments. He has trod all the paths of glory, heard the "thunderous roar" of battle, and in the dread sequel listened to the groans and prayers of the wounded and dying. To-day he tells us that he hates war, and the policies that in the name of peace are making the world an armed camp. There was no uncertain ring in the vigorous sentences in which he denounced the policy of a greater Navy, as a policy of "criminal waste," and militarism, as "damnable." He declared that no man of heart, or capable of thought, believes that a big Army, and a big Navy are messengers of peace. And he was right. Referring to the movement for two battleships, he vehemently declared that—

this was a movement to tax the whole American people, on everything that they wear and eat, to raise $28,000,000, in order to gratify the barbaric yawp of war-mad semilunatics.

Gen. SHERWOOD is not alone in repudiating the theory that the maximum of Army and Navy is the most effective preservative of peace.

A few years ago, a great jurist now gone to his rest, declared that the

pretense current in certain circles, that the best way to preserve peace, is to build up an enormous Navy, shows a profound ignorance of the lessons of history, and the conditions of genuine and enduring peace.

The claim preferred on behalf of battleships that they are agents of peace is an absurdity, worthy to be classed with the other delusion that the peaceful disposition of a country is developed by the multiplication of military agencies, and the cultivation of the military spirit. A large military and naval force in any country, means a military caste in that country, as is notably the case in France, Russia, Germany and other countries of continental Europe. A military caste means war talk, and war talk always and everywhere means more ships, more soldiers, more war money, and more workers withdrawn from gainful occupations. The only reason that the United States is not afflicted to-day with a huge army and a colossal navy, is that our civilian rulers have refused to adopt the suggestions of the mandarins of the War and Navy Departments. The sooner the world rids itself of the obsession that prevails in certain quarters, that elaborate preparations for war, constitute an infallible index of peaceful intentions, the nearer we will be to the era of universal peace.

The gentleman from Minnesota announced on yesterday that in recent years, the armies and navies of the war lord of Germany, have been a potent influence for peace in Europe. I challenge that assertion. The real influence for peace in Germany, is the attitude of the burden bearers, the taxpayers, the hewers of wood, and drawers of water, the tide of whose power has been steadily rising in the Reichstag. The final weight of military preparedness, armed peace as it is euphemistically called, falls upon the common people, and well the representatives of the German people know that fact. They have no desire to see that burden increased, by the appalling cost of a modern war. The growth of the socialistic party, and the increase of its representatives in the great legislative chamber of Germany, has exercised a restraining influence on the Emperor William, on more than one occasion. Their presence in that chamber is, and will be, the surest guaranty of peace in Europe. Those representatives have not been slow to manifest both their restlessness under existing burdens, imposed in the name of peace, and their indisposition to assume still greater obligations in the same name. They know full well that every increase in the army means more men withdrawn from productive industries, more mouths to feed, more salaries to be provided, and more pensions to be paid by the taxpayers.

When the opponents of the Hensley resolution tell us that it will not receive a respectful hearing abroad, I reply to them that the people in whose interest it is offered, will hear it gladly. It is no longer a joke in continental Europe, to speak of the power of the people. More and more, with each passing year, the ministries and chancelleries of those countries, reflect the wishes and attitude of the people with respect to domestic, and foreign policies. In time, they will mirror them absolutely, and when that time arrives, the era of militarism will pass. Within the last 48 hours, a ministry associated with an unpopular military policy in France, has been overthrown. The increasing intelligence of the voters gives them a fuller appreciation of their own power, and a clearer comprehension of the exactions, and sacrifices required by a policy of useless militarism. Once freed of the delusion that these burdens are necessary and inevitable, they will welcome any feasible plan of reduction. Mr. Churchill's proposal would save thirty millions to Germany, and sixty millions to England in one year, leaving the relative strength and degree of safety of the two countries, at the end of that year, precisely the same. With the repetition of this proposal, reenforced by our action, and the illuminating discussion that will follow in the meantime, there will come a fuller realization of its full meaning, and of the message of hope that it carries to the toilers, and taxpayers. The vested interests, the armament firms, the generals, and the admirals who are chiefly responsible for the military craze, may be counted in opposition to this movement, nor is the strength of this opposition to be lightly regarded, but in time sanity will prevail, and hearkening to an imperious popular demand, the governments of the world will put into effective operation, agreements that will terminate the present extravagant naval rivalry. Mr. Churchill showed a full appreciation of the momentous character of this problem, when he declared on October 18 of this year that—

It was necessary for the welfare, and even endurance of our civilization, and the existing structure of society, that the question of armaments should be boldly discussed, not only by the Government, but by the peoples.

It is fitting that this Nation, which by "virtue of its position is the safest and strongest of nations," and whose motives will be least open to injurious suspicions, should lend its powerful aid to this hopeful movement. We have no ancient antagonisms, no old and unsettled scores, that will cause us to be regarded as Greeks bearing gifts. And to every eager soul who is sick at heart over this ceaseless talk of war, and these ceaseless preparations for strife, our attitude will afford hope and encouragement that all will yet be well, and the world in time cured of this "sickness called war."

Our friends are much concerned——

The SPEAKER. The time of the gentleman from Virginia has expired.

Mr. SAUNDERS. Mr. Speaker, I ask unanimous consent to proceed for five minutes. I was entitled to recognition for an hour in my own right. I can conclude in five minutes.

The SPEAKER. Is there objection? The Chair hears none.

Mr. SAUNDERS. Mr. Speaker, I was on the point of saying that I can readily understand that any first proposition looking to a reduction of armaments and emanating from any one of the European countries, would be received with suspicion by the country to which it was addressed. These countries have long lived in an atmosphere of suspicion, of secret diplomacy, and court intrigues. The roots of their jealousies and antagonisms lie far back in the centuries. They have severally inflicted, and endured at different times, the most grievous and horrid wrongs. They are prone to suspect the worst of their neighbors. This attitude has made it easy for the military caste to play upon the fears, and quicken the apprehensions of the people, who were already surcharged with the belief that beyond the border, their one-time enemies were brooding over ancient injuries, and meditating revenge. Under these conditions huge military establishments have been a natural growth, and a specious excuse for their maintenance, at whatever cost of popular sacrifice, has been readily afforded. But these suspicions would not attach to a proposition of reduction either emanating from, or indorsed by this country. We are outside of the sphere of European cross-purposes, and have given evidence of our good faith by reducing the size of our Navy in two successive years. From a financial standpoint, we are better able to sustain this deadly competition than any of our European competitors.

Our adhesion to this movement is therefore less to be related to some immediate selfish interest, though that interest measurably exists. Why need we fear a rebuff, and if rebuffed, what of it? Should the proposal be rejected again, and still again, will such rejection bring contumely upon this country? Will it cause us either to be ashamed, or to be afraid? Will it bring humiliation in its wake? Will it cause us to lose the solid regard of any portion of the civilized world? Why then should we fear to go forward? I am amused at the tender solicitude for our President displayed by our Republican friends who are opposing this resolution. They are oppressed with anxiety lest he should unwarily fall into this pit, that his Democratic associates are unwittingly digging for his feet. Mr. Speaker, we are constructing a bridge, not digging a pit, a bridge by which the nations of the earth may escape from their present prison house of fear into the full freedom of peace triumphant. The headship, the leadership in this great movement belongs to us of right. We are told by the opposition that we are pursuing a last year's bird's nest, that Mr. Churchill's proposal has been rejected. What of it? How often has this been true of great movements that in the result have been hailed with universal acclaim. Put forward with enthusiasm by some ardent pioneer, they are received with apathy, or chilling indifference. Slowly the movement gathers strength, until in time some great surge of popular favor, or the effective influence of some great leader, carries it to the front with irresistible momentum, and at once its adherents become legion. Things that are pronounced impossible, are accomplished in the twinkling of an eye when the hour and the man meet. Once done, and the wonder is that they were not done long ago. I recall that when I first came to this House, and as a new Member timidly suggested in the cloakroom, that the then conditions might be improved if the power to appoint the committees was taken from the Speaker, I was firmly told that such a thing was impossible.

Mr. MURDOCK. The gentleman was told that such a thing would be anarchy.

Mr. SAUNDERS. Yes, I was told that such a change would produce anarchy, that the business of the House of Representatives, could not be conducted decently, and in order, if the Speaker was deprived of the power to appoint the several committees. And yet for some years, in spite of these dismal prophecies, we have proceeded very comfortably, and efficiently under the present régime, without loss of dignity, or prestige on the part of the Speaker. The Speaker is no longer a boss, throttling or advancing legislation at his pleasure, but the presiding officer of a great deliberative assembly. The roll of constructive legislation enacted by this body during the past three years, is an ample answer to the croakers who confidently announced that we would be unable to do business under the new system.

Mr. Speaker, there are many things to encourage the friends of this resolution to press the same upon the attention of the nations. The action of Germany is not a discouragement. All great movements proceed slowly, and many pourparlers must precede the final agreement. The forces behind this proposal are the slow-moving masses, the much derided common people. At present the Governments of the great powers of Europe are essentially military, and as a matter of course, hostile to a movement of this character. The pressure for the same must come from below. It must be imposed upon the rulers. All new principles are put into operation by authorities that are either in sympathy with the proposed policies, or acting under strong popular compulsion. As well expect a reactionary stand-pat protectionist to accept the first suggestion of a different policy, and agree out of hand to revise the tariff downward, as to expect the Government of the Emperor William to agree in the first instance to a proposal that carries with it the implication that the militaristic policy is at fault. But there are many influences at work throughout the world upon which the friends of peace may confidently rely, to overturn the hostile attitude of the military caste towards reduction in military and naval armaments. Chief among these is the increasing cost of these armaments. The present indebtedness of the world is, $42,000,000,000. Ten years ago it was $32,000,000,000. Forty years ago it was little more than $20,000,000,000. The entire increase is practically due to the cost of wars, or the preparations for war. It is a striking fact that no nation is apparently willing to burden itself with a great national debt to promote works of domestic development. Perhaps the largest sum ever expended by a nation on a work of commercial utility is the outlay for the construction of the Panama Canal. But even this work partakes largely of a military character, for the chief argument in its behalf was the contention that it would be an important contribution to our works of national defense.

The great powers are severally indebted as follows:

France	$6,284,000,000
United Kingdom	4,961,000,000
German Empire	4,553,000,000
Russia	4,553,000,000
Austria-Hungary	3,753,000,000
Italy	2,707,000,000
Spain	1,815,000,000
Japan	1,242,000,000
United States	1,028,000,000

The increasing intelligence of the masses, and the increasing use of national funds to secure results of social and domestic betterment, that are reflected in a higher standard of living the world over, are tending to emphasize the fact that there are alternative uses for public money of a far more fruitful and beneficent character, than the building up of huge armies, and imposing navies. The public is not indisposed to expend whatever is necessary in this direction, but they are making a searching inquiry into the alleged necessity, and are manifesting a growing distrust of expert opinion, so far as it undertakes to fix the size of the navy, or army.

The fact is, that the size of the latter is not a question of naval strategy. Nor should the size of the former be remitted to the military experts. "It is a matter for the decision of the highest statesmanship. In a civilian country, made up of civilian people, the statesmanship should be civilian statesmanship. Inside of the Army or Navy, with a view to its maintenance on the highest plane of efficiency, expert opinion ought to rule; but the relation of the Navy to the other nations, constitutes a matter mainly outside of naval judgment. We should determine whether there is any menace to us, in what our sister nations are doing, and then do whatever is needful, wise, and just. Whatever is more is waste, and waste is another name for graft." Moreover, the advocates of peace, should spread the propaganda of peace on all occasions. In this respect, they should take a lesson from the activities of the members of the Navy League. They are at work in season and out of season. Any speaker who derides the motives, and sneers at the policies of the advocates of peace, is sure of an enthusiastic hearing at their hands, and if the orator goes further and pledges his support for liberal appropriations for the Army, and Navy, the applause becomes thunderous. If one tithe of the effort that has been expended in favor of maintaining the agencies, and machinery of war, had been used to show its folly and waste, the benisons of universal peace would long since have descended upon:

Every kindred, every tribe, on this terrestrial ball.

The public has long and passively acquiesced in the prodigious appropriations for military purposes, from a feeling that it was useless to struggle against the closely organized, and well-knit forces that have conducted the propaganda for this policy, and that have been so diligent in disseminating misleading arguments, and distorted facts in its behalf. This feeling is passing, and as the real facts are becoming known, it is being rapidly replaced with a growing sense of the futility, and folly of militarism under present conditions. The vast amounts that are being expended for these "unproductive purposes," are causing the taxpayers, "furiously to think," and to make instructive comparisons. "Two superdreadnoughts will cost about

$28,000,000. This sum would build 14,000 churches at $20,000 each, would buy 7,000 farms, at $4,000 each, would furnish a college education for 14,000 young men at $500 a year."

Save the British Navy, the "American Navy is the most costly on earth. It is one of the world's most expensive institutions. It costs more each year than all the colleges of engineering, and agriculture in the world, with all the technical, industrial, and trade schools of whatever sort—the foundations of the industrial prosperity of the nations. It costs more each year than all the universities of the world—the foundations of all intellectual leadership, and social progress. Each year it reaches a higher level of expense, and for this there is no visible reason external, or internal. The annual cost of our Navy has risen from $13,000,000 in 1881, to something like $140,000,000 in 1913." No one will pretend that this country is more secure to-day, or better protected against real dangers than it was in 1881, though the size of our Navy, in relation to the navies of the other nations, is much greater now than it was at that time. We are paying over $125,000,000 a year to protect ourselves against imaginary dangers, and maintain our "fighting edge." This gigantic sum if expended on the construction of roads, would build in any one year more than 31,000 miles of first-class highways, of the most approved character. With this sum we could do "wonders in storing, and distributing our flood waters," in the maintenance and enlargement of our levee systems, in the construction of new irrigation dams, and the reclamation of our deserts, in draining our swamps, and affording new areas of fertile lands for settlement and development. These great projects are calling to us insistently. What shall our answer be to the call? On every hand we see the "multiplying evidences" of an era of peace, but the armies and the navies grow apace. This is due in part to the vested interests, to an erroneous sense of insecurity, to the unceasing efforts of the military propagandists, to the glamour that attends the possession of military and naval power, and to "outworn ideas of national glory." But there is another contributing cause, and that is the mistaken judgment of certain advocates of peace, who believe that all this waste and debt are necessary, that peace means armed peace, peace backed by a great navy, and a corresponding army. This attitude ought to be challenged on every occasion by the friends of peace, who believe that "war instruments are built for war, and that their influence tend toward its destined end." The more peaceful a nation is, as manifested by its ways, and its works, the less reason for other nations to concern themselves with what it is doing. But the construction of battleships by one peacefully disposed nation, arouses the most lively concern among the other peaceful nations.

If battleships are agents of peace, and their construction means peace, why is it that whenever a dreadnought is projected, or laid down, it becomes a subject of instant interest to every other nation that is building dreadnoughts. Dreadnoughts in some marvelous fashion seem to procreate dreadnoughts, to give birth to "new dreadnoughts at home, and abroad," always with regard to the laws of dreadnought eugenics, for the descendant is ever bigger and sturdier, and in every way more vigorous and powerful, than the ancestor. "English dreadnoughts breed German dreadnoughts. German dreadnoughts are the parents of American monsters." Our Navy is the parent of sturdy youngsters in Cuba, Argentina, and Brazil. It would be difficult to gauge the unrest, distrust, apprehension, alarm and positive dislike that the steady increase in our Navy has aroused in the Republics of South America. The road to peace is not by this way. It is by the way of promoting, "friendly relations, and friendly commerce, by stimulating science, education, sanitation, industry, national justice, economy and solvency." We should cultivate the virtues of patience, tolerance, and self-restraint, and above all reject the sophisms of "armed peace":

> "To safeguard peace we must prepare for war"—
> I know that maxim; it was forged in hell.
> This wealth of ships and guns inflames the vulgar
> And makes the very war it guards against.
> The god of war is now a man of business,
> With vested interests.
> So much sunk capital, such countless callings,
> The army, navy, medicine, the church—
> To bless and bury—music, engineering,
> Red-tape departments, commissariats,
> Stores, transports, ammunition, coaling stations,
> Fortifications, cannon foundries, shipyards,
> Arsenals, ranges, drill halls, floating docks,
> War-loan promoters, military tailors,
> Camp followers, canteens, war correspondents,
> Horse breeders, armorers, torpedo builders,
> Pipe-clay and medal vendors, big-drum makers,
> Gold-lace embroiderers, opticians, buglers,
> Tent makers, banner weavers, powder mixers,
> Crutches and cork-limb manufacturers,
> Balloonists, mappists, hellographers,
> Inventors, flying men, and diving demons,
> Beelzebub, and all his hosts, who, whether
> In water, earth, or air, among them pocket—
> When trade is brisk—a million pounds a week.

The sum of the whole matter is that the United States as a peaceful Nation should maintain an adequate Navy. The test of an adequate Navy is easy. We need no ships for the purpose of offense, since this country is dreaming no dreams of conquest, or empire. Our requirements for defense are simple. "There is no power which hopes to rule over us, no enemy that dares, or cares to attack us." Our commerce enriches the world. Our virile citizenship, our available resources, our actual wealth, our commanding position, our present military and naval strength, which is far in excess of our actual needs, and the unity of our national sentiment in all that touches the vital interests of this country, afford an ample panoply of protection against any suggested attack. There is no occasion to increase either the Army or the Navy. Both may be safely reduced. Mr. Speaker, everything tells us to go forward with this great movement for the reduction of armaments. We may be rebuffed. If so, we will try again, and will not weary in well-doing in this great cause. For years, through remonstrance and diplomatic representation, we sought to improve the condition of the Jews in Russia. Finally, we repealed our treaty with that country, in the hope that betterment might come by that way. Vain hope. We have been rebuffed at every turn, our requests denied, our suggestions rejected. Have we lost standing thereby, have we lost prestige, have we fallen into a pit which we have digged for ourselves, have we been made ashamed before the nations? Ah no! The fight goes on, light is breaking, and in the end, justice will be secured for the Jewish citizens of that unhappy country. And this other fight will go forward, whether under our leadership, or that of another. In due time victory will come, for no system grounded in absurdity, rooted in folly and wrong, can endure for all the ages. In spite of the forces of active opposition, in spite of chill indifference, and envenomed attack, this movement will not fail. The day of deliverance for the nations is at hand.

> It's coming yet for a' that,
> When man to man the world o'er,
> Shall brothers be, and a' that.

[Applause.]

Mr. Speaker, there are many encouraging indications that the era of great wars is passing. God speed its passage. In the barbarous past war has afflicted mankind with untold miseries, with woes unnumbered. It has destroyed values beyond computation, lowered all ethical standards, and degraded the high ideals of humanity. In its wake are heard the groans of strong men, and the pitiful weeping of sorrowing women. The spirit of the enlightened present is calling the Christian nations to enlist in the "common service of world-wide liberty," and civic betterment. Everywhere recruits are needed for a universal war to eradicate war, and the vicious causes that lead to war. In such a cause I am ready to enlist as a volunteer. This will be a holy war, a war for humanity, a war to banish disease, and crime, and suffering, and sorrow, a war to lift up the lowly, and bring comfort and relief to the miserable and afflicted of every degree. In time peace will win this victory, a victory more renowned than any achievement of grim-visaged war. [Applause.]

Currency Bill.

EXTENSION OF REMARKS

OF

HON. MOSES P. KINKAID,

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. KINKAID of Nebraska. Mr. Speaker, in my estimation, the Democratic Party has not made the most of the greatest political and statesmanship opportunity ever afforded a political party in the history of our country. I predict the operation of this bill will show the present majority party has been found wanting in constructive legislation. The pending bill combines good and bad features; it contains even opposing principles, and is therefore inconsistent within itself.

Mr. Speaker, except for the earnest and persevering resistance of most Republicans and Progressives, aided by a few Democrats, in opposition to provisions of the original Glass bill, from its start in the House, the sponsors of the bill, impatient of any deliberation or delay, would have forced its passage without the allowance of a single amendment. But as a result of the untiring protests of those opposed to certain provisions as the bill was introduced, covering a period of several months, many amendments have finally been secured in the Senate, the merits of which even the most ardent supporters of the bill, as it was first written, now admit to be indispensable to its successful operation. But it is yet, improved as it has been by amendments, imperfect in several respects, in details. These remaining objectionable features have been pointed out and amendments proposed which would have removed them. But these amendments have been voted down by the majority party.

Mr. Speaker, I do fear the strong political party desire to pass a bill as drafted and proposed by the majority leadership has outweighed and subordinated the more deserving purpose, that of securing a financial measure truly salutary. Certainly I grant the majority party seeks meritorious legislation. But I do fear the anxiety of its leadership to secure exclusive credit for the party for passing a currency measure has stood in the way of the best results.

Mr. Speaker, viewing the provisions of the bill as I have stated myself raises the question of what it is my duty as a Member of this House at this juncture to do, with a final vote upon the measure impending. I am frank to say if my vote against the bill would defeat it and thereby secure the striking out of objectionable features and the substitution of what would be beneficial to the measure, I should unhesitatingly now vote against it, just as I did vote when it passed the House, to encourage amendments by the Senate. But the opposition vote of all Republicans and Progressives, combined with the very few Democrats who opposed the bill, would not now prevent its passage. Therefore it is not three alternatives the situation presents, namely, this bill, the national banking system we now have, or, instead of either of these, a new and better bill. Such is not the situation. It is but two alternatives that confront me, namely, this Glass-Owen bill or our present national banking system. It is a vote for the Glass-Owen bill or a "No" vote, which should be construed that I would prefer our present system to the pending bill.

As I have in substance heretofore expressed myself, as I view it, our national banking system, while a great achievement for the time of its enactment, comparatively viewed, a great contrivance to be attained under the then existing environments, and for which Secretary Chase, Senator Sherman, and a few others were entitled to all if not more than the credit acknowledged them at the time, and, I may add, without which the Union of the States might not have been preserved, yet its operation has proven the system to be unsound in principle as to the volume of currency. Statesmen, party conventions, business men—maybe I should have first mentioned the press—and the masses generally have for a considerable period declared against it and for a better system. All concur that an elastic currency and a mobilization of bank reserves would operate for the welfare of the people. These are wanting in our existing national banking system; they are provided for, though not as well and skillfully as might be, by the pending bill. The Glass-Owen bill in these respects constitutes a material improvement upon the fundamentals of our existing system; therefore, while much of the machinery and details of the bill are objectionable to me, I find myself impelled to take a practical view of the situation, whereby I find a preponderance of advantage in favor of the pending bill in preference to a continuation of our old national banking law. I voted against the Glass bill when it was the most objectionable to me that it has been; this was when it passed the House; again I voted to concur in the amendments, just as it came from the Senate, for fear that in conference the provision for the insurance of deposits might be striken out, and so I think I voted against the bill when it was the worst it has been, and I shall now vote for it, when it is the best it has been, certainly in many respects, but I do grant that while the clause for the insurance of deposits was lost in the conference that slight gains in other respects were made.

Mr. Speaker, I very much regret the deposit insurance provision has been stricken out of the bill by the conferees. It was my fear that this might be done—this was my principal reason for voting to concur in the Senate amendments instead of permitting a conference and taking chances that this very salutary clause would be eliminated. But, Mr. Speaker, I serve notice now that if some one does not get ahead of me I shall prepare and introduce a separate deposit insurance bill just as early as I can find the time to prepare it.

Mr. Speaker, the membership of this House ought to be agreed, and I am sure all their constituents will agree, and especially the business interests of the country will agree, that political partisanship feeling should not for a moment be permitted to stand in the way of a vote expressed the best calculated to promote the welfare of all the people collectively, and with this view I shall vote for the bill by voting to adopt the report of the conferees.

Mr. Speaker, to be clearly understood, it is my position that while this bill is defective in different respects it yet contains enough good, enough of a start for an improvement in our banking and currency system, that we should pass it rather than make no commencement at all, and from time to time amend it in the places and at the points at which its operation shows it to be weak or wrong.

Currency.

EXTENSION OF REMARKS
OF
HON. S. A. WITHERSPOON,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. WITHERSPOON. Mr. Speaker, upon the conference report of the currency bill, agreed on by the conferees of the Senate and the House, I voted in the negative because, after as much study and investigation as it was possible for me to give the subject, I came to the conclusion that the proposed law was contrary to the best interests of the American people.

In 1900, after much agitation and party conflict, a system of banking and currency was adopted, and this system of finances has been on trial for 13 years. The result of this long trial is that the Republicans who fastened the system upon the country, the Democrats who bitterly opposed it, Greenbackers, Socialists, anarchists, and, in short, all classes of our people, unanimously agree that it has resulted in intolerable evils, and that something else must be substituted for it.

The concentration of the wealth of the country in the hands of the favored few, the correlative increase in the multitude of the poor, the reign of uncontrollable panics, the widespread failure of business enterprises, and the monopoly of the money of the country by the idle rich and the gamblers are some of the results which have marked the progress of our financial system for more than a decade. The foundation principle of this system was laid in the act of 1890, which provided that 25.8 grains of gold should constitute the dollar which was to be the standard of value, and that other dollars should be maintained at a parity with this dollar. Silver ceased to be coined into money and a vast sum of gold, amounting to $150,000,000, was accumulated in the Treasury and has been kept there ever since for the purpose of maintaining this parity.

Having destroyed the use of silver as money, and having adopted as the sole money of the country a metal whose quantity is utterly insufficient to supply the money requirements of the country, it became a matter of necessity that something else should be substituted for money. Accordingly the banks were required to gather up and store in their vaults immense quantities of the gold and other moneys of the country, aggregating about a billion and a half dollars called their reserves, and this money they have been forbidden by law to lend or use, however much it might be needed.

The effect as well as the object of this was to give these institutions the highest possible credit, and bank credits, loaned the people to the amount of $18,000,000,000, have been effectually substituted for money as a medium of exchange. Less than 5 per cent of the business of the country is transacted with money and the use of bank credits has become almost the sole medium of exchange, and the dependence of the people upon bank credits in lieu of money explains the purpose of demonetizing silver and of adopting as the sole money of the country a metal whose scarcity made it impossible to transact the business of the country with money.

This cruel, foolish law which has forced the substitution of bank credits for money does not permit the banks to use the money in their vaults even when the destruction of confidence

makes it impossible for them to lend their credits in lieu of money. In 1907 the banks had a billion and a half dollars in their vaults, and if this vast sum of money had been put in circulation money among the people would have been so plentiful that the continuance of the panic would have been impossible, but the principle of our financial system regarded it as of the first importance to maintain the credit of the banks, and hence this vast reserve was kept in sacred idleness and even increased throughout the panic at the cost of untold suffering and widespread ruin.

With this experience to guide us and these calamitous results still fresh in our memories we have now adopted a new system of banking and currency founded on the same vicious principle of finances.

The new law provides for the establishment of 12 banks located each in one of the 12 districts into which the country is to be divided. The capital stock of these banks is to be taken and paid for by all banks that become members of the system and in these regional banks the members are to keep a part of their money on deposit. The regional bank's business will be the rediscounting of the paper of the member banks, and on this rediscounted paper as security the regional bank is authorized to issue the new currency, in the discretion of the Federal Reserve Board. This new currency, secured by the rediscounted paper, made a legal tender in the payment of public debts, and guaranteed by the Government, will constitute the money which the regional bank loans to the member banks on its rediscounted paper. It is the credit of the regional bank in the form of a note which it loans instead of money, and the amount of such credits, which it will be authorized to loan, is measured by the amount of gold and other lawful money it may be able to hoard.

The act authorizes the regional bank to issue $100 in these currency notes for each $40 it may have or $2.50 in currency for each $1 of gold or other money. In other words the regional bank must always keep in idle money 40 per cent of all the currency it lends and this is a sacred fund which must never be put to any use except to maintain the credit of the bank and thereby cause its credits, in the form of currency notes, to circulate among the people and serve as a substitute for money. The principle of this scheme is identically the same as that of the system which proved so disastrous and which we have now abandoned. The basis of it is that there is no real money but gold and that the scarcity of gold makes it necessary to collect and hoard it in the vaults of the banks to the end that this will create such confidence in the banks that their credits can be loaned to supply the place of money. This firmly establishes the autocratic supremacy of the banks and the utter dependence of the people upon them for their credits as a medium of exchange, and the whole fabric of the system rests on the delusion that one dollar in gold will make two and a half in currency notes good.

The science of money is very abstruse. The complication of its principles are difficult to comprehend, and the human reason is often bewildered in the effort to unravel its economic questions. The evil effects of a false system are often impossible to distinguish from results that might come from other sources and the magnitude of the problem should shield the honest conclusions of anyone from criticism and blame.

But we acquire most of our wisdom in this world not from reason but from our mistakes, blunders, and misfortunes, and if we can not see by the lamp of experience we will never find the truth. Men may justly differ when they resort to reason, especially on such a difficult subject as the currency; but after 13 years of trial with all the evil results that are admitted to have followed there seems to be little excuse to establish a new system on the very same principle. If this was wise, then the teachings of experience have no value. A system of finances would have been devised on a different principle if it had not involved a confession on the part of the framers of the bill that they were wrong 13 years ago; but I knew that the gold-standard theory of money was wrong then, and in the light of the disaster it has caused I could not vote for it.

In arriving at the conclusion that I ought to vote against the currency bill I considered as fundamental the question, What is the real object and function of money and banks and whether the proposed currency system carries out those objects?

MONEY.

What is the use of money and what object is it designed to accomplish? All dictionaries answer this question by defining money as a medium of the exchange of products and none of them define it as a medium of creating credits in banks.

All books on political economy accord with the definition of the dictionaries, and teach the doctrine that the sole function of money is to effect the interchange and distribution of the products of labor. This exchange is always given as the necessity for money and this use constitutes its sole value. Without money the business of the country would be impossible. When a man raises 1,000 bushels of wheat and only needs a few bushels for his own use, he would find it impossible to exchange what he can not use for the great multitude of other articles he must have, and the only method by which his necessities can be met is to sell his surplus wheat for money and then use the money in the purchase of whatever he may need. In this way money effects the exchange of these products which each man does not need for those products which he does need, and this is the function of money as expounded by all writers on the subject. I have never been able to find any book on the science of money which claims that its function and use is not as a medium of exchange but as a means of creating in banks credits to be substituted for money.

To destroy the use of money altogether and to make the people wholly dependent on the banks for their credits as a substitute for money is the prime object of the currency bill against which I voted. Under the old system, which its advocates and originators have been forced to abandon, the laws of the United States and of the States required American banks to keep as reserves in their vaults from 15 to 25 per cent of their deposits in cash, and this legal requirement resulted in the hoarding by the banks of one and a half billion dollars. This vast reserve means that much money must be idle and never be used for any purpose at any time. It had no other effect except to center in the banks the credits of the country and to make the people wholly dependent on them for their credits as a medium of exchange in lieu of money.

The new system is still worse. It requires all banks who become members of the system to keep 12 per cent of its deposits if it be a country bank, 15 per cent of its deposits if it be in a reserve city, and 18 per cent of its deposits of it be in a central reserve city lying idle and useless in its vaults all the time. In addition to this each bank must keep 5 per cent of its time deposits as a part of its reserve. In addition, each regional reserve bank must maintain two large reserves. For all deposits of money or paper it must have 35 per cent thereof in cash in its vaults, and for all currency notes it may issue it must keep 40 per cent thereof in gold or lawful money, the currency notes themselves being by implication a sort of unlawful money.

When we remember that the total amount of bank deposits in the United States is about $18,000,000,000, it is plain that if the banks conform to all the requirements of new reserves and for increased reserves, and if the banks take from their vaults all the cash required by the law for the purpose of paying for the stock in the 12 regional banks and for the maintenance of their required deposits in the regional banks, it will take about all of the $3,000,000,000 of money now in existence and thus effectually destroy the use of all money in the United States as a medium of exchange and firmly establish the dependence of the people upon the use of bank credits in the form of currency notes as a substitute for money.

Money, whether it be gold or silver or greenbacks or Treasury notes or what not, will cease to be a medium of exchange. All money will form a part of some bank reserve, and all the dictionaries and books on political economy will have to revise and change their definitions of money, and, so far as the United States is concerned, they will have to admit that from the beginning of time they have been mistaken in declaring that money is a medium of exchange, and that it was left for the modern goldbug to discover that the prime object and only function of money is to form bank reserves and create bank credits.

The unknown author of the currency bill was certainly enamored of reserves. He calls the bill itself the "Federal reserve act." He names the 12 regions into which it divides the country "reserve districts." He denominates the officers in whom the supreme power is vested "the reserve board," and the 12 regional banks are to be known as "reserve banks." Even the agents are dubbed "reserve agents." And then it effectually provides that practically all the money of the country shall be used solely for bank reserves. To him reserve seemed to furnish the answer to all financial questions, to be the whole culmination of the science of money, and to be set up as the ultima thule of real statesmanship.

If the perfection of bank reserves is the object of our currency system, I made a mistake in voting against the bill; but that idea is so antagonistic to all my conceptions of the function of money that I was unable to appreciate the wisdom of it. It may have been because my reserve of the information which I have been receiving all my life was too large to admit any further reserves into my head.

BANKS.

No institutions are more important than banks. They are as necessary as money itself. Without them money could not perform its function, and upon the proper exercise of the banking functions depends the prosperity of the country. Banks are indispensable to the distribution of wealth and the good of all classes, because they are the only institutions yet devised by which a small amount of money can be made to effect a large amount of business.

In the United States it is said that the wealth of the people amounts to $130,000,000,000, and that the annual production of wealth amounts to $30,000,000,000, all of which has to be interchanged and distributed, and we have less than $3,000,000,000 with which to effect these enormous exchanges. This is not possible unless each dollar, which may change hands and effect many exchanges every day, is used to the greatest extent. If each individual keeps his money in his pocket and it is used only when he enters into a business transaction and lies idle during the time its owner does not use it, then our supply of money would be wholly insufficient for the demands of business. In order to make $3,000,000,000 ample to do the business of the country it is indispensable that one man may be able to use the money of his neighbor, who does not for the time need it, and this is accomplished through the medium of banks. When everyone in a community deposits his money in the local bank it can all be used all the time by those who need it, and in this way only can the supply be made sufficient. Here lies the usefulness and the necessity of banks. Their main function, therefore, is to lend the money of the people, and as long as they perform this function they are a blessing to every community.

But the present law, as well as the abandoned system, instead of making the banks perform their legitimate and highly useful function of lending the money of the people, aim to make the banks in each community have a monopoly of its money to the end that money shall cease to be a medium of exchange, and that bank credits shall be substituted therefor. Not only did the old system require that the cash reserve of each bank should be increased in proportion to the loan of its credits, and not only is this requirement continued in the present system, but in addition to this each bank which becomes a member is now required to surrender a large part of its cash to the 12 regional banks, and these regional banks are required to keep two large reserves of cash, one of which is 40 per cent of the new currency notes they may issue, and the other is 35 per cent of their deposits, thereby largely increasing the amount of money whose use as a medium of exchange will be destroyed, and greatly enlarging the dependence of the people on bank credits as a substitute for money.

The new law, in fact, conditions the power of each regional bank to do business upon the amount of cash it can hoard and monopolize, because it must have a dollar in gold for each $2.50 of currency notes it issues, and the more gold and other money it can hoard the more of its credits it can lend. It is therefore under not only the temptation but the necessity of accumulating and hoarding as much money as possible. The more money it keeps idle and destroys the use of the more of its credits it can lend.

When the currency bill was under discussion the ablest members of the Banking and Currency Committee, well understanding that the object and effect of the bill was to destroy the use of money and to substitute therefor bank credits as a medium of exchange, boldly asserted in the debate that banks do not deal in money at all, but they deal exclusively in credits. This was literally true in the old system, and will be equally true under the new. It will be impossible for the banks to lend money and comply with the requirements of the law. Each bank will have to strive to become a monopoly of all the money in its community in order that it may be able to lend the largest amounts of its credits to the people.

The monopoly idea of a bank is intolerable to anyone who has the instincts of a Democrat. All private monopolies are denounced in the Democratic platform as intolerable and indefensible. A monopoly of money is the worst form of monopoly that selfishness can devise. It is worse than a monopoly of corn or wheat or cotton, because the monopoly of money blights prosperity in every walk of life and makes the welfare of the people in every country dependent upon the will and whims of the money monopolists. The potent cause of the paralysis of the transportation and mercantile business as well as of the manufacturing and agricultural and other productive industries of the country lies in the Money Trust, which has existed for many years and which is the legitimate offspring of our old banking and currency laws, and to vote for a bill which increases the monopoly of money meant a surrender of all my conceptions of the functions of money and banks and the abandonment of all my convictions as to the political evils of the day and of the proper remedy therefor. I could not do this because somebody told me to do it.

THE EXPENSE OF THE SYSTEM.

But having adopted a banking and currency system which abandons the use of money as a medium of exchange and substitutes bank credits therefor, which converts banks from money-lending into credit-lending institutions, designed to hoard and monopolize the money of the country, the question still remains, Is such a system good for the country? The answer to this question depends upon the profits it will afford the banks and the cost it will fasten upon the people.

No banking and currency system can be good unless it makes the profits to banks easy and the cost to the people low, for without profits to the banks the system will be a failure, and if its cost to the people is so burdensome as to equal the profits of commercial, agricultural, and manufacturing pursuits, material prosperity could not advance. There is no real conflict between the interests of the banks and the prosperity of the people. If the banking business is a failure, then no other enterprises can be supplied with the money necessary to success, and if the cost of the banking and currency system is so high as to absorb all profits of productive wealth, then all kinds of business must fail and involve the banks in their failure, for the measure of prosperity to the banks is the amount of wealth to be distributed.

The test, therefore, of the best banking and currency system is the one that will enable the banks, with the least possible expense, to earn a reasonable profit and to lend to the people the money of the country at the least possible cost; and the worst possible banking and currency system is the one that imposes upon the banks the highest possible expense before earning their profits, and thereby forcing them to exact from the people the most extortionate rates of interest for money.

The use of money as a medium of exchange is a necessary item of cost in both the production and distribution of wealth, and it is self-evident that the smaller that cost may be the greater will be the success of every kind of business, and the higher that cost may be the more certain will be disaster and failure. If the annual production of wealth were $30,000,000,000, and if the cost of this production were the same, and if the interest charges in that cost were a billion dollars, it is manifest that the cost of the money used was so high that no profits were left. If a farmer sells his crop of wheat for $1,000 and the expense of raising it was $1,100 and included $200 for interest, it is evident that all his profits and his loss were the result of the cost of his money. This cost of money courses through every artery and vein of business like the blood through the human system. When the manufacturer sends into the markets the product of his factory there is included in the price of each article its share of the interest and discounts which he has paid for the money used in the purchase of the material, in the payment of his laborers, and in the holding of his goods until a purchaser is found. The wholesaler and jobber who bought the goods from the factory, and every middleman through whose hands it passes, adds to the price the cost of the money he has borrowed in handling the goods. The freight which the transportation company charges for delivering the goods to the retailer is largely composed of the interest on the bonds which the transportation company owes to the Money Trust; and, finally, the retail merchant sells the goods to the consuming farmer on a credit, and is compelled to add to the price, already surcharged with interest, an additional amount of interest for carrying the farmer till his crop is ready for market. When he sells his crop, and with the proceeds settles his store account, filled with all this interest, and then pays the interest on the money he has borrowed, he finds there is no profit, and frequently a debt, to be carried the next year. He wonders why this is so, for he has without knowing paid such a high cost for the money used in his business that profits were impossible. He learns that the banker, the railroad company, and the merchant have realized great profits, but the silent, unseen effects of our money system on production are unknown to him. But it is clear to one who thinks that the most expensive currency system is the worst, and the cheapest system is the best. This is the only real true test, because it is the only one that consults the welfare of the people and the prosperity of the country.

But this new system of banking and currency ignores this fundamental principle and is constructed for other ends. The basis, the beginning, the middle, and the end of the new law are reserves. The member banks must send a large part of their cash to the regional banks, where it can never be used to accomplish any of the purposes of money, but where it must lie as idle capital to measure the amount of currency notes the regional bank may issue. In addition, the member bank must keep 12 per cent of its deposits idle in its own vaults. The

regional banks also must have 40 per cent of the currency notes and 35 per cent of its deposits idle and useless. I can not tell how much all these reserves will aggregate, but if the old law compelled the banks to hoard a billion and a half dollars of idle money, the new system will approximate three billions, or all the money in existence in the United States.

When all this idle capital is stored up in the vaults of the banks which can not use it or lend it to the people without violating the law, when they must keep it and hoard it without the possibility of any profits on it, then the banks must either fail or, when they lend their credits, created and maintained by these reserves, they must charge such rates of discounts and interest on their loans to the people as will not only compensate them for the risk and expense of the loan, but the rates must be sufficiently high to also compensate them for the vast amount of capital which the law requires them to keep idle in their vaults as reserves.

No business can succeed which is compelled by law to keep 50 or 25 per cent of its capital idle. The principle of success in every business is to make every item of capital earn something and to turn it over as often as possible.

If the law should require the manufacturer to keep half of his machines in idleness as a reserve, it would ruin him unless he could sell the product of the other half for a price twice as large as he could sell them for when operating all of them. If a law were to require a merchant to keep one-fourth of his goods as a reserve and never sell them, he would go into bankruptcy unless he were permitted to add 25 per cent to the price of that portion of his stock which he is permitted to sell. If the farmer were required by law to keep half of his plows, hoes, horses, mules, and lands idle all the time as a reserve, he would soon move to town, as so many of his neighbors have done, because not only profits but a living would be an impossibility to him unless he could sell his wheat, corn, or cotton for a double price. If the banker is forbidden by law, as the new currency bill effectually does, to deal in and lend his money, and if he must be confined to the lending of his credits in the form of currency notes, then he must charge a rate of interest to the people sufficiently high to remunerate him for all his idle money, the expenses of his business, and a reasonable rate for the loan.

The bill certainly puts it up to the American banker and confronts him with the problem of his idle money, which can yield no profit, and submits to his genius to rob his customers of enough interest on his credits to compensate him for the loss of the use of his money.

When a Federal reserve bank desires to secure $250,000 in currency notes, it must first collect and hoard $100,000 in gold or lawful money, and this, with the proper security, will get the currency notes, on which it must pay interest to the Government at such rate as the Federal reserve board may determine. It then uses the currency notes to rediscount the paper of member banks at a rate which will enable it to pay its expenses and the interest it has already paid on the notes and a profit to itself, and also compensation for its idle reserves. The member bank must pay out a rate of interest to the regional bank sufficiently high to cover these four items and is then supplied with the new currency, which it will lend to its customers.

When the farmer and the merchant and the manufacturer come to the member banks to borrow these currency notes, which are nothing but bank credits, guaranteed by the Government, or, in other words, by the people, and ask the rate of interest, the member bank must resort to a good deal of figuring. It must put down the interest it has paid to the regional bank; it must put down the value of the money it has been compelled to contribute to the capital of the regional bank on which it may never receive any returns; it must count in the value of its own reserves on which it can make no profits; it must consider its own expenses; and, lastly, it must make the rate of interest high enough to cover all these items and a profit to itself.

To one who expects to borrow this new currency and to pay the amount of interest that will make the system profitable to the Government, the regional banks, and the member banks, the outlook is alarming, but the bill gives the people the assurance that these rates of interest will be controlled, not by a money trust, as heretofore, but by a Federal reserve board, composed of the servants of the people. No doubt the Federal reserve board will exert all its power to shield the people from exorbitant interest rates and stand in strong contrast to the Money Trust which has heretofore controlled the money and credits of the country in the interest of the banks. But if the Federal reserve board constrains the banks to lend the new currency to the people at rates which will enable them to live, the banks will be unable to pay the interest they will have to pay for the use of their own credits and compensate them for their idle reserves, amounting to billions of dollars.

The good of the people will involve the system in failure and the success of the system will entail upon the people the highest possible cost of their medium of exchange.

But when the people shall borrow this new currency from the banks at a rate of interest that will pay for its use and also for the idle money they do not get, what sort of money will they have? It will be good to pay tax collectors and banks, but it can not be used to pay private debts unless the creditor sees fit to take it. The new currency is not a legal tender in payment of private debts, and if the sheriff has an execution and is about to sell the property of the citizen to satisfy a judgment, it can not be satisfied and the sale can not be stopped with this costly currency. It lacks the most valuable quality of money, and that is the legal-tender quality. If the creditor refuses to take it, the debtor must send it a thousand miles to a regional bank, or to Washington, and exchange it for lawful money.

THE CORRECT PRINCIPLE.

Our currency system should have been based on the very opposite principle from that of the one adopted. It should have aimed at giving the people the money needed in their business at the least possible cost. It should have provided for the issuance of no currency to any bank as long as it had money in its vault, and this would have forced the banks to use the actual money of the country, and the people would have gotten the use of the money without paying for idle useless money which they did not get. Whenever a bank was found to be perfectly solvent and to have loaned out all of its money and could furnish ample security, to such bank and to such bank only should the new currency be issued. The fact that provision was made by which such banks could procure more currency would have made them free to lend it, and would have reversed the tendency to increase their cash and hoard the money of the country at the approach of a panic. Under this principle the fact that a bank had loaned all of its money would prove that more money was needed, and when the bank had idle money it would show that the community did not need any more money, and thus the currency would expand or contract, according to the needs of each community, avoiding dangerous expansions and ruinous contractions.

But under the new law the amount of new currency which the banks can secure will depend not upon the needs of the people, but upon the amount of gold in the vaults of the banks. In those regions of the country where the gold is accumulated they will be entitled to issue two and one-half dollars in currency for one of gold whether an increase in currency is needed or not, making it possible for unnecessary expansion and speculation, while in those regions where actual money is scarce the new currency can not be issued no matter how much the needs of the people may demand it.

If in the preparation, consideration, and discussion of the currency bill it had seemed to me that it was an effort to adopt a currency bill which would facilitate the profits of the banks and thereby enable them to accommodate the people at reasonable rates of interest, I should have hesitated before putting up my own judgment against that of the entire Congress. But in the entire bill, from its title to its end, I could find nothing except bank reserves and the gold standard. I listened for weeks to the debate on the bill and I did not hear a single Member even contend or assert, much less try to prove, that the proposed system would reduce the expenses of banking and enable those institutions to supply the people with money at less cost than the present system, nor did anyone ever try to explain how the nonuse of the vast reserves would result either in profits to the banks or benefit to the people.

The framers and advocates of the bill seemed to have lost sight of the real object of the currency system, and to have centered their whole attention upon the correction of certain evils resulting from the former law. They claimed that it would prevent the concentration of money in New York, that it would prevent the use of such vast sums of money in gambling on the New York Stock Exchange, that it would transfer the control of money and credits from the Money Trust to a board of the people's servants, and give a flexible instead of a rigid, fixed currency. The answer to all these contentions is that the proposed bill might accomplish all these good results, and yet if it makes the cost to the people and the burden on the production and distribution of wealth greater than it was, it would be a worse system, and do more harm than good. Another answer is that all these evils could have been as easily corrected in a currency system based on the right principle as in a currency system based on a wrong principle, and I be-

lieve that defeat of this bill would have resulted in the early passage of a bill framed in the interest of the people.

The grandeur of the scheme seems to have captivated the Congress. Twelve great regional banks, conducted in stone buildings covering acres of ground, lifting their white walls and splendid domes high up toward heaven, and containing within their huge vaults all the gold and most of the other money of the country, presented to the imagination a sublime system of money in keeping and harmony with the greatness of the country, and its immense proportions afforded a favorable comparison with our great continental railroad system and the vast manufacturing and other great enterprises of the country.

Such a scheme had never been mentioned in any newspaper, magazine, public speech, or political platform, but like Minerva it leaped forth full panoplied from the brains of its sire, and the very novelty and originality of the scheme inspired the oft-repeated eulogy that it was a piece of great constructive statesmanship. If the grandeur of the conception was the object to be attained, then this bill was properly passed into law, but grandeur and power in governmental affairs do not always coexist with the good and life of the people any more than it does in the material world. Nothing is more sublime than the heaven-piercing peaks of the Alpine Mountains. Upon their huge crests the never melting snows of the centuries sleep. They lift up their great heads to see the earliest light of the morning and shake their white locks in defiance at the storm. The traveler gazes in wonder at their grandeur, and the poet and the orator struggle in vain to depict their sublimity. But mixed and mingled with all their grandeur there is no sign of life. Nature has never crowned those frozen heights with a tree or bush. No blade of grass extends from that icy bed of snow, its green tongue to catch and drink the falling dew, and no flower flings its fragrance around that cold bleak summit. All is cold, frozen, bleak, and dead, and we behold the sublimity of the earth and eternal death joined together in unending wedlock.

And so we find in history that the highest grandeur of human governments have crushed and destroyed the liberties of the people. Its huge operations often blight their hopes and undermine their patriotism and other virtues. The burden of its support may become a weight which the people can not bear, and then the Nation, like the mountain, presents the union of governmental grandeur and popular death.

Currency Bill.

EXTENSION OF REMARKS
OF
HON. J. B. THOMPSON,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913.

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. THOMPSON. Mr. Speaker, when the bill we are about to pass was first before the House and before it went to the Senate, where a number of very valuable amendments have been added, on September 16, in the few remarks I made on the bill as it then read, I said:

I do not believe this bill takes care of all the different classes of our people to the same extent. * * * I reserved the right in the Democratic caucus to vote for certain amendments if they were proposed upon the floor, and I shall do so. I shall vote for a provision against interlocking directorates. I shall vote for a provision prohibiting rediscounting of commercial paper, the proceeds of which are to be used on the stock exchange for purchasing futures on staple farm products and for gambling on the board of trade. I shall vote to extend the time provided in section 14 of the bill from 90 days to 6 months for the maturity of commercial paper secured by staple farm products, so that our farmers' and stockmen's paper will be the subject of rediscount and placed on an equal footing with the paper of Wall Street speculators.

Without going into detail, I will point out what appears to me to be a few of the improvements that have been made in the bill by the Senate.

The time for which money can be loaned to our farmers has been extended from 90 days to 6 months, making it possible for them to borrow and pay off the loan out of the proceeds of their crops. The time for which money can be loaned on farm lands has been extended from 1 to 5 years. I favored inserting these provisions in the bill when we were considering it in caucus. After a bitter struggle the friends of agriculture were able to extend the time of personal loans to farmers from 45 to 90 days. The Senate now extends it to 6 months, which is gratifying to the friends of agriculture.

After a determined effort in caucus, the time of loans on real estate was extended from 9 months to 1 year. The Senate now extends that period to 5 years, and this is also gratifying. The Senate, by these amendments, has made it possible for a farmer to secure money from the banks operating under this new system, and for this reason the Senate bill is infinitely better than the House bill.

The Senate bill carries a provision for the guaranty of bank deposits—one of the most beneficent provisions of the entire bill and a provision which, when adopted into the national banking law, will do more toward destroying panics than all the other provisions of the bill. All recognize that panics are caused by fear. The word "panic" means fear. There will be no fear when depositors know their savings are secure. There is not a bank in all this country that can not be destroyed if a "run" were made on it. The Banking and Currency Committee of the House refused to write such provision in the bill and voted down the proposition when it was proposed. The time has passed for discussion on the merits of the guaranty of bank deposits. It is now full upon us, and no matter what we may think on the subject, it is here and here to stay. In my opinion, no fairer or better plan for raising a guaranty fund is possible of devisement than that provided by the Senate amendment. The total losses to the depositors in national banks during the half century of our present national banking system—1863 to 1913—has been but a little more than $30,000,000. During that same period the Government of the United States collected from the national banks, on the 1 per cent charge for circulating privileges on national-bank notes, more than $90,000,000, or three times the amount of losses sustained by depositors in national-bank failures. It has always appeared to me that the Government should have taken one-third of the amount it collected from the banks for circulating privileges and paid the deposits of the many thousand poor people of our country whose lifetime savings were swept away by the failure of these Government-created and quasipublic institutions.

Mr. Speaker, money on deposit in a bank is just as much property as if it were invested in a stock of goods, a house, or any other kind of tangible assets. If sound business judgment dictates the insurance of tangible property, I confess that I can not understand why the same good judgment does not also dictate the insurance of money deposited in a bank. A bank requires a borrower to insure its money before it passes it out over the counter to him. He must give security for its return. The United States, the States, the counties, the cities, and the townships all require the guaranty of deposits of public funds. Every employee of every bank in the United States is bonded to faithfully and honestly discharge the duties of his position, but a cry of socialism is raised when it is proposed to insure that class of our people—depositors—who, above all others, ought to be looked after with keenest solicitude by the Government. The guaranty system, such as is proposed here, in my judgment is the most satisfactory that can possibly be proposed, for by this system the funds come out of the Government's part of the profits. If there are losses, the Government will secure less profit, and this will cause a more careful selection of the men who are permitted to go into the banking business and a more rigid and careful supervision of the banks.

The Banking and Currency Committee complain that the Senate provision setting aside a part of the profits which accrue to the Government by reason of its partnership with the national banks is not the proper method for producing this fund. The committee say the money for guaranty purposes should not come out of the Government's part of the profits, but the banks ought to pay it. No such provision, however, as the committee now suggests was incorporated when it had the bill before it. The banks, under the provisions of the Senate amendment, as a matter of fact, do produce this guaranty fund, for the profits of the regional reserve banks are earned entirely on money furnished by the banks. It is true under the provisions of the bill the Government is allowed one-half of the profits after the stockholding banks are paid 6 per cent on the investment. To allow one-half of the Government's profits to go toward insuring deposits takes nothing from the Government, but amounts merely to the Government taking less from the banks and the banks setting aside that part which the Government does not take for the protection of their depositors. The statement of the committee that a guaranty fund should be paid by the banks, in view of these facts and the further fact that there is no limitation on the amount of

interest a bank can charge, is not calculated to reassure borrowers and popularize the guaranty-fund provision, for do we not all know that whatever burdens are placed upon the banks the borrower must finally bear? If in addition to the burdens already placed by the provisions of this bill the banks are required to set aside an additional amount for guaranty purposes, that additional amount will have to be added to the interest account and finally paid by the borrower.

The Senate bill in many other respects is an improvement on the House bill, especially those provisions of the House bill which afforded scant relief to the farming and producing classes of the country. The bill, however, falls far short now of what is my conception of a complete banking and currency bill. Including the Senate amendments, it does not adequately provide for the needs of that great class of our people—the farmers—who by their patient toil produce the products that feed and clothe the unreckoned millions of the world.

Mr. Speaker, I have prepared a bill which I expect to introduce when Congress reconvenes in January. This bill will, in my opinion, place the farmers on an equal footing with all other classes of our population. The bill which I intend to introduce reads as follows:

A bill (H. R. 11524) to establish national rural credit banks for the purpose of furnishing money to the farmers on real and personal security at a reasonable rate of interest.

DIVISION OF RURAL BANKING.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby created in the Agricultural Department of the United States a separate bureau to be known as the division of rural banking, to be under the general direction and charge of a rural banking board, which is hereby created, consisting of the Secretary of the Treasury, Secretary of Agriculture, and the Secretary of Labor. The division of rural banking shall be under the immediate direction and control of a director of rural banking, who shall be appointed by the President, by and with the advice and consent of the Senate, and who shall serve for a term of 10 years, or until his successor is appointed and qualified. Such director shall receive an annual salary of $6,000, payable in monthly installments. He shall have the power to employ such agents, servants, and assistants as may be necessary to carry out the work of said division, subject to the approval of the rural banking board.

SEC. 2. That the division of rural banking shall exercise supervision and control over and make examinations of all of the national rural banks established under this act, under such general rules and regulations as may be provided for the government and management of the said division by the rural banking board, subject to the requirements and provisions herein contained. The said division of rural banking is authorized and empowered upon the recommendation of the director of rural banking to issue charters or certificates of incorporation for the establishment of local national rural credit banks, as herein provided for, and may upon like recommendation withdraw or forfeit such charters or liquidate such banks whenever necessary, and under the rules and regulations established for it.

SEC. 3. That the national rural credit bank of the United States of America and all local national rural credit banks that may hereafter be established as provided for herein shall be bodies corporate and shall, in addition to the other powers conferred upon them by the provisions of this act, have the right to contract and be contracted with, and sue and be sued

NATIONAL RURAL CREDIT BANK OF THE UNITED STATES OF AMERICA.

SEC. 4. That there is hereby created at the city of Washington, D. C., the National Rural Credit Bank of the United States of America, with a capital stock of $100,000,000, the same to be subscribed and paid by, issued to, and owned by the United States of America, and said bank shall be under the control of the rural banking board. Said bank shall act as the agent, clearing house, and depository of the local national rural credit banks hereinafter provided. It shall accept from the local national rural credit banks all bonds purchased by said banks as hereinafter provided, and advance the purchase price thereof on request of such banks when said bond or bonds are duly indorsed by such local national rural credit bank.

SEC. 5. That any number of residents or real-estate owners in any magisterial district, or county, or such other political subdivision of any State, as may be approved by the division of rural banking, not less than 100, may, on application to the division of rural banking, made on forms furnished by it, and upon compliance with its requirements, become incorporated as a local national rural credit bank.

NAME AND NUMBER.

SEC. 6. That the name "rural credit bank" shall be a part of the name or title of such institution and shall not be used by any institution other than those incorporated under this act. It shall be prefixed by such descriptive title or name as the applicants may indicate, subject to the approval of the division of rural banking. Each such bank shall also be designated by an official number provided by the division of rural banking.

SEC. 7 That the capital stock of such local national rural credit bank is hereby fixed at the sum of $2,500, the same to be subscribed and paid by, issued to, and owned by the United States of America, and said banks shall be under the control and management of the rural banking board.

SEC. 8. That any local national rural credit bank organized under the provisions of this act shall, on application of any of the organizers thereof, accompanied by a first-mortgage lien on farm land, issue to such member its bond, with coupons attached, for an amount not to exceed 50 per cent of the value of the property covered by such mortgage as certified to by an inspector appointed by the rural banking board.

SEC. 9. That any local national rural credit bank organized under the provisions of this act shall, on application of any of the organizers thereof, accompanied by a first-mortgage lien on growing crops and other personal property, issue to such member its bond, with coupons attached, for an amount not to exceed 40 per cent of the value of the property covered by such mortgage as certified to by an inspector appointed by the rural banking board.

SEC. 10. That on presentation of such bond by the holder thereof to the local national rural credit bank said bank shall accept said bond and pay to the holder its full face value in cash, or give him credit for said amount on the books of said bank in accordance with the regulations of the rural banking board adopted to provide the disposition of the proceeds of such bond for the purposes provided in this act.

SEC. 11. That no bond shall be issued on a mortgage secured by real estate unless the proceeds of such bond be used entirely in the payment in full or in part of the purchase price of said real estate or for the improvement thereof, and no bond shall be issued on a mortgage secured by crops and other personal property unless the proceeds of such bond be used entirely in the production and harvesting of such crops, and the rural banking board is hereby vested with authority to prescribe such rules and regulations as it may deem necessary to enforce the provisions of this section.

SEC. 12. That on presentation of a warehouse certificate showing the deposit of cotton, corn, wheat, or any other staple farm product in a warehouse in good condition, accompanied by a policy of insurance against destruction by any means whatsoever, said policy containing a loss clause providing that payment, if loss occur, shall be made to the holder of such warehouse certificate to any local national rural credit bank, said bank shall accept such warehouse certificate and advance to the holder thereof 50 per cent of the appraised value of such farm product, as the same may be found by an inspector: *Provided*, That in no case shall the amount advanced on such warehouse certificate exceed two-thirds of the amount of the insurance carried thereon. Any warehouse or storage plant having legal identity and existence and authorized to do business under the laws of the State, bonded and insured under the direction of the rural banking board, shall be recognized as a legal warehouse under this act. Loans made under the provisions of this section shall have a maturity of not to exceed nine months, and shall not be subject to renewal for a period to exceed a total of nine months.

SEC. 13. That the local national rural credit bank is authorized, under such rules and regulations as may be prescribed by the rural banking board, to make loans on first-mortgage liens on live stock being prepared for the market: *Provided*, That said loan does not run for a longer period than nine months: *And provided further*, That the amount advanced does not exceed 50 per cent of the value thereof as found by an inspector.

SEC. 14. That the interest charge where the bond is secured by a mortgage on real estate shall in no case exceed 5 per cent per annum, and where the bond is secured by crops and other personal property it shall not exceed 6 per cent per annum.

SEC. 15. That bonds secured by mortgages on real estate shall not run for a longer period than 30 years from the date of the mortgage, and bonds secured by a mortgage on crops and other personal property shall have a maturity of not exceeding 12 months from the date of the mortgage.

SEC. 16. That the owner of real property shall have the right at any interest-paying period after the expiration of 5 years from the date of the mortgage, first giving 30 days' notice in writing of his intention, addressed to the local national rural credit bank to which the mortgage was executed, to pay off and discharge said mortgage in full.

In case the bond and all interest and amortization coupons due under the terms of the contract at the next interest-paying period thereafter are paid in full, then all of such bonds and the mortgage shall be canceled, stamped "Paid," and returned to the owner of said land.

EXEMPTION FROM TAXATION.

SEC. 17. That the stock and all other property and assets of all national rural credit banks shall be forever exempt from all Federal, State, local, or other taxation, and this exemption shall apply to all bonds issued by said local national rural credit banks without regard to the ownership thereof.

DESTRUCTIBLE PROPERTY TO BE INSURED.

SEC. 18. That wherever buildings or destructible property attached to the land is a part of the security for any real estate loan, and wherever the security for any chattel loan is the subject of insurance, the loan shall be further secured by the deposit with the bank of policies of insurance against loss by fire of such buildings or other destructible property or chattel to the extent of at least 75 per cent of the assessed taxable value of such buildings or other destructible property or chattel. Such policies of insurance to be assigned or provide that loss shall be payable to the holder of the lien thereon and the payment of premiums thereon to be protected and provided for in such manner as the division of rural banking may provide.

LOCALIZATION OF LOANS.

SEC. 19. That all loans made by local national rural credit banks shall be secured on lands or crops and other personal property located within the political subdivision where the bank is located, although this shall not prohibit the local rural credit bank from taking land or crops and other personal property outside of such political subdivision as additional security for any loan.

AMORTIZATION PAYMENTS.

SEC. 20. That every long-term real-estate loan guaranteed by any local national rural credit bank shall be further protected by provisions in the mortgage or trust deed securing the same, authorizing and requiring the amortization or gradual retirement of such loan by the maker thereof by annual or other periodic payments of stated amounts on account of the principal of such loan to the local national rural credit bank guaranteeing such loan.

SEC. 21. That all local national rural credit banks organized under the provisions of this act shall at all times carry all its time deposits and 25 per cent of its checking deposits with the National Rural Credit Bank of the United States of America, the national rural credit bank to allow the same interest on time deposits as is paid by the local national rural credit bank.

DEPOSITS.

SEC. 22. That local national rural credit banks shall receive money on time deposits, paying interest therefor at such rate as may be approved by the division of rural banking. All interest-bearing deposits shall draw interest from the date of deposit, but no interest shall be paid on fractions of a dollar. Deposits of 10 cents and upward shall be received under such regulations as the division of rural banking may prescribe. All time deposits shall be evidenced by forms of certificates of deposit, with or without interest coupons attached, or by savings pass books, or by both, or by such other evidences of indebtedness to the depositor as the division of rural banking may approve.

Check deposits may also be received by local national rural credit banks. In no case shall any local national rural credit bank pay interest on any check deposit

AUTHORITY CONFERRED ON THE RURAL BANKING BOARD TO ISSUE BONDS.

SEC. 23. That the rural banking board may from time to time issue bonds not exceeding in the aggregate the assets of the National Rural Credit Bank of the United States of America, drawing interest at not exceeding 4 per cent per annum, payable semiannually, and running for a term not exceeding 30 years, said bonds to be the obligation of the National Rural Credit Bank of the United States of America, and to be a first lien on all the assets of said bank. Said rural banking board shall have authority to dispose of such bonds and other assets belonging to the National Rural Credit Bank of the United States of America as it may deem necessary and proper for conducting the business of the system of banking hereby established.

AUTHORITY CONFERRED ON RURAL BANKING BOARD TO PROVIDE RULES AND REGULATIONS.

SEC. 24. That the rural banking board shall have authority to employ such assistants and fix their salary and to adopt such rules and regulations as it may deem proper and necessary to successfully originate, put in force, and operate the system of banking authorized under the provisions of this act.

When the banking and currency bill was before the House last September I made this statement with reference to its provisions:

The banking and currency bill which we are now considering is not a banking and currency act for the great producing masses of this country. It is a banking and currency act for those classes of our citizenship engaged in commercial occupations. I believe, as declared in the Democratic platform, that the banking and currency act should take care of the interests of every class of our citizenship—those engaged in the farming industry as well as in commercial and other industrial occupations.

Mr. Speaker, I believe the bill which I have just quoted, and which I intend to introduce, presents the only feasible and workable plan that can be adopted in this country to furnish to the 40 000,000 of our population engaged in agriculture sufficient money at a reasonable rate of interest to carry on and develop that great industry. The farmers are certainly entitled to the same consideration, the same protection, and the same accommodations as those engaged in other pursuits. They follow the oldest occupation known to history—an occupation smiled on with approval by the Creator at the very dawn of history—an occupation which can exist and prosper without the assistance and in the absence of any other of the great occupations, but an occupation which, if abandoned, would cause all others to wither and die. The farmers are not asking for special privileges. They are demanding even-handed justice. They know something is wrong when railroads, banks, and great business and industrial corporations can borrow multiplied millions of dollars at rates of interest varying from 4 to 6 per cent, while he—the producer of all wealth—is compelled to pay from 10 to 36 per cent, and I regret to say sometimes an amount that exceeds this. We all know that no legitimate business can pay such rates of interest and continue for any considerable length of time. It is foredoomed to failure, and the farming industry is now staggering under this load.

Mr. Speaker, there is no scarcity of money to loan in this country. The banks and trust companies, the savings banks, insurance companies, the funds of widows and orphans administered through our probate courts, and the money of private individuals—unreckoned millions, sufficient to satisfy the needs of every legitimate demand of commercial and industrial activity—are continually and earnestly seeking safe and legitimate loans at reasonable rates of interest. The railroads, banks, and great commercial and industrial corporations are able to borrow what they need at rates of 4 to 6 per cent, because under the present banking system their security is favored by law. If the provisions of the bill which I have here set forth are written into the laws of this country the small business man, the farmer, and the laborer—all who are really worthy of credit—can secure money for legitimate business purposes at rates of interest now enjoyed by the great business concerns of our country. This plan simply acts as a pipe line to convey the money from the man who has it and desires to loan to the man who has security and wishes to borrow. All this is done without injury to any existing business.

I have no war to make on legitimate business. I would not favor the enactment of a statute that would injure commercial banking interests. It was never intended, however, that national banks doing a purely commercial business should at the same time take care of the rural or farming business. The requirements of the one are entirely different from the necessities of the other. The framers of the banking law in 1863 clearly disclosed this by prohibiting national banks from making loans on farm lands. It may and doubtless will be said by some that this plan is socialistic; that the Government ought not to do for the citizen what the citizen can do for himself. The cry of socialism is always raised when the power of the Government is used for the benefit of all the people, but the cry is never heard when the few are being benefited at the expense of the many.

Under this plan the Government is not contributing one cent to any of its citizens. It simply provides that where a citizen has $2 of property value the Government will assist him in securing a credit of $1 on that property at a reasonable rate of interest. There is nothing new or novel in this plan. From the foundation of our Government the time of Congress and of the executive departments has been occupied in exactly this character of service, except in most cases the Government has furnished the money outright, never expecting its return.

Let us see what the Government has done for other lines of development. We have appropriated for river and harbor purposes between 1789 and 1910, $583,895,000; for fortification between 1820 and 1910, $130,625,000. We are spending to support the Army and Navy annually the sum of nearly $250,000,000. We have spent in the construction of the Panama Canal nearly a half billion dollars. Unspeakable millions have been collected from the people to build up our manufacturing industries. The Government has contributed to the railways of the country 158,294,870 acres of our public domain to assist and encourage their construction. This land at the market price to-day would amount to nearly $5,000,000,000—a sum sufficient to build and equip every line of railway in the United States. We have appropriated for furthering irrigation projects in the arid regions of the West $36,933,643.78. We are now considering on the recommendation of the President an appropriation of $35,000,000 to build a Government railroad in Alaska. Our intervention in the war between Spain and Cuba has cost us to this time approximately $1,200,000,000. The Postmaster General in his last annual report recommended the consideration of the question of acquiring title to the telegraph and telephone lines of the country as a part of the postal system, and a fair estimate of their cost is $1,140,000,000. It is now being urged upon Congress to erect residences for our ministers and ambassadors to foreign countries, at an estimated cost of about $10,000,000. All this expense can be incurred and paid without any criticism or objection, but the moment the small sum of $200,000,000—as compared with the other expenses of this Government—is proposed to aid the 40,000,000 of our people engaged in agriculture to secure money at a reasonable rate of interest the cry of socialism is raised.

The idea that "the least governed is the best governed" was an ideal statement in the infancy of our country, when the untouched natural resources and unoccupied lands became the property of any man who cared to put forth sufficient physical effort to possess them. Not so now, when practically all the lands have been taken and practically all the natural resources monopolized. Not so now, that our population is crowding on each other, and the hand of greed is always stretched forth by the strong to take by force or fraud from the weak. It is the highest duty of the Government to exert its lofty power to assist the weak against the aggressions of the strong. Our farmers in this new country have during all the years past gone on in patience and silence while the Government was extending bountiful assistance to manufacturing, to railroad building, to river and harbor improvement, to aiding in irrigation, digging the Panama Canal, and to the uplift and benefit of those who were thrust upon us by war—the people in the Philippines, Porto Rico, and Cuba. They have paid the bills; they have stood by in silence and watched the passage of a banking and currency bill which extended them no adequate relief. They now ask the passage of a bill that will afford them relief. They do not ask the shadow; they desire the substance of relief.

Mr. Speaker, I have studied, as well as my poor abilities would permit, the different systems of rural credit organizations in the countries of the Old World. I am convinced that the systems which are in most common use there are not adapted to the conditions that exist here. There are, however, in Europe a large number of countries, among which I might name Norway, Sweden, Prussia, Austria, Roumania, Hungary, and Denmark, where the rural credit banks are owned or largely subsidized by the Government. In Italy, while the Government does not own the stock, an act was passed requiring the Bank of Italy and the savings banks of Milan and Rome to furnish the money necessary to establish the rural credit banks. The systems, other than those where State aid has been extended, in general authorize the formation of rural credit banks with limited capital to be subscribed in small amounts by the people in a given territory. When a member desires a loan, he executes a mortgage on his land, if a real-estate loan, and the bank furnishes the money on the mortgage and reimburses itself by selling the mortgage. Generally the mortgage not only becomes a lien on the land of the borrower, but also a lien on all of the land located in the rural credit district. In the case of

personal loans the borrower is generally required to secure the signature of at least two other members of the society who are worthy of credit. It is possible to work a scheme like this in Europe, where conditions are favorable, but such a plan could not be successfully adopted in this country. In Europe the population is from 300 to 500 to every 640 acres of land. In this country the population is 31 to every 640 acres. In Europe all who become members are of the same race. Here in every community we have practically every race of people. There all the people are of the same religious belief. Here every community is made up of people who profess every variety of faith. There the people of the community are largely related by blood or marriage. Here they are not so related.

In Europe the people have lived in the same community and largely on the same farms for generations. Here at least one-fourth of the population of every community change practically every year. There they are intimately acquainted with the character and habits and the disposition of one another. Here they know little of each other. In Europe they are practically all small landholders and small farmers, and the loans made to them are small. Here we have every variety of farmer, from the tenant to the large landowner, and they cultivate many times the number of acres of land cultivated by their European brother, and their requirements are many times as great. I feel bold, therefore, to predict that the European system of farm credits can never be adapted to the uses of the people of this country. Any plan which provides for the organization of local national rural credit banks and requires the people of the district where the bank is organized to subscribe and pay for the stock, and which also requires these local banks to subscribe and pay for the stock before a State national rural credit bank can be established, and in turn requires the State national rural credit banks, when organized, to subscribe and pay for the stock of the National Rural Credit Bank of the United States, will be a failure in this country, in my judgment, because of the conditions that exist which I have pointed out.

There is, in my judgment, only one plan that we can adopt that will be successful, and that is the plan I have proposed in my bill. There is but one way to extend relief to the farmers in this country, and that is by making it possible for them to secure cheap money on their assets, whether these assets consist of real or personal property. This can be done by establishing a national rural credit bank, with a capital of $100,000,000, and the organization of such number of local national rural credit banks as are necessary to conveniently serve the farming population. In my judgment $200,000,000 will be amply sufficient to successfully establish and make secure this system of banking. I would make the capital of the National Rural Credit Bank $100,000,000, because that amount of capital would give high credit to this bank in the money markets of the world. Its bonds would be sought after more eagerly than railroad bonds or the bonds issued by great industrial corporations, and would find ready sale at rates of interest not to exceed 4 per cent. This would enable the central national rural credit bank to purchase the bonds issued against mortgages secured by farm lands and staple agricultural products, including live stock. One hundred million dollars additional invested in the stock of local national rural credit banks, each having a capital of $2,500, would provide for the establishment of 40,000 such banks. This is six times the number of national banks now in the United States, and a greater number of national rural credit banks than exist in any country of Europe, where the rural credit banking system has proved the greatest success. How better could the United States invest $200,000,000 than in bringing relief to the farmers of this great country?

Mr. Speaker, England within the last quarter of a century has begun to realize the importance of promoting agriculture in Ireland. Conditions among the farming class there were found to be most deplorable. The land was owned by the few and cultivated by the many. As is always true where this condition exists, production was at a low ebb. The people were dissatisfied, and riot and disorder stalked everywhere. The Imperial Government of Great Britain extended its credit to the extent of $2,000,000,000, and with this assistance the two and one-half million tenants of Ireland became landowners, and happiness has taken the place of discontent and prosperity instead of poverty is in evidence on every side. If the British Government can with profit lend the credit of the imperial treasury to the extent of $2,000,000,000 to provide and promote happiness and prosperity to two and one-half million people, is it not possible here in this great country for us to use one-tenth the amount there used to assist twenty times the number of people there benefited to secure money at a reasonable rate of interest on perfectly safe security which they can furnish and where the Government will not pay out or become liable for one cent? This system will merely engage the activities of the Government in bringing the man who desires to loan and the man who wishes to borrow together. The Government, through the national rural credit bank, will act as the middleman for a small commission, which will meet all expense. When the producer is prosperous all classes of industry flourish. When production is curtailed, its effect is reflected in every department of industry. Enact legislation that will unlock the vaults and make it possible for the producer to secure money on safe security at reasonable rates of interest and the "back-to-the-farm" movement will be solved. The farmers do not need sympathy and advice. They can solve their own problems if given an equal chance with the rest of the world.

I desire briefly to call attention to the condition of the farmers of this country, as shown by the census figures. During the 10 years from 1900 to 1910 the population of the cities increased 34.8 per cent. The rural population during the same period increased 11.2 per cent. The per cent of increase in the city population was a little more than three times that of the increase in rural population. I call attention also to the fact that in making this estimate the Census Bureau included as a part of the rural population all towns having a population of 2,500 and less. The real increase as between the two classes of population is therefore much more than the census figures show. The per cent of increase in the number of farms from 1900 to 1910 was 10.9 per cent. The increase in the number of farms and the increase in rural population was practically the same, demonstrating the necessity of increasing the farming population if the number of farms are to be increased. In 1910 there were 6,361,502 farms in the United States, and there were 2 per cent less owners and 2½ per cent more tenants living on these farms than in 1900. In 1900 31 per cent of the farms were under mortgage. In 1910 33.6 per cent were under mortgage. In 1900 there were 67,719,410 cattle, 62,868,041 swine, and 61,503,713 sheep in the United States. In 1910 there were 61,803,866 cattle, 58,185,676 swine, and 52,441,861 sheep, a decrease during the 10 years from 1900 to 1910 of 5,915,544 cattle, 4,682,365 swine, and 9,055,852 sheep—8.7 per cent decrease in the number of cattle, 7.4 per cent decrease in the number of swine, and 14.7 per cent decrease in the number of sheep—an average decrease of 10.3 per cent in the source of our meat supply as against an increase in population in the entire country, including both the city and rural districts, of 21 per cent.

In 1900 we produced 1,619,415,263 pounds of butter; in 1910, 1,491,752,602 pounds. In 1900 we produced 298,344,642 pounds of cheese; in 1910, 320,532,181 pounds, an increase of only seven one-hundredths of 1 per cent. In 1900 we exported 209,348,284 bushels of corn; in 1910 we exported 36,802,374 bushels, a decrease of 172,545,910 bushels within the 10-year period.

By comparison it will be found that the quantity of the present crops produced in the United States increased about 10 per cent between 1900 and 1910. This increase is substantially the same rate as the increase in the number of farms, which is 10.9 per cent, and the increase in the acreage, which was 9.9 per cent, the aggregate average production of these crops per farm and per acre remaining substantially unchanged during the decade, while the population of the country increased at a rate more than twice as great as the crop production and the increase in the population of our cities being three and one-half times as great. These figures need no elaboration, no comment. They speak a condition which if permitted to continue even for an inconsiderable length of time, as we reckon time, with the rapid increase of population, will bring want and hunger to the country. There were 6,361,502 farms in the United States, according to the census of 1910. Of these, 1,327,439, valued at $6,330,236,951, were mortgaged for $1,736,172,351, or 27.3 per cent of their value. The annual interest charge on this indebtedness is about $150,000,000. It is safe to say that the interest paid on loans secured by personal indorsement and by mortgages on chattels will, added to the amount paid on real-estate mortgages, mount to the large sum of $500,000,000.

The rate paid on real-estate loans, including commissions, abstract, recording and attorneys' fees, amount to from 8½ to 10 per cent, and the interest charge on personal loans amount on an average to about 11 per cent, though the rate varies in different sections of the country, some places being higher and others lower than the average.

If these interest rates can be cut in half, a result which I believe would follow the adoption of this system, there will be left in the pockets of the producers one-half of the enormous interest charge that they now annually pay. The saving in interest

to the borrowers will be but one of the benefits that will result from providing money for the producers at a reasonable rate of interest. One of the greatest handicaps that the farmer now labors under is the present system of marketing farm products. Under existing conditions he is compelled to mortgage his crop for money with which to produce it, paying a high rate of interest on a short-time loan. He is thereby compelled as soon as the crop is gathered to place his product on the market in order to raise money with which to discharge the mortgage. This results in an overfed market during the gathering season. No manufacturer of cotton or wheat or corn products purchases a sufficient supply to satisfy his demands during the entire year. The speculator steps in between the producer and the consumer, and by reason of an overfed market depresses the price of the product and purchases. Having secured control of the supply, he holds the product until the necessities of the consumer require it and sells it at a greatly increased price. Thus, both the producer and the consumer are compelled to pay tribute to the speculator. If the farmers could have warehoused their produce and extended their market period over a year instead of being compelled to sell during the gathering period, the legitimate profits of the speculator would be his and there would be no corner on the market, requiring the consumer to pay unreasonable prices fixed by the middleman. The annual value of agricultural products in the United States is about $9,000,000,000, but by the time the product reaches the consumer it costs him three or four times what it brought the producer. If three or four billion dollars can be kept in the pockets of those who earn their money by the sweat of their face, is it not the part of wisdom that this great Government extend its credit to the extent of a couple hundred million dollars to accomplish that end?

There is an abundance of money in the United States to supply every legitimate demand. There is on deposit in the 25,993 National and State banks, savings banks, and trust companies, $17,475,764,134. In addition to this, there is money in thousands of homes all over this country that has never reached the banks that would be brought out and deposited if these rural credit banks are established and made Government institutions—money which would never show itself if the banks are established and left to private control. In addition to the vast deposits of money in the banks, there are millions of trust funds being administered by the probate courts of the country, and unreckoned millions controlled by the insurance companies of the country, that would seek investment in the bonds of these rural credit banks. The statement of the New York Life Insurance Co., published on January 8, 1914, discloses that that company alone has $762,850,703 invested in different forms of securities, producing an average income of 4.54 per cent. The bonded indebtedness of cities and towns, according to the 1910 census, is $2,366,420,733. Three hundred and twelve million of this indebtedness bears interest at the rate of 3 per cent, $594,000,000 at the rate of 3½ per cent, $903,000,000 at the rate of 4 per cent, and $272,000,000 at the rate of 4½ per cent.

The bonded indebtedness of the United States in 1909 was $730,000,000 bearing 2 per cent interest, $63,000,000 bearing 3 per cent interest, and $118,000,000 bearing 4 per cent interest, the average rate being 2½ per cent. The total funded debt of all the railroads of the United States, according to the census of 1909, was $9,801,590,390, and the average rate of interest was 4 per cent.

I quote these different figures to demonstrate that it will be an easy matter for the rural credit banks established as provided in this bill to readily sell sufficient bonds to supply the needs of the farmers of the United States at the rate of interest provided, and at the same time produce a fund sufficient to take care of the expense connected with administering the banks and producing a profit to the Government.

This bill, in brief, establishes in the Agriculture Department of the United States a separate bureau charged with the special duty of looking after the interests of the farmers of the country. It establishes a national rural credit bank, to be located at Washington City, with a capital stock of $100,000,000, and authorizes the establishment of 40,000 local national rural credit banks by the farmers of the United States at such places and times as their necessities require, each local national rural credit bank to have a capital of $2,500, the bank to be organized with not less than 100 members. It authorizes the members organizing the local national rural credit bank to mortgage their property, both real and personal, to the local bank, and provides that the local banks shall issue bonds against these mortgages to the amount of 50 per cent of the value on real estate and 40 per cent of the value on personal property, and provides that the local banks shall purchase these bonds and pay cash or extend credit on their books under rules and regulations to be prescribed by the rural banking board. Loans are to be made on real estate for the purpose of paying the purchase price or a part of the purchase price of the real estate, or for making improvements thereon, and on personal property for the purpose of producing crops. The provision authorizing the payment of the money under such rules and regulations as the rural banking board may prescribe was inserted in the bill in order that the money might be expended for the purposes required by law.

The bill exempts the assets of the banks from taxation, and in this respect is identical with the provisions of the national banking and currency act which we are now passing. It also exempts bonds issued by the national rural credit bank from taxation, regardless of ownership. This is a sound economic proposition, for if these bonds were subject to taxation they would sell for just the amount of taxes they will be required to pay less than they will sell for if free from taxation, and the borrower, of course, would be compelled on final analysis to pay this tax. The borrower always pays the original cost and all intermediate expense incurred in conveying money from the lender to himself.

The bill requires that all classes of property subject to insurance be insured for the benefit of the local national rural credit bank and the policy be left with the bank as an additional security. By inserting this provision in the bill I have but followed in the path of sound business and have done what every conservative banker does every time a loan is made. The bill provides that no loans shall be made by any local national rural credit bank on property, real or personal, located wholly without the district where the bank is located. This provision was inserted to localize the bank, because these institutions are created for the purpose of providing money to the members who reside and whose property is located within a given territory. They are organized along cooperative lines. The money advanced is to be used in purchasing property or in producing property, and it will require a careful supervision to see that the money is not misapplied. The local banks are authorized to receive money on time deposit, paying such rates of interest as the division of rural banking may provide. Every dollar deposited in this manner can be used in purchasing the bonds issued by the banks on real-estate mortgages or loaned out on real or personal mortgages, and for convenience to the farmers the local banks are authorized to accept check deposits. The local banks are required to keep all time deposits and 25 per cent of checking deposits with the national rural credit bank. This is done because the national rural credit bank is required to purchase all bonds indorsed to it by the local banks, and in order to enable it to do so it is necessary to mobilize all of these deposits in the great central institution.

The rural banking board is authorized to rediscount any bonds and dispose of any of the assets of the national rural credit bank that it may deem necessary for the purpose of carrying on the business of the bank, and it is also authorized to issue bonds, which will be the obligations of the national rural credit bank, not exceeding, however, the aggregate assets of that bank.

The bill provides that every long-term real-estate loan shall be protected by a mortgage or trust deed authorizing and requiring the amortization or gradual retirement of such loans by the maker at interest-paying periods. I regard this as one of the most beneficent provisions of the bill. Under the farm-loans system now in use money is loaned for a period of from 5 to 15 years. The interest, whatever it may be, is paid at stated periods, and at the end of the term the entire principal becomes due in a lump sum. It is practically impossible for a farmer to produce on his farm a sufficient fund and lay it aside with which to discharge in bulk the entire mortgage within a period of 5 or 10 years. Under the amortization plan, if a farmer having a loan on his real estate bearing interest at the rate of 4.3 per cent pays each year 6.56 per cent, the loan would be wiped out entirely at the end of 25 years. This practice makes the payments on the principal consistent with the income from the farm. This principle is very clearly stated in the preliminary report on Land and Agriculture Credit in Europe. (S. Doc. No. 967, 62d Cong., 3d sess.) It is there said:

> Amortization is simply a method of paying off a loan by returning a little of the capital each year. These payments are called annuities and are composed of the interest and contributions to the sinking fund and the cost of conducting business. They are calculated in periods of 10 to 75 years, and at the end of the period the mortgage debt becomes extinguished and the property returns to the owner free and clear of all incumbrance. The prevailing interest rate on amortizable mortgages in France at present is 4.3 per cent, but by adding a little over 3.2 per cent to this and paying 7.5 per cent a year a French farmer can extinguish his debt within 20 years and obtain a satisfaction piece in full from his creditor. Thus, suppose he borrowed $10,000. He pays $750 annually 20 times for the interest, sinking fund, and expenses. This makes a total of $15,000, interest included, and his debt is paid off. A farmer in the Southwestern States would pay this much for interest alone and his debt would still be unsatisfied. Amortization has a two-

fold value. It lessens the debtor's burden year by year and increases in an equal ratio the security of the lender, provided, of course, the sinking fund created by the accumulated annuities be properly and honestly kept for the redemption of the debentures.

If the loan were $1,000 instead of $10,000 the farmer, by paying $75 each year, would extinguish the debt, principal and interest, at the end of 20 years. Of course, the period being 30 years under the provisions of this bill, the amount paid each year would be correspondingly less. Another result of this provision would be the accumulation of a vast fund in the central national rural credit bank, which could be used by that bank in purchasing bonds issued on mortgages by the local banks and warehouse certificates representing staple agricultural products.

I have thought it best in preparing this bill to provide only the general outline or skeleton and leave it to the wisdom of the rural banking board to work out the details. When we attempt to legislate on the details of a business transaction the legislation is apt to be unworkable. What we all desire, I am sure, is a bill that will furnish relief to the burdensome conditions that now impose themselves upon the producing masses of our countrymen.

Currency Bill—Reply to Cries of Panic and Hard Times.

EXTENSION OF REMARKS

OF

HON. GEORGE E. GORMAN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. GORMAN. Mr. Speaker, there has been so much discussion in the House concerning the approach of hard times and the bold declaration having been made by some of the Republican Members that we are now experiencing conditions of panic throughout the country, that I feel impelled to submit some suggestions by way of reply to these reckless and harmful public declarations.

The country has little regard for panic criers. The man who cries panic when there is no panic occupies the same relative position in, and performs the same relative service to, society as the man who did not know the gun was loaded or who rocks the boat, or the man who cries fire in a crowded playhouse when, in fact, there is no fire. It has always been the stock in trade of the Republican Party to cry panic just before a presidential election. They have tried to make the possibility of a Democratic victory the basis of a panic before the elections are held, and now that a Democratic administration is in power and the predictions of panic not having materialized, they are determined to force a panic if it be possible to do so by the constant cry of panic. Chanticleerlike they have so repeatedly made the boast that the sun of prosperity rises only when a Republican administration is in control that they have come to believe this fable, or appear to believe it, themselves. One of the penalties for uttering of falsehoods is that those who utter them eventually shut out from their own sight all that is good and true and become obsessed with the idea that the falsehoods which they have uttered are in reality the truth. Manifestly many of our Republican friends are thus afflicted.

During the discussion of the currency bill predictions of hard times, panic, and national disasters have found their way into the CONGRESSIONAL RECORD and the newspapers, and while the men who made these predictions have no greater reputations as prophets than they have as statesmen, and the mere predictions might be passed unnoticed, yet the frequency with which they were being made and the sources from which they came at a time when currency legislation was being enacted invite a brief consideration of the conditions which prompt these prophets of evil to prophesy. In a characteristically brilliant speech in the Senate a short time ago a distinguished leader of the Republican Party took such a gloomy view of the future and pictured a prospect so dismal that he was at once acclaimed as the logical and only available candidate for the Republican nomination for the Presidency. He became at once the "candidate of the glooms."

Distinguished Republican leaders on the floor of this House so frequently made reference to coming panic and financial disaster during the tariff debate that they felt obliged to proclaim from time to time during the past few weeks by way of vindicating their prophecy that the panic is already upon us. Some gentlemen on the Republican side of the House have occasionally informed us that certain manufacturers have closed down their factories, and, according to the logic of those who made the announcements, these manufacturers thrived upon a tax levied upon 90,000,000 of people, and upon that tax being removed their sources of revenue were gone and they were obliged to betake themselves to some occupation wherein they would render a greater service to society than that of producing economic waste.

During the recent "post mortem" over the "remains" of the late Republican Party, which was held in this city, at which time it might be observed the "jury again disagreed," as was the case in all the previous "post mortems" since the death of the party in November, 1912, a very distinguished Republican, who was formerly a Member of this House, said the prosperity lever was reversed since the Democrats came into power and that dire disaster was to be our portion; hard times were now upon us, and they would continue to grow worse until the Republican Party again came into control—which means in effect that we will never again have good times.

Now, I can readily understand how a gentleman who has been connected with the Government pay roll uninterruptedly for twenty-odd years, on being suddenly and unexpectedly jarred loose from the pay roll on which he has been thriving all those years, would very naturally experience a sensation of panic and be conscious of some distress, and these symptoms might develop to a point where he may believe that nothing could bring about a period of prosperity except his personal return to the pay roll. And I have no doubt that a return to the pay roll, after a long absence therefrom, would relieve the financial stringency complained of considerably.

In addition to what has been said by the distinguished gentleman referred to, there have been many pessimistic utterances from other sources, but they emanate from or are inspired by discarded statesmen whose conception of the country's prosperity is gauged almost entirely by their receipts from the Government pay roll and whose notions of the country's depression is determined by their own lack of pay-roll income.

The frequent gatherings of the remnant of the Republican Party, now for the purpose of discussing ways and means to regalvanize it into life, then for the purpose of presenting some suggestions with a view to inducing the former members of that party who call themselves Progressives to return to the Republican fold, again for the purpose of announcing in loud but hollow tones that a union has been effected between the Republican survivors and the Progressive repudiators of Republican doctrine, all of which are as empty of fruition as Republican promises are of redemption, have given to those who would rather see the country in panic and distress than to witness the successful prosecution of the present administration's policies an opportunity to give public expression to wishes which are but father to their express thoughts.

The great masses of the American people are naturally optimistic, and they have little patience with and less regard for the pessimistic croaking of disgruntled politicians. The election in November, 1912, resulted in a large number of statesmen being obliged to join the ranks of the unemployed, and as many of them have not found active employment up to date in other pursuits they amuse themselves and find occupation in pointing with pride to the good old days and viewing with alarm the gloomy prospects of their personal political futures.

While the tariff bill was under discussion predictions of disaster came frequently from politicians, but the American business man was complaining only of the uncertainty as to what the new rates would be and when they would go into effect. Of course, those who thrived on special privilege, the lobbyists and the Manufacturers' Association, so called, bemoaned the passing of the good old days when these Halls resounded with the tramp of feet of the advancing hosts of special privilege. But the business men who conduct their business upon economic principles and seek a free field in which to present the merits of their wares, rather than the secluded shelter of legislative monopoly, neither looked forward to nor predicted hard times or panic.

The failure of a panic to follow the enactment of the Underwood tariff law has directed the attention of the pessimist to the currency bill, and the same old prediction, still perfectly good and useful, notwithstanding its extensive use before the passage of the tariff bill, is again brought into play, and we are told that the panic which the tariff bill failed to produce is now upon us because of the combined effect of the tariff and currency laws.

While the Republicans in this Chamber and in the Senate, and those who presume to act and speak for the remnant of that party at their various gatherings, confined themselves to predictions of coming panics, there was no occasion to pay any attention to them, for time alone could answer predictions of that sort. But when they advanced boldly to the position that we are now experiencing a panic or that times are hard, money scarce, and that there is a reduction in manufactures and a decrease in output it is only fair that these claims should be subjected to the test of statistical analysis and historical review. I might very properly, by way of answer to these claims, direct the attention of the House to the panic of 1907, which occurred when the Republican Party was in full and complete control of both Houses of Congress and the Presidency, at a time when work was plentiful, the harvest abundant, the railroads busy, business conditions generally prosperous, yet like a bolt of lightning from a clear sky we found ourselves plunged into a most disastrous panic, from the effects of which this country has not yet fully recovered, a panic for which the Republicans can not hold or charge the Democratic Party with any measure of responsibility, and the blame for which the country has very properly charged up to Republican legislation and the evil effects of special privilege.

I might direct the attention of the House to the panic which began in 1892, under President Harrison's administration, and which burst in all its fury upon the country while President Cleveland was in office, and which Republicans ever since have falsely charged to Democratic inefficiency; or I might refer to the panic of 1873, when the Republican Party was in full control of all the departments of the Government. Any one of these real panics and the causes which led up to them might properly be regarded as a sufficient answer to the Republican boast that prosperity always accompanies a Republican administration; but I prefer to base the answer to claims of Republican prosperity upon an analysis of the condition of the country as shown by statistics now available and a comparison of present conditions with those boasted years of Republican prosperity.

It is only natural to expect some slowing up in industry at this time of the year—first, because it is the season of year when many industries temporarily reduce their forces because of the approach of winter; second, because the present administration has begun the process of reversing the policy which characterized preceding administrations; special privilege and the interests which thrive upon it have been notified that their day is past; and, while the beneficiaries of special privilege are few in number, they have grown powerful in recent years and their influence is being exerted to frustrate the policies of an administration which is pledged to their destruction; third, the prosperity which obtained under Republican administrations was of a kind which permitted a great many of our workingmen to find employment at different occupations which netted them sufficient wages to live from day to day while the work lasted, but an idle day meant to them a hungry day. The prosperity obtaining under Republican administrations also meant the accumulation of vast fortunes by a few stock-gambling kings and a coterie of commercial pirates operating by means of interlocking directorates along the highways of trade, and while they paid the workman his wages one day they took it from him the next day in tolls which privilege and monopoly enabled the beneficiaries of Republican rule to exact. So that while a few days of idleness may mean distress for the toiler, the agents of privilege and monopoly, glutted with the proceeds of their years of plunder, may sit in idleness and await the return of another harvest, legitimate industry and honest toil, like the patient whose circulation is made sluggish by disease, feel temporarily the lack of that proportion of the circulating medium in the channels of trade and commerce which privilege withholds.

A brief review of the industrial conditions under President Harrison's administratioin and a reference to conditions under President Taft's administration will probably be sufficient to dispose of the boasted claims of Republican prosperity. During the four years from 1889 to 1892, while President Harrison was in office, the following business failures occurred:

In 1889 the number of failures was 10,882, with liabilities aggregating $148,784,337.

In 1890 the number of failures was 10,907, with liabilities aggregating $189,856,964.

In 1891 the number of failures was 12,273, with liabilities aggregating $189,868,638.

In 1892 the last year of President Harrison's administration, the number of failures was 10,344, with liabilities aggregating $114,044,167.

Among the concerns that went to the wall during those years of national disaster, and which brought others to ruin with them, may be mentioned, because of their prominence in the industrial and commercial world of those days, the following concerns:

Barker Bros.' Banking House, Philadelphia.
Citizens' Savings Bank, of Philadelphia.
The North River Bank, of Philadelphia.
Union Rolling Stock Co., of Chicago.
Jamieson & Co., of Philadelphia.
The Ohio Iron & Steel Mills, of Pittsburgh.
Meyer & Co., of New Orleans.
The Scotdale Rolling Mills.
Charlotte Furnace Co., of Philadelphia.
The American National Bank, of Kansas City.
The Spring Garden National Bank.
The Pennsylvania Trust Co.

And in 1892 occurred what was merely a reflection of the disturbed industrial condition throughout the country, but which has remained to this day as the country's crowning industrial disaster—the terrible and never-to-be-forgotten Homestead strike at the Carnegie Mills, of Homestead, Pa., which were presided over by the great apostle of protection, manufacturer of armor plate and blowholes, and founder of many libraries—Andrew Carnegie.

During the year 1907, with a Republican President, a Republican House and Senate, and the protective tariff on the statute books, the number of failures, according to Bradstreet's reports, was 10,285, with liabilities aggregating $371,342,692, the largest in the history of the country.

In 1908, another year of so-called Republican prosperity, the total number of failures was 15,690, with liabilities aggregating $222,315,684.

The number of failures during the first nine months of the year 1912, the last year of President Taft's administration, and before the election was held, the number of commercial houses that failed total 15,299, with liabilities aggregating $202,219,352.

The prosperity of our national banks is generally regarded as a good index of our industrial conditions as well as the general condition of the country. In 1907, up to October 31 of that year, 7 national banks had failed, with liabilities totaling $5,597,604.

In 1908, 24 national banks went to the wall, with liabilities totaling $22,565,838.

Up to the 31st of October, 1912, which is generally regarded by Republicans as a very prosperous year, there were 8 national-bank failures, with liabilities totaling $4,498,926.

And during the 10 months ending October 31, 1913, during which period Republican legislation was still on the statute books, the Democratic tariff law not having taken effect until October 3, 6 national banks went to the wall, with liabilities totaling $2?,809,434.

The country can very well afford to dispense with this brand of Republican prosperity. There is no occasion for a panic now. There will be no panic now, unless the efforts of the calamity howlers succeed in precipitating one. The condition of the country was never better than it is to-day. According to the reports of the Department of Agriculture, the farm value of all crops for the year 1913 is $6,100,000,000. The total farm value of all animals sold and slaughtered and of animal products for the year 1913 was $3,650,000,000, making a total of $9,750,000,000, the greatest crop in the history of the country, with the average price level for staple crops 9.3 per cent higher than the average price level for the last five years.

According to the circulation statement issued January 2, 1914, by the Treasury Department, the general stock of money in the United States was $3,775,464,096. Our population, estimated to be 98,181,000, makes the per capita circulation of the country, according to the same statement, $35.11, the highest in the country's history. The World Almanac for 1913 reported money on deposit in savings accounts in the various banks of the country during the year 1912 amounting to $4,451,818,522. The report of the Comptroller of the Currency for the year 1913 reports the amount of money in savings accounts in all the banks throughout the country for the year 1913 amounting to $6,972,069,227. This is a larger savings account than any other country in the world and the largest in the history of this country.

The report issued by the Department of Commerce shows that imports into this country for November, 1913, amounted to $148,222,733. This, it will be observed, was after the Underwood tariff law took effect. And for the month of November, 1912, the imports were $153,094,898, nearly $5,000,000 more imports in 1912 under a protective tariff than for the same month in 1913 under the Democratic revenue tariff. Our exports for November, 1913, according to the same report, amounted to $245,550,392, and for November, 1912, $278,244,191, a decrease of nearly thirty-three millions. During the five months, July

to November, inclusive, of 1913, our exports were $35,000,000 more than for the corresponding period of 1912. And a comparison of our exports with our imports for 1913 as compared with the exports and imports of 1912 for the five months from July to November, inclusive, shows a trade balance in our favor for 1913 of $355,681,454. The total exports of our manufactures for November, 1913, were nearly $13,000,000 below those of November, 1912, but were $6,000,000 in excess of our exports for November, 1911. The total exports of manufactures for the five months' period, July to November, inclusive, of 1913, was approximately $4,500,000 less than for the same period of 1912, but it was almost $80,000,000 more than that of 1911.

This report of our exports and imports after the Underwood tariff law went into effect ought to be comforting to those calamity howlers who during the tariff debate pictured ships at the ports of France, England, Germany, and other European countries taking on cargoes of manufactured goods to be dumped upon our shores at prices that would destroy our manufacturing industries. An editorial in one of the leading daily papers recently contained the following, which is here appropriate:

Berlin has had the gloomiest holiday season known for nearly a century—shops empty, traders facing bankruptcy, 100,000 idle men parading the streets, want in the poorer quarters that public and private charity can only palliate. Throughout the German Empire banks are refusing loans and manufacturers are cutting down their force. In Austria-Hungary conditions are worse, though the world hears less about them.

In Italy State enterprises are halting for lack of money and the ministry is engaged in a vain search for something new to tax. Hunger is a regular winter guest in some parts of Russia, but his name is always "blacked out" by the censor. Despite the revival of business during the last two years distress continues to be severe in London; and France, probably most prosperous of all European great powers, is at her wits' end over problems raised by the new military loan.

It should be clear to anyone that some world-wide cause is responsible for such world-wide results.

That cause is not far to seek. At least a thousand million dollars was burned up in the Balkan wars. Nearly as much more has been withdrawn from productive enterprises by recent military increases in Germany, France, and Russia. Add to this the cost of the Italian conquest of Tripoli, the waste in Mexico, and the unparalleled extravagance of commercial and social life for the past decade and the "season of short fare" now prevailing is pretty thoroughly explained.

If this editorial correctly describes the conditions existing abroad, we may very properly regard them as a reflection of world conditions generally, but they should not necessarily cause any alarm here. Europe is an armed camp, and the devastation caused by war is manifesting its terrible effects there now. Mexico may continue its process of self-destruction until wisdom dictates a better pursuit. But while other countries are pursuing a policy of destruction or expending their energies in building engines of war we can profitably pursue those peaceful pursuits for the encouragement of which our Government was formed and find prosperity and contentment in furnishing food, clothing, and manufactures for the world.

This noisy clamor of coming panic is indulged in at a very critical time. We are now engaged in a herculean task. In response to the mandate of the people the Democratic Party has undertaken to correct evils which resulted from excessive tariff duties. That party in its national platform promised to remedy these abuses by reducing the tariff. The Progressive Party was also pledged to a downward revision of the tariff. Out of the 15,000,000 votes cast at the presidential election, approximately 10,000,000 were cast for the two presidential candidates whose party platforms declared in favor of a downward revision of the tariff. So that it is in response to the demands of 10,000,000 of voters that the revision of the tariff was undertaken.

Every revision of the tariff has a tendency to unsettle business conditions, and it is not only unpatriotic but grossly contemptible for the Republicans to cry panic and hard times at a time when business is unusually sensitive because of the changes in tariff rates. That the Republicans fully realize the advantage to be gained by this cry of panic during the enactment of tariff legislation is clearly shown in President Taft's famous speech at Winona. Mr. Taft, during the course of that speech and having reference to his speeches made in the congressional campaign in Maine in 1896 and having in mind the disturbance of business due to the revision of the tariff, said:

I pointed out the difficulty that there always was in a revision of the tariff, due to the threatened disturbance of industries to be affected and the suspension of business in a way that made it wise not to have too many revisions.

Everybody knows that changes in the tariff schedules have a tendency to make business sensitive, but it remains only for Republican leaders at such times to cry panic and disaster with a view to scaring the country into a respect for protection policies, regardless of how disastrous those policies may be.

In addition to the tariff legislation already enacted the Democratic Party is about to present to the country a measure which has been characterized by many Members of the House and Senate, as well as distinguished economists and financiers, as the greatest piece of constructive legislation enacted since the Civil War. The currency law, which is about to be replaced, was designed chiefly to guide the Nation through its greatest crisis, and so well did it perform that service that it ill becomes the legislator of to-day to replace the currency law of the sixties without reverend salutation to the genius and statesmanship of its authors and the expressed hope that the new law will serve its intended purposes as faithfully and well as the old law served the purposes of the Republic in the hour of its greatest peril.

The enormous growth of the country in population, business, commerce, and manufactures; its enormous increase in wealth and the growing needs of the commercial community render necessary the enactment of legislation which will provide greater elasticity to our currency and render less liable to recurrence those disastrous panics which in times past have paralyzed our industries and brought suffering and destitution to many of our people. That there is need for such legislation is not in controversy, but the question whether the bill which is now being enacted into law will accomplish that purpose has been the subject of prolonged and illuminating discussion. The bill has been thoroughly discussed and analyzed, not only in the House and Senate but also in the press and before conventions and assemblies of business, commercial, and banking associations throughout the country. Further discussion of it is useless. It is about to be subjected to the acid test of experience, and those who have indulged in prophecy concerning its effects will soon see their prophecies realized or come to naught. The debate on the bill has not been free from partisan bias, but it is gratifying to Democrats to know that it was supported when it passed the House in its original form by many Republicans and Progressives, and that in its final form it will have the support of as great, if not a greater, number, of those who occupy seats on the other side of the Chamber.

The Glass-Owen currency bill is not a partisan measure, and the opposition to it was not in all respects partisan. Throughout the debate we heard frequent references to the Aldrich currency bill and the Monetary Commission report. Many of those who were opposed to the Glass-Owen bill in the House, in the Senate, and those outside of the House and Senate who had sufficient influence to have their views expressed through the newspapers, seemed never to weary of contrasting the Aldrich and Glass-Owen bills to the disadvantage always of the Glass-Owen bill. While it was conceded by the bankers and advocates of the Aldrich plan generally that the Aldrich currency plan had many vices, it possessed one virtue in the estimation of the banking fraternity which amply compensated for all its vices, and that is the central bank plan. Almost any kind of currency system would be acceptable to the banking fraternity, apparently, if it comprehended a central bank as part of its scheme. Nearly all the argument against the Glass-Owen bill was openly directed against the regional bank system for which it provided, or was masked behind criticism of other features of the bill.

Again and again we were told in the literature of the central bank lobbyists of the excellent system which prevails in England, and the Bank of England was held up to our view as the model which we should adopt. It counted for little with those who flaunted the virtues of the Bank of England at us to suggest that a king also does well in England but he would not be tolerated here at all. The Reichsbank of Germany was also held up to our view as a coaxer, and we were told a similar institution would do admirably in America. But would those who admire the German banking system be in favor of an emperor here also? Canada, we were told, had an excellent banking arrangement, and if the Bank of England or the Reichsbank of Germany would not do, why not adopt the Canadian plan? Canada, however, is content to be a colony and its people subjects, while nothing less than sovereignty would be acceptable to America, and there are no subjects here. But these institutional differences are of no consideration to the advocates of the central bank plan.

The division on the Glass-Owen measure may be said to show clearly the advocates of a central bank and those who are opposed to it. During the course of the debate the opponents of the regional bank plan have caused the specter of inflation to flit across the legislative stage and the ghost of free silver has been trotted out and made to gallop around the forensic arena. And while the same logic which injects them into the debate on the pending measure could with equal force disport these specters through the provisions of the Aldrich currency plan, the plain purpose of these prophets of evil was to scare away the regional bank proposal and bring about the substitu-

tion of the central bank plan. The fight for the regional bank plan was the fight of the people against plutocracy—the struggle of the many against monopoly—and to the extent, at least, that the central bank proposition has been eliminated, the people have won. But this is only one battle. The war is not ended. There will be a cessation of hostilities for a time, but the contest will be resumed.

One of the most admirable features of the old law is its absolute freedom from monopoly, in so far as relates to persons engaging in the banking business, and this feature is retained in the new law. But while the door was open, permitting all who wished and possessed the necessary capital to enter the national banking system, this freedom from monopoly ended there. That monopoly of the banking business prevailed among those who were engaged in that business is clearly and unequivocally stated by a distinguished banker who acknowledged himself a party to that monopoly. Mr. George M. Reynolds, president of the Continental & Commercial National Bank of Chicago, while testifying before the Pujo committee, was asked if he had made the following statement:

I believe the money power now lies in the hands of a dozen men, and I plead guilty to being one, in the last analysis, of those men.

And he answered:

Yes, sir; my purpose in making that statement was this: I talked extemporaneously and perhaps was not as explicit as I should have been in making my explanation. I have no desire to in any way disclaim responsibility for it, however, because I have reiterated it fifty times since, and I believed it, and still believe it.

If a condition such as Mr. Reynolds acknowledges was developed under a law which was designed to prevent monopoly in the banking business, a condition which could only be built up after a hard struggle, painstaking effort, and a long process of years, and the maintenance of which could only be possible as a result of constant effort and with the possibility of frequent clashes with the authorities or with those who in a competitive way sought to break down the system or be declared a party to it, we can readily understand why the banking monopoly was eager to have its existence legalized and its grip on the credit of the country securely riveted; and one does not have to go outside the circle of those who control the credit of the country under existing conditions to trace the lobby in favor of a central bank to its source.

I am not opposed to the central-bank plan because it is not a good plan; I am opposed to it because it is undemocratic and un-American. The central-bank scheme has worked out satisfactorily in England, France, Holland, Germany, Canada, and elsewhere, and it would probably work successfully here; but a central bank means centralization of credit, which in turn means centralization of power. The war of the American Revolution was a protest against centralized power. Every line of the Federal Constitution breathes the spirit of opposition to centralized power. The division of the functions of government into executive, legislative, and judicial; the division of the country into States, each sovereign within its territorial limits, portrays clearly and powerfully the spirit of American opposition to centralized power. The central-bank plan because of its identification with and affinity for centralized power is out of harmony with the spirit of American independence, is in conflict with the genius of American institutions, and violative of the uniform trend of American law.

This currency law is in a measure an experiment. If there are defects in it they will appear as time goes on, and any suggestion looking to an amendment or change in it will, I venture to predict, be accompanied by a demand for the adoption of the central bank plan. The claim will again be made, as it has heretofore been made, that the central bank will be under the joint control of the Government and the banks, but this so-called joint control will in time degenerate into bank control, for in time such an institution will be absolutely dominated by one man. Emerson has said that "every successful institution is the lengthened shadow of a man," and a central bank will only vindicate the wisdom of Emerson's assertion. The establishment of one central bank will, in my judgment—if it is ever established—mark the first step in our national deterioration. It must be fought as vigorously as we would fight pestilence. "Eternal vigilance is the price of liberty," and we should never relax our vigilance against the encroachments of a central bank.

As these two great reforms, the reduction of trust-fostering tariff rates and the curbing of the money trust, are being accomplished, those who vainly sought to prevent the enactment of this legislation raised the false cry of panic and hard times. The motive which prompts the outcry is clearly understood by the great masses of the American people. This clamor will deceive no one. President Wilson has won the confidence of the American people, and while the professional politicians may try to encompass the defeat of his policies, the great American public are with him and will sustain him. He is not the President of a party; he is the President of the American Republic. He is not the representative of a class; he is the representative of all the American people. The laws which have been enacted have ceased to be the policies of a party; they are the laws of the land, and the rank and file of the American public consider themselves not only bound by, but they embrace them. Those who thrive on agitation may continue their agitation, but the law-abiding citizen will pursue the even tenor of his way. When national elections come on we will again divide ourselves into parties, and the spirit of partisan loyalty will claim a measure of our attention. But in the carrying out of great national policies, in the accomplishment of great national reforms, "none are for the party and all are for the State." This was the spirit that animated and sustained the men of 1776, the men of 1812, the men of 1846. This was the spirit that guided and sustained Lincoln in 1861–1865. It was the spirit that sustained McKinley in 1898. And, unless I have grossly misjudged the temper of my fellow citizens, it is not only the dominant quality of the American spirit of to-day but it will always be the guiding spirit of the American public in every national undertaking throughout all the vicissitudes of our national life in the years that are to come.

Currency Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. WILLIAMS.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. WILLIAMS. Mr. Speaker, the subject is of such importance that I prefer to submit my remarks from manuscript, rather than to indulge in an extemporaneous discussion which would involve greater latitude, and occupy more time than I am allotted for the presentation of my views on the pending currency legislation. And in the presentation of the subject, I shall confine myself in a general way to the main features of the bill without an attempt to minutely analyze them or go into any detailed discussion of the subject.

Every debate necessarily assumes certain bases or premises, and I propose here to take it for granted and assume that there is a pressing need for currency legislation in this country. Our banking law was the product of an emergency, as also has been every attempt to change it during the 50 years that it has been in operation. The national-bank law now in force was born of the conditions attending the Civil War, and perhaps was, during that period, as good a system as the conditions justified. As time went on, the necessity of amendment became apparent, and alterations have been made and the system patched up to meet changing conditions from time to time, but, like repairs to an old building, such amendments have rather tended to continue in operation and use an inadequate and inconvenient structure than to hasten the substitution of a new one more suited to the requirements of trade and commerce. So pressing became the need for a general revision, or rather a new banking and currency law, that in 1898 the Indianapolis Monetary Commission advised a general revision, and offered very valuable suggestions, which were never acted upon. Later the American Bankers' Association drafted a bill, making fundamental changes, which was introduced in Congress, but never became a law. Following this came the Lovering bill, and later the Fowler bill, both of which failed of passage; and, finally, following the panic of 1907, the Vreeland-Aldrich bill, providing for an emergency currency in time of financial stress, was enacted and is still in force, but will soon expire by its own limitations. Within recent years Congress authorized the appointment of a Monetary Commission, to investigate the whole subject and to report a scheme or plan for a new law in the light of present-day requirements and of the systems in vogue in European countries. After an exhaustive research, that commission made a report which demonstrated conclusively that an entirely new system in this country is necessary, and that the sooner a comprehensive banking and currency law is

adopted the safer will be the financial and business interests of the country.

I do not find fault with the delay which has characterized the progress of this bill, for I realize the importance of the subject and the advisability of the greatest care and consideration in adopting a fundamental change so minutely affecting every banking concern, business interest, and individual in the entire land as does this measure. Some criticism has been indulged that this bill was hurried through the House and that the President has urged undue haste in the Senate. I may say this bill was most thoroughly considered in the House, and no little presumption should be given the arduous labors given the bill in its preparation by the very efficient committee which reported the same to the House. This committee and the House had the benefit of all prior proposed schemes and of the prolific researches and investigation of the Monetary Commission as the basis for action, and while the bill may not be perfect in many of its details, I undertake to say in its fundamentals it is sound. The overwhelming vote by which the bill passed the House, after a most thorough and exhaustive debate, receiving as it did so large a Republican and Progressive vote, together with an almost unanimous Democratic vote, indicates that the good in this bill so far overbalances its faults as to render it reasonably acceptable to the country in the form that it left the House. It no doubt has been been materially improved by the modifications and amendments adopted in the Senate and in conference, and I believe that the bill now pending final passage in the House on the conference report is as nearly complete as could be hoped for any measure of so comprehensive a character. But whatever of defect or imperfection there may be, and whatever of deficiency may be demonstrated by actual operation and experience, can be, and I assume will be, promptly remedied from time to time by the Congress.

It is said by many that currency legislation is not a party question, and much criticism has been indulged by the opposition that this bill comes forth as a party measure, and during its various stages has been promoted by party influence. This is true, but this fact does not detract from the merits of the bill. Ours is necessarily a government by party, and an administration charged with the responsibility of government must operate through party machinery. The Republican Party has been so impotent to remedy existing financial and currency evils, or so unwilling to do so, that the new administration, on its advent to power, found it advisable to proceed in the usual way and propose a new bill through the expediency of party machinery, and a very efficient Democratic majority in the House and Senate have fathered and promoted this measure, and the very limited, weak, and ineffective opposition which has developed on the Republican side clearly demonstrates that the administration has not proceeded upon any very wrong theory or assumed any unwarranted responsibility.

The real source of opposition has come from the bankers and not from the country at large or from other business interests; and by this I do not mean the bankers generally, but the big institutions in the great commercial centers, which have had such complete sway and absolute control of the money system of the country that they are loath to surrender their ancient privileges without at least a show of resistance, to the end that they may secure as many concessions and favorable amendments as possible. I can not believe that the show of opposition is in all respects sincere and genuine, but such opposition, it appears to me, flows from selfish motives and purposes rather than deep-seated conviction or sincere opposition to the measure as a whole.

We have been in this country the victims of recurring panics such as not experienced in any other civilized country on the face of the earth. The reason why becomes a pertinent inquiry. The answer can be found only in our banking and currency system, which has placed the volume and control of our currency so largely in the hands of banking institutions, which have sometimes, it is believed, administered the finances of the country rather to their own gain and profit than to the welfare of the country; and yet I can not say that these concerns have been so wholly selfish as to utilize every advantage which the system affords them and to abuse every right which the law guarantees them. It is always a dangerous thing to place power in the hands of individuals or corporations, and it speaks well for the integrity and patriotism of the great banks of the country that the system has not been more abused and utilized more for private gain than has generally been the case.

The greatest fault with our present system has been the concentration of the currency in Wall Street and other financial centers, and its use in speculative operations, to the impoverishment of other sections of the country where money was most needed for legitimate use, and this has resulted often in a currency famine and high rates of discount, to the detriment and disadvantage of legitimate business everywhere, sometimes precipitating panics of fatal and far-reaching consequences. The proposition urged by many for the creation of one central reserve bank would not, in my judgment, remedy this evil as effectively as hoped for by this bill, which provides for a number of regional reserve banks, judiciously located with reference to the course of trade and exchange in the various sections and the business and financial centers of the country. To this end this bill provides for the establishment of from 8 to 12 regional reserve banks and for the mobilization of Government funds and bank reserves, and for the transfer of same from one regional bank to another under the management and control of a Federal board, so as to maintain a proper distribution of these reserves and their convenient accessibility to the sections of the country where most needed from time to time. No elaboration of this provision in the pending bill would seem to be necessary. The mere statement of the proposition carries with it the arguments in its favor.

The bill provides for an elastic currency, under the control of the Government, more responsive to the demands of trade than afforded by our present system. In fact, under the national-bank act our currency has proven so inelastic that financial stress, resulting in currency famine, has at times proven disastrous to trade and commerce and business interests generally in various sections of the country removed from the congested money centers where money was accumulated and used in stock-gambling speculation, and no means provided by which it could be supplied for the wants of legitimate trade elsewhere. The rediscount provision of this bill, by means of which any member bank owning stock and becoming a part of a regional reserve bank may obtain currency on commercial paper and other liquid assets, we believe supplies a deficiency in the present system of inestimable value, and that it affords a means by which any solvent banking institution which may become a part of the system will be enabled to promptly realize upon its assets and meet all demands made upon its resources, and reduce to the minimum the possibility of bank failures and the attendant direful results which follow in the wake of such catastrophies. I have followed the course of the debate in both the House and the Senate on this bill, and I am convinced, if ever in doubt, that a currency responsive to the demands of trade, expanding and contracting automatically with the law of demand, is one of the requisites of a safe currency system, and I know of no better means than that authorized by this bill to provide such a currency.

There are 25,000 banks in operation in the United States. This number includes national banks, State banks, and private banks, and embraces trust companies and savings banks. National banks are under the control and supervision of the Federal Government, while each State has a separate banking law, and in most, if not all, the States private banking is tolerated if not sanctioned by law. We have no comprehensive uniform system under proper supervision and control.

One of the purposes, if not the essential feature, of this bill is to correlate these banks and to enable or compel them to cooperate in one uniform system, all under Government supervision and control. I would not question the integrity of the men who conduct private banks, but I do believe that such banks should be under National or State supervision, subject to proper inspection, and that every bank in the country, great and small, should eventually be compelled to reorganize under a law such as is provided in this bill and become a part of a great common system, all more or less directly under the supervision and control of the Federal Government. A way is provided in this bill by which any banking institution may avail of its provisions, and I can foresee no hardship that would result from compulsory cooperation on the part of all banks, whether private, State, or National, and the establishment of one common, uniform, comprehensive banking system, all under Federal or joint Federal and State control.

Agriculture constitutes the first, the prime, and the most important industry in the country. All others are secondary, and yet our present banking system discriminates against securities based on agricultural products and live stock, and recognizes only commercial paper in clearing-house transactions. This, again, has tended to rob the rural sections of currency and to concentrate the same in the commercial centers, to the financial embarrassment and great inconvenience of agricultural pursuits during seasons of the year when money is most needed to move the crops. This bill affords a remedy against this condition of things by expressly providing that securities based upon farm products and live stock, and of a longer maturity period, shall be considered prime paper and subject to rediscount to the same effect and advantage as so-called commercial

paper, by means of which the farmer's and the stock dealer's paper may be readily converted into cash, and currency supplied to rural districts as required to meet the demands during stock-feeding and crop-moving seasons.

These are some of the most important provisions of the bill, and time forbids that I consider others or discuss these more in detail.

Mr. Speaker, I have no patience with the insinuations of gentlemen of the opposition, who undertake to discredit this bill because it is a party measure promoted by the administration, and who undertake to disparage its provisions by relating them to the so-called heresies of the campaign of 1896. Nor do I deem it of importance to discuss the issues of that campaign or to answer such arguments. It is sufficient to say that conditions are materially different now than then, and the same arguments, except in principle, do not apply. We are concerned with the present. The present administration is abreast of the times and offers legislation that meets present-day requirements. I have absolute faith in the integrity and character of the President, and am in entire accord with the aims and the hopes and the aspirations of his administration. This bill, important as it is, is but a part of a general comprehensive plan to meet the trade and financial conditions of the present, and I confidently predict that this bill when it becomes a law will be found adequate for every emergency, and establish a sound currency system and form the basis of a lasting and uninterrupted prosperity unequaled in the past. I deprecate the cry of politicians, who, without consideration for the business interests of the country, predict a panic and business depression as a consequence of this bill if it shall become a law. I question the sincerity and motives of these gentlemen. I do not believe they are in good faith; I do not believe they expect evil consequences to follow; but some of them are so hidebound, so partisan, and so mean as to challenge the welfare of the country by treasonable utterances more calculated to breed a panic than all the evil legislation which could be enacted. The purpose is manifest and twofold. These men would force the hands of the administration and compel amendments to this bill demanded by Wall Street, and, if need be, would precipitate a panic for political advantage. They see no hope for their party in the future, save calamity, which some of them are mean enough to fondly anticipate and even hope for.

With tariff revision a realized fact and currency legislation within sight, I hope and believe that we have passed the pitfalls and the breakers and are about to enter upon an era of unprecedented prosperity. I confidently hope and believe that these two great measures bespeak for the Democratic Party continued supremacy, and will mark the administration of President Wilson, as it so far justly deserves, the greatest in a half century.

The New Federal Reserve Act.

EXTENSION OF REMARKS
OF
HON. ALBERT JOHNSON,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. JOHNSON of Washington. Mr. Speaker, after an all-summer struggle—in caucus, in committee, in House and Senate—the currency bill now becomes a law, and the general American attitude toward the new financial system will be that of unqualified effort to bring the new plan to a perfect working system. Every person hopes for this. Everyone will do his part. If we are to have the most powerful banking organization in all the world, we want it to be a success in every detail.

The delay in the preparation of the bill has been for the betterment of the bill. Had the measure been jammed through as proposed last June it would have been a measure far inferior to the act which now becomes law. Almost every day in recent weeks has seen changes in the bill looking to its betterment. Even in the last week changes vitally important have come thick and fast.

WARNINGS BY AUTHOR OF MEASURE.

Here in the House when the bill has come from the Senate, supposedly finished, we hear the author of the measure, Hon. CARTER GLASS, calling out in sharp tones of warning these words:

The House, after full discussion, decided that we would not embark on that uncertain and reckless proposition of permitting 7,500 national banks and, it may be, 18,000 State banks, scattered all over the country, to engage in the acceptance business—that is to say, in business involving contingent liabilities—without one dollar of reserve behind them as a safeguard. That is one of the provisions of the Senate amendment. * * * That involves nobody knows how great an expansion of credit.

And the author of this bill issues the following further warning against changes which have been made:

The required cash reserve in member banks has been so reduced as to practically amount to no reserve at all. Is the House willing to approve that? Within six months after the passage of this bill there would be a veritable saturnalia of inflation in the country.

And in spite of pressure his words have been heeded and these and other offending clauses corrected—partially, at least.

My regret, Mr. Speaker, is that the Republican members of the conference committee were not permitted to take part in the business of the last few hours. That would have checked the cry of partisanship and would have gained the bill more votes on this side of the House. These last changes in the bill were very important. It is unfortunate that less than half a day was permitted for discussion and explanation of these changes. Four hours was not enough. The Democracy, with its overwhelming majority in the House, should have granted a few more hours for explanation and discussion of what it has produced with so much heavy labor—with effort so stupendous that other congressional work has been practically at a standstill for all of these months.

OPPORTUNITY FOR ACTIVITY OVERLOOKED.

I contend, Mr. Speaker, that while the Senate was engaged, day and evening, all these fall and early winter weeks the Democratic caucus could have lifted the rule of its own making and permitted those of us, on both sides of the Chamber, who had remained here in Washington to have discussed at length and with profit the Alaska railroad bill, the bill for the restriction of immigration, the question of Asiatic exclusion, the educational measures, and many other question on which debate must now be, of necessity, greatly limited.

But the time for criticism is past. The bill is on the books. The measure is the law as soon as it shall have been signed by the President. No one pretends entire satisfaction with it. Examination of the details of the new law in comparison with the currency bill in its evolutionary forms can be postponed. There remains only to be considered the all-important matter of supervisory management and control which is vested in the Federal reserve board. Congress has devolved a tremendous responsibility upon the seven men who constitute this board, and while the practical workings of the system will be largely in the hands of the bankers of the country, the fate of the new departure will be determined by the governing body.

COOPERATION IS PLEDGED.

Already the bankers of the country, both large and small, are pledging cooperation, and this, Mr. Speaker, is true Americanism.

In the bill itself the United States has in characteristic fashion drawn the experience of all older countries and created a device which is like systems of older countries, but, nevertheless, different. The regional plan of organization sets up several central banks, united through a Government board of control, so that reserves may be more effectively mobilized, as in other lands, while with the help of these banks and the provision of a currency in contact with the seasonal or abnormal variations of business credits may be rendered liquid, as they never have been in the past.

One may rest content that if the future discloses imperfections in the measure, they can and will be speedily corrected. The thing now is to get it into speedy operation, which, even with cooperation on every hand, must be a slow process. But business need not stand back a moment. Enough of the good clauses of the present banking act have been improved upon and temporarily retained, so that the mobility so long desired is at last at hand—available even while the machinery authorized by the Glass Act is being assembled.

I ask permission to insert as part of my remarks a concise digest of the salient features of the currency bill as amended in its final form.

THE NEW CURRENCY ACT.

Authorizes at least eight regional reserve associations, each with a regional bank. Will probably be 12.

Constitutes the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency the organization commission to fix boundaries of districts and reserve cities.

Entire system under the control of the Federal reserve board of 7 members—the Secretary of the Treasury and the Comptroller of the Currency, ex officio, and 5 others appointed by the President.

National banks must signify their intention to join the association within 60 days or they can not act as reserve agents thereafter.

They must enter within a year or forfeit their charters.

State banks may join by meeting requirements for Federal inspection.

Total capital stock of the regional reserve associations, $106,000,000, or 6 per cent of capital and surplus of all national banks.

Stock open to the national banks first and then to the public.

Dividends on the regional bank stock, 6 per cent.

ADVANTAGES OF NEW SYSTEM.

Will give expansive or elastic currency, facilitated by the ready mobilization of reserves.

Will prevent panics.

Provides after two years for the gradual retirement of national-bank notes and refunding of 2 per cent Government bonds. Substitution of 3 per cent gold bonds without circulation privilege, to run 20 years, or 3 per cent Treasury gold notes for 1 year, renewable annually for 30 years.

Authorizes the Government, through the Federal reserve banks, to issue notes against collateral approved by the Federal reserve board redeemable at the Treasury in gold and at regional banks in gold or lawful money at election of banks.

Requires gold reserves of 40 per cent in the Treasury Department against outstanding reserve notes. Provides tax against depletion.

Every regional reserve bank managed by 9 directors—3 chosen by the Federal reserve board, 6 elected by member banks, but 3 of whom shall not be bankers.

Provisions of the Aldrich-Vreeland emergency-currency act extended until July 1, 1915, with modification of the high tax on emergency notes issued under the law.

The Currency.

EXTENSION OF REMARKS

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. BARTON. Mr. Speaker, when the Glass currency measure passed the House I voted against it and stated my reasons for so doing. It seems by the bill presented for our consideration that the Senate concurred in that belief, as evidenced by the many changes made.

In constructive legislation of this character it is entirely impossible to draft a bill that would in all its parts be acceptable to each and every Member of the House and Senate. It is also true that all political parties, the bankers, and the people in general have declared for a change in our monetary system. This being true, it is my opinion that to comply with their desires some measure should be adopted.

I shall vote for this measure, not that I think it perfect, but on the ground that the people have declared for a change and that I think the good outweighs the bad and that in placing its machinery into operation the defects will be cured by legislative enactments.

The organization of the Federal reserve system in the House bill was purely political, naming the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency as the board. The Senate bettered this condition by adding two other members of the Federal reserve board, but in the conference, where the Republican conferees were not admitted, the Senate amendment was stricken out and the political construction as outlined in the House bill prevailed. In my remarks criticizing the House bill I made the point that our western banks were discriminated against, as the assessment was solely on the capital stock and not on capital and surplus, and that 5 per cent on call and 5 per cent in 60 days, as provided in the House bill, might invite stringent conditions. I am sure that the bill as it now becomes a law, assessing 6 per cent on capital and surplus, 1 per cent on call, 1 per cent in 3 months, 1 per cent in 6 months, and the remainder, 3 per cent, on call when needed, is not only more equitable for our western banks, but better for the entire country.

The House bill made no provision for stock ownership in these banks by any other than banks or bankers; in fact, it was purely a bankers' bill. An effort was made in the Senate to throw this stock subscription open to the people. The present bill provides that if the banks do not take the stock it can be then sold to the public. A very small concession; but when you take into consideration these individual stockholders are not permitted direct representation, the condition presents itself as in mutual insurance companies controlled by proxies of a make-believe representation.

I have not yet heard one good reason why the people should not have the privilege of owning these Federal banks. I can not understand why the bankers should have a preference over the farmer, the merchant, or any other business man. The resources of the Government will be behind this structure, and I am firmly of the opinion that the banks should be owned and controlled by the people outside the banking business, thus making it a Government bank, in which the resources of the Government would be used in the interests of the people, and not for any particular class of people.

The House bill provided that the Federal reserve board should consist of the Secretary of the Treasury, Secretary of Agriculture, Comptroller of the Currency, and four members appointed by the President to serve two, four, six, and eight years, respectively. This made the administration of the banks a matter of pure political partisanship control. This bill as it will now become a law provides that the Secretary of the Treasury, Comptroller of the Currency, and five members for 10-year terms, which makes it a better bill, for at the time for the inauguration of a President the majority personnel of the board can not be changed at once. It can under this bill be changed, and no doubt will be, as proven by the political changes made now in the several Federal departments where changes are being made to reward the faithful instead of adhering to the merit and efficiency system, but I believe the people will revolt against such partisanship and that eventually these men will be chosen for their fitness rather than their political service, and that the entire corps of workers under this great system will be placed under civil service and that legislation will be enacted making this board at least bipartisan.

The Hitchcock committee bill was the only one that placed these important places above politics.

While I know this bill has been copied to a great extent from the Aldrich bill, and the chief point of difference that has been urged is the central bank idea, yet it seems to me in the provision contained here that five members of the Federal reserve board can compel Federal reserve banks to rediscount the discounted paper of other Federal reserve banks that the idea of a central bank has been applauded, for this does exactly the thing that a central bank would do. What is this combination after all but one big bank controlled by the Federal reserve board.

Senator La Follette's amendment providing that no Senator or Representative in Congress shall be a member of the Federal reserve board, a director of a Federal reserve bank, or an officer or a director of any member bank, and further, that no director of class "B" or of class "C" shall be an officer, director, employee, or stockholder of any bank. This seemed to me to be good law. The Senate thought so and adopted his amendment, but the Democratic House conferees succeeded in having these words stricken out: "Or an officer or director of any member bank," and in the second part "or of class 'C.'" I can not think of one intelligent reason for this change, but certainly would be charitable enough not to say that this was on account of prominent Members on the House and Senate committee occupying positions of the character that this controlled.

This bill is better than the House bill, as it now permits, under certain conditions, banks to make farm loans and permits six months' paper, based on agricultural products, to be rediscounted, but at the same time I do not see where, with the placing of all of this Government money, the farmer will get his interest rate reduced, and inasmuch as the Government now only receives 2 and 3 per cent on its funds I was greatly in hopes that an arrangement would be made that would give the farmer direct benefits.

The Hitchcock wing of the Senate committee had, in my opinion, one very commendable and important feature that was eliminated, as follows: To prevent loss by depositors in bank failures they proposed, after paying 5 per cent dividends to the stockholders and after the required 20 per cent reserve is earned, that one half of the excess profits should go into the National Treasury and the other half constitute a trust fund for the insurance of the depositors of the member banks. These funds are earned by the depositors' money and the sav-

ings of the depositor should have a substantial guaranty. The failure of a national bank in my district brings this matter close home. The real sufferers are the depositors who placed their money for safekeeping and who now are compelled to loose their deposits. The amount to return them the money they lost through the failure of this bank to this system would be infinitesimal, but to the depositors it means in many cases all. The Government is to a degree subject to censure, for this bad condition did not come in one day, and the true conditions surely was on record with the Comptroller of the Currency.

I deeply regret that this important provision was eliminated and sincerely trust that before this session ends arrangements will be made to protect the depositors.

In this rambling discussion there are many points untouched, many changes made which makes this a better bill than the one presented to the House. The increased reserve requirements from 33⅓ to 40 per cent, the manner of retiring Government bonds, and so forth, I shall not endeavor to cover the bill completely, for we know it will pass in its present form, and all patriotic citizens are hoping for its success. I would like to have had incorporated insurance of deposits, a section forbidding interlocking directorates in all banks, a more liberal policy of farm and farm products credits, a nonpartisan board, civil service protection for the employees of the system, all of them to be started under a merit system, but knowing that a Member can not have his way in detail and as this bill is a blending of all currency bills to date, I feel that we should respond to the demands of our constituents and believing it will make a better condition than the one now prevailing, I shall vote for the measure.

Banking and Currency Bill.

REMARKS

OF

HON. MICHAEL K. REILLY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. REILLY of Wisconsin. Mr. Speaker, it is now a half century since the enactment of our present national banking and currency law. This law was a child of necessity—a war measure. It was not designed by its authors for the purpose of establishing a sound and elastic currency or to meet the then needs of a growing and expanding country. The vital problem of that day was to finance the Civil War and save the Union.

During the past 50 years there has been a wonderful growth in population and marvelous expansion in the industrial and commercial life of our country, and yet during all that time there has not been a single fundamental change in our banking and currency system.

In almost every convention of bankers, business men, commercial men, and leaders of economic thought held in the past decade or more our present national banking and currency system has been denounced as unscientific, dangerous, and a veritable panic breeder.

Foreign critics and authorities on banking have called our money and banking system "barbarous." Textbook writers and students of finance in all countries have united in denouncing our unscientific and out-of-date currency laws.

Bankers, business men, and students of finance at home and abroad are a unit, almost, in the opinion that the financial and industrial disasters that have visited our country in recent years are chargeable to a defective banking and currency system.

It would appear that the ideal banking and currency system for this or any other country is a system that would provide for a sound currency and at the same time for the automatic expansion and contraction of the volume of the currency as the economic needs of the country demanded.

A currency that is larger than is needed at any one time, and which can not be automatically contracted, results in a useless and needless accumulation of reserves, for a time at least, and the consequent stimulation of unhealthy speculation.

Our present national banking system has not responded to the demands of the commercial and industrial world or to the demands of our growing population. It would seem that there has been no relation at all between the currency demands of the country and the increase or decrease of the amount of national-bank notes in circulation.

From 1883 to 1891 the national bank-note circulation decreased from $361,000,000 to $167,000,000, or 53 per cent. This decrease was due to the fact that an overflowing National Treasury provided means for the redemption of United States bonds, the basis of our national banking system.

This contraction in our currency took place at a time of great industrial prosperity and expansion; at a time when the clearing-house exchanges showed an increase from $36,000,000,000 in 1883 to $53,000,000,000 in 1891.

Again, from 1892 to 1896, the panic period, the national bank-note circulation increased from $174,000,000 to $235,000,000, notwithstanding the fact that during that same period there was a shrinkage in the business activities of the country and consequently a decreased demand for money.

Within the past 10 or 15 years bill after bill has been presented to Congress aiming at a radical revision of our banking and currency laws, but for some reason or other each and every one of these bills failed to become a law.

The panic of 1907 gave impetus to the agitation for banking and currency reform in this country. The experiences of 1907 taught the American people that the so-called reserves of our national banks allowed by law to be kept in the reserve banks of our country were no reserves at all.

In the fall of 1907, when the country bankers attempted to get their reserves from the reserve centers, they found out that there was no money to be had, and that the only real reserves of their banks were the reserves required by law to be kept in their own vaults.

As a result of the panic of 1907 the so-called Fowler bill, providing for fundamental changes in our banking and currency system, was introduced in Congress.

After the Fowler bill was before Congress for several months and had been much discussed and criticized, it was suddenly put aside, for some reason or other, and in its place was passed the Aldrich-Vreeland bill, an emergency currency measure.

The Aldrich-Vreeland bill was passed in 1908, and it has practically been a dead letter since, except as used by Secretary of the Treasury McAdoo recently in putting out among the banks of the country $50,000,000 for the purpose of assisting in moving the crops.

The Aldrich-Vreeland bill provided for a monetary commission, composed of nine Senators and nine Representatives. This commission was authorized to study the banking and currency systems of the entire world and to report to Congress such a bill, based upon said study and investigation, as would, in the judgment of the commission, meet the peculiar geographical, industrial, and commercial conditions of our country.

In January, 1912, after four years of investigation and study, and after the expenditure of almost $300,000, this committee reported a banking and currency reform bill known as the Aldrich bill, which bill was introduced into the United States Senate by Senator Aldrich the early part of 1912.

The Aldrich bill, while purporting to establish a Government bank or currency association under the control of the National Government, practically turned over to private individuals the control of the banking and currency facilities of this country. The bill was so monopolistic in its tendencies and had within it possibilities of such unlimited currency expansion that it never got very far in Congress.

The Baltimore platform committed the Democratic Party to a systematic revision of the banking laws of the country, and President Wilson in interpreting that platform pledge laid down in a special message to Congress on the currency question the lines to be followed in framing a new banking and currency law.

The President says:

We must have a currency not rigid as now, but readily elastically responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings. Our banking laws must mobilize reserves; must not permit the concentration anywhere in a few hands of the monetary resources of the country or their use for speculative purposes in such volume as to hinder or impede or stand in the way of other more legitimate, more fruitful uses. And the control of the system of banking and of issue which our new laws are to set up must be public, not private; must be vested in the Government itself, so that the banks may be the instruments, not the masters, of business and of individual enterprise and initiative.

This bill, now known as the Glass-Owen bill, is in substantial compliance with the platform pledges of the Democratic Party and the recommendations of President Wilson.

Under this bill the United States is to be divided into not less than 8 nor more than 12 districts, the said districts to be formed with due regard to the convenience and customary course of business of the community and without any reference to State boundaries.

Each national bank located within a given district is obligated to subscribe to the capital stock of the reserve bank located therein in a sum equal to 6 per cent of its paid-up capital stock and surplus, one-sixth of the subscription being payable on call, one-sixth in three months and one-sixth in six months, and the remainder of said subscription, or any part thereof, shall be subject to call when deemed necessary by the Federal reserve board.

The national banks are also obligated to keep on deposit in the different Federal reserve banks of their respective districts a certain portion of their legal reserves, which deposits, together with the general funds of the National Government that may be deposited with the Federal reserve banks, will constitute all the deposits of the said Federal reserve banks.

The reserve requirements of this bill are as follows: country national banks, 12 per cent of their demand deposits and 5 per cent of their time deposits; reserve city banks, 15 per cent of their demand deposits and 5 per cent of their time deposits; central reserve city banks, 18 per cent of their demand deposits and 5 per cent of their demand deposits.

Of the above legal reserve this bill requires after three years that the country national banks shall keep four-twelfths of their reserve in their own vaults, five-twelfths with their Federal reserve bank, and three-twelfths in their own vaults or with the Federal reserve bank, at their option; that the reserve city bank shall keep five-fifteenths of their reserve in their own vaults, six-fifteenths in their Federal reserve bank, and four-fifteenths in their own vaults or with the Federal reserve bank, at their option; and that the central reserve city banks shall keep six-eighteenths of their reserve in their own vaults, seven-eighteenths with their reserve bank, and five-eighteenths in their own vaults or with their Federal reserve bank, at its option.

Thus by the terms of this law after three years it is contemplated that all the reserve of the national banks and such other banks as may see fit to join the Federal reserve system shall be held in the vaults of the individual banks or with the Federal reserve banks.

It is estimated under the above requirements that the Federal banks to be established under this act will have at the outset an aggregate capital stock of about $53,000,000 deposits belonging to the member banks of about $350,000,000, and Government deposits of about $150,000,000, making in all resources to the amount of approximately $550,000,000.

The subscribing banks, called member banks, will receive 6 per cent dividends on their capital stock subscriptions. They will receive no dividends on their deposits. All the earnings of the Federal reserve banks, after payment of the running expenses of the bank and the 6 per cent dividends on capital stock, go to the National Government after the accumulation of a reserve fund of 40 per cent of the capital stock of the individual reserve banks.

These Federal reserve banks may loan their capital stock and deposits to member banks and on good security. The loaning will be accomplished through the rediscounting for member banks of promisory notes based on genuine commercial paper.

Loans to member banks through rediscounting operations will ordinarily be made from funds of Federal reserve banks composed of the capital stock and deposits, but in case the funds of reserve banks should become low and the demands of industry and commerce should require more money, a Federal reserve bank may apply through the Federal reserve agent of the district to the Federal reserve board for Federal notes and in case its application should be approved by the Federal reserve board the said board will order Federal notes to be delivered to the Federal reserve bank asking for the same.

The Federal reserve bank being required to retain in its vaults a gold reserve of 40 per cent against the Federal notes issued and rediscounted commercial paper to the full amount of the notes issued.

Each Federal reserve bank will be governed by a board of nine directors—six to be chosen by the member banks and three appointed by the Federal reserve board.

The board of directors of a Federal reserve bank have the ordinary powers usually conferred upon the board of directors of a bank, except that the acts of the board of directors of the Federal reserve bank are subject to the approval of the Federal reserve board.

The Federal reserve board provided for in this act is composed of the Secretary of the Treasury, the Comptroller of the Currency, and five other members to be appointed by the President of the United States.

This board has in each reserve district a Federal reserve agent representing it and the Government in its dealings with the reserve banks.

This Federal reserve board has large and important powers. It appoints three of the nine directors of each regional bank; it has power to remove any officer or director of a Federal reserve bank; to permit or require one reserve bank to rediscount for another reserve bank; to suspend for 30 days the reserve requirements of the law; to superintend and regulate the issue and retirement of Federal notes to Federal reserve banks, and to fix the rate of interest on said notes; to permit national banks to act as trustee, executor, administrator, or registrar of stocks and bonds; to cause Federal reserve banks to be examined; and to review and determine the rate of discount to be charged by Federal reserve banks.

Each reserve bank, by the terms of this law, will be required to maintain in gold or lawful money a reserve of not less than 35 per cent against its deposits and a reserve in gold of not less than 40 per cent against its Federal reserve notes in actual circulation.

In addition to its dealings with the member banks and the Government, the Federal reserve bank is permitted to engage in certain so-called open-market operations, such as purchasing cable transfers, bankers' acceptances, and bills of exchange.

Under this bill national banks are permitted to loan money on farm mortgages to the extent of 25 per cent of their capital and surplus, or one-third of their time deposits, the time of the loan not to extend longer than five years and the amount of the loan not to exceed 50 per cent of the actual value of the property.

Provision is also made for a Federal advisory council, which shall consist of as many members as there are Federal reserve districts, each Federal reserve bank having the power to select one member of said council.

This council shall hold meetings in Washington at least four times in each year, and its duties shall be principally to advise the Federal reserve board on general business conditions as they exist in the various Federal reserve districts.

From the foregoing general outline of this bill it is apparent that it aims to bring about fundamental, radical, and beneficial reforms in our present banking and currency system.

It provides for the taking of the bank reserves of the country out of the large industrial centers, where they are now admittedly used to a large extent in stock speculation, and the mobilizing of the said reserves in Federal banks in the different sections of the country, where the said reserves can be used for the industrial and commercial requirements of the section from which they were gathered.

It gives to the Government and not to the banks power to issue emergency currency, thereby recognizing the sovereign right of the Government to issue money.

It gives to the National Government power to fix the rate of discount to be charged on the hundreds of millions of dollars of resources of Federal reserve banks, thereby enabling the Government and not the banks to become the controlling factor in every movement to increase or decrease the currency supply of the country. It is also the belief of the friends of this bill that it will destroy forever the power of the money trust that has been dominating the financial and industrial world of our country for many years.

It is not claimed that this bill will prevent stock gambling in New York and other large cities, but it is contended that this bill will prevent the bank reserves of the national banks of this country from being used for stock-gambling purposes.

Wall Street will undoubtedly continue to gamble after this bill is a law, but after 36 months have passed Wall Street will have to carry on its operations with funds other than the reserves of the national banks of this country.

Notwithstanding the dire prophecies that have been made by some of the leading bankers of this country, who fear a large shrinkage in their deposits because of the ultimate withdrawal of the reserves of the country bankers, that the requirements of this bill as to the transferring of the present reserves now held in the large reserve cities to the Federal reserve banks to be created by this bill will cause an industrial upheaval such as we have never known before, it is a belief of the friends of this bill that the transferring of the reserves provided for in this bill can be accomplished without any great disturbance of existing loans or any curtailment of the loaning powers of the national banks.

The fact of the matter is after this bill becomes a law and the system is in operation there will be more money available for loaning purposes by many millions than there is available to-day. The reserve requirements of this law are such as will liberate and make available for loaning purposes approximately $200,000,000 more than is available under the reserve requirements of the present law.

I am aware that there are not a few bankers who are opposed to this bill who will not suffer in any way by the loss of their deposits when the bill becomes a law. They claim that the compulsory feature of the bill is unjust; that they ought not be compelled to join the system; and that the reserve requirements of the bill are such as would make it impossible for them to come under the law without loss to their stockholders, for the reason that at the present time they get 2 per cent on the part of their reserves that they are now permitted to keep in the reserve banks of the country, which they will lose if they join the proposed system.

The bankers of this country have sanctioned in their conventions at one time or another almost all the important features of the present bill except Government control and the withdrawing of the reserve funds of the country from stock-speculating centers. The Aldrich bill, that the bankers did so much to boost, provided for capital-stock subscription by the banks, and the Aldrich bill was in reality just as much a compulsory measure as the proposed bill, as far as coercing the banks to join it. It provided indirectly what this bill provides directly.

The Aldrich bill contemplated rediscount operations on the part of national banks, the only difference being that the fund provided for rediscount purposes in the Aldrich bill was much smaller than the fund provided in this bill.

The fact of the matter is that big bankers of the large cities, who are opposed to this bill and who have been responsible for much of the opposition that has been in evidence, are opposed to it because it is different from the Aldrich bill in three important features:

First. The bill takes away from the banks the right to issue money and lodges this power with the Government, where it belongs.

Second. It gives power to the Government to control the discount rates of the Federal reserve banks.

Third. It will destroy the system that permits New York, in part, to become the legal custodian of the reserve funds of the banks of this country and the use of said reserve funds for stock operations in Wall Street.

The argument made against this bill because it makes it compulsory for national banks to join a Federal reserve bank or to surrender their charters has no foundation whatever.

The bill aims at the establishment of a banking and currency system for the whole country that will be more directly under the control of the National Government than is the present system and more responsive to the industrial and commercial demands of the country.

If we are going to have a currency system in this country under the control of the National Government, it is manifestly impossible to operate successfully and satisfactorily such a system with part of the national banks out of the system and part of them within the system.

The great important question to be determined is whether or not the proposed bill, if enacted into law, will give us a banking and currency system that will be the best for all the country; and having determined that the proposed bill does provide for an adequate, sound, and elastic banking and currency system that will meet the industrial and commercial demands of our country, there is nothing else left to do but to declare that all banks desiring to operate under the authority of the National Government should come within the provisions of the law or else surrender their charters as national banks. To provide otherwise would be to invite disaster and defeat at the very beginning of this attempt to fundamentally change our banking and currency laws.

While it is true that the bankers will lose the 2 per cent that they now receive on the reserves that they are permitted by law to keep on deposit in certain reserve cities, it is also true that the bankers will have more money to loan under the terms of this bill than under the present system, and they will also have greater stability in the financial world, as a result of which they will be enabled to make up for the loss of interest on their reserves.

The authors of this bill do not claim that it is a perfect currency bill. It would be asking too much of Congress to expect a perfect currency bill in the first law to be passed upon the subject within half a century. When you consider the fact that in the past 20 years numerous attempts have been made to modify and amend our national banking laws, and that all said attempts have resulted in failure, you will have some idea of the difficulties that are met with in trying to harmonize divers views as to what is the proper kind of currency legislation for this country.

This bill passed the House several months ago with almost the unanimous indorsement of its Democratic membership and with the votes of a large number of the opposition. It now comes back to this House from the conference committee a better bill in my judgment than when it left here on its way to the Senate, or when it left the Senate on its journey back to this House.

The conference committee has retained the meritorious amendments to the bill made by the Senate and has eliminated the objectionable amendments, thereby making the bill, as I have stated, a better bill than when it first passed this House.

Recently the National Citizens' League, an organization of business men having representatives in almost every important city in the Union and formed for the purpose of securing banking and currency reform, sent out the following announcement in its publication, Banking Reform, under date of November 1, 1913:

> The work of the National Citizens' League has been completed. On November 1 the office of the league in Chicago was closed. An acceptable law has not been passed, but such legislative progress has been made that there is no shadow of doubt that legislation is certain. * * * A banking reform bill admitted to be 80 per cent good has passed the lower House of Congress.

If this bill was 80 per cent good when it passed this House last October, it is at least 90 or 95 per cent good as it comes to us from the conference committee.

To be able in about seven months to secure the enactment into a law of a currency and banking bill, radically and fundamentally changing a system a half a century old, is certainly a wonderful achievement for a President and his party, especially so when the proposed law commands the support of such a large element of the party of opposition.

While there appears to be considerable opposition at the present time to this bill on the part of a great many bankers of the country, I am firmly of the opinion the more the bankers study this bill the more they will be convinced that it provides for this country a safe, sound, and elastic currency.

I have too high a regard for the patriotism of our bankers, and particularly for the patriotism of our country bankers, to believe that as a class they desire any special favors at the hands of Congress. I believe that they are willing to unite with their fellow men in all the various walks of life, in urging Congress to give us a banking and currency bill that will be for the best interests of all the country; a banking and currency bill that will meet the requirements of the industrial and commercial life of every section of our country; and not a bill that will be favorable to the bankers, the farmers, or the manufacturers.

The time has passed in this country when any industry, banking or otherwise, will be heard in an appeal to Congress for legislation beneficial to that particular interest.

The criterion by which to judge of the merits of this bill is not whether it will be for the best interests of stock speculators, or of the big bankers in our great cities, or of the country bankers, or of the manufacturers, or of the farmers, but the one and single inquiry should be, "Will it be for the best interests of the commercial and industrial life of the whole country"?

The question is, whether this bill if enacted into law will give us a sound and elastic currency that will prevent a recurrence of the industrial disturbances which we have been subject to under present conditions, and at the same time adequately provide banking facilities for every section of our country and for all the industries of our country.

The advocates of this bill believe that it is a long step in the right direction. They believe that the General Government and not the bankers should have the power to issue money, and that the Government also should have power to fix the rate of interest to be charged on bank reserves in this country, which, under the terms of this bill, will be mobilized in the Federal reserve banks. They also believe that the mobilizing of the hundreds of millions of dollars of bank reserves in this country in not less than eight regional banks, where the said funds can be made available for legitimate, industrial, and commercial enterprises instead of being available, as they are at the present time, for stock speculating purposes, is a vital and essential reform in the interests of the industrial and commercial development of our country.

The Federal Reserve Act.

EXTENSION OF REMARKS
OF
HON. EDMUND PLATT,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. PLATT. Mr. Speaker, the Federal reserve act is founded on the "Aldrich plan," prepared by the National Monetary Commission of which ex-Senator Aldrich, of Rhode Island, was the chairman. It is a clever and able adaptation of the "Aldrich plan" to the Democratic platform, which declared against a central bank or reserve association. Students of banking are practically agreed that a central reserve association or bank would be stronger and safer than the divided plan of the Glass-Owen Federal reserve act, but there is no good reason why the latter should not work well, in my judgment, if the President appoints the right men on the Federal reserve board which is to supervise and regulate the new system.

The Federal reserve act, or "currency bill," provides for the establishment of not less than 8 nor more than 12 reserve banks, in which a part of the reserves of all national banks and of as many State banks as decide to join are to be pooled. These Federal reserve banks are to be depositaries of the general funds, receipts from customs, internal revenue, and so forth, of the United States Government, which will place in their vaults some $400,000,000 in addition to the reserves from the member banks. They are also authorized to deal in Government and State bonds, to buy and sell gold, and so forth, and to issue notes on the security of United States bonds, so they will have ample resources.

The main purpose of the establishment of the Federal reserve banks is to prevent panics and to afford the member banks a place to go for help in time of stress or of extraordinary demand for loans. In order to obtain help a member bank puts its own indorsement on some of the notes of merchants or farmers for whom it has discounted and sends them to the Federal reserve bank of the district for rediscount, receiving back the proceeds with which to extend further accommodations to its home patrons. This is stating the operation in its simplest terms, and perhaps rather more simply than it will work in practice. The proceeds of such rediscounting will probably not be remitted to the member bank, as a rule, but will more generally be placed to its credit in the Federal reserve bank. In either event the amount can be counted as additional reserve upon the strength of which accommodation can be extended at home considerably beyond the proceeds of the notes rediscounted. The limit upon this is the requirement that the Federal reserve bank itself must keep a reserve "in gold or lawful money" of 35 per cent against its deposits; that is, $35 out of every $100 placed to the credit of member banks. There is undoubtedly possibility of inflation in these provisions, but good management will guard against it.

It is expected that the present bank notes based on Government bonds will be gradually superseded by the new Federal reserve Treasury notes authorized. These notes are to be issued to the Federal reserve banks on the security of commercial paper by the Federal reserve board through the Federal reserve agent in each bank. This process is awkward and indefensible, except as an effort to comply with the Democratic platform. On its face, as I have stated, it appears to be a loan to the banks of Government notes. Practically, however, the notes are to be bank notes, as the Federal reserve banks are required to keep a 40 per cent reserve in gold against them. These notes, or rather the machinery provided for their issue and the form they are to take, constitute one of the worst features of the bill. It amounts to a compromise with greenbackism, but was the best that Mr. Bryan and his friends could be got to agree to. I see no reason why any Republican should vote for a bill containing this deceptive provision, which should be eliminated; but if the people understand that it was adopted only for political reasons and is not to be too literally construed, it may do no serious harm. That at least is my hope, after having done my best to get it made right, both in the Banking and Currency Committee and on the floor of the House in debate.

Mr. Speaker, I have avoided as much as possible going into elaborate details, such as the provisions for organizing the new banks, the reserve requirements of member banks, and so forth, and have endeavored to set forth plainly the main features of the bill. I think the Democratic administration has made a serious mistake in conveying the impression that the wheels of industry will begin to hum the moment the bill is passed. It contains no magic. It will do little, if anything, to help the country out of any business depression brought on by the tariff or other causes, though I believe it will effectually prevent a panic. It should be remembered that a panic and a business depression are two different things, and that we may have the latter without the former. In a business depression there is no extra demand for money; quite the opposite, in fact. At such a time money piles up in the banks, because business men do not care to venture it in new enterprises or in the enlargement of their businesses. At such a time the new banking system would probably be of no assistance whatever, and restoration of confidence would depend upon other things which I need not mention at this time.

Currency Bill.

EXTENSION OF REMARKS
OF
HON. JOHN W. LANGLEY,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913,

On the conference report to the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. LANGLEY. Mr. Speaker, I take advantage of the privilege granted of extending my remarks in the RECORD in order to explain my reasons for voting against the agreement of the conferees on the currency bill. I voted to concur in the Senate amendments, just as many others did who were against the bill as a whole, because I thought those amendments made it a better bill than it was when it left the House, and, of course, I wanted to minimize its evils as much as possible. A good many Republicans voted for the conference report because they felt that while it contained many errors it embodied more good than evil and was, on the whole, an improvement upon the existing law; and I think a number of Democrats who supported it shared the view of a distinguished member of that party who said that in his opinion it contained 60 per cent that was good and 40 per cent that was bad. Indeed, I confess that with me it resolved itself into a question of percentage; but I reached the conclusion that the bad features of the bill more than overbalanced the good. I may have been mistaken about that—time only can determine—but it was a candid conviction based upon the best light that I could get upon the question. My views upon the bill when it was under discussion in the House are, in the main, still applicable to the bill as agreed to in conference, because most of the features of the House bill that were objectionable to me are still in it. I quote the following from my argument against it when it was pending in the House:

> There are some gentlemen so partisan that they think there is neither virtue, wisdom, nor patriotism in any party except their own. I am thankful to the good Lord that he created me so that I do not belong to that class. I concede that there are some good provisions in this bill. Indeed, I think it is the product of the highest order of wisdom and patriotism of which the Democratic Party as now constituted in the House is possessed. [Applause on the Democratic side.] Neither do I think the defects in the bill are due to any lack of Democratic patriotism, but rather to the defective methods of thinking and legislating with which Democracy is sometimes handicapped when it is in control of our national affairs. [Applause and laughter on the Republican side.]
>
> The banking business of our day is the outgrowth of centuries of experience and evolution. There are just two interests represented in a bank—the bank itself, which, of course, includes its stockholders, and the people with and for whom it does business. The banks in a community represent in a peculiarly intimate way the credit of that community, and therefore any legislation which affects injuriously the interests of the banks is of necessity injurious to the community itself. No legislation bearing upon currency or upon banking that meets with the opposition of the banks and the people interested in them—nay, more, that has not their active support—can be successful in operation any more than a tariff bill professedly in the interest of the farmer can win his enthusiastic commendation if in reality it puts a serious burden upon him in the pursuit of his calling.
>
> There are defects, and perhaps abuses, incident to the banking business which can and ought to be cured, but it ought to be done without

putting such a severe strain on the gold reserve and the credit of the Government as this bill would do. It seems to me that it ought to be done by direct legislation instead of punishing the innocent in order to reach the guilty, which will, I fear, be the effect of this bill. There ought to be more rigid Federal supervision of national banks, but I do not think we ought to go so far as to put the Government in the banking business, thus making it responsible for their operation and obligations. I am not a banker nor an expert on the currency question. I have listened patiently and carefully to all the arguments presented here by the sponsors and supporters as well as by the opponents of this bill, trying to get all the light I could; and when I come to record my vote on the measure I shall do so according to my best judgment, uninfluenced, I trust and believe, by any partisan purpose, for it is not properly a political question and ought not be made one here. At the present it is my purpose to point out what appear to me as some defects in this bill which have been, to my mind, pretty well established in this debate. With this I must be content, for I know full well the futility of offering any amendment with the hope of having it accepted.

First of all, it places all the banking facilities in the country in the grasp of the President of the United States. It is true the President is the chief officer of the Government, but it must be remembered that he is also the chief of his party. What he says "goes," to use a vulgarism. Striking proof of this fact has been given of late in the manipulation of this as well as the tariff bill. The President, if this bill becomes a law, will appoint every member of the Federal reserve board, which will have the whole banking business of the country absolutely in its power, or at least that part of it which becomes a part of the machine constructed by this measure. It is true, an advisory board is provided for, but for all practical purposes it is utterly powerless. It can make suggestions but it can not enforce them. It will know of the acts of the Federal reserve board just what that body chooses to let it know; so much and no more. It is as useless as a fifth wheel on a wagon so far as aiding to move this gigantic vehicle is concerned.

The next step in the erection of this political pyramid is the constitution of the boards of directors of the Federal reserve banks. Each reserve bank is to have nine directors. Three of them are to be elected by the member banks, three representing the agricultural and commercial interests of their respective districts, and three to be selected by the Federal reserve board. It is to be noted, however, that the members of the second group are removable at the pleasure of the Federal reserve board. The directory of a reserve bank, therefore, has six directors, over whose tenure of office always hangs the Damocles sword of the will of the Federal reserve board.

That is not all. The chairman of the board of directors of a reserve bank, denominated reserve agent, is selected by the Federal reserve board, and is removable at its pleasure without notice.

Can you imagine any machinery which could more completely place the operation of all banks embraced in the proposed system under the immediate, direct control of the President, if there should be at any time one with a sufficiently despotic disposition to use his power? There is no other nation that places such unlimited control of the banking business of the country in the hands of the Government. I will mention only the three most important ones. The Bank of England is a private corporation, the Government's fiscal agent, but not subject to the Government's control in the management of its business in any manner whatsoever.

The Bank of France is a joint-stock corporation, with more than 30,000 stockholders, 10,000 of whom own no more than one share each. While under government supervision, because of its fiscal relations and issuing notes for general circulation, the control of its business rests with the general council, consisting of 15 regents and 3 supervisors, elected by 200 of the largest stockholders. The governor and deputy governor are appointed by the President of the Republic upon the recommendation of the minister of finance. The bank has over 400 branches and agencies, the managers of which are appointed by the President from a list submitted by the governor. The regents fix the weekly discount rate and the supervisors examine the business of the bank. The shareholders meet once a year, receive the report of the bank's business, and elect the general council.

The Reichsbank of Germany is under the supervision of the State, but its 40,000 shareholders take part in the administration of its business through a central committee, elected at a general meeting, annually. When in 1899 it was proposed to transform the institution into a State bank, the Imperial Government, the Reichstag, and the governments of the States, comprising the German Empire, opposed the proposition "on political, economic, and financial grounds." That is precisely the objection lying against the pending bill. It is political in principle and practice, and, viewed from an economic standpoint, it is bad policy for the Government to issue notes and thus become a debtor.

Another serious fault of this bill is its compulsory character in seeking to force existing national banks to take stock in the reserve banks, the only alternative being for a bank to surrender its charter if it refuses to accept terms that are not to its liking. A bank is required to subscribe to the capital of the reserve bank to the extent of 20 per cent of its capital stock, one-fourth of the subscription being payable within 60 days. This will impose so great a hardship upon banks with limited capital and surplus that many of them will surrender their charters and either operate under State charters or as private banks. The bill also provides for the compulsory transfer of funds from one reserve bank to another, the transfer being directed according to the judgment and on the order of the Federal reserve board. This is a dangerous interference with individual property rights, for it must be remembered always that the Federal reserve bank handles the money of its stockholders, the subscribing banks, which in turn are custodians of the money of their depositors. The individual depositor, while willing to intrust his funds to a bank in the integrity and judgment of whose officers he has confidence, may well object to the transfer of those funds to the custody of persons or institutions of whom he knows nothing.

Right here is another point where the danger of these banking operations being influenced by political considerations becomes apparent. Let us suppose that the district of one of these reserve banks is suffering under monetary stringency and that it is a district whose voters and political representatives are in harmony with the political views of a majority of the Federal reserve board. The board, either on its own volition or acting under pressure from above, could order the reserve bank of another district to transfer some of its funds to the district in distress, even against the protest of the former and in utter disregard of the injury it might inflict upon the bank so directed. I am loath to believe that such a thing will occur, but the danger, the possibility, of such action is unquestionably imbedded in the provisions of this bill, and that danger, that possibility, should never be permitted to find lodgment in such a statute.

Mr. Chairman, I think this bill will work injury to the section of country I represent for another reason. It is the greatest coal field in the world. Millions of dollars are being expended there in the building of railroads and in the development of those coal fields. The money necessary to do this is not and could not be furnished by the local banks. It is obtained from outside sources, from sources with which the men engaged in that development have established financial connections and which this bill will tend to impair. If the facilities of the promoters for raising this money are thus impaired the development will necessarily be retarded. If this should happen the local banks would likewise suffer, for they not only do not furnish the money but are direct beneficiaries of it.

Another trouble with this bill is that it will break up old banking associations and connections. The country banks know now where to get their money, and that is true also of the capitalists who are developing our section of country. They have their balances in Cincinnati, New York, or other convenient places. When the call comes to these small country banks for their subscriptions to the Federal reserve banks and their cash reserve is exhausted thereby and their surplus impaired they will have to cut down those balances, and in many instances, as I have already stated, will have to borrow to replace the funds withdrawn for these subscriptions. Therefore instead of helping the country banks the proposed legislation is likely to do them great damage. Moreover, the cutting down of those balances will necessarily impair their credit in these large banks, for, after all, the banking business is, in a measure, reciprocal. In still another direction this call for money reserve bank stock will work hardship. It is almost inevitable that the country banks will have to call in loans made to farmers, to the serious inconvenience and, I fear, in many cases, to the serious injury of the latter. As I have already pointed out, the provision of this bill calling for the payment of 10 per cent of the reserve bank subscriptions within 60 days will cause a tremendous contraction of credits under the operation of which the little fellows, as is always the case, will suffer the most. I will not undertake to say to what extent liquidation of assets will be necessary to raise these hundreds of millions, and I am certainly not going to pose willingly as a prophet of evil and predict that this liquidation will be the cause of a great panic, but I seriously apprehend a condition which would closely approximate such a catastrophe.

Great injustice is done the member banks in the scheme for the distribution of the earnings of reserve banks. The section of the bill dealing with the subject provides for an annual dividend of only 5 per cent. I know of no bank anywhere that does not get at least 6 per cent on its loans, for while there are two or three States where the legal rate is only 5 per cent, in all of them a higher rate, in some as high as 12 per cent, can be charged by special contract. To the amount of 1 per cent at least on the amount of reserve bank capital subscribed, therefore, every member bank is made a loser, and to that extent the possible earnings of its stockholders are curtailed. Incidentally it may well be asked in this connection what inducement there is in such a condition to a State bank or a private bank to respond to the invitation to enter the system. But coming back to the national banks subscribing to the capital stock of the reserve banks, it can hardly be called a square deal to first club them into membership, as it were, and then give them less on their money than they would have received if they had not so invested it. The underlying principle of it is fundamentally wrong, and it is not creditable to our Government to indorse it.

Another serious objection is found in the section relating to rediscounting. The paper presented to the reserve banks for rediscount must have a maturity of not more than 90 days, except in certain special cases it may be 120 days. Now, it is well known that what are usually spoken of as country banks, with, say, a capital stock of from $25,000 to $50,000, have frequently to take for discount paper running from four to six months, often with the understanding that there are to be renewals, so that it is practically a loan for a much longer period in many instances. Therefore these small banks would be largely excluded from the benefits of this rediscount provision that will be enjoyed by the larger banks which give accommodation for not longer than 90 days. In other words, the country banks would relatively pay the highest for the privilege of membership and gain the least by it.

A good deal has been said on the subject of rediscounting commercial paper by the Federal reserve banks. There are two cogs in that wheel that are liable to break at any time and leave in a bad fix those who count upon the wheel's moving. Let us assume that a country bank desires to rediscount some of the paper which it has received from its regular customers in the course of business. Let us assume, furthermore, that a number of other banks in the same district are also in a condition which makes it necessary for them to appeal to the Federal reserve bank for rediscount. Let us assume still further that this Federal reserve bank at the time that this extraordinary demand is made upon it by these member banks finds itself short of funds and unable to relieve the necessities of the applying banks. What then? The banks have broken off their former connections and have now no source from which they can draw the necessary funds whereby to relieve their necessities. The inevitable result of this condition is that the individual banks will be compelled to refuse to their customers the customary accommodation to carry on their business, and that, therefore, there arises in that district not only a monetary stringency, but a more or less serious handicap on business generally. The other cog that may fail is the possible refusal of the Federal reserve bank to accept for rediscount the paper presented by its member banks. The right so to refuse is conferred upon the Federal reserve bank by the provisions of this bill. Thus it will be seen that the rediscounting feature of the bill does not confer upon the country banks the inestimable benefits which have been so loudly heralded. It is the big banks that in the end are going to be the chief beneficiaries of the rediscount feature.

While I am glad to see that this bill makes provision for some accommodation in the way of loans by country banks to farmers, I fear that these provisions do not go far enough. In the first place, the time allowed for loans to farmers—not exceeding 12 months—is hardly sufficient in most cases, and again I doubt if the interest rate the farmers now have to pay would be materially lessened under the operations of this bill. Nevertheless, I am glad that the committee gave some thought to the farmers, and I hope that at the regular session it will bring in a bill providing for a comprehensive system of rural credit banks, taking as a model the admirable systems now in operation in Germany and France.

The organization of this new banking and currency system is to be begun within 90 days after the passage of this act. It may be safely assumed that by the end of that period the organization will have proceeded to the point where the national banks will be called upon for their subscriptions to the capital stock of the regional reserve banks. They will be required to pay, within 30 days after that demand is made, an amount equal to 5 per cent of their capital stock, and the same amount in another 30 days. In 60 days they will have paid in a sum equal to 10 per cent of their capital stock, and another 10 per cent becomes a liability of these banks, to be called for at the pleasure of the respective Federal reserve banks. It has been estimated that the total cash to be withdrawn from the banks under this provision within the 60 days will be between two hundred and two hundred and twenty-five million dollars.

In the majority of cases the cash reserves of national banks to-day are either below or dangerously close to the legal requirement, and in many instances the subscriptions to the reserve banks' capital will not only exhaust this reserve, but will necessitate encroachment upon the surplus. The inevitable result will be a drastic calling in of loans in order to make good the depleted surplus and provide the legal cash reserve. One need not be an expert financier to realize the effect that such a contraction of loans will have immediately upon the business of the country. Perhaps in a year or so business conditions will readjust themselves, but I am fearful that in the meantime there will be serious disturbances in business circles, attended with disaster to some. It may be that I am mistaken in this regard; indeed, I hope that I am mistaken; but I can not help but feel that it would have been the part of wisdom and prudence to have spread these withdrawals of cash from the banks over a longer period than 60 days.

One of the principal aims of the framers of this bill—so it has been generally proclaimed and understood—was to curtail the power of the New York banks. It was firmly believed that in the organization of the Federal reserve banks, distributed through different sections of the country and concentrating, it was hoped, all available banking funds in the respective districts, the means had been found to keep these funds from flowing into the great money reservoir of the commercial metropolis of the country. How utterly futile this hope will prove to be has been shown even before this bill was passed through the initial stages of legislation. Quite recently it was proclaimed with a loud flourish of trumpets that the Secretary of the Treasury stood ready to distribute from fifty to one hundred million dollars to the banks of the West and South to facilitate the movement of crops. Something over $25,000,000, I believe, has actually been distributed. Where is that money to-day? Not in the country banks, Mr. Speaker, but more than half of it has already found its way to New York, and, if current report can be believed, has found its way across the border into Canada, aiding and assisting and developing various enterprises over there. This incident illustrates as forcibly as anything that could be said the utter lack of wisdom which has characterized thus far the manner in which this important undertaking of providing a better currency and banking system for the United States has been managed. The authors of this bill seem to have ignored entirely the fundamental principle that capital, like everything else in the world, seeks its legitimate level. You might just as well try to prevent water from flowing downhill as to prevent the accumulation and concentration of banking funds in the financial center of the country.

Section 17 of this bill is calculated to raise serious apprehensions in the breast of every man who rejoiced when in the year 1900 the Congress definitely placed the currency of the United States upon a gold basis. This section makes the Federal reserve notes to be issued under the provisions of this bill "obligations of the United States and * * * receivable for all taxes, customs, and other public dues," and provides furthermore that, "they shall be redeemed in gold or lawful money." Lawful money? Why, that is the silver dollar with 60 cents worth of silver in it; such are the silver certificates and greenbacks in circulation. If the Government has the option to redeem these Federal reserve notes in gold or silver or Treasury notes—all lawful money—then our gold standard has become an iridescent dream, and bimetallism and greenbackism have become a fixed fact, notwithstanding the declaration of the closing part of this bill, that nothing in this act "shall be construed to repeal the parity and provisions" of the act of March 14, 1900. That declaration will not, in my judgment, prevent the Treasury from taking advantage of the privileges specially granted by section 17 to redeem in "lawful money," notwithstanding the view of the able and distinguished gentleman and Republican from Ohio [Mr. FESS] who raised the question and who voted for the bill because that declaration was inserted at his instance; and if the Treasury does so construe it and takes advantage of it, no believer in the gold standard will question the bad results that will follow. In any event, I think it would have been infinitely safer to have omitted the fateful words "or lawful money" from that section.

The practical effect of this section, moreover, will be to drain the country of gold. At present customs dues are payable in gold. It is expected that under the new tariff law importations will be greatly increased. Duties amounting to hundreds of millions of dollars will be paid annually. The importations themselves must be paid for in gold. Now, if the Federal reserve notes are receivable for customs dues and the Treasury gold stock can be depleted, as naturally it will be, by the presentation of these notes for redemption, where shall we finally find ourselves? Shall we again sell bonds, as we did in the Cleveland administration, to get gold, and shall we again set in motion the endless chain?

I do not think I could more appropriately conclude this discussion than by the following quotation from a letter I have received from Mr. Fon Rogers, president of Pikeville National Bank. Mr. Rogers is one of the leading bankers of eastern Kentucky, and I think his views are fairly representative of the views of most of the bankers in that section. At any rate, he unquestionably points out some very serious defects in this bill. He says:

"The currency question should be settled right. The passage of the present act will leave the country in worse shape than we now are. There will be dissatisfaction with it that will not down until the law is made square with right and justice. The wisdom of the world as crystalized by the old countries points to a central bank of issue which does not rest upon the credit of the Government, but the legitimate commerce of the country instead. This is the only way to settle that question and there will be agitation until the system is adopted. The plan of the proposed bill is cumbersome and will not work much better, if any, than the law proposed and enacted by the Republicans as a temporary expedient.

"They provide that national banks shall put up the capital, every penny of it, but shall not have the direction of the business; this shall be done by the agents of the President who in all instances—judging by our every-day observations—are politicians. This is rotten to the core. It is the worst sort of taxation without representation, and I dare say could not stand the judicial test. They provide that national banks shall, without the consent of the banks, subscribe for 20 per cent of their capital in the new bank. They propose to pay the banks only 5 per cent on their investment. They put up the money and should have at least a legal rate of interest on their investment.

"They also provide that member banks shall deposit in the reserve bank at least 5 per cent of their cash reserve required by law, and shall deposit without compensation of any character. A bank whose deposits amount to $50,000 daily (with the reserve bank) contributes $83.33 per month to the Government bank—figuring its balance worth as much as we now get with reserve agents. This is wrong. It is taking the bank's earnings away without consideration and against its will. If a bank is to be established along the ideas of the present bill, it should deal honestly and squarely with its constituents and not fraudulently by subterfuge. The 25,000 banks of the country demand a square deal, and there will be the most unsettling agitation until an honest policy toward these banks is established. They are in close touch with the people. They are the arteries of commerce. Their rights and privileges should not be restricted by adverse legislation, for such will bring stagnation. The great heart of commerce should be allowed to beat in the normal way. The present measure before your body is abnormal and will hinder instead of advance our financial interests.

"I can better express my feeling fully in the statement that we would gladly welcome a nation-wide movement of national banks to reorganize into State banks rather than submit to such an imposition. The more I consider the proposition the less good I see in it. It is founded wholly on theory by theorists and not bankers. I can not conceive of an idea more preposterous than that shown by the Democrats in absolutely ignoring the banks and banking interests. We grow proficient through years of toil and thought and experience. Man develops in the line of his activity. Why the theorists seek to take the direction of this bank from bankers is beyond me. But that idea is in keeping with the general plan of the bill."

I shall pursue the subject no further. I have attempted to the best of my ability to point out some of the pitfalls which, in my opinion, the passage of this bill opens for our people.

Mr. Speaker, it is perfectly apparent to me, and I have never heard it denied, that the administration and its advisers expected more or less commercial depression to follow the enactment of the Underwood tariff bill, and hoped to avert what might otherwise have been a serious panic by adopting this radical and untried scheme of banking. In the Executive mind these two bills appear to be as inseparably linked as were the Siamese twins. The two are put forward as a joint panacea for our ills. It is therefore entirely proper and logical to discuss both of them together. I took some part in the discussion of the Underwood bill when it was pending in the House, and I want to repeat here most of what I said then. On April 25, 1913, while the House was in Committee of the Whole House on the state of the Union and engaged in general debate on that bill, I said:

Mr. Chairman, I am very proud indeed to have the privilege of addressing so large and enthusiastic an audience. [Applause.] I hope my genial friend from Alabama [Mr. UNDERWOOD]—and I am glad that he and the distinguished gentleman from Missouri [Mr. CLARK] both honor me with their presence and attention—will pardon me if I become personal to the extent of saying that, although I greatly admire the superb qualities of leadership possessed by the gentleman from Alabama and hold him in the highest personal esteem, I was, nevertheless, in favor of the nomination of my old friend CHAMP CLARK for the Presidency. [Applause.]

Millions of honest voters had been persuaded into the firm conviction that protection was unconstitutional and a robbery; that it was a handicap to capital, a burden to the masses, and beneficial only to plutocrats and other selfish enemies of the common people. I felt that the gentleman from Missouri [Mr. CLARK], having been the star performer in that well-staged drama, ought to have been the chief beneficiary of Democracy's ill-gotten gain. [Laughter and applause.] But the Democratic Party is sometimes ungrateful, as Republics are proverbially said to be, and my friend was "turned down." The manner of the "turning down" and the reason for it have nothing to do with the tariff question, and therefore it is not proper that I should discuss the subject here.

Mr. AUSTIN. But he will come back again, I will say to the gentleman.

Mr. LANGLEY. I hope he will. I do not know whether I shall favor his nomination four years from now or not; but one thing is certain, and that is that if the popularity of the gentleman from Alabama [Mr. UNDERWOOD] continues to grow in this country, as a result of his authorship of this bill, as it is now growing in the countries across the sea, where they are looking with longing eyes to our rich markets, which the bill will open up to them, then his political future is assured and the attainment of the goal of his ambition certain. [Applause.] Then nothing can keep him out of the White House. Even fusion between Wilson and Bryan and LA FOLLETTE and CLARK and Roosevelt, with the Socialist vote thrown in, could not stop him. [Laughter and applause.]

But will the American people like him as well "after taking" as they do "before taking"? [Laughter.] That is the momentous question. He is not exceedingly popular just now down in the district which I have the honor to represent. My constituents like him well enough, but most of them fear the effect of his bill. However, I will tell him how he can make himself a hero in the tenth district of Kentucky. We raise a good deal of cattle and hogs there, and we also consume a good deal of beef and pork and bacon. We produce a great deal of coal and lumber, but we also use a great deal of those commodities, and the same is true with reference to many other articles I could mention. If he can so shape this bill that he can maintain the price of cattle and hogs and at the same time reduce the price of beef, pork, and bacon to the consumers of those articles; if he can keep up the present price of coal and lumber to the producer and at the same time cheapen them to the consumer; in a word, if he can devise some sort of automatic process, working both ways, whereby the wages of

labor can be maintained as well as the prices of what labor produces and at the same time these products can be cheapened to the consumer, then, indeed, I am almost willing to concede that he could come very near carrying that rock-ribbed Republican district as the nominee for the Presidency in 1916.

I earnestly hope that he can do these things, because I want to see all the people of my district get a square deal and their share of the beneficence of this bill. I confess that I entertain serious doubts as to whether all this is possible, although I really think that you Democrats are in earnest about it and really believe that you can accomplish this devoutly wished-for result. I give you credit for the utmost good intentions, but I beg to remind you that there is a certain road which is said to be paved with that kind of material.

I will admit that I used to be quite considerably prejudiced against Democrats, and sometimes I even doubted the patriotism of some of them. When I was a boy and heard that good old camp-meeting song—

"Show pity, Lord! O Lord, forgive!
Let a repenting rebel live—"

I thought it was a generous plea of a righteous Republican to the good Lord to be merciful to a poor penitent Democrat. But in recent years I have developed very largely the spirit of tolerance. I think the gentleman from Alabama and his followers earnestly believe that this bill will work out great good for the country. On the other hand, I am just as firm in my belief that it will curtail home production, embarrass capital, lower the wages of labor by reducing the demand for it, driving many out of employment, lower the prices of farm products and of labor's products generally, and halt the industrial progress of the Nation. Should it turn out that I am mistaken, my disappointment will be compensated by the gratifying knowledge that more good has come to the country.

I want to say to my distinguished Democratic friend from Kentucky in front of me here [Mr. STANLEY] that I will not agree to join his party in that event, because it is wrong in too many other things; but if you Democrats make times better by this bill I will take off my hat to you and admit that for once you have guessed right.

I shall not attempt, Mr. Chairman, to point out all the defects, great and small, in this bill. Life is too short for that. I shall content myself with pointing out some of its most striking shortcomings. Everyone within the reach of my voice and millions of people throughout the country will remember how for years the Democrats, in season and out of season, have berated the Republican Party for not giving the farmer a square deal, and how they swore by high heaven that things should be different if their party ever got into power. Every Democratic platform since the close of the Cleveland administration has been ringing and reverberating with promises that the farmer and his interests should be properly cared for if the Democratic Party obtained control of the Government. This was one of the leading issues upon which that party appealed to the voters of the country for confidence and support.

Well, the party is in power now, and the very first thing it has done, in spite of those promises, has been to give the American farmer the worst slap in the face that has ever been administered to him since the foundation of this Government. It taxes the raw material and lets in free the finished product. It taxes wheat, but lets in flour free. It taxes cattle and hogs, but lets in free beef and pork and bacon, thus transferring to foreigners the employment involved in converting the raw material. If ever any class of producers in our country was discriminated against by legislation, it has been done in the case of the farmers in this bill. It was bad enough in the so-called farmers' free-list bill, which proposed reciprocal trade in agricultural products between the American farmer and the Canadian farmer, but this bill is infinitely worse, because it invites the Canadian farmer to dump all of his surplus products into the United States and gives the American farmer nothing in return. I know it is contended that Canada to-day has no agricultural products to spare, but it is well to bear in mind the fact that up in Alberta and other Provinces enormous wheat fields are being cultivated in ever-increasing numbers and that in the natural course of events that wheat will seek the American market. I opposed reciprocity with Canada, although it was favored by a Republican President, because I feared the conditions which I have just described, and with all the more vigor do I oppose the present bill, which aggravates these adverse conditions beyond compare.

Our Democratic friends declare that while it is true that the farmer's profits on his crops may be scaled down by the free entry of the products of competing agriculturists, he will be benefited by the lower prices of the things he consumes. They seem to forget, however, that it makes very little difference how cheaply an article may be bought if the would-be purchaser has not the money with which to buy it. It will make very little difference to the American farmer whether he can buy his clothing and the clothing for his family for 25 per cent less than he has been paying for it if his own income is cut down 50 per cent, or even more, as the result of this tariff legislation. It will make very little difference to him that agricultural implements can be imported free of duty if production on his acres has to be curtailed because no longer profitable.

Coal is put upon the free list in this bill. I am opposed to that. I do not believe that the price of coal will be cheapened thereby in such a degree as to make a material difference to those who use the domestic product. I do know that free coal is certain to result in the lowering of wages of the men employed in American mines. I am sure that it will affect most injuriously the coal-mining industry of Kentucky and West Virginia for the reasons already stated, and also because of the fact that a large part of the northern market now supplied from the mines in those States will hereafter be supplied by Canada and Nova Scotia by reason of the cheap water transportation from those Provinces as against the more expensive rail transportation from the States I have named. I assert, Mr. Chairman, that this is a most inequitable arrangement. We allow Canada to bring her coal into the United States; we make her a present of this great market and we ask nothing in return. In all conscience it would be bad enough to allow the free importation of coal under any circumstances, but it appears to me as extremely poor statesmanship to permit this to be done without obtaining at least some reciprocal advantage from Canada. It violates every fundamental principle of economic wisdom, and can not be excused even upon the score of expediency.

I know it is contended that putting coal on the free list will not reduce the wages of the labor employed in the coal industry in this country. I have had no practical experience in the business, and can not therefore speak from personal knowledge, but I would like to introduce a witness who has had vast experience in the business and ought to know what he is talking about. I refer to no less a personage than the Hon. Henry Gassaway Davis, of West Virginia, whom you Democrats nominated for Vice President a few years ago. Mr. Davis appeared before the Committee on Ways and Means in 1893 (Fifty-third Congress), of which Mr. Wilson, of West Virginia, was chairman, and of which the Hon. William Jennings Bryan, of Nebraska, was a member. It so happened that Mr. Davis was being interrogated by the Nebraskan with regard to the effect of putting coal on the free list. In answer to one of Mr. Bryan's questions Mr. Davis made this very significant statement:

"That is the district of your chairman—the second West Virginia. There are 3,000 or 4,000 people there who are depending almost entirely upon the digging of coal and getting it to market. Make coal free and you take from them their bread."

Your arguments now contradict this distinguished witness, although you tried to elect him to the great office of Vice President after he had taken this stand. This may be Democratic consistency, but it is certainly not a jewel.

Mr. Chairman, the lumber industry is also an important one in my district, and I am opposed to free lumber for the same reasons that I am opposed to free coal. I have heretofore stated pretty fully my views on free lumber, and as I expect to debate it, as well as free coal, under the five-minute rule, I shall not go into these matters further now, except to venture the prediction that this bill will injure both industries and to protest against its enactment.

We have heard much, Mr. Chairman, about the wonderful benefits to be derived in consequence of this legislation by the "ultimate consumer." One would think that the ultimate consumer was in a class by himself. The family name of the ultimate consumer is "everybody." The tailor is the ultimate consumer of the shoemaker's product; the miller is the ultimate consumer of the man who sells him the machinery for his mill. What one man produces another consumes. Production and consumption are interlocking facts. You can not separate the one from the other. You can no more segregate the effect of the one upon the other than you can set apart cause and effect in any other operation, whether natural or artificial. We are all producers and we are all consumers. If one of us is inordinately benefited, some one else is necessarily inordinately injured. It is an endless chain. In the view of economic legislation the ultimate consumer is a myth.

In order to furnish the Treasury a compensating revenue for the loss resulting from the lowering of the tariff duties the Underwood bill provides an income tax. I have always favored such a tax as a proper means for raising revenue for the support of the Government. I voted to submit the constitutional amendment to the States, and I am glad that it has been ratified so as to enable this Congress to impose the tax. It is no more than right that the wealth of the country should bear its proper share of the expense of Government. The burden of such expense ought to be placed upon those best able to bear it, and for the protection of whose interests most of that expense is incurred. The "unearned increment" ought to be made a factor in providing for the needs of the Nation. The principle of this kind of taxation has long been recognized as absolutely correct by other nations, and has been carried into practice much more drastically than this bill proposes. I have no fault to find with the scale adopted for the imposition of this tax. I do not care how large the amount of revenue which may be derived from it. The industrial and social progress of the Nation will call for ever-increasing expenditure on the part of the Government. As the country grows its needs will grow. We are accustomed in the United States to doing things upon a liberal scale, and we shall never change in that respect. When the first billion-dollar Congress passed into history a great cry was set up over the alleged Republican extravagance of that day. Since then we have come to the billion-dollar session, and our Democratic friends have appropriated considerably more than a billion dollars in one session without turning a hair. I am not finding fault with them for that; I predict that while they are in power they will probably exceed the limit of appropriations of the last session.

Many things remain to be done in the legitimate functions and through the legitimate expenditures of the Government. Millions of dollars can be profitably expended every year in the construction of good roads. I heartily approve of the proposed creation of a committee of this House to whose care is specially to be confided the subject of providing comprehensively for a system of public highways with Federal aid in their construction and maintenance. It is one of the great needs of the American farmer, upon whom rests an unnecessary burden of hundreds of millions of dollars every year in the matter of carrying his produce to market over the worst roads of any civilized country. The American farmers, Mr. Chairman, are very much more concerned and directly interested in the improvement of roads than they are in the improvement of rivers and harbors, however necessary the latter may be. We have heard quite a good deal of late about several proposed enterprises to be undertaken by the Government looking to the construction of inland waterways that are to link the Great Lakes to the Gulf and make it possible for great steamers to pass from the Lakes to the ocean. I have no objection to the prosecution of such enterprises, but I maintain that of greater importance than these is the building of good roads, which are the primary avenues of transportation for the farmers.

It will be expensive, it is true, but it will make up the unequal distribution that has occurred heretofore in Federal appropriations and do justice to a class of our citizens—the farmers—who are most in need of this assistance; and the burden on the taxpayers will be many times compensated by the advantages that will accrue to them and to the whole country. If the country is to be so greatly benefited, as is generally supposed, by the new markets that the building of the Panama Canal is to open up to our surplus products, this public highway improvement is the only substantial way in which the farmer can get an adequate return for the share of the expense of the canal which he has borne. Mr. Chairman, I have been advocating Federal aid in the construction of public highways for many years. I have made it one of the chief issues of my campaigns for Congress. So persistent have I been in its advocacy that I was dubbed "Turnpike John" by my Democratic friends. I have always been rather proud of the name, because I regard it as a token of honor rather than of ridicule, as it was originally intended, and I am glad to see the Democrats and the country generally coming around to my views on the question.

No matter how large the revenue may be which is to be derived from this income tax, there are many other perfectly legitimate ways in which it can and will have to be expended. I need but point to one of these to make good my assertion—the Navy. It may be, Mr. Chairman, that the millenium is right at our door and that the era of everlasting peace between the nations of the earth is at hand. I per-

mit myself, however, to entertain some gentle doubts as to this perfect consummation. At any rate, as the most reliable insurance of peace for our country and against any hostile designs on the part of any foreign nation there is no better or more obvious investment than a navy which shall be in all respects the equal of any other, excepting always, of course, the navy of Great Britain. For these reasons and many others which I do not regard as necessary to state I favor the income tax, and, to use a popular phrase, "you may go as far as you like" with it, provided always that you do not thereby destroy the protective system which enables American industrial life to hold its own against the cheaper methods of other nations and which sustains the better standard of living which differentiates the American wage earner from his fellow in any other country. Under this protective system our country has flourished for more than half a century. I believe, nay, I feel certain, that you can not subvert the principle of protection nor lessen its application without grave danger to the best interests of our people.

Mr. Chairman, this bill carries joy to the heart of every importer in exact proportion to the sorrow and apprehension which it stirs in the breasts of American manufacturers and wageworkers. The importer's business will flourish exuberantly under its operation, because foreign goods of every kind, now restrained by the protective tariff, will pour in at every port. We shall see imports growing in corresponding ratio to the curtailment of domestic production. While the American manufacturer and wage earner see their profits and earnings shrinking day after day the importer will reap the rich harvest which this bill insures him. Not only the importer is rubbing his hands in glee at the prospect thus opening up before him, but foreign manufacturers are already singing paeans of joy in view of the impending breaking down of the tariff barriers which thus far have kept the American market free from the floods of cheap-labor products.

British and German trade journals and the daily press of both those countries have been fairly shouting the good tidings to their readers. And let me say right here that even those of our own newspapers which have been persistent propagandists of free trade or of a tariff for revenue only have not hesitated to say, since the provisions of this bill have become known, that it can not fail to injure many domestic industries, while some, as sugar and wool, will be practically destroyed.

There is a strong sentiment—and it is becoming stronger every day—that we shall have to enact legislation which will check the influx of immigration, especially of that class whose inevitable effect is to lower the standard of wages and the standard of living of the American workingman. This fact is recognized in nearly every State, and this feeling has found expression in many a petition to Congress asking for appropriate legislation, and numerous bills have been introduced both here and in the Senate with the view to checking the tide of undesirable immigrants. Mr. Chairman, there are more ways than one to kill a dog. Suppose that we were to enact a law to keep out the kind of immigrants that preeminently get into destructive competition with our wage earner; what will it profit those wage earners if we let down the tariff bars so far that they will have to compete against the products of that same kind of labor brought from abroad? So far as the effect upon economic conditions is concerned, the one process is almost as bad as the other; but if I had to make a choice between the two evils, I would prefer to take goods manufactured abroad by cheap labor rather than see the cheap laborer himself imported into this country and by his presence and activity lessen the opportunities of the American workingman for employment and for earning the wages he is now accustomed to receive, and at the same time lower our standard of civilization and patriotism. In its ultimate effect upon economic conditions there is very little difference between the policy of a low tariff and lax immigration laws, and I fail to see any consistency in the action of a Democratic House in passing a drastic anti-immigration law and then tear down the walls that give us protection from the ruinous competition of the cheap labor of the very same class of people.

Right here I can not forbear to express my sympathy with the action of the California Legislature and the attitude of California's governor in respect of the tenure of agricultural lands by alien Japanese in that State. I want to register my most positive dissent from the policy of the present administration on that subject. Almost from the day when Commodore Perry introduced Japan to the knowledge of the civilized world—certainly ever since Japan has taken on the garb of western civilization—she has been a land-grabber. Japan is taking a leaf from the colonization book of her good friends, England and Germany. Like them she has adopted the motto, "Wherever you see land, grab it." She has become an industrious colonizer. Her population is increasing at such a rate that an outlet must be found for the surplus. Whether it be the forcible annexation of Korea or the joint occupation with Russia of Manchuria or the insidious acquisition of land in the States on our Pacific coast or the flooding of Hawaii with Japanese, the aim and purpose of every movement is the same—to wit, to extend Japanese influence, Japanese customs, and Japanese methods. We would be blind indeed if we were to shut our eyes to these facts and to the further portentious one that Japan means to extend her Empire at the cost of any nation whom she may deem weaker than herself. If Japan to-day were ready for a combat with the United States, she would not care the value of a tinker's dam whether she had a treaty of peace and amity with us or not. I do not think we ought to let Japan or any other nation bluff us, and I do not think the American people will stand for it, either. All this, of course, is incidental to the general subject of my remarks.

I do not flatter myself with the belief that anything said in criticism of this bill by anyone on this side of the House, or on either side, for that matter, will have the slightest effect upon its status. I am perfectly well aware that I am now performing a useless function, and I should not undertake to perform it but for the fact that this bill deals a staggering blow to the industries of our country. That blow will be felt in my district and in my State as in all others.

Men of the South, no section of the country will be a greater sufferer under this bill in the long run than the Southland. We are in the transition stage from a purely agricultural to a large manufacturing community. There is hardly a State south of the Potomac that is not benefited by protection. When the people of these States realize that their onward march in industrial enterprise is checked as a result of the enactment of this bill, as I believe it will be, I shall be surprised if many of those States do not turn to the safe old captain who for so many years has guided the good ship Prosperity safely through storms and breakers. When the Republican Party returns to power, as surely it will, mark my words, it will be because the electoral votes of some of the Southern States are cast for the Republican nominee. [Prolonged applause on the Republican side.]

I also took some part in the discussion of the bill when it was being considered under the five-minute rule. The following are extracts from the RECORD:

Mr. LANGLEY. Mr. Chairman, it is not my purpose to offer an amendment to this lumber schedule, because I realize that it is useless to do so. Nor is it my purpose to take up but two or three minutes of the time of the committee in discussing it, because I realize that is also useless for this side to discuss it further.

We have not the acute situation with reference to Oriental competition in my State that the gentlemen from the Northwest who have spoken have, but we sympathize with them. We are interested in the lumber industry in Kentucky. We have thousands of men employed in that industry and hundreds of thousands of dollars invested in it. I wish the gentleman from Alabama [Mr. UNDERWOOD] and those who are helping him in this assault upon the lumber industry could take a look into the humble homes of the men who are earning their daily bread for themselves and their families. They would realize that this question about cheaper lumber for the home builders is a two-sided one. In every race I have made for membership in this body in that district I have contended that if Democracy obtained the power to do so it would injure the lumber industry and the coal industry. I have contended also that the party is utterly opposed to the principle of protection in any shape. Many Democrats in that district who are interested in the development of the great resources that we have there have denied that proposition. I am glad that the gentleman from Alabama [Mr. UNDERWOOD] and the gentleman from Pennsylvania [Mr. PALMER] and other leaders of the Democracy have made it perfectly clear now that I was correct when I said that they are opposed entirely to the policy of protection. It will relieve me of the necessity of rearguing that question when I run again.

Mr. HAMILTON of Michigan. Does the gentleman say that he will not make an occasional casual reference to it in the course of his campaign?

Mr. LANGLEY. Yes; I guess I will; and I will also have my distinguished friend from Michigan [Mr. HAMILTON] come down there and help me do it. He does it so handsomely. [Laughter]

Mr. Chairman and gentlemen, mind what I tell you, when this bill goes into operation the lumber industry and the coal industry will suffer. Leaders of Democracy in Kentucky contend that taking the duty off of coal will not reduce the price to the consumer, and putting lumber on the free list will not reduce the price to the consumer. If that is so, then why take the duty off of these articles and give up that much revenue, which you say you were after in framing this bill? In the name of the people——

Mr. HARDWICK. Will the gentleman yield to me?

Mr. LANGLEY. No. The gentleman never yields to me, and I take great pleasure in declining to yield to him. [Laughter.]

In the name of the great industrial district which I represent, which is just now starting on an era of prosperity that will be almost unparalleled if they are let alone, I desire to protest against this lumber schedule as well as many other schedules in the Underwood bill that will deal a staggering blow to my district and State. [Applause on the Republican side.]

Mr. LANGLEY. Mr. Chairman, earlier in the day I said I was not going to take up any of the time of the committee, because I knew it was useless; but as we proceed step by step in this bill you are rubbing it in so hard on many of the industries of the district which I represent that I am bound to say a few words more.

Cattle raising is one of the great industries of our State. To my mind it is an economic absurdity to put a duty on cattle and then put on the free list that which cattle are converted into. The effect of it, as I view it, is to bunco the farmer and whipsaw the packing industry of the United States and the laboring men employed in that industry. Watch the price of cattle go down after this bill goes into operation.

Mr. Chairman, I shall say nothing further at present, but I want to have read in my time a resolution adopted at a recent nonpartisan mass meeting in the city of Buffalo, attended by about 2,500 citizens, in which they expressed their views upon this matter. I send it to the Clerk's desk.

The Clerk read as follows:

APRIL 26, 1913.

Hon. JOHN W. LANGLEY,
House of Representatives, City.

DEAR SIR: The city of Buffalo is up in arms over the provision——

Mr. LANGLEY. I only asked to have the resolution read.

SEVERAL MEMBERS. Read it all.

Mr. LANGLEY. I have no objection to the Clerk reading it all.

The CHAIRMAN. What was the request of the gentleman from Kentucky?

Mr. LANGLEY. My request was that the Clerk read the resolution adopted at that meeting.

The CHAIRMAN. Without objection, the Clerk will read.

The Clerk read as follows:

"Whereas we, the citizens of Buffalo, in a mass meeting assembled this 23d day of April, 1913, upon consideration of the proposed changes in tariff schedules now pending in Congress as affecting wheat, oats, wheat flour, cereals, live stock, and dressed meats, by which all raw materials in each case would be left subject to a substantial tax, while the finished products of such materials would be admitted to this country free of duty; and

"Whereas we are advised and believe that the certain effect of such legislation would be to destroy live stock, milling, and packing industries in this city and elsewhere now engaging vast amounts of capital and employing thousands of workmen; and

"Whereas we believe that the Congress of the United States would not wittingly enact such disastrous legislation if the situation were thoroughly understood: Therefore be it

"*Resolved*, That if flour, cereals, and meats are admitted free, then the raw materials—wheat, oats, and live stock—should also be admitted free; and be it further

"*Resolved*, That we do earnestly protest against legislation that imposes a duty on wheat, oats, and live stock, while permitting free entry to this country of wheat flour, cereals, and dressed meat, and we beseech Congress to give further serious consideration to the far-reaching effects of such legislation, and not to pass a tariff bill containing such unjustifiable and disastrous measures."

Mr. LANGLEY. I commend these resolutions to the prayerful consideration of the distinguished gentleman from Buffalo.

* * * * * * *

Mr. LANGLEY. Mr. Chairman——

The CHAIRMAN. Under the practice, the Chair will recognize the gentleman from Alabama.

Mr. UNDERWOOD. I want to see if we can agree on time on this wheat proposition.

Mr. MANN. Let us see how many gentlemen want three minutes each.

Mr. LANGLEY. Mr. Chairman, I took the floor for the purpose of offering an amendment.

Mr. UNDERWOOD. I think there were five gentlemen rose on that side.

Mr. HAMMOND. I should like four or five minutes.

Mr. UNDERWOOD. I ask unanimous consent that debate on this paragraph close in half an hour.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent that debate on this paragraph and all amendments thereto close in 30 minutes.

Mr. MANN. Will not the gentleman include the request that the recognitions be for 3 minutes instead of 5?

Mr. UNDERWOOD. I have two gentlemen on this side who would like to speak. The gentleman from Minnesota [Mr. HAMMOND] said he would like three or four minutes.

Mr. HAMMOND. I would like four or five.

Mr. UNDERWOOD. I ask that the recognitions be for four minutes.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent that debate on this paragraph and all amendments thereto close in 30 minutes, and that the recognitions shall be for 4 minutes instead of 5.

Mr. MURDOCK. Reserving the right to object——

Mr. LANGLEY. Reserving the right to object——

Mr. LA FOLLETTE. Reserving the right to object——

Mr. MURDOCK. I should like to point out that there are now over 10 Members on their feet.

Mr. UNDERWOOD. We must get along with this bill. They can not all speak at one time.

Mr. MURDOCK. There will be more controversy over this than there will if you let us have the time.

Mr. UNDERWOOD. I will tell the gentleman that if he will not take it he will not get it. I want to move along with this bill, and every man can not speak on every item.

Mr. LANGLEY. The Chair having recognized me for the purpose of offering an amendment, I desire to inquire if I am entitled to the floor for four minutes after this agreement is reached?

The CHAIRMAN. The Chair will state that if it is left in the power of the Chair he will recognize the gentleman.

Mr. MANN. The gentleman has the floor.

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. LANGLEY. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Kentucky offers an amendment, which the Clerk will report.

The Clerk read as follows:

"In line 15, page 51, strike out '10' and insert '25.'"

Mr. LANGLEY. Mr. Chairman, it seems to me that this provision and other similar ones in this bill violate the traditional policy of the Democracy as I have always understood it. At to-day's session I read some resolutions that were adopted by the citizens of Buffalo, in which they asserted that the provision to which these resolutions referred, including this one, would seriously cripple, if not destroy, a home industry in that city, and either drive out of employment or greatly reduce the wages of thousands of laboring people employed therein.

I desire now to read a telegram from the secretary of the Chamber of Commerce of Cincinnati along the same line. It is as follows:

"CINCINNATI, OHIO, *April 30, 1913.*

"Hon. J. W. LANGLEY,
"*House of Representatives, Washington, D. C.:*

"By unanimous vote the board of directors of the Cincinnati Chamber of Commerce, at a meeting held April 29, adopted the following resolution, which is respectfully submitted for your attention:

"Whereas the Underwood tariff bill imposes a duty of 10 cents per bushel upon foreign wheat and admits duty free the foreign-milled products of such foreign wheat;

"Whereas this discrimination in favor of the foreign manufacturer is in contradiction alike of all accepted economic doctrine of the established tariff policy of all political parties and of all nations and in effect pays a bounty to the foreign miller on all products of wheat sold by him in the markets of the United States; and

"Whereas if American flour millers have to pay a tax upon foreign-grown wheat, then a simple justice requires that the foreign-milled products of such wheat shall pay an equivalent tax, and if foreign-milled wheat products are admitted duty free, foreign wheat should be admitted duty free: Therefore be it

"*Resolved*, That, believing the proposed legislation would inevitably destroy one of the most important manufacturing industries in the United States and that it would further result in most serious injury to the American farmer, the Cincinnati Chamber of Commerce, through its board of directors, records itself as unalterably opposed and earnestly urges upon the President and Congress of the United States the necessity of placing both wheat and its products upon terms of absolute equality.

"*Resolved*, That copies of this preamble and resolution be forwarded immediately to the President of the United States, Senators and Congressmen from Ohio, Indiana, and Kentucky, the members of the Senate Finance Committee and the Ways and Means Committee of the House of Representatives.

"CINCINNATI CHAMBER OF COMMERCE,
"W. C. CULKINS, *Executive Secretary.*"

Mr. Chairman, our daily mail is filled with protests like this, from commercial bodies, corporations, firms, and individuals, appealing to us to protect them against the results of what they assisted in bringing about when they put the Republican Party out of power and placed our friends on the other side in power. If I desired to be ugly and revengeful about it, I might say that they deserved a few heroic doses of free trade for having brought about that result. I sympathize heartily with the people of Cincinnati in the sentiments which they express through this telegram, although I can not refrain from reminding them that this is what they get for turning out of Congress men like the able, patriotic, and distinguished Nicholas Longworth [applause] and men of that kind, who were their friends and champions, and putting in their places men who are here making assaults upon the industries of the great State of Ohio. I hope the good Lord will give them more light and that they will have the foresight next time to correct the grievous error they made last fall. [Applause on the Republican side.]

Mr. THOMAS. Mr. Chairman, as I understand it, the gentleman from the tenth district of Kentucky [Mr. LANGLEY] has introduced an amendment to raise the tariff on wheat from 10 cents to 25 cents. As a matter of fact, the gentleman knows nothing about wheat, because they do not raise any in his district, and but little corn, the most of which is made into moonshine liquor. [Laughter.]

Mr. LANGLEY. Does not the gentleman like the finished product? [Laughter.]

Mr. THOMAS. Mr. Chairman, I admire the products, but not more than the gentleman admires his own products, and I do not use them one-half as much. [Laughter.]

Mr. LANGLEY. I will leave that to our associates.

Mr. THOMAS. If there is anybody upon the face of this earth that ought to be for free corn and free wheat it is the gentleman from the tenth district of Kentucky, for the greatest use that they make of corn and wheat in that district is to make liquor out of it, and they need corn and wheat shipped into that district for bread, and they ought to get it just as cheaply as possible.

Mr. LANGLEY. Mr. Chairman, will the gentleman yield?

Mr. THOMAS. Certainly.

Mr. LANGLEY. Was the gentleman ever in the tenth district in his life?

Mr. THOMAS. Many a time.

Mr. LANGLEY. Then the gentleman did not observe very much.

Mr. THOMAS. And the next time the gentleman runs for Congress I will be up there. [Laughter.]

Mr. LANGLEY. That is why I got a large majority, and the next time he comes it will be unanimous. [Laughter.]

Mr. THOMAS. No; I have never been up there in the campaign when the gentleman was running for Congress, and when I do I will run him out of the district. [Laughter.]

Mr. LANGLEY. Well, the gentleman will certainly not do it while the moonshine lasts.

Mr. SWITZER. Mr. Chairman, will the gentleman yield for a question?

Mr. THOMAS. One at a time.

Mr. SWITZER. I would like to inquire whether the business of making moonshine whisky is a growing business in Kentucky?

Mr. THOMAS. In the tenth district it is. [Laughter.]

Mr. LANGLEY. We make it to some extent in my district, but it is consumed largely in the gentleman's district, I understand.

* * * * * * *

Mr. LANGLEY. Mr. Chairman, I hope that the few remarks I am going to make will be in order. I tried a moment ago to get recognition to say a word in defense of the American hen, but the gentleman from Alabama cut me off with his motion to close debate. Eggs are a very important product, and valuable product, in my district. The hens down there frequently lay them in the hay; and I think, therefore, that a discussion of the question will be in order upon this hay paragraph. [Laughter.] The hen is a very generous, good-natured fowl, and we ought to be kind to her and protect her. I am reminded of a limerick that went the rounds in the days of Henry Ward Beecher which illustrates the noble generosity of the hen, which ran something like this:

"Said a Congregational preacher
To a hen, You are a beautiful creature.
And the hen, just for that,
Laid an egg in his hat,
And thus did the hen reward Beecher."

[Laughter.]

If we want to encourage the egg industry in this country we ought not to be too hard on the hen and her product. [Applause.]

Mr. UNDERWOOD. Mr. Chairman, I move that all debate on the paragraph and all amendments thereto now close.

* * * * * * *

The Clerk read as follows:

"234. Poultry, live, 1 cent per pound; dead, 2 cents per pound."

Mr. LANGLEY. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

"On page 57, line 16, after the word 'live,' strike out 'one' and insert 'three,' and after the word 'dead' strike out 'two' and insert 'five.'"

Mr. LANGLEY. Mr. Chairman, my genial friend and colleague from Kentucky [Mr. THOMAS] seems to have the impression that moonshine is the chief product of the district I have the honor to represent. I do not know whether the wish is father to the thought or not, but I beg to assure my associates here that it is not the chief product by any means of that district or of our State.

Mr. BUTLER. What is moonshine?

Mr. LANGLEY. I refer the gentleman to my colleague. He probably knows. There are many important industries in the tenth Kentucky district, and among them is the chicken industry. We raise, consume, and sell a good many chickens in that district, not only hens, but spring chickens and roosters, and all classes of fowls, and, as I said yesterday, we have a flourishing egg industry also.

I feel that this provision in the Underwood bill reducing the tariff so radically on chickens dead and living would be an injustice to my district because, if you Democrats are going to reduce the price of chickens and eggs, you will seriously cripple that important industry. For that reason I have offered this amendment to restore the rates provided by the existing law.

* * * * * * *

Mr. LANGLEY. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

"Page 108, paragraph 460, amend by striking out the paragraph."

Mr. HARRISON of New York. Mr. Chairman, I ask unanimous consent that all debate on the paragraph and amendments thereto be closed in 10 minutes.

Mr. MANN. Mr. Chairman, several gentlemen wish to be heard on this side, and coal is a very important item in the bill.

Mr. HARRISON of New York. Well, I will say 15 minutes.

Mr. LANGLEY. I suggest to the gentleman that he make it 25 minutes at least.

Mr. HARRISON of New York. Mr. Chairman, I will modify my request and make it 25 minutes.

The CHAIRMAN. The gentleman from New York asks that all debate on this paragraph and all amendments thereto shall close in 25 minutes. Is there objection?

There was no objection.

Mr. LANGLEY. Mr. Chairman, I shall not detain the committee but two or three minutes. I shall not attempt to go into this question in

detail now, because I covered the matter rather fully in my remarks in general debate. The coal industry is the greatest one in my district. Something has been said in this debate about looking to the interests of the country in general rather than to our own local interests. My opinion is that you can not injure any great industry in the country without on the whole injuring to some extent the whole country. So far as I am concerned, I shall endeavor to represent, so long as I am a Member of this body, what I believe to be the best interests of my own State and district. I have tried to do this ever since I have been here. If there is a Member of this body who is willing to sacrifice any industry in his district for the benefit of some other section of the country, I would like to see the color of his hair. [Laughter.] My experience here has been that if you do not look out for your own section no one else will do it for you. In my district there is one of the greatest coal fields in the world. It is my opinion that when you transfer coal from the dutiable list to the free list you necessarily injure that industry more or less.

I have heard gentlemen, and particularly the gentleman from Massachusetts [Mr. PETERS], boast that this bill will give the people of the country free coal. If there was anything to boast of in that connection it must have been that it will reduce the price of coal to the consumer. You can not reduce the price to the consumer without affecting the capital and the labor invested and employed in producing coal.

I have listened attentively to most of the speeches delivered during this debate, and I have listened intently and earnestly, because I was extremely anxious to find out, if I could, by what process you gentlemen on the other side expect to reduce the cost of anything to the consumer and at the same time not affect adversely the interests of the producer. I would ask my distinguished friend from Illinois if he can explain it, but I fear he would answer me like he did the gentleman from Iowa [Mr. GOOD], by asking me what I thought about it, or propound the ancient and perplexing interrogatory "How old is Ann?"

Therefore I shall refrain from asking him or any of his colleagues how they propose to reduce to the consumer the price of coal and at the same time not affect the producer of coal. Numerous efforts on this side to get that information have been futile, and I do not wish to waste time. I shall content myself with protesting against free coal.

Mr. HELM. Mr. Chairman, will the gentleman yield?

Mr. LANGLEY. Certainly; with pleasure.

Mr. HELM. The district that the gentleman represents is 500 miles from any coast line, is it not?

Mr. LANGLEY. It is quite a distance. I do not recall the exact number of miles.

Mr. HELM. From what foreign country would coal be imported which would affect the price of the Kentucky coal, which has to pay a freight rate on 500 miles of railroad?

Mr. LANGLEY. I will say to my colleague that the gentleman from Massachusetts the other day admitted that with free coal there would be large importations of coal from Nova Scotia, and that would increase the supply and reduce the demand for domestic coal, and——

Mr. HELM. But Massachusetts is right along the coast line.

Mr. LANGLEY. Mr. Chairman, I can not yield any further. The gentleman asks another question before he permits me to complete my answer to the question he has already propounded.

Mr. HELM. Kentucky has not any coast line at all.

Mr. LANGLEY. The gentleman is asking a useless question. I take it for granted that he knows where Kentucky is located and how it is bounded.

Mr. HELM. I want to inform the gentleman that it is 500 miles from any coast line.

Mr. LANGLEY. I know that is substantially correct. Now, Mr. Chairman, I decline to yield further, because I have not enough time left now to complete the statement I wanted to make. Coal coming from Nova Scotia will necessarily come in competition with the coal now shipped into New England and to the Atlantic coast market, particularly from West Virginia, and that will necessarily divert that coal to the markets to which we are sending our coal from the Big Sandy, the Licking, and the Kentucky River valleys. But, Mr. Chairman, the chief damage to the coal industry of the country will be not so much from foreign competition in the coal business itself as from the commercial depression throughout the country resulting from the general provisions of this bill, which embody an assault upon nearly all of the great industries of the country, and I predict——

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

* * * * * * *

The CHAIRMAN. Are there any further amendments on paragraph 648? If not, the next paragraph is 650. Are there any amendments to paragraph 650?

Mr. LANGLEY. Mr. Chairman, I understood yesterday that some one else had reserved the right to offer an amendment to this paragraph, I was so informed by the gentleman from Alabama, and therefore I did not prepare an amendment to it.

The CHAIRMAN. It is reserved, and amendments are in order.

Mr. LANGLEY. Then, Mr. Chairman, I desire to move to strike out the paragraph.

Mr. UNDERWOOD. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in 8 minutes.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent that all debate on this paragraph and all amendments thereto close in 8 minutes.

Mr. FORDNEY. I would like 2 or 3 minutes.

Mr. UNDERWOOD. I will make it 13 minutes, then; 10 minutes to be controlled by the gentleman from Illinois and 3 minutes by myself.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent that all debate on the paragraph and amendments thereto close in 13 minutes, 10 minutes to be controlled by the gentleman from Illinois [Mr. MANN] and 3 minutes by the gentleman from Alabama [Mr. UNDERWOOD]. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. MANN. I yield 3 minutes to the gentleman from Kentucky [Mr. LANGLEY].

Mr. LANGLEY. Mr. Chairman, before proceeding to discuss for a moment or two this paragraph, or rather my motion to strike out the paragraph, which would leave the existing law in operation, I wish to express my appreciation of the courtesy of the gentleman from Alabama, who I must say is very generous in the matter of yielding us additional time on this side of the House when we desire to discuss a matter. Of course, the time is so short we do not get a chance to say anything, but at the same time I appreciate his courtesy.

Mr. AUSTIN. I think the gentleman should also express his appreciation for the numerous amendments that he has permitted us to make to the bill.

Mr. LANGLEY. I might add, also, that he has permitted us to correct so many of the imperfections of this bill that I think he is entitled to the thanks of the Republican side of the House, and as a fellow Kentuckian, because the distinguished gentleman is a native Kentuckian, I feel very proud of the record which he has made here in charge of this bill. Of course, I know that the gentleman——

Mr. DYER. Is the gentleman going to approve of this legislation before he gets through with his speech?

Mr. LANGLEY. If my distinguished colleagues from Tennessee and Missouri will permit me to use the remaining minute that I have, I will state my position in regard to the paragraph. [Laughter.]

My judgment, Mr. Chairman, as I have said before, with regard to coal, and also with regard to lumber, is that placing these products upon the free list will injure those industries. I concede that in the matter of lumber the cost of transportation is so great that there will not be that direct competition with Kentucky lumber that there will be with lumber interests in sections of the country in closer proximity to competing lumber countries. But, Mr. Chairman, I still believe in the philosophy of Patrick Henry—that the way to judge the future is by the past. Lumber was placed on the free list once before and as a result the price of lumber in the mountains of Kentucky went down. I recall that the price of crossties went down until the industry was practically suspended. I think the same thing will result again. Perhaps it may not be so much by reason of direct competition with foreign products as from the general industrial depression which will prevail throughout the country following the enactment of the bill which strikes at so many of our important industries. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

* * * * * * *

Mr. UNDERWOOD. Mr. Chairman, I ask unanimous consent that debate on this amendment close in five minutes.

Mr. LANGLEY. I would like to be heard on the amendment. If you would make it 10 minutes I would be obliged to you.

Mr. UNDERWOOD. I will make it 10 minutes.

The CHAIRMAN. The gentleman from Alabama [Mr. UNDERWOOD] asks unanimous consent that all debate on this amendment close in 10 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. UNDERWOOD. I will say to the gentleman that there is no doubt in the minds of the committee as to the constitutionality of a graduated income tax. But if it should fail it might cause a loss of approximately $20,000,000 that would otherwise be raised, and there is sufficient revenue in the Treasury at this time to take care of it, and then it would only be necessary to increase the normal income tax about a quarter of 1 per cent to cover the difference. But I do not have any apprehension about the constitutionality of the graduated income tax.

Mr. PAYNE. The gentleman need not worry over that, I will suggest, because they retain the provision for the issuing of bonds in case they are needed. [Laughter on the Republican side.]

Mr. BRITTEN. Mr. Chairman, I urge the adoption of my amendment. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. LANGLEY. Mr. Chairman, I entered the Chamber just as the gentleman from Illinois [Mr. BRITTEN] was explaining his amendment. I am not quite certain that I caught the exact purport of it, but I understood him to say that it was designed to help relieve some of the burden of an income tax upon married men who are supporting their wives—excuse me, I mean their wife. [Laughter.]

If that, Mr. Chairman, is the purpose of the amendment, then I am opposed to it, because women are so much better than men, that a man who has the privilege and the honor of supporting a wife ought to be willing to bear any reasonable additional burden that the Underwood bill may impose upon him. [Laughter and applause.] And, so far as I am personally concerned, I am also heartily in favor of any burden that the bill may impose upon married men who are not supporting their wives. [Applause.]

Mr. AUSTIN. Mr. Chairman, may I ask if this is in return for the amendments which the gentleman from Alabama [Mr. UNDERWOOD] permitted the gentleman to write into this bill? [Laughter.]

Mr. LANGLEY. Mr. Chairman, I did not quite catch what the gentleman from Tennessee [Mr. AUSTIN] said, but he has been heard so abundantly on this bill and these amendments, while I have had but few hearings, that I hope he will not interrupt me further. [Laughter.]

I hope, also, Mr. Chairman, that I may be permitted to depart a little from the strict line of this discussion and touch on a topic which under the rules might not be entirely germane to this amendment, and I will agree to make this my valedictory, so far as this debate is concerned. [Laughter.] This afternoon the gentleman from Illinois [Mr. MANN] paid a very beautiful and a most deserved tribute to the distinguished chairman of the Ways and Means Committee, Mr. UNDERWOOD. I most heartily agree with all that he said concerning that distinguished gentleman. I do not agree with his bill, except the income-tax provision, but personally I take off my hat to the amiable and courteous gentleman whose skilled leadership has guided his party in this battle.

I want to say, further, that I have had now a number of years' service in this great body, and I also had the pleasure and the honor of the personal acquaintance of a great many of its Members before that period of service began, and during that time I have formed the acquaintance and the friendship of many men on both sides of the House, and that acquaintance and friendship have left upon me an impression that I shall never forget and memories that I shall cherish to the end of my days. I have learned to appreciate, aside from and above partisanship, the high character and ability and patriotism of the membership of this body.

The gentleman from Illinois [Mr. MANN] stated that 51 years ago a distinguished Democrat [Mr. UNDERWOOD] first saw the light of day. Thirty-seven years ago another distinguished Democrat first saw the light of day, and that gentleman is also a Member of this body. I feel that I am privileged as a southerner, as a Republican, and as a citizen of a neighboring State to say a word in praise of that gentleman. I am sure that Members on both sides of the Chamber will agree with me when I say that we have never had to preside over the Committee of the Whole House on the state of the Union under such circumstances as these and during such a sharply contested debate as this has been a man who has been more courteous, more impartial, nor one who has presided with more dignity and more intelligence and fairness than the distinguished gentleman [Mr. GARRETT of Tennessee] who is now presiding over this committee. [Prolonged applause.]

Mr. Speaker, whether the currency bill is to accomplish the purpose for which it was in part designed—that is, to minimize the commercial depression that was expected to follow the Underwood bill—remains to be seen; but the fact that something is needed for that purpose is already evident. While some gentlemen on the Democratic side are loudly proclaiming that there is already unbounded prosperity throughout the country as a result of Democratic legislation, and while still others on that side are significantly silent, their distinguished leader [Mr. UNDERWOOD] admits that there is industrial depression, and seeks to relieve his party from responsibility for it by alleging that it has existed for more than a year, and predicts that before the coming elections next fall there will be an awakening of the great business interests of the country which, to use his language, "will put the croakers who preach hard times and bad business to shame." How he can reconcile his admission as to the existing conditions of depression with what some of his party associates have said I am unable to see. They certainly do not gibe with what the gentleman from Illinois [Mr. FOWLER] says about the industries "blossoming like roses" in his State. Neither are his predictions and prophesies about the prosperity that is shortly to be upon us borne out by the indisputable facts which the gentleman from Washington [Mr. HUMPHREY] and the gentleman from Wyoming [Mr. MONDELL] and others on the Republican side have brought out. On the contrary, it is shown that the industrial depression continues to increase as factories, mills, and mines close down and capital continues to seek more hiding places, while enrollment in the army of the unemployed grows daily larger. This is merely a statement of facts and not a preachment of disaster, as the gentleman from Alabama [Mr. UNDERWOOD] would term it. Of course, all patriotic Americans hope that the crest of the evil tide is passing, but we will have to wait and see.

Tuesday, January 13, 1914.

Mr. UNDERWOOD. Mr. Chairman, I will ask the gentleman from New York to conclude his time.

Mr. PAYNE. Mr. Chairman, I yield five minutes to the gentleman from Kentucky [Mr. LANGLEY]. [Applause.]

Mr. LANGLEY. Mr. Chairman, I have always claimed to be a tolerably liberal-minded Republican. I do not wish to be unfair to the Democratic Party——

SEVERAL MEMBERS (on the Democratic side). No!

Mr. LANGLEY. Later on in this session I shall perhaps ask the indulgence of the House for the purpose of showing the effect, good or bad, which this new tariff law has had upon the people and the industries of my State and district. Some reference has been made here to-day to the Democratic promise to reduce the high cost of living. I am willing to give the Democrats a fair chance and a little further extension of time in which to redeem that promise to the people. That is one of the reasons why I do not wish to discuss the question fully now. I want to say in passing, however, that they have not done it yet, so far as prices to the consumers in my district are concerned. The gentleman from Illinois [Mr. FOWLER] says that the coal operations in his district are running full time and are prospering, and that the people of his State are prosperous and happy. Mr. Chairman, there are many coal operations in my district. Before this Underwood tariff bill went into effect they were working all the men they could get and were even sending out agents to other parts of the country to get additional men. Now many have closed out and others have curtailed their output, and hundreds of the men are leaving. Whether that is the result of this tariff law I do not know. I shall investigate and try to inform the House later. I am even liberal enough to give the Democratic Party credit for having taken a step in the direction of redeeming its promise to reduce the high cost of living so far at least as one item is concerned, although it was apparently necessary for them to sacrifice the jobs of a good many people in order to bring that about. I have here an article published a few days ago in a leading journal of the country, the Washington Post. You gentlemen on that side have said that we quote Republican newspapers only. This paper, I believe, is classed as independent, but it is owned and managed by a distinguished Democrat, the Hon. John. R. McLean, of Ohio. This article, which I shall ask to be read at the Clerk's desk in my time, indicates that the Democratic Party has redeemed its promise to reduce the high cost of living, at least to the extent of reducing the price of soup in the city of Chicago from 10 to 2 cents a bowl. [Laughter and applause on the Republican side.]

The CHAIRMAN. The Clerk will read the article desired.

The Clerk read as follows:

"RAID BY HUNGRY MEN—CHICAGO CAFÉS INVADED AND FOOD DEMANDED—BREAK IN UPON REVELERS—UNEMPLOYED ALSO PARADE STREETS, SMASH WINDOWS, AND PUNCTURE AUTOMOBILE TIRES—'WE WANT WORK, NOT CHARITY,' MOTTO ON THEIR BANNER—HOTEL FOR HOMELESS OPENED AND FILLED IN TWO HOURS.

"CHICAGO, *January 1.*

"Entering restaurants and demanding food, breaking windows, and puncturing automobile tires, a crowd of nearly 500 unemployed men early this morning marched through Chicago's business district. They furnished a strange contrast to New Year revelers who were leaving the cafés and restaurants.

"The men marched in State Street four abreast, carrying a banner which read, 'We demand work, not charity.'

"The army halted cars and cried to passengers that they wanted work. At Van Buren Street the police halted the marchers, but they soon re-formed their line farther down the street.

"'Hey, you bums, what's up?' shouted a pedestrian from the curb.

"'You are drunk and we are hungry,' replied one of the leaders.

"The band finally broke up into small groups.

"OPEN HOTEL FOR UNEMPLOYED.

"The Rufus F. Dawes Hotel, Chicago's first endowed home for unemployed men, was thrown open to-night, and two hours later its capacity of 305 guests was reached.

"In midafternoon a small knot of men gathered in front of the new building. They formed two lines of ragged humanity, which grew until it extended for a block in either direction. There were more than a hundred in line when the last bed was taken.

"The doors were opened by Charles G. Dawes, former Comptroller of the Currency, who built the hotel as a memorial to his son, who was interested in sociological work. The junior Dawes was drowned more than a year ago.

"FOOD AT SMALL PRICES.

"Before retiring each guest was required to bathe and was given a nightdress and slippers. Clothing of the lodgers was placed in steel lockers, which were superheated to destroy all life. A bed and a bath are furnished for a nickel, and there are rooms for a dime for more particular guests. A bowl of soup may be obtained for 2 cents, pie for 3 cents, coffee for 2 cents, and rolls for 1 cent.

"Mr. Dawes and his daughter sat before the fireplace in the lobby and listened for several hours to stories of fruitless job hunting. Over the fireplace was a large flag with the inscription, 'Don't give up the ship.' It was made by Miss Hattie Stewart, granddaughter of Margaret F. Stewart, who made the original historic flag, and donated by J. L. Pelton, of Erie, Pa. The hotel is three stories high and was erected at a cost of $100,000."

Mr. LANGLEY. Mr. Chairman, I see my time is up, but I want to say, in concluding, that I commend this statement of facts, which stands uncontroverted, to the prayerful consideration of the distinguished gentleman from Illinois who spoke so fervently and eloquently a few moments ago about the happiness and prosperity which he says exists in his State.

Immigration.

EXTENSION OF REMARKS

OF

HON. JAMES B. ASWELL,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 17, 1914.

Mr. ASWELL. Mr. Speaker, with reference to H. R. 6060, now pending before the House, I desire to present some records and data bearing upon this question.

This bill passed the last Congress by a decisive vote only to be vetoed by President Taft. I have here a telegram asking me to take the view of this 58-page bill that ex-President Taft took in his 12-line veto message. I have also my reply to the telegram. They are as follows:

[Telegram.]

NEW ORLEANS, LA., *January 15, 1914.*

Hon. J. B. ASWELL, M. C.,
Washington, D. C.:

Your letter of the 13th received. Please advise us of your position on Burnett-Dillingham immigration bill. Extremely important that people of Louisiana, who are interested in proper promotion of colonization of their farm lands, should know how their Representatives regard a measure which so vitally affects their interests. Please wire at our expense.

NEW ORLEANS ASSOCIATION OF COMMERCE,
By M. B. TREZEVANT, *General Manager.*

[Letter.]

WASHINGTON, D. C., *January 15, 1914.*

Mr. M. B. TREZEVANT,
New Orleans, La.

DEAR SIR: Replying to your telegram and three letters to-day, on various subjects, I have the honor to state that they will receive earnest and proper consideration along with letters, appeals, and petitions from the great laboring people of New Orleans. I am devoting myself earnestly to the various questions that will come before Congress, and shall vote on each as my best, honest judgment dictates in the interest of the great people of the eighth district whom I have the honor to represent.

Yours, truly,

J. B. ASWELL.

From all over my district, which is some 200 miles from New Orleans, I have received many letters from farmers, of which the following is typical:

Congressman J. B. ASWELL,
Washington, D. C.

MY DEAR CONGRESSMAN: Having been informed that certain big, selfish interests are opposing certain legislation of vital importance to the farmers and the people of this country as a whole, such as laws curbing gambling in cotton and the like, I beg to urge your aid and support of the following legislation:

A more liberal appropriation for agricultural purposes;
The extension of the parcel-post law by a further lowering of rates and increase in the weight limit;
The inclusion of the farmer in the currency bill and a genuine rural credit system;
The establishment of a real division of marketing; and
The restriction of foreign immigration.

The Farmers' Union of Louisiana is well organized and a growing institution, alive to every interest of the farmer, although not able to control the columns of certain large subsidized newspapers, and it demands a just consideration at the hands of its Representatives. I dare say that some of those who have been retired are aware of that fact.

Respectfully, yours,

I have received many communications from the farmers of my district in favor of this 58-page immigration bill, which was prepared by a congressional commission after a four years'

searching investigation at home and abroad that cost Uncle Sam over a million dollars.

The bill has many desirable provisions in it that no one except the selfish interests affected can possibly oppose. For instance, it excludes paupers, imbeciles, insane persons, criminals, and the like much more effectively than does existing law. Among other things, it heavily fines the foreign steamship companies for bringing such undesirables here when their undesirability could be ascertained at the time of purchasing ticket and embarking; authorizes the placing of doctors, inspectors, and matrons on board vessels for the purpose of better caring for and looking after the welfare of the immigrants, as well as improving steerage conditions.

But all this is much more ably presented by the distinguished members of the House Committee on Immigration, which has had charge of the whole matter, familiarized themselves with the 42 volumes of the commission's report, held hearings, and finally, after much hard work and the most careful consideration, reported this 58-page bill again to the House with the recommendation "that the bill be passed." From their enlightening and extensive report I want to quote the following paragraphs, in order to show the many splendid provisions the bill contains:

Another important change from the existing law is that penalizing steamship companies for bringing in insane aliens, and increasing the fine on the steamship companies for bringing in insane and other excludable aliens from $100 to $200.

The insane under the present law can be excluded, but there is no law which now imposes a fine on the steamship companies for bringing them in. The result of this is that the insane asylums of New York are being filled with alien insane, and it is costing that State nearly $4,000,000 a year to take care of them.

The same is true in a less degree of several other North Atlantic States.

The Commissioner of Immigration in his report for the fiscal year ended June 30, 1911, has this to say in regard to the question:

"One of the most useful provisions of the present statute is section 9, by which a fine of $100 is assessed against any steamship line that brings to a United States port an alien afflicted with a loathsome or dangerous contagious disease, or with tuberculosis, or with idiocy, imbecility, or epilepsy. During the past year such fines were assessed in 246 cases, the aggregate amount being $24,600, of which $23,700 was on account of the first, $100 on account of the second, and $800 on account of the third class, respectively. It is believed this statute would be much more effective, however, if the amount of the fine were made considerably larger—sufficiently large to compel the transportation companies as a measure of self-protection to use greater care in the medical inspection of embarking passengers. The fine should also be made to cover cases of insanity, a class omitted from the present statute probably by inadvertence."

On page 9, report of New York State board of alienists for the year ended September 30, 1911, is the following:

"It must be remembered that foreign countries look with favor upon the emigration to America of diseased and defective persons. Examination by American officials at the ports of embarkation in Europe has been strenuously opposed by certain foreign Governments, and it is a notorious fact, commented upon in every annual report of the Commissioner General of Immigration, that the steamship companies make only the most perfunctory medical examination of passengers upon their departure for America. Thus there are no obstacles in the way of diseased persons embarking for this country. In the case of those returning, however, the conditions are reversed. The passengers are carefully scrutinized by ships' surgeons at the gangway as they embark at the port of New York, and those who do not satisfy the steamship officials or the representatives of foreign Governments stationed on such ships are peremptorily refused passage, even although they have been only a short time away from the countries to which they still owe allegiance. Cases are not decided individually upon their merits, but as soon as it is learned that an applicant for passage has been in an institution for the insane he is at once rejected. It can be seen that with an unimpeded flow of inferior immigrants to this country, and with an outflow which is so carefully regulated that only the prosperous and sound can return, we must ultimately become the asylum for an increasing number of those unable to sustain themselves."

On page 22 of the same report is the following:

"For the first few years after the commencement of that remarkable migration of the races of southern and eastern Europe to this country (to which Austria-Hungary, Italy, and Russia have contributed nearly 500,000 persons a year) it is noted that the increase of patients of those nationalities in the State hospitals was gradual. By 1905, however, it was possible to predict that when the effects of the 'new immigration' commenced to be felt the 'old immigration' (of Germans, Irish, and Scandinavians) would be outdone in the numbers of insane added to the foreign-born population of our State hospitals. To-day that prediction is fulfilled, and during the year more than 55 per cent of the aliens deported by the United States Immigration Service were natives of those three countries."

The New York Times of March 28, 1912, says:

"INSANE ALIENS.

"The Times is informed by Secretary McGarr, of the State commission in lunacy, that of the 31,432 insane patients under treatment in the 14 State hospitals on February 10 last, 13,163, or 41.9 per cent, were aliens. Foreign-born patients have increased since the Federal census of December 31, 1903, by 1,552, or 13.4 per cent. In the two State hospitals for the criminal insane there were 1,230 patients on February 10, of whom nearly 44.4 per cent were of alien birth; the Federal census of 1910 showed a percentage of aliens to total population in this State of 29.9 per cent.

"The prevalence of insanity among immigrants is evidently much greater than among the native born. Of the 5,700 patients admitted to the civil hospitals for the year ending September 30, 1911, 2,737, or 48 per cent, were aliens, and 1,481, or 26 per cent, were of alien parentage, while only 1,224, less than 26 per cent, were of native stock. Of the whole number, the nativity of but 218, which is 3.8 per cent, was not ascertainable. Insanity among the foreign peoples of this city occurs in a still larger percentage of cases. Of the first admissions to the hospitals, 2,006 out of 3,221 residents of the city were of foreign birth; that is 64.1 per cent, although the foreign-born population is but 40.4 per cent of the whole."

Another important change in the present law is that which provides for the exclusion of stowaways and deserting alien seamen.

The Commissioner General of Immigration, in his report for the fiscal year ending June 30, 1911, has this to say:

"Table 20 is a compilation of figures covering alien seamen reported by masters of vessels as having deserted. They are known to be very inaccurate. For the past three years it has been impossible to obtain from the steamship lines accurate information concerning deserters. The decision of the Supreme Court in the Taylor case (207 U. S., 120), and the fact that a suit in which it was attempted to enforce the payment of head tax on account of deserting seamen was decided adversely to the Government, tend to encourage noncompliance with the provisions of rule 22 of the immigration regulations. The very serious nature of this matter is illustrated by the wholesale violations of law discovered in the case of the Hellenic Transatlantic Steam Navigation Co. In that case the immigration officers at New York, acting in conjunction with the United States attorney's office in Brooklyn, obtained very substantial results both as regards fines and imprisonments in connection with an investigation of the unlawful bringing to the port and landing of aliens placed upon the articles of the ship as employees, as set forth in the report of the commissioner at New York (p. 149).

"In addition to the showing of this table, it should be stated that during the year over 30,000 Chinese seamen have come into the ports of the United States on merchant vessels, and many desertions have occurred. Moreover, Table 21 shows 528 stowaways brought to the United States ports during the past year, as compared with 474 for the preceding year. A bill (H. R. 32441) was introduced at the last session of Congress which, if enacted into law, will go a long way toward the abatement of these grave evils * * *."

The investigations of the Immigration Commission disclose that there is a practice of articling seamen simply for the voyage from a foreign country to the United States, and that men so articled are in many instances aliens who would be deported if coming as passengers. Under the decision in the Taylor case the immigration law does not apply to such aliens. This fact, and the fact that the number of desertions is increasing, creates a serious situation which requires legislation.

Closely related with this subject is that of stowaways, whose treatment has been a disputed question for years. The bill provides for their exclusion, but permits their admission under the discretion of the Secretary of Commerce and Labor. The committee deem both the exclusion and the exception wise—the exclusion because in a majority of cases stowaways are liable to become public charges, and the exception because in some cases they are political refugees, and there should be discretion permitting their admission.

Another change of the old law provided for by this bill is that which permits the Secretary of Labor, when he deems it necessary, to detail immigrant inspectors and matrons for duty on vessels carrying immigrants or immigrant passengers to or from the United States. This is not made imperative but is left to the option of the Secretary of Labor. We think this is in the interest of better and more humane treatment of the immigrants or immigrant passengers.

The bill also provides for the exclusion of aliens who advocate or teach the destruction of private property; also for the deportation of such persons and for the deportation of alien anarchists and those advocating or teaching the unlawful destruction of property, or advocating or teaching anarchy or the overthrow by force or violence of organized government or the assassination of public officials.

The only apparent provision to which any definite objection is made is the so-called illiteracy test, which is as follows:

That after four months from the approval of this act, in addition to the aliens who are by law now excluded from admission into the United States, the following persons shall also be excluded from admission thereto, to wit:

All aliens over 16 years of age, physically capable of reading, who can not read the English language, or some other language or dialect, including Hebrew or Yiddish: *Provided*, That any admissible alien or any alien heretofore or hereafter legally admitted, or any citizen of the United States, may bring in or send for his father or grandfather over 55 years of age, his wife, his mother, his grandmother, or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not; and such relative shall be permitted to enter. That for the purpose of ascertaining whether aliens can read the immigrant inspectors shall be furnished with slips, of uniform size, prepared under the direction of the Secretary of Labor, each containing not less than 30 nor more than 40 words in ordinary use, printed in plainly legible type in the various languages and dialects of immigrants. Each alien may designate the particular language or dialect in which he desires the examination to be made, and shall be required to read the words printed on the slip in such language or dialect. No two aliens coming in the same vessel or other vehicle of carriage or transportation shall be tested with the same slip. That the following classes of persons shall be exempt from the operation of the illiteracy test, to wit: All aliens who shall prove to the satisfaction of the proper immigration officer or to the Secretary of Labor that they are seeking admission to the United States solely for the purpose of escaping from religious persecution; all aliens in transit through the United States; all aliens who have been lawfully admitted to the United States and who later shall go in transit from one part of the United States to another through foreign contiguous territory.

With reference to this particular provision, the Farmers' Union, which has an extensive membership in my district, as well as organized labor, the congressional commission, and other experts and persons qualified to speak are in accord. I have here a letter and inclosure from the national secretary of the Farmers' Union which fully explain that influential organization's attitude:

FARMERS' EDUCATIONAL AND
COOPERATIVE UNION OF AMERICA,
OFFICE OF THE SECRETARY-TREASURER,
Rogers, Ark., December 1, 1913.

Hon. JAMES B. ASWELL, M. C.,
Washington, D. C.

HONORED SIR: Inclosed find copies of resolutions passed by the national union of the Farmers' Educational and Cooperative Union of America at the annual session held in Salina, Kans., September 3, 4, and 5, 1913.

I hope that these resolutions coincide with your views upon the important matters mentioned and that you can actively support measures intended to secure the legislation needed as expressed by these resolutions.

Respectfully, yours,

A. C. DAVIS,
Secretary-Treasurer.

REPORT AND RESOLUTIONS ADOPTED BY NATIONAL FARMERS' UNION IN NATIONAL CONVENTION AT SALINA, KANS., SEPTEMBER 4, 1913.

Your committee on immigration beg to respectfully submit the following report:

"One year ago it was reported to the national convention that the congressional Immigration Commission, composed of three Senators, three Congressmen, Government officials, and others, after a four-year investigation at home and abroad, costing over a million dollars, had presented to Congress a 42-volume report of 500 pages per volume, recommending the very legislation which the Farmers' Union had been urging for years, and that it was pointed out the chairman of the commission, Senator DILLINGHAM, had introduced in the Senate on August 7, 1911, a 58-page bill—Senate bill No. 3175—containing the legislation that we had been urging and that had been recommended by the commission. The bill was reported to the Senate by the Senate Immigration Committee on January 17, 1912, and after three months' consideration and many days' debate passed the Senate on April 19, 1912, with only nine votes in opposition.

"It will be recalled that the commission found that 'many undeniably undesirable persons are admitted to this country every year' as a result of our weak laws and the shift in the source of our immigration by the profit-making steamship companies to southern Europe and western Asia, that 'there is a dangerous and apparently growing criminal element in the country, due to immigration,' and that the nine distinguished members of the commission unanimously concluded that 'substantial restriction is demanded by economic, moral, and social considerations,' recommending legislation that would give this country some such laws as other new countries have and as would tend to force the steamship companies to shift the source partially back to north European countries.

"The voluminous report of the commission completely vindicated our previous demands for this legislation, for it showed that this country has the feeblest immigration laws of any new country and that our feeble laws accounted for our getting such an enormous number of undesirables, in spite of the efforts of our immigration inspectors. In this connection your committee feels that it ought to call your attention to the fact that last year 1,427,237 aliens entered this country, practically 90 per cent of whom came from southern Europe and western Asia, and most of whom were adult males coming merely to sojourn only temporarily, and only 15,000 of whom were 'farmers,' while the steamships report carrying back 611,924 aliens.

"Senate bill No. 3175 aimed at sifting out from this enormous stream the undesirable and at improving a little the quality of this enormous annual alien influx of nearly a million and a half. Having passed the Senate on April 19 1912, and being reported to the House by the House Committee on Immigration June 7, the bill came up in the House for consideration under a special rule on December 14, 1912, shortly after our resolution of one year ago indorsing it was communicated to Members of the House by our faithful national secretary, and after continuous consideration for several days the bill was passed with an amendment on December 18 by a vote of 201 to 64.

"The Senate bill having been amended by the House necessitated a conference between the two Houses for adjusting their differences. After many conferences the bill was finally agreed upon and was passed again by the House and Senate, and was sent on February 3, 1913, to the White House for President Taft's signature and approval. On February 6, in fulfillment of his preelection promise to certain persons and without precedent, the President held a public hearing in the east room of the White House, at which attorneys for the foreign steamships, certain employers and importers of cheap labor, and other large interests appeared in opposition to the bill, and your national legislative committee, together with the representatives of the American Federation of Labor and others, appeared in favor of the approval of the bill.

"To the surprise of everyone, President Taft on February 14, 1913, the last day and at the very last hour, returned to the Senate the 58-page bill with a 12-line message, saying that he did so 'with great reluctance,' but that he could not 'make up' his 'mind to sign it.'

"Four days later the Senate, after two days' debate, passed the bill over the veto by a vote of 72 to 18. The bill came up in the House the next day, February 19, 1913, but failed to receive the necessary two-thirds required by the Constitution, the vote being 214 for the bill to 113 against it, showing that a change of only 4 votes would have put the bill on the statute book.

"The same identical bill has been introduced recently in the Senate by the chairman of the Senate Committee on Immigration and in the House by the chairman of the House Committee on Immigration, both of whom have been in conference with the President and the Secretary of Labor, and who say that the bill will pass Congress the first thing next session and will certainly be signed by President Wilson.

"Therefore your committee respectfully recommends that the following resolution be adopted:

"Whereas the Immigration Commission, after years of investigation and a 42-volume report, recommended certain legislation contained in a 58-page bill that passed the Senate and House during the last Congress, only to fail by a few votes to receive the necessary two-thirds in the House needed to make it a law over a 12-line veto, after it had passed the Senate by the decisive vote of 72 to 18; and

"Whereas the same bill has been introduced recently in the Senate by the chairman of the Senate Committee on Immigration and in the House by the chairman of the House Committee on Immigration: Therefore be it

"Resolved by the Farmers' Educational and Cooperative Union of America in national annual convention assembled at Salina, Kans., this 4th day of September, 1913, representing over 2,000,000 members throughout 33 States, That we reiterate our earnest demand for this needed legislation and urge upon the President and Members of the Senate and House that this bill, which is Senate bill No. 2453 and H. R. 6060, be put upon the Federal statute books at the earliest possible opportunity; and be it

"Resolved further, That the national secretary send this resolution to President Woodrow Wilson, Secretary W. B. Wilson, and Members of the Senate and House.

"Respectfully submitted.

"R. F. DUCKWORTH, *Georgia, Chairman.*
"A. J. MARTIN, *North Carolina.*
"H. F. MCNAUGHT, *California.*"

The attitude of this organization, which has locals in 32 States and State organizations in 22, claiming over three and a half million members, is more fully explained in the last two issues of its official national organ, the National Field, published at Atlanta. The articles are such classics that I beg to call them to the attention of the Members of this House. They are:

[From the National Field, Jan. 8, 1914.]

LEGISLATION WE WANT.

Practically every single, solitary piece of so-called progressive legislation, enacted or proposed, originated with the Farmers' Alliance or Farmers' Union. How well do we all remember the derision and ridicule with which parcel post, postal savings, direct elections, rural delivery, regulation of railroad rates, and every other proposal was met by the interests, the subsidized press, and even the politicians and statesmen who now claim such reforms as partisan achievements and party platform planks. It took years, and years that were long, for we had to wait them through, until those beneficent reforms were placed on the statute books. So may it be with reference to our present legislative demands.

We want a real, genuine division of marketing. No pretense will do.

We want gambling in farm products stopped. It is immoral, uneconomical, and vicious. No half-hearted palliative will do.

We want sure-enough rural-credits legislation. Our credit has got to be made available as well as that of the business man and speculator, and we will "roll" the buncombe political faker who tries to palm off a soft-soap proposition on us.

We want better roads, and there is no reason under the sun why the Federal Government should not render financial assistance in the building and maintenance of business roads that will get the farmers out of the mud. The Federal Government has just spent $500,000,000 digging a ditch in a foreign land. It spends millions dredging harbors and rivers for the steamships. It has built good roads in the Philippines for the "brown brothers." And it is high time it did something for our own—our farmers, the backbone of our Army in time of war and the foundation of our prosperity in time of peace.

We want the restriction of undesirable immigration. The splendid immigration bill, H. R. 6060, that has just been reported to the House, containing the very legislation we have been urging for years and that has been found necessary by the congressional Immigration Commission after a four years' investigation at home and abroad, should pass at once.

We want more liberal appropriations for agricultural purposes. Uncle Sam spends annually over a billion dollars, only one-fortieth of which is for agriculture.

We want these things. Brother, have you told your Congressman and Senator so? You know how busy the opposition is to defeat these needed legislative proposals from reading about the Mulhall lobby investigation, so get busy. Write your Congressman at once.

[From the National Field, Jan. 15, 1914.]

ON THE LITERACY TEST APPLICABLE TO IMMIGRANTS.

"There has never been advanced a single substantial or just argument in favor of basing the desirability of immigrants on the ground of their ability to read and write," says a magazine professedly wanting some "sane" immigration policy.

No "sanity" has yet come to light which offered any definite solution. Hiding behind vague generalities the wiseacres remain quiescent while the tide flows in with no test of desirability worth considering at all, and become clamorous opponents of any measure which would be restrictive.

The Farmers' Union has repeatedly urged the educational clause. It would be strange indeed if an organization representing the bulwark of national life and committed to "equity, justice, and the golden rule" indorsed a measure without having a "single substantial or just argument" to advance.

It would be weirdly strange if other organizations, far and wide, took the same position and had no earthly reason for it.

And when you consider the fact that all of these include not merely descendants of foreigners, but men and women who themselves came here so recently as to leave many friends and loved ones in the Old World, these indorsements would reach the pinnacle of selfishness and absurdity if such foreign-born men and women entertained an "insane" prejudice against their own blood.

Why, we all came over—or our fathers or our grandfathers or great-grandfathers did. And were we merely "ins" wanting to exclude the "outs" we would be ingrates and renegades. Fundamentally men and women do not change. The types of immigrants who builded a civilization here are just as welcome to-day as ever, and just as needed. But conditions change, and the educational test, so long advocated, as stated, and recently confirmed after long and costly investigations, is the first practicable solution of the problem—one that, without injustice, meets the changed conditions.

Education is no test of individual character—granted; but it is a mighty good test of the enlightenment prevailing in the country from which an immigrant comes. Neither the aged nor the young are bound by it. If any country is allowing its poor to live their mature years in ignorance of their own written tongue, it is shifting the burden of education to our shoulders, or giving us an element which is helpless for several years in the hands of—well, mostly the cunning, educated, foreign-born, contract laborite, the fleecer, the sweatshop and factory exploiter, the liquor dealer, and the "cadet." Who are now the chief victims of wage and so-called "white slavery"? And who are expected to be the victims of the land serfdom of the future? Why, the ignorant foreigner, of course. He can't protect himself on landing, and before he is able to learn our language, maybe, it is too late.

Social workers can do very little at the docks. Their work of informing the prospective citizen should have been done before he sailed. If he can not read or write, how can he be reached in time?

Urban and mining centers are filled with wretched foreigners who came to an alleged "land of opportunity" only to find a misery infinitely greater than they left. Of the unprotected, illiterate immigrant girl why speak? Every intelligent person knows of the awful revelations which have been going on for years in regard to commercialized vice which feeds upon such. If these could read and write, they could be warned, directed to the safe places, which, unaided, all too many never find. They simply "disappear."

The fortunate immigrants who have relatives and real friends awaiting them are comparatively safe. Yet it is just these relatives and these real friends who advocate the educational clause, knowing it will work no hardship to any and will confer blessings on the mass.

If there be no "sanity" in these arguments, then sanity does not exist.

Considerable slush is sloshing around about the "good mother" who can not read or write. It appears that a woman who could read and write would become quite a vicious mother, quite an unfit person altogether.

These poor "good mothers," women who never had a chance and never will be given a chance to know anything but dull drudgery just exactly so long as the Governments abroad regard them as nothing more than a combination between a plow horse and a perambulating incubator. For shame that this Nation of decency and chivalry should have any misrepresentatives who fail to see what a boon it would be to all foreign women, and necessarily to their children and homes, and necessarily to all social life if it were known abroad that here we would refuse to tolerate such needless ignorance as is the lot of the average peasant-class woman of Europe. Schools would open. All boys and girls would go to them. One boy of the peasant flock would not be selected for the "educated" member of the family and the rest of his brothers and sisters compelled to toil for his tuition and remain peasants.

Even at present, should the law go into effect to-morrow, it does not take long to learn the simple rudiments of reading and writing. While these prospective emigrants are saving money for the voyage, as nearly all must, they could be instructed, then informed, and come partially equipped to protect their own rights and thus assist in protecting the general rights. They would not come, as multitudes have come, "dumb, driven cattle," to be numbered, ground into the mills and mines and shops, robbed, ruined, and terrorized and used as tools by crooks and exploiters.

"Only a wopp," No. —, is killed in some construction work and hauled to the potter's field; only a "contract" laborer, just one of a gang. Nobody knows, nobody cares. Certainly the "sane" restrictionists shed no tears.

What of the children of immigrant parents who can not read or write? The children readily learn. Every juvenile officer, running down waywardness and youthful vice and crime, is finding the same condition of affairs. The family discipline prevailing abroad is broken down. The sophisticated juniors are dictating to parents; lying to them; having their own way. They are like ducklings hatched by a hen. They gaily sail around in the social puddles, while these "good mothers" some people rave about are utterly puzzled and helpless.

If any of us expect to even visit a foreign country we straightway get all the maps, guide books, information, and data available, and lay in some reserve cash. Yet these nearly penniless immigrants come here to live, neither knowing our language nor how to read or write in their own. The printed page is meaningless. Translations are nil. Interpreters may, or may not, be honest.

What other tests would we have? Health, of course. Well, ought not these people to be informed in advance what tests are required? Should any sick and disabled be allowed to come only to be heartbroken because of inevitable deportation? Besides, physical tests are already in vogue, mostly superficial. They do not serve to protect the public adequately from disease, and they are carried out with considerable disregard of the immigrants, who huddle in quarantine or are passed by with a casual look over. Those diseases which are the outcome of insanitary or immoral modes of life are precisely the disasters which ignorance fosters. And those diseases which are not such outgrowth have necessarily no particular bearing upon the "moral character" of the afflicted. Ignorance, poverty, and disease are a triune. No blame attaches to those who would escape the countries which keep masses subject to this triune; but why should we not insist upon those other countries correcting their own wrongs, not casting the results upon us, while continuing to maintain undemocratic conditions—their dear love of a perpetual "peasant class"?

When it comes to finding out a stranger's "moral character" we pause. If there is any way to be sure of it, it has never been proclaimed. If we say that disobedience to law is immoral, what becomes of our boasted protection of the oppressed? We couldn't take the stranger's word. He'd have to show "papers" in a test of that sort. The result of that would be exactly this: The criminal elements that any foreign Government has always been glad to get rid of, or order banished, would be insured very favorable "papers." We couldn't go over and look up his record. He'd bring a clean sheet. But the hapless man or woman, persecuted, and whom a despotic government desired to bring back and punish, would never get a passport. Consequently he could show nothing, favorable or unfavorable. Therefore he'd be deported—sent right back to the wolves.

We will never stand for an inquisition here. We will never call any man or woman "undesirable" because he or she has fought for the rights of free speech and a free press or any other fundamental human liberty.

No better citizens have ever come here than the true liberty lovers who were driven out or who escaped or who were dead tired of oppressive conditions and wanted a chance under the American flag. We propose to give them that chance. And we propose, by forcing their own Governments to educate them or requiring them to seek out education for themselves to come here equipped to meet conditions that have changed from the pioneer days to the present ones of an awful competition for existence, where the odds, God knows, are heavy enough for the literate and hopeless for the illiterate.

Time was when the generality of people could not read or write in any language, and in that time no shame attached to them or anyone else, except the despotisms which needed ignorance in their business. The same despotic spirit is behind all this piffle about "the honest, the industrious, the moral" type. Much they care for the real welfare of this type.

What they want is plenty of cheap laborers. After trustifying the industries through special-privilege legislation on one hand and pauperized labor on the other hand, they are now turning to the blessed vision of "trustifying" agriculture.

Corner any of these big business rascals on the immigration problem and he always talks of "putting them on the land"—land they can not buy; land from whose homesteading and desert-claim privileges they are excluded as unnaturalized citizens for a period of five years; land which they could not rent, even. "Back to the land," then, how? The process is very simple. Let capitalists buy up whatever tracts they haven't now scooped, and herd these immigrants on the land like serfs in fee simple. And then? The farmer who owns his land, the farmer who is trying to own his, can no more compete with the agricultural trust than the proverbial village blacksmith could compete with the Steel Trust.

The individual farmer, therefore, will simply have to sell out to the trust, and go to work at whatever the trust will pay. He will not have a home. He will have one of a hundred one-room "shacks" and he will work, his wife and his children will work, under the eye and even the lash of the overseer.

Against the cold-blooded "interests" and a few misinformed, misguided sentimentalists the immigration bill must fight. For the sake of all humanity, in your land and other lands, won't you work for the passage of this bill as long as your voice can speak or your hand be lifted in its defense?

I have here also several other articles quoted by the Farmers' Union national legislative committee before the House Committee on Immigration and taken from the State Farmers' Union papers of Mississippi and Georgia that contain additional reasons for the stand that organization has taken in this matter, and which show conclusively that it is not only the national organization, but the membership of individual States and other Southern States, such as Mississippi and Georgia, as well as Louisiana, that urge this legislation. The articles are well worth the careful reading and study of every Member of this House having at heart the welfare of the farmers and the people as a whole.

[Editorial from the Mississippi Farmers' Union Advocate, published at Jackson, Miss., May 25, 1910.]

AGITATING IMMIGRATION FOR MISSISSIPPI.

WHAT THE NATIONAL UNION SAYS ABOUT IMMIGRATION.

Whereas it is proposed to distribute and divert foreign immigrants to the agricultural districts of the South and West; and

Whereas a Federal bureau has been established and State immigration bureaus are proposed for that purpose; and

Whereas we are unalterably opposed to such and to the present enormous alien influx as detrimental to the best interests of the farming communities and the welfare of our whole country: Therefore be it

Resolved, That the Farmers' Educational and Cooperative Union of America in national convention assembled at Memphis, Tenn., this 8th day of January, 1908, and representing 2,000,000 farmers, urge upon Congress the immediate abolition of the Federal bureau of distribution and the speedy enactment of laws substantially excluding the present enormous alien influx by means of an increased head tax, a money requirement, the illiteracy test, and other measures; and that we call upon our public and especially our State officials to prevent the agricultural section from becoming a dumping ground for foreign immigrants.

WHAT THE MISSISSIPPI UNION SAYS ABOUT IMMIGRATION.

Whereas the distribution of aliens from northern cities and their diversion from abroad to the South is being agitated; and

Whereas the United States Immigration Commission is now investigating the attitude of the South toward these proposals, and there is need of the farmers of Mississippi making known their wishes: Therefore be it

Resolved, That the Farmers' Educational and Cooperative Union of the State of Mississippi is irrevocably opposed to the present tide of undesirable immigration now pouring into this country from sections of Europe, Asia, and Africa, which until recently sent us no immigrants, and that we urge all our officials and legislators, both State and national, to use their influence in every possible way to make clear our opposition and to secure reports and legislation that will exclude the present alien influx, which is detrimental to our best interests and to the welfare of our country; and be it further

Resolved, That a copy of these resolutions be sent to our Congressmen and Senators and to the Immigration Commission at Washington:

Resolved, That the State presidents and lecturers emphasize this one question, and that copies of this resolution be furnished the press.

[Adopted at the Mississippi Farmers' Union State meeting, July 8, 1908.]

WHAT WE THINK ABOUT THIS IMMIGRATION MOVEMENT IN MISSISSIPPI.

For a number of years there has been a strenuous effort made in Southern States east of us to establish, at the taxpayers' expense, State bureaus of immigration for the ultimate purpose of inducing foreigners. Various conferences and conventions were first held, apparently, at the suggestion of local commercial bodies and old-time residents. The arguments advanced had around them a progressive atmosphere and lauded development of every kind, picturing increased bank deposits, larger commerce, better prices, and enhanced land values.

Virginia, North Carolina, South Carolina, and even Tennessee yielded, and established an immigration department with a commissioner in charge and appropriated a certain amount of the public funds for furthering the purposes of the department. In South Carolina the movement was then openly fathered by the cotton-mill men and transportation interests. Some $25,000 or $30,000 was raised by these interests, and, together with an appropriation by the State legislature, State Commissioner of Immigration E. J. Watson was sent abroad to carefully select several shiploads of immigrants, which in due course of time arrived on the *Wittekind*. To make a long story short, one year ago last March the State Legislature of South Carolina abolished the State bureau of immigration and by affirmative statute forbade a "State official to attempt, directly or indirectly, to bring immigrants into South Carolina." Virginia and North Carolina took similar action by refusing to appropriate funds.

In view of the current discussion now going on in this State, it seems opportune to call attention to the attitude of such a progressive trade paper as the Manufacturers' Record, of Baltimore, which is purely and solely a factory, transportation, and financial organ. In no unmistakable editorials it has repeatedly called attention to the foreign interests, foreign steamships, and even foreign Governments back of this proimmigration movement, and has repeatedly and in the strongest terms warned the South, its commercial bodies, and its good citizens against being used by these selfish interests in their profit-making and dastardly schemes to dump upon us not only the inflowing undesirable tide, but to distribute the foreign dregs now congesting the large cities of the Northeast, which are clamoring to Congress for restrictive legislation such as Canada, Australia, Cape Colony, Natal, and other countries have.

In the movement, the farmers of this State have many interests which should be watched with untiring care. A copy of the House hearings on immigration has just come to hand. On page 405 it is pointed out by Congressman BURNETT, of Alabama, that in 1908 Mr. ——— ———, of ———, N. C., went to Paris, France, and argued

before a big conference of European cotton-mill men that the only way to "increase adequately the world's cotton supply" was "by developing cotton growing in the Southern States," and that the "requirement for such development" was "an increased labor supply." This, he went on to say, could only be accomplished by their doing all they could to help them stimulate and divert foreigners to the cotton belt.

Mr. ——— at that time was the head and tail of the American Cotton Manufacturers' Association. He personally owns many cotton and oil mills throughout the South. He, ——— ———, and other cotton-mill men went abroad during the summer of 1907 and got up that famous European millmen's conference which was held at Paris in June, 1898, and at which he made it clear that the only way to keep down the price of cotton and neutralize the efforts of the Farmers' Union was to stimulate foreign immigration to the Southern cotton-growing States.

Such an attitude is quite unworthy of the American cotton-mill men. Their mill investments have yielded them handsome dividends and enormous salaries. They ought to be willing to share their fabulous profits with the growers of the raw products. They, of all, ought to stand willing and every ready to guard against undesirable immigration.

But if reliable information and such counselors as the Manufacturers' Record are to control our attitude, the so-called Southern Commercial Congress, recently established at Washington, D. C., is nothing but another phase of this anything and everything for the almighty dollar. Merely a scheme for unloading upon the South foreign flotsam and jetsam. Banquet after banquet has been held at our National Capital. Meeting after meeting has been held. Speaker after speaker has been sent throughout the South and West arousing the people to the "need of developing their resources." "A greater Nation through a greater South" is the cry.

How? By immigration—foreign immigration. Establish State bureaus at State expense, stir up your local commercial clubs, etc. Of course, the railroads naturally join in anything that means more traffic. Local boosting clubs are easily organized by an appeal to local pride and patriotism. And so the movement grows. But what is the use of all this hot haste to develop every one of our resources, to mine every ton of Alabama's coal, to cut down every tree in Mississippi, to raise every possible pound of cotton? There was a time when we were exploitation mad and everyone seemed crazed with the idea that man was made for work and not work for man, our resources for destruction rather than conservation. What about our children's children?

What is the use of putting a cotton planter on every acre of cultivable cotton land in Mississippi? We may be a little old-fashioned, but we do not feel like flying from our present "ills," whatever they may be in the minds of some of the exploiters, to ills we know not of. The country, and particularly the South, has had a pretty tough experience with one stimulated immigration of an alien race, somewhat off color, in order to satisfy a similar exploitation and labor argument, and now that it is somewhat recovered from—but never will be over—the effects thereof, we would suggest that we don't play with this immigration business any more. Let us not bring it upon ourselves at any rate. If some good people from the northwestern part of the United States want to come down here, they will come, and we will welcome them if they take to us, our ideas about local matters such as the negro, etc., but we do not favor a State movement to get them, nor the expenditure of State funds to attract them; because just as sure as that once gets started it will not only bring in some we don't want, but there will be a demand on the part of some to turn it to bringing in the foreign immigrant.

We ought to profit by the experience the Northeast is suffering from, the attitude of old South Carolina, and the advice of such a capitalistic paper as the Manufacturers' Record.

—

[Editorial from Farmers' Union News, of Union City, Ga., June 29, 1910.]

PRESIDENT HIGHTOWER THWARTS IMMIGRATION SCHEMERS.

With the demand of Northeastern States for the restriction of the present new enormous foreign influx of brownish races from southeast Europe and western Asia and the crowding of so many good Americans across into Canada, largely as a result of immigration evils, a series of systematic State immigration conventions and southern conferences, and even organizations, have followed in rapid succession.

Virginia, North Carolina, Maryland, South Carolina, Georgia, Florida, Alabama, Tennessee were called together in convention assembled, apparently by local commercial bodies and old residents, to discuss ways and means for bringing in a class of desirable white immigrants. "A greater State," "A larger population," "Development of our resources," and other similar pridesome slogans were the cry.

Somewhat belated, the fad has just struck Mississippi. Last week it had a "State-wide immigration convention." The call was issued by the governor, at the suggestion, apparently, of the Natchez Commercial Club. Every local commercial body and each city was invited to send delegates. The Farmers' Union of the State and other representative organizations most entitled to speak the wishes and record the true sentiment of the whole people were completely ignored in the call. Of course, the railroads were in the game. According to the Jackson Union Advocate, they were "the whole thing," and, according to the "official program," they provided the speakers for the two days and nights sessions.

These transportation interests went there from all parts of the country, assisted by certain large millmen and land speculators, with the whole thing cut and dried. But they had reckoned without their host. At the proper time President G. R. Hightower and Vice President J. M. Boatwright appeared upon the scene, protested against the scheme to make the South the dumping ground, the unrepresentative character of the meeting, and by threatening to call a State meeting that would be composed of 25 tillers of the soil for every one of the 138 railroad, millmen, and others present compelled the packed affair, in spite of itself, to organize, not a proforeign immigration association, but a "land-development association," and to pass, among others, the following resolution:

"*Resolved*, That this convention does hereby respectfully memorialize Congress to pass legislation restricting the present alien influx of ignorant, thriftless, and of undesirable people now pouring into the United States from southern Europe and western Asia, and that we urge upon our Senators and Congressmen to use every possible effort to bring about this desirable legislation and the abolition of the Federal bureau of distribution, in order that this objectionable tide may not be diverted to and distributed over the South, and particularly Mississippi."

Mississippi and the whole South owe a most profound debt of gratitude to President Hightower and Mr. Boatwright for nipping in the bud this affair, which would have been used next winter, when the Immigration Commission makes its final report and legislative recommendations, as a conclusive argument in favor of distributing and diverting the present brownish influx to the Southland instead of properly restricting it, in order to relieve the Northeast of its intolerable immigration evils.

The "development" scheme is doomed to failure. Such has been the history of identically similar movements in other Southern States. North Carolina and Virginia have abandoned their State appropriations. Tennessee and Alabama have never appointed their State commissioners of immigration. South Carolina abolished her bureau of immigration, after one expenditure of $30,000 in bringing in two shiploads of "carefully selected" foreigners, and affirmatively enacted by statute March 4, 1909, that no State official should "directly or indirectly attempt to bring immigrants into the State."

These movements have been weighed in the balance and found wanting, not only in each Southern State, but in similar affairs, pretending to embrace and represent the entire South. The Manufacturers' Record, of Baltimore, editorially, on March 4, 1909, commented at length upon these so-called southern commercial congresses, parliaments, conventions, etc., and said:

"We have in our archives complete records of every one of these attempts made during the past 10 years. It appears from these records that there is almost something more than mere coincidence in the means adopted, and even the language employed, in trying to persuade representative southern men to give them countenance."

In speaking of one of these in particular, the editor says:

"A later gathering, into which an alien element dominantly, but in cloak, entered, was in reality the outcome of a plan originating in Italy to flood the South with Sicilians. The Manufacturers' Record knows that representative Southerners would be astonished to learn how close they have come in southern gatherings of various kinds with the witting or unwitting agents of these alien-fostered immigration schemes directed against the South and its best interests."

I find also that a number of Southern States have memorialized Congress as follows:

Whereas the United States Immigration Commission, after four years' investigation and the expenditure of $1,000,000, has made a 40-volume report to Congress; and

Whereas it is being proposed that the immigration evils from which the Northeastern States are suffering be relieved by diverting and distributing the aliens now crowding into and congesting the slums, sweatshops, and city centers of the Northeast; and

Whereas the Immigration Commission clearly points out that this is the only country with any considerable net foreign immigration, our laws and administrative policy are the weakest of any new country, and that "substantial restriction is demanded, through economic, moral, and social considerations," and the illiteracy test is recommended "as the most feasible single method for excluding undesirable immigration": Therefore be it

Resolved by the State Senate of Tennessee, That we hereby memorialize Congress to immediately enact some such illiteracy test as is recommended by the Immigration Commission, as is law in Australia, New Zealand, and other new countries, pass other needed legislation along the lines of the Immigration Commission's suggestions, and do not pass any legislation looking to the diversion and distribution of the kind of alien population that is now congesting the northeastern cities and causing so many evils there; and be it further

Resolved, That a certified copy of this resolution be sent by the secretary of the senate at once to the President of the United States, to our two United States Senators, and each of our Representatives at Washington, D. C., with the request that it be presented to Congress and properly referred.

I hope to see an amendment adopted providing that any alien who commits a felony within 10 years after his arrival in this country shall serve his term of punishment and be immediately deported to the country whence he came and be forever barred from the United States; and that immigration agents at every port in the United States shall be required to furnish every immigrant upon his arrival with a copy of this provision, so that each immigrant will immediately recognize that to live in the United States means to be a law-abiding citizen.

This provision, in my opinion, would have much to do with encouraging good immigrants and discouraging the criminal or the criminally inclined.

Vocational Education.

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 19, 1914.

Mr. SABATH. Mr. Speaker, unlike most of my colleagues who have preceded me, I do not represent a rural district, but a district wholly within the limits of a great city, yet I am heart and soul in favor of the pending bill, which has for its object cooperative extension work between the agricultural colleges in the several States and the Department of Agriculture, in order to aid in diffusing among the people of the United States useful and practical information on subjects relating to agriculture

and home economics and to encourage the application of the same.

Mr. Speaker, I am satisfied that not only will this law be of great aid and benefit to the farming communities of our country, but it must of necessity be of incalculable benefit to all of the people of our land, including the great masses that reside in our large cities. Anything that tends to reduce the cost of production of our food supply and anything that tends to improve farm conditions redounds to the advantage of all of the people of this country, who of necessity must and do depend upon the products of the farm to feed and clothe them.

This great Government of ours is expending over a billion dollars annually, only a small portion of which sum is being expended by the Department of Agriculture, and I venture to say that not a single department has produced greater results and done more for the people, considering the amount of money expended, than has the Agricultural Department. I have been, and am now, opposed to the large and increasing expenditures for the conduct of our Government, but in this instance I believe, judging the future by the past, that the money expended will be returned to us many times over, and that a better investment could not be made.

Mr. Speaker, I have from time to time read with great interest the reports from the agricultural experimental stations, and I have sent out many of these, as well as other publications, to the residents of my district, and I do not know of any documents published by the Government that are more eagerly sought for and read with greater interest than those issued by the Department of Agriculture, containing as they do such valuable information.

I consider this measure of great merit, and one which, as I have already stated, will be of great benefit, not only to the farming communities, but to the people in the cities as well.

National Aid to Vocational Education.

REMARKS
OF
HON. FRANK PARK,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 20, 1914,

On Senate joint resolution 5, providing for the appointment of a commission to consider the need and report a plan for national aid to vocational education.

Mr. PARK. Mr. Chairman, I wish to say a few words on Senate joint resolution 5, "providing for the appointment of a commission to consider the need and report a plan for national aid to vocational education."

As I see it, the resolution is for naming a commission of educational experts to make investigation and report; and while investigation is not restricted to particular vocations, I understand the object in view is primarily an aid to training along lines whereby the masses earn a living.

I favor, Mr. Chairman, any well-meaning effort to unlock the doors of skill to the unskilled, and teach awkward minds useful, practical knowledge.

The great need of our country is more trained minds to direct better trained hands.

The masses are awakening to the needs of the hour, and competition in all vocations proclaims the deeper meaning of training and skill.

We have reduced the tariff on many necessities and resulting conditions call for better training and skill if we expect, as we do, to meet successfully world-wide competition.

A short time back in my little home city of Sylvester a house was being built; I talked with some laborers who were hauling sand and brick and other materials. I asked how much they earned, and they told me $2 a day for a man, wagon, and horse, and $3 a day for a man, wagon, and two horses; on the building were laborers getting $3 to $4.50 a day laying brick. The man with the wagon was of the dominant race; the man with the trowel of another race. One was trained, the other not.

I favor legislation to point a way and plan to increase the value of a man's services from $2 to $4 a day.

Increased skill means increased earnings, and resultingly better fed and clad wives and children, more prosperity, and greater contentment.

In the old "blue back speller" is the picture of a mother holding her child by the hand and pointing along the road that leads up to the "hall of fame," over whose portals are writ the talismanic words, "knowledge is power." Unconsciously the child draws inspiration from the picture, his soul fires with ambition's hopes as his ears catch encouragement from the loving lips of her who gave him life.

Our great country is neglectful of her children when she permits them at 21 years of age to begin life's journey without inheritance of lands, money, or chattels and without training or skill.

And I declare to this body it is no appeal to the patriotism of the masses when we willingly expend $15,000,000 for a beautiful street from the Capitol to the Union Station in Washington and balk at incurring an expense of a thousandth part of that sum to find a way for national aid to train our boys and girls.

I favor any measure to procure national aid to train our girls in sewing, cooking, and housekeeping; that will fit them for capable housewives and mothers, the foundation of every Nation's strength.

I venture to say that not 1 woman in 25 of our country can make a good biscuit or a tempting cup of coffee, or can measure and make a neat-fitting shirt for her husband.

I favor national aid in training our boys to properly perform ordinary tasks and pursue with profit the ordinary vocations of life; that will train them to use with skill the saw and trowel, the plow, the paint brush, and the shop hammer; that will teach the boy the way to plan a home and build it and care for the mate who is to share his joys and sorrows.

From the Great Lakes to the Gulf, from the Atlantic to the Pacific, comes a call to Congress to consider the need and report a plan for national aid to train our children to lead better and more useful lives.

Let us answer them as they have a right to expect.

Let us show them whenever we can that this Government cares more for the flesh and blood, the brain and brawn, of the plain people than for ornamental sidewalks, plazas, and streets even of our proud and beautiful National Capital.

Show them that we are more heedful of the welfare of the humble plowboy, far remote though he be from the seat of government, than we are of plaudits of foreign nations for the architectural beauty of our public buildings and grounds.

Let us provide a plan to aid vocational education whereby the knotted hand of the untrained, overworked laborer may point with joy to the golden gateway of equal opportunity for his ambitious son and the bent back of the overworked mother can straighten with enthusiastic hope as her shining eyes behold the equal chance offered her cherished child.

When every citizen is made to feel and know that our Government watches and cares and provides for his peace and prosperity and values him as an asset and a unit of this great Nation, then will we know that our country occupies among nations the sole place that she should, the real land of equal opportunity, the land of liberty, the land of the truly free.

Let us open the doors of opportunity to all. Let us convince the worker on the farm, in the shop, in the factory, on the railroad, and in all the vocations that we really care for his interests.

Let us prove to rich and poor in all the vocations that this Government is the common guardian of all, extending equal rights and opportunities to all and special privileges to none of her children.

When our Government loves every citizen, regardless of section, and convinces him of the fact by aiding him to become better and more useful, then will all our citizens love our Government and willingly sacrifice for it, and not till then.

Whether the resolution should pass with an appropriation for expenses or not is a trifling matter. What is to be most desired is the united voice of this Congress affirmatively recognizing the resolution and showing intention by its action to aid the people.

By vocational education we specialize and concentrate the scattered strength of brains and hands along definite lines of thought and development, which can but make for the common good.

We must progress; action along progressive lines means breath and life to our Nation; inaction is retrogression, paralysis, and death.

Let us help our country live daily on a broader, loftier plane of development, and may our votes on the resolution favor the masses who are calling for aid and guidance to this great Congress.

On the Retirement of Superannuated Federal Employees.

EXTENSION OF REMARKS
OF
HON. WILLIAM M. CALDER,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 15, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. CALDER. Mr. Chairman, in listening to the debate on the Post Office appropriation bill I am reminded of an incident that occurred several weeks ago in New York City which it would have been well for every Member of this body to have witnessed. It was a public meeting scheduled to be held in the Hippodrome, the largest theater building in the city known and famed for its great structures. The day of the meeting, which was a Sunday, was one of the stormiest days that the city experienced in years, and the date was November 16, 1913.

Having accepted an invitation to be present I wended my way to the hall with many misgivings, believing that I would find very few who would brave the cold and rain and discomforts incident thereto to attend a public meeting.

It was a meeting called to discuss the question of a retirement law for superannuated employees of the Government. Would that I could draw a mental picture of what I saw and heard, in order that you could get the benefit of my experience. That great building, well named the Hippodrome, was filled from pit to dome with as highly intelligent an audience as it has ever been my pleasure to look upon; a sea of faces filled with animation and anxiously drinking in the remarks of the several speakers, and many of them for the first time receiving the information as to the manner in which this great Government treats its civil servants when they can no longer do justice to their work; wondering, too, of the reasons that caused their legislators to denounce corporations and railroad companies as soulless and without conscience, and yet these very corporations treating their employees in a far more considerate manner than does the Government its employees.

In order that no misapprehension might exist in the minds of my colleagues, I will endeavor to explain briefly the class of people who composed that vast audience. There were business men, representing large manufacturing concerns, leading bankers of the great metropolis, professional men, tradesmen, mechanics, and laboring men. There were men and women interested in every movement for the uplift and betterment of the human race, and there were old, worn-out veterans of the Government, many of whom wore anxious looks, while others bore a stamp of resignation, wondering if it were possible that something would be done to grant them a few years of peace and contentment before they were called to the great beyond.

Mayor Kline presided, and on the platform were men of national reputation, who were there to give expression to their views on the question of retirement. Those who spoke on the subject were Mayor Kline; Police Commissioner Waldo; Rev. Francis J. Sullivan; Frank A. Vanderlip, president of the National City Bank; Miles W. Dawson, the well-known actuary; Rev. Dr. Van De Water; Street Cleaning Commissioner Edwards; Congressman LATHROP BROWN; Herbert N. Casson; Andrew W. McKee; Congressman JAMES A. HAMILL; and Mr. George W. Perkins, a man whose manifold business interests mark the value of his time as priceless. The speech delivered by Mr. Perkins was logical and convincing and represented the views of a man of large experience in the business world. It is worthy of the attention of the Members of this House, and I will insert it in the RECORD for your information.

Adding inspiration to the occasion was as well drilled a band, discoursing the sweetest music as it has been my pleasure ever to have listened to, and it was composed entirely of letter carriers.

Scattered through the audience was a fair percentage of ladies, which added a charm to the occasion and made one forget the elements that were raging on the outside.

As one of the speakers of the meeting, I gave my views on the subject, which are well known to the Members of this body. I am, however, a stronger advocate of a retirement law on account of the impression made on my mind on the afternoon of November 16 at the Hippodrome.

Three old veteran letter carriers sat on the platform in their uniforms of gray. One could see at a glance that they were proud of the uniform as well as their long record of honorable service. But, me thinks, what will happen when they can no longer cover the districts assigned them? Echo answers that they should by right and justice be permitted to live their declining years in peace and contentment on annuities allowed for long, loyal, and faithful service. Strange to say, however, in this land of patriotism and progress that such is not the case, and that they will be thrown on the charity of the world when they are forced to resign on account of superannuation. Would that every Member of Congress could have been present at that meeting and have seen for himself what I looked upon that Sunday afternoon. Had they been there, I feel satisfied that this session of Congress would see the enactment of a law that would make proper provision for the retirement on annuities of our superannuated Government employees.

We can not delay action on this question much longer. It is a problem that must be solved in the interest of efficiency in the conduct of the business of the Government. As the question possesses great merit as well as justice I sincerely hope that Congress in its wisdom will meet it in the proper spirit at an early date and will work a solution of a problem that should be solved in the interests of humanity.

The address follows:

[Address delivered by Mr. George W. Perkins at the Hippodrome, New York City, Sunday, Nov. 16, 1913, at a mass meeting held by Branch No. 2, National Association of Civil Service Employees, for the purpose of directing the attention of Congress and the public to the necessity of retiring superannuated Federal employees after 30 or more years' service.]

Mr. GEORGE W. PERKINS. Mr. Mayor, ladies and gentlemen, I take it from the care with which you listened to the last speaker and your generous applause of his sentiments that you will agree with me, as you did with him, that, wicked as Uncle Trusty may be in some respects, he has been better to you than Uncle Sam has been. [Applause.]

I believe in your cause. I believe in such meetings as this as a method of furthering your cause. I believe in pensions, not because I have read about them in books and studied them as a theory, but because I have seen them in actual practice. [Applause.]

I believe in aroused public opinion and in informed, enlightened public opinion, not because we have all been taught since childhood that it is the fundamental principle upon which our Government is founded, but because it has times without number succeeded when all other methods have failed.

I do not believe, however, in looking upon pensions as gratuities, as a nice thing to do for somebody, as a gift for which the recipient should be duly grateful and the giver pat himself on the back for having bestowed. I believe in pensions on principle; believe in them as a just compensation for actual services rendered; believe in them as promoting efficiency of service and establishing better relations between employer and employee. [Applause.]

Long experience with a vast number of men in various lines of industry has convinced me that no man worthy to be called a man wants something for nothing. [Applause.] He prizes his manhood too highly for that; but what he does want is a fair, square deal [applause], an opportunity to work under an arrangement that is fair and right. Given such conditions, I am convinced that, except in very rare cases, employees can be relied upon at all times to stand by the business or the occupation in which they are engaged, and in place of being envious and jealous of capital continue, as occasion arises, to discharge their duties and make at least as great a sacrifice to further the interests of the occupation in which they are engaged as will those representing capital. [Applause.]

Too much stress can not be laid on the fact that pensions are not gratuities. [Applause.] The word "pension," through misuse, has come to convey an erroneous impression to the average mind. It is almost universally thought of as something that is done to take care of the poor and decrepit, of those who have been shiftless and improvident and who are to be taken care of by kindly disposed people as a matter of charity. This view of it is all wrong and must be eradicated from the public mind, must be banished from our calculations in considering this great question.

The pension is just as much a part of proper compensation as is the monthly salary. [Applause.] It is just as much a fixed charge on any business as is the sum that is set aside for depreciation of machinery or building [applause], and a business of any sort that does not proceed on this basis is being condemned to-day by public opinion.

No merchant, no manufacturer, no owner of a 20-story building would think that he was calculating his profits on a conservative basis unless he set aside each year a certain percentage of his earnings for depreciation, maintenance, and repair,

said sum to be used for just that and no other purpose at some future date.

In precisely this same manner a merchant should set aside each year a certain percentage of his earnings for the maintenance, repair, and depreciation of those serving with him in his business. [Applause.]

By maintenance, as applied to human beings in industry, I mean better sanitary conditions under which men and women work. By repair, as applied to human beings in industry, I mean better provision for their disability in case of accident. By depreciation, as applied to human beings in industry, I mean pensions for old age. [Applause.]

All these things should be a part of the fixed charges against any business or any governmental calling, and my firm belief is that they are not only right and should be done because they are right, but because they pay purely as a cold-blooded proposition. [Applause.]

I have watched the working out of this problem in industrial, railroad, and other lines of business, and have yet to see a case where beneficial results have not followed where the principle has been applied properly, honestly, and equitably.

In my judgment, the beneficial results have been at least as great to the employer as to the employee.

The most modern, up-to-date factory, equipped with the latest and best machinery, is idle and useless and will not produce one cent of return unless some human beings are handling and directing the machinery. In other words, no matter how up to date and perfect a factory may be, it is useless until the human touch is given to direct its operations, and the more efficient you can make that human touch, the more genuine, hearty interests you have behind it, the more efficient will be your machinery, the less depreciation you will have to write off, the more excellent will be the quality of the output.

This being so, any and every proper method should be used to enhance the interest of the employees in the business in which they are engaged, to the end that they will find genuine pleasure and satisfaction in work in place, as is often the case, of looking upon the daily work as a grind and a piece of drudgery. The ordinary, everyday wage, with nothing to look forward to except possible incapacity through accident or old age, with small, if any, savings to depend upon, is not conducive to a lively, keen interest in each day's work; and the merchant or the government that does not realize this is working against his or its own pecuniary interest, to say nothing of taking unjustified profits out of human beings. [Applause.]

In the large corporations with which I have been connected there is no longer any question about the increased efficiency that has come from the policy of providing better sanitary conditions, better compensation for accidents, and adequate pensions for old age. That is admitted. [Applause.]

These plans were gone into purely in a business spirit, believing that they would so knit together vast organizations of men and women, would so stimulate individual initiative and interest in work, would so strengthen and develop esprit de corps as to make it possible to increase business and increase earnings, and with the spirit of being willing to share such increased success with employees.

Where lack of interest formerly existed, where men were dull and listless, new life and interest has sprung up, and men vie with one another for improvement in their work. This means additional profits to the business, additional profits both to capital and to labor.

Among the number of unforeseen benefits at the beginning that have since developed and which we have followed, those above referred to have been for us more important than the lengthening of service of the average employee. In many lines of industry great waste exists through the constant changing of employees. A man or woman works a year or two in one business and then leaves to enter some other business for a slight increase in wage or better working conditions. The waste in this one practice alone has been enormous—enormous to the employer, enormous to employee. On the average, there is a distinct loss to a business in continually changing employees. There is no efficiency in business as effective as that which comes from a force of men and women who have worked together for a long time, who know one another, cooperate with one another, and who work as a compact, well-organized body. [Applause.]

Statistics clearly show that a substantial percentage of this waste can be eliminated where the business has adequate and proper accident and pension plans as a part of its methods for compensating employees. Considering the strides that have been made in recent years among the railroads and the industrials and in the business life of the country generally, in readjusting the method of compensating people so as to include, as a matter of just and proper compensation, sums to provide for accident and old age, it is surprising that our Government has done so little. In this respect, our Federal Government is not only far behind our business world, but is woefully behind practically all civilized Governments, for to-day Venezuela and Haiti and the United States are alone, I believe, as laggards in this movement, having no pension plans for civil employees. [Applause.]

Our Government has something over 250,000 employees in the classified civil service. The average salary is approximately a thousand dollars a year, possibly a trifle under. This means that there are a great many employees who receive a great deal less than this sum per annum, which means that for them to provide against accident and old age out of their pay is practically an impossibility.

During the four years preceding 1912, in the letter-carrier service in this city, there were seven deaths from accidents while on duty, and it is estimated there were 500 weeks of sickness as the result of accidents while on duty. In this service a man draws no pay while ill, even though his illness is the result of injury or exposure received while on duty in the Government's service. Men who meet with accidents while on duty in the post-office buildings through flaws in the equipment or through derangement of machinery receive no pay whatever while recovering from any such accidents. For instance, I was recently told of a letter carrier in a down-town office in New York who was injured through the breaking of a stool that the Government furnished him to sit upon. The injury kept him from work for over three months, during which time he received no pay.

Employees in this branch of the Government work who perform their duty faithfully year after year and finally reach old age, are no longer able to work, are obliged to retire from the service without any means whatever of support save as they may have been able to lay aside a few dollars during their period of service.

Working under such conditions as these is not conducive to efficiency. A man must necessarily have constantly in his mind that if he is injured physically he is also going to be injured financially, and if he is fortunate enough to live to old age he will be unfortunate enough to have little or nothing to live on in his old age.

This method of compensating employees has cost the Government through inefficiency far more money than it would have ever spent in providing proper compensation for accidents and pensions. [Applause.]

Statistics show that there have been over 90,000 voluntary resignations in a period of eight years among civil-service employees, mostly of men who have been in the service less than 10 years. This, of course, means that these men were young men, active men, men whom the Government really needed in its business, and that the men who remained were old men, less active, less ambitious, somewhat less efficient. The younger and more active men naturally sought other fields where their labors would be more properly compensated—where compensation covered not only service rendered day by day, but protection against accidents and provision against old age. This change has been more rapid in recent years because of the changing policy toward this matter by corporations of various kinds. The Government alone has suffered.

How can the Government, for instance, expect to recruit its ranks in the civil service with able and ambitious men when the great industrial concerns of the country are offering fairer, broader, more equitable terms of employment? And how can the men now in the service enter it with the zest and the interest that they should in order to give the Government the high order of efficiency necessary when they know that private concerns are the better recognizing their services?

My attention was recently called to the case of a man in this city who was appointed to the Post Office Department in 1862. He remained in the service for 50 years in good and regular standing. He has recently had to resign, owing to continued ill health, and is now dependent for support upon a daughter.

I would like to ask our Government, which is so zealously persecuting our large industrial and railroad organizations, if in any one of these concerns it can find an instance where an old and faithful employee, after 50 years of service, has received such treatment as this. [Great applause.]

At the present time the agreement between our Government and the post-office employees of this city, for instance, is, in effect, that if a man meets with an accident while on duty, even though the accident occurs clearly through the fault of the Government, he has absolutely no compensation or redress. He can not even bring a suit to recover damages.

Now, if any one of the large corporations that the Government is to-day proceeding against engaged its men on any such terms as these, the Government would be pointing to the practice as one of the great iniquities of the trusts. [Applause.]

The case is perfectly clear; the Government is wrong, and you are right. [Applause.] The wonder is that there should be any delay whatever on the Government's part in correcting the position it now occupies. Anyone familiar with the whole question can think of no reason whatever for delay, but some of us who have been studying this question and many other questions that have to do with governmental action realize that there are causes that account for the delay, and that these causes are deep-seated and must be removed as causes before the problem in which you are directly interested and many other problems in which our people are to-day interested can be properly solved.

One reason given for not adopting proper disability and pension plans on behalf of the Government is their cost. A reason like this from some of the Congresses that have recently been spending our money seems too ridiculous to treat seriously. [Laughter and applause.]

And so, as I said in opening, I am for your cause and for your method of furthering it, by arousing public opinion, by presenting the justice of your cause on every possible occasion for the consideration of our intelligent and thoughtful citizens.

There is no weapon so powerful in correcting evils, in bringing about better conditions, as aroused public opinion. Aroused public opinion alone has corrected more abuses in corporate management in the last 10 years than all the dissolution suits under the Sherman law. [Applause.]

Our people are preeminently successful, sensible, and intensely practical. They are beginning to realize the many incousistencies of our governmental policies in recent years. They are after the substance and not the form of things; they are already looking with suspicion on legislators who, for instance, will not lend a hand to enact a law to give pensions to civil employees, but who will lend both hands to enforce an old law in order to destroy corporations that are giving pensions to employees and in many other ways successfully meeting and coping with modern industrial problems in such a way as to bring the broadest and best results to labor, consumer, and competitor alike.

Your way out of your problem, the business man's way out of this problem, the country's way out of many of its problems is to send to our legislative bodies more unselfish and public-spirited representatives [applause], men with sufficient intelligence to cope with the economic questions of the day and solve them for the benefit of the whole people, and not for the benefit of themselves alone [applause]—above all, men of vision and patriotism who realize the magnitude of our country and the place it must take in the nations of the world. I thank you. [Great applause.]

Requiring Manufacturers to Certify to the Materials of and Place their Names upon the Products they Produce.

EXTENSION OF REMARKS

OF

HON. PHILIP P. CAMPBELL,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 21, 1914.

Mr. CAMPBELL. Mr. Chairman, under leave granted me to extend my remarks in the RECORD, I insert the following statement made by me before the Committee on Interstate and Foreign Commerce in urging a favorable report on the bill referred to:

Mr. CAMPBELL. Mr. Chairman and gentlemen of the committee, I introduced a bill in the Sixty-first Congress requiring manufacturers to place their names upon the products they produced. In the Sixty-second Congress I introduced a bill covering the subject, with an amendment to the old bill, to the effect that where it was impracticable to place the name of the maker on the article itself that the name might be placed upon the wrapper or the article containing it. In this, the Sixty-third Congress, I introduced a bill on April 17, which is H. R. 2970, requiring the name of the manufacturer upon the article or the wrapper container as might in any particular case be most feasible, and also, in addition to that requirement, requiring that the maker state the product of which the article is made, placing it upon the same standard as the pure-food law. I have had from the beginning no particular manufacturer in mind. I have had many in mind.

The shoe dealers are here, and it may not be out of place to say in their presence what I have had in mind in regard to the shoe trade. Every shoe dealer knows, and if the dealer does not know every wearer of shoes knows, that many shoes are sold that are made of a split leather or of an inferior leather that is braced up with some sort of treatment that breaks down as soon as it gets wet. The soles of many shoes are toned up with some sort of treatment that makes the sole look firm and sound until it gets wet, then it becomes soft and absorbent and is a source of cold and damp feet, resulting many times in serious illness to the wearer. In addition to that, manufacturers put out shoes that have, instead of leather, a product similar to paper for the insoles. I have made an investigation, so far as it has been possible for me to do so, and I have found that every shoe made of the character that I have described does not contain the name of the maker nor the place where it was made nor a statement of the nature of the product entering into the manufacture of the shoe; and I feel very sure that no manufacturer would place his name upon a shoe such as I have described.

Mr. GOEKE. Your motion would be that in the manufacture of shoes, the manufacturer should indicate somewhere on the shoe itself or boot, or whatever it might be, whether it contained anything other than pure leather?

Mr. CAMPBELL. Yes, sir; and it should also contain his name.

Mr. GOEKE. The manufacturer's name is frequently there, but not the material that the shoe is made of?

Mr. GOEKE. I want to get your idea on this a little bit further and see how far that would be practicable. Do you think it would be sufficient if the manufacturer stamped on the shoe or boot "Pure leather" or "Not pure leather"? Would that be sufficient, in your judgment?

Mr. CAMPBELL. That is a detail.

Mr. GOEKE. When you go on in your bill and state that he shall give the substance, that might be a pretty difficult thing to do, might it not?

Mr. CAMPBELL. Oh, no. He could say: "This is made of oak tan leather," or "The sole of this shoe is a composite made as a substitute for leather."

Mr. GOEKE. Under the terms of this bill would you not have to give the ingredients of that substitute, unless you designated particularly what should be put in the shoe?

Mr. CAMPBELL. That could be done as a label attached to the shoe—placed in the shoe.

Mr. GOEKE. It might be some secret process?

Mr. CAMPBELL. It might be, but the public has the right to know, just as the consumer of an article of food has the right to know, or the consumer of an article of medicine has the right to know.

Mr. GOEKE. I am trying to get at the practicability of the plan.

Mr. CAMPBELL. I think it is entirely practicable. I do not think any man has the right to filch money from the public with a product that is not what it purports to be and is not worth the money that it costs.

Mr. GOEKE. We do not disagree on that. I am not talking about that proposition. We all agree on that. The proposition I am trying to get at is how far it is practicable to state on the article itself the ingredients of the material from which it is made.

Mr. CAMPBELL. That is not practical on many articles; but it can be stated in connection with the article, as is done here on a certain pair of shoes. Here is a label that goes with a shoe, telling people all about it, what it is made of, and what its wearing qualities are, and all that sort of thing.

The CHAIRMAN. Do you think in order to make this proposition safe it ought to go that far?

Mr. CAMPBELL. It ought to go that far; yes.

When a shoe manufacturer can place a label or certificate like that I have just shown the committee, he can also state upon a similar label what the shoe is made of. There is nothing impracticable about it.

Now, to pass on to other matters, because the bill does not relate solely to the shoe trade, but relates to the products of manufacture generally; I can take up any branch of manufacture—buggies, harness, organs, pianos——

Mr. GOEKE. Before you go to that, let me ask you one more question about this tag proposition.

Mr. CAMPBELL. Yes, sir.

Mr. GOEKE. Do you not think it would be safer to require the shoe manufacturer, if this plan should be adopted or passed, to show upon the shoe itself, on the inside, for instance, what it

contains? It would be easy to counterfeit or forge these tags that are attached loosely.

Mr. CAMPBELL. I do not think it is impracticable at all to do that sort of thing. I have noticed this, that when a manufacturer establishes a reputation for an article and has a trade-mark, that he protects that trade-mark just as he would protect his diamonds, if he had any.

Mr. GOEKE. He has no trouble in putting that on?

Mr. CAMPBELL. He has absolutely no trouble in putting that on. If it is a liquid, in the form of a bottle of medicine, he gets his name connected with that in such a way as to protect what he regards as a valuable article of commerce. And there is no trouble about it. A manufacturer who has an oil that he puts up in bottles can imitate the manufacturer of patent medicines, if he wants to get his name out in connection with it.

The name can be blown in the bottle, and manufacturers do blow it in the bottle when they have an article that they are willing should go upon the market with their name and reputation. And manufacturers state what is in a product now, if it is an article of medicine or food, under the pure food and drugs law, and it has worked no great hardship, and from year to year it is becoming more and more advantageous and beneficial to the public.

The health conditions of the community are becoming better and better because poisonous articles of food and drugs are kept off of the market, because manufacturers of these products of food are required to state what they are composed of and place their name upon them. Many articles of food, however, do not contain the name of the maker nor his address, but do contain the substance of which the article is made. I am sure that what has come to my observation and experience has come within the observation and experience of almost every man who has mingled a bit and is a part of the great consuming public.

You will find advertised in catalogues buggies for $40, and the advertisement states that this particular buggy is like the buggies that you pay $85 for in the local market; and if you will just send them the $40 they will send you the buggy, and you will get a buggy for $40 that would cost you $85 from the dealer at home. The buggy comes. There is no name upon it at all, and in about three weeks the paint begins to come off and in three months the wheels, and the young man who expected to have a buggy that would last him a year or two has a broken-down buggy that was not worth 40 cents in the first place. He does not know where to have his wrongs righted. He has parted with his money and he can not get an answer to the letters that he writes with regard to it.

The manufacturer is absolutely unknown to him, and there was no certificate as to what the wheels were made of or whether the buggy was painted or simply touched up to make it look like paint. The same is also true of organs and of pianos. It has been discovered that pianos were put up in poplar boxes instead of the kind of hardwood usually used in the construction of pianos. Cheap, worthless pianos and organs are yearly placed upon the market at the cost to the public of millions of dollars, and the public is defrauded because the name and certificate of the maker are not placed upon their products, so the public can not hold him responsible for putting upon the market the spurious product that he does put upon it. The same thing is true in the manufacture of clothing.

The CHAIRMAN. Let me ask you, before you get away from buggies, organs, and pianos, what suggestion would you make as to the character of the label and scope of the label that would be put upon any buggy, organ, or piano?

Mr. CAMPBELL. The label that should be placed upon the buggy could be put upon a plate and state: "The wheels of this buggy are made of second-growth hickory; the hubs are hard maple. It is painted with such and such paint; the top of this buggy is made of leather; or, the wheels of this buggy are made of sap oak; one of the fellies is made of hard pine and the other made of poplar." The plate should state what materials enter into the construction of the buggy, and the plate should state the materials that enter into the construction of the piano or of the organ.

The CHAIRMAN. Take a piano, for instance, which is made of, possibly, 100 different sorts of things. That may be an exaggerated number, but no doubt the different materials that go into the making of a piano are numerous. Would you undertake to describe each particular article that went into the manufacture of the piano, or undertake in general terms to describe the wood of which they made the body of the piano, or the material of which they made the strings?

Mr. CAMPBELL. Offhand, I should think, the principal thing about a piano would be the wood of which the framework is made and the body was made, and the nature of the strings entering into it.

Mr. GOEKE. Do you think your bill is broad enough in language to require such statements?

Mr. CAMPBELL. I think so. If not, I will say this, Mr. Chairman, I have absolutely no pride of authorship in this bill. I am anxious for amendments that will improve the bill. What I want to see is the commerce of our country filled with articles that are what they purport to be.

Mr. GOEKE. I think we all agree on that subject and are trying to find some way to do it.

Mr. CAMPBELL. I say this: It is not an easy subject to deal with. I have been working on it for four years, and I think if I were rewriting this bill to-day that I could make some improvements in it over the copy that I prepared on April 17. I know that I have improved on it from time to time since it was first introduced some four years ago.

Another thing that I have had in mind is the matter of clothing. There are many articles of wearing apparel that are to-day made under conditions that are so insanitary that no one, with our present knowledge of the manner in which diseases are communicated, would wear any of these articles if it were known under what circumstances and conditions they were made. But the name of the maker and his address is not known. There is nothing to indicate who made this shirtwaist that is offered for sale at $1.49. There is nothing to indicate who made the undergarments for the child that are offered for 19 cents, and these articles of wearing apparel are purchased and put on very much to the danger of the health of the wearer in many instances. They are made in sweatshops. They are made under insanitary conditions that make it dangerous to have them as articles of commerce and of wearing apparel. My contention is that if the provisions of this bill were complied with we would rid ourselves very largely of the productions of the sweatshop. We would elevate manufacture in our country as a whole to the very high level that much of our manufactured products occupy to-day.

Mr. DECKER. It seems to me that that is the greatest part of all, to get a bill in any way to at all cover that. For instance, take it out there where you and I live. Supposing the dirtiest sweatshop that ever existed put a lot of goods out and stamped on them the name of the maker or where they came from. I have never been to New York; lots of people out there would not know any more about it after the manufacturer's name was on it. Have you any other suggestions? Can you suggest any other way of reaching it? I thought perhaps there should be some law requiring the strict inspecting of that kind of goods before they put them out.

Mr. GOEKE. That is in one of the bills, I think.

Mr. DECKER. That seems to me the hardest proposition of all.

Mr. CAMPBELL. That should be done, and I have no doubt it would materially promote the modern idea of maintaining the health of the community. It is a very difficult thing to deal with. We are dealing with avarice on the part of the man who uses the sweatshop. The manufacturer does not place his name upon them; but suppose he did, and gave the address, the factory inspector could look him up and inspect his factory. It is discovered that his products are made in these sweatshops. The bill would enable the inspector of factories to find out the conditions under which an article was produced.

The shoe dealer wants to be let alone, but he wants to be sure that his wife and children are not imposed upon by those who deal in other products of manufacture, just as those who deal in these other products of manufacture may want to be let alone, but they want to be sure that the shoes they get are what they purport to be, and it is a matter in which the whole community have an interest that rises far above the personal interest or convenience of a given manufacturer.

The CHAIRMAN. In connection with the clothing, Mr. CAMPBELL, I want to ask you what your suggestion is in reference to this: Your idea is not only to compel the manufacturer to put his name on the garment. For instance, you take a suit of clothes, an overcoat, and a pair of trousers. It is an easy matter for the manufacturer to put the name of his factory inside of that suit of clothing somewhere. In addition to that, what would you require as to the labeling of that suit of clothes or that overcoat so as to give the contents?

Mr. CAMPBELL. My bill requires that the label state also the nature of the material entering into the suit of clothes.

The CHAIRMAN. But take wool, cotton, or half wool and cotton, or shoddy or some other material.

Mr. CAMPBELL. Yes; let him state what it is.

The CHAIRMAN. There appears to be a difficulty not with reference to the clothing but with the goods of which the clothing is made, which is sent out in the bolt, for instance. How are you going to show the quality of the bolt?

Mr. CAMPBELL. Most of the goods that are now consumed are purchased ready to wear. Our mothers used to make our shirts and our trousers and all our clothes. They do not do it any more. My bill simply requires that the products that enter into an assembled article be labeled and holds the man who makes that article responsible for its contents. He is responsible for the body of the goods, for the lining, and for the making.

The CHAIRMAN. Take goods out of which tailors make clothing, which come to them in the bolt, unmanufactured, simply the goods. How would you label a bolt of goods? Would you put the label at the end of the bolt?

Mr. CAMPBELL. Yes; at the last end, just as it is now.

The CHAIRMAN. How is it possible for the label to follow the bolt until the bolt is entirely exhausted?

Mr. SNYDER. I am a merchant tailor. That is our object in being here to-day. We would like to have all the cloths that go into our business properly labeled, stating what they are composed of. That would be a very simple matter. Suppose we get a bolt of cloth 10, 15, or 20 yards. That cloth should be labeled by the importer.

The CHAIRMAN. Do you want to be heard here at length?

Mr. SNYDER. I just wanted to answer this one question. Then we could have a ticket, one similar to the tickets placed on these shoes, and have it put on the cloth by the dealer that we purchase our cloth from—the importers, for instance—and that ticket should state what these goods are composed of. We leave that ticket on there until the cloth is entirely cut up. We put it on the white end of the cloth, and we cut off to the end.

The CHAIRMAN. That was the question I was getting at, whether or not a bolt of cloth out of which men's suits were made, or silks, or calico, or any other article sold in the bolt to the merchant and measured out by him to his customers, whether that label could be put in a place where it would show for itself as long as the bolt lasted.

Mr. SNYDER. It can be done by stamping it on the whole length.

Mr. LAFFERTY. The bolt is all on the inside, and the tag is on the latter end——

Mr. SNYDER. The tag remains on there until every yard is cut. You will take the celebrated manufacturer of Clay, in England, for instance; he stamps his cloths every 3 yards; every suit pattern has a stamp on it.

Mr. LINDQUIST. But he does not put the percentage of wool on it, does he?

Mr. SNYDER. But he guarantees that—that it is first-class in every respect. But as far as the label is concerned, that would be a very different matter.

Mr. CAMPBELL. I am very glad to have that statement from Mr. Snyder in this connection. Now, what is said of shoes, and of buggies, and of wagons, and of harness, and musical instruments, and of clothing is equally true of the thousands of articles that are daily manufactured and enter into the commerce of our country. Since I took up the subject I have had many interesting articles sent to me dealing with the subject. It has been called to the attention of German manufacturers that the American people are beginning to take the view of manufactured products that long has been the custom in Germany. We are further behind in this particular than is any other country that pretends to be a great manufacturing and commercial country. Germany and France and England have long required the highest possible standard of every product of manufacture that enters into their commerce, and the manufacturer is held strictly to account for the nature of the article he produces, and he gives his name and address and holds himself responsible to the public for every article that he places upon the market.

The CHAIRMAN. What percentage, Mr. CAMPBELL—if you have any information about the subject—what percentage of clothing and the goods out of which clothing is made is misrepresented? I mean represented to be all wool, for instance, which is not all wool?

Mr. CAMPBELL. As a matter of fact, the nature of the garment is cunningly concealed by the gloss of finish and by the arguments in its favor by a good salesman; and I am very sure, as I am sure the chairman and every member of the committee is, that a very large percentage of the clothing worn to-day by our people is not what it purports to be. Much of the clothing that is purchased upon the assumption of the purchaser that he is getting an all-wool article is less than one-half wool and in many instances contains little or no wool at all; but it does contain a shoddy. The unfortunate thing about it is that the people who are least able to afford it are most imposed upon in this particular. A good-looking suit of clothes, at first glance, is advertised for $8 or $10. In many cases it is not worth one-half the money, because it does not contain any wool at all. It is a mere shoddy that will not last the wearer at all as he had supposed it would. He parts with his money, and he has had a few weeks' or, at most, a few months' wear of the article and it is gone—the first time it gets wet. I do not know what percentage there is.

The CHAIRMAN. Do you think it is a very large percentage?

Mr. CAMPBELL. I think it is a very large percentage; I should say much more than one-half, numerically speaking. I am very sure that among the people generally more than one-half of them are imposed upon in the matter of clothing; that they do not get what they think they are getting; and that they are simply cheated out of their money when they buy much of the clothing they do buy.

The CHAIRMAN. How would you go about including articles of jewelry, for instance, under a general bill like yours? That is a subject in which there is almost as much fraud as there is in clothing.

Mr. CAMPBELL. Perhaps more. I do not know whether the chairman was a Member of the House or not when the late Mr. Olmsted, of Pennsylvania, discussed the subject of jewelry upon the floor.

The CHAIRMAN. No; I was not.

Mr. CAMPBELL. He showed the gross frauds perpetrated upon the public in the manufacture of jewelry. Millions upon millions of dollars are taken from the public every year with spurious articles of jewelry that do not even contain a wash of what purports to be gold that is sold for gold—filled stuff—and, of course, the bill I have here applies to the manufacture of jewelry just as it applies to the manufacture of shoes or clothes. The certificate of the manufacturer should accompany and be on every article.

It is doubtful if that would stop entirely the frauds that are perpetrated in connection with jewelry, but it would help. I am not expecting the millennium during the time I am on earth, am not expecting that all species of frauds will cease, and that every practice in which the public is imposed upon will be stopped, but I do think that from year to year we have made much advancement toward the betterment of these subjects, and I think that the work that is now undertaken by this committee is but another step forward, and that if we raise the plane of manufacture in this country to a higher standard, we will put honest stuff into every article that is produced. Many manufacturers will produce cheap articles, but they should say so. There should be a discrimination easily made by the purchaser when he goes in to buy between the article that is cheap and spurious and the article that is made of the best materials of which such articles are made.

Mr. LAFFERTY. Have you ever considered the question, Mr. Campbell, as to the advisability of including in your bill a short provision giving the Secretary of Commerce the power to prescribe rules and regulations necessary for the practical working out of this act?

Mr. CAMPBELL. I think that should be done. I think in the operation of a law of this character that it will be discovered that many things were not anticipated by the lawmakers, and those who have to do with the enforcement and execution of the law should be authorized to make, from time to time, such rules and regulations as are proper.

Mr. LAFFERTY. Reasonable rules and regulations?

Mr. CAMPBELL. Such reasonable rules and regulations as are necessary for the enforcement of the provisions of the law itself.

Mr. LAFFERTY. Is there any reason in your mind why an act of this character—which I heartily approve, I will say by the way—should not be made to include all articles of commerce and require full disclosures, as far as practicable, as to their contents? I mean thereby articles of food and drugs, as well as articles of other kinds; and has it ever occurred to you that this section 1 of your bill might be construed to include food and drugs?

Mr. CAMPBELL. If it does not include food and drugs, it comes short of the intention that I had when the section was drawn, because I fully intended it should include both food and drugs, and other articles.

This section reads:

It shall be unlawful for any person, firm, company, or corporation to place upon the market for interstate or foreign commerce any product of manufacture without accompanying the article with a certificate setting forth the material or materials of which the article is made, etc.

The words "material or materials" there might be held to include only clothing, boots, shoes, jewelry, etc., and, to make it clear, you might say "ingredients," because that is the term there applied.

Mr. CAMPBELL. I think the word "ingredients" might well be inserted there.

The CHAIRMAN. I would not suggest that the word "ingredients" take the place of "material," but that it be added.

Mr. CAMPBELL. That it be added is what I assumed the gentleman from Oregon suggested.

Mr. GOEKE. What effect would that have on the existing drug and pure-food law?

Mr. CAMPBELL. It would be supplemental to that law.

Mr. GOEKE. Would it not weaken rather than strengthen that law? Is it not stronger now?

Mr. CAMPBELL. No; it lacks just that element of strength. The manufacturer of many articles of food now does not place his name upon the article, and I have had more letters of indorsement, I think, from the manufacturers of articles of food products who do place their names upon their products than from any other kind of manufacturers, and they say that all manufacturers of food products should be required to place their names and certificates upon them or upon the packages containing them.

Mr. LAFFERTY. Then, if this covered drugs, it would certainly add to the strength of the present so-called pure food and drug act, because it would require a statement of the materials entering into the compound?

Mr. CAMPBELL. Yes, sir.

Mr. LAFFERTY. Which we do not have now. People buy drugs and compounds every day and do not know what enters into them.

Mr. CAMPBELL. I have taken much more time than I had intended. I simply want to say this. I have not introduced this bill and am not urging it out of any unfriendly feeling toward any industry, any manufacturer, wholesale or retail. I have prepared and introduced this bill and have been for years urging its passage, because for years I have believed it would be beneficial to our whole country—the manufacturer, the wholesaler, and the retailer, as well as the public generally—and I believe that every shoe dealer and every clothing dealer and every implement dealer and every drug dealer and every dealer in food will occupy a more secure position in the community in which he lives, and hold the regard of that community and the trade of that community better by having every article made by a reputable manufacturer who is not afraid to have his reputation and the reputation of his industry stand upon the article that he produces by having his name and reputation go with it to the wearer, to the user, and to the consumer.

I thank you, Mr. Chairman.

Mr. LAFFERTY. I have just one more question before you sit down. Your bill is very broad, and I heartily favor the bill. I should like to see it favorably reported, or one similar to it. I should like to know what you think of this proposition to require canned fish, or salmon, which we can in Oregon, to have the year on the label in which they are canned or packed. I should like to have your opinion on that point.

Mr. CAMPBELL. That might be done, and that brings up another matter. The wholesale grocers were against my bill the first time it was introduced. The association in their annual convention denounced the bill. The next year the annual convention indorsed the bill. Many large grocers have their own names placed upon the article; the name of the canner is not upon it, and in many instances the name of the wholesale grocer appears upon the can instead of the name of the canner.

Mr. LAFFERTY. Your bill authorizes both names now?

Mr. CAMPBELL. Both names now; and the attitude of the grocers has very materially changed toward the bill in the last three years.

The CHAIRMAN. That brings up a question I wanted to ask. I think it is true that a great many articles of commerce are manufactured where the name of the manufacturer is not placed upon it, but the jobber has a trade-mark of some kind that is placed upon it for him by the manufacturer, or placed upon it by him after he obtains it. How would you treat that situation? Would you require the original manufacturer to put his name upon the article, and if the jobber wanted his trade-mark on it would you put it on it?

Mr. CAMPBELL. Certainly. The bill provides for that. I thank you, gentlemen. I have taken up a great deal of your time.

District of Columbia.

EXTENSION OF REMARKS
OF
HON. FRANK O. SMITH,
OF MARYLAND,
IN THE HOUSE OF REPRESENTATIVES,
Friday, January 22, 1914.

Mr. SMITH of Maryland. Mr. Speaker, I ask unanimous consent for leave to print in the RECORD a few remarks on a bill (H. R. 12175) I have just introduced relative to the District of Columbia as a municipality of the United States and concerning the expenses thereof.

Mr. Speaker, I have just introduced a bill of the following tenor:

A bill relating to the District of Columbia as a municipality of the United States and concerning the expenses thereof.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled—

SECTION 1. That the revenue from every source received or collected by the District of Columbia, the municipal corporation created by Congress for purposes of government within the District that is the seat of government of the United States, is hereby declared to be revenue of the United States derived from the District of Columbia, and it shall be covered into the Treasury of the United States.

SEC. 2. That Congress, for the expenses of the municipality of the District of Columbia, shall appropriate from the Treasury of the United States the amount in which the estimates relative to the municipality, made and transmitted to Congress as provided by law, shall be approved of by Congress.

SEC. 3. That the provisions of this act shall become effective on the 1st day of July, 1915.

In connection with this bill I wish to put into the RECORD, for the benefit of persons interested in the subject and as explanatory of the bill, an article which I have in my hand on the relation of the District of Columbia to the Federal Government. This article was prepared with special reference to showing the connection which ought properly to exist between the District Government and its revenues and the Federal Treasury. The article was given a week or two ago to the Washington Post to be used, either as a signed communication or as the basis of an interview on the subjects therein discussed; but the Post has not found it practicable to use the article in either capacity. The article strikes me as a very clear and convincing statement about a subject of present interest connected with matters of legislation now pending concerning the District of Columbia.

This article, Mr. Speaker, under the leave which I have to print, I will incorporate in the RECORD as part of my remarks and thereby afford to my colleagues an opportunity to read what I am sure will be helpful to them in their further consideration of the subject to which the bill I have just introduced addresses itself.

The article is as follows:

HALF-AND-HALF PLAN NOT ESSENTIAL TO DISTRICT'S WELFARE—LOCAL SELF-GOVERNMENT, IN ITS PROPER SENSE, CAN NOT BE HAD AT THE SEAT OF THE NATIONAL GOVERNMENT—CONTROL, CARE, AND GOVERNMENT OF THE DISTRICT IS A NATIONAL MATTER.

All revenue raised by taxation in the District ought to be covered into the Treasury of the United States, and Congress, from the Treasury of the United States, ought to make all requisite and needful appropriations for the municipality which is the seat of Government of the United States.

Taxes in the District, levied according to a fixed rate upon property valued according to just principles of assessment, ought to be revenue of the United States, collected from the people of the District as due to the Government under which they live, and the taxes so levied and collected ought to constitute for the people of the District a full discharge of all local liability to the United States for good government in the District.

John Altheus Johnson, of the Washington bar, discusses the District of Columbia as the seat of the Federal Government.

EDITOR WASHINGTON POST:

The people of the District of Columbia occupy a position in the citizenship of the country which is both peculiar and anomalous. A community of American citizens, without suffrage, without power to control the local government under which they live, and without a voice in that government. Such a situation is certainly without a counterpart in a country in which the basic principle of government is, and from the beginning has been, that a people have the right to govern themselves; to manage their own affairs, either directly or through agents of their own choosing.

But this anomalous condition in the District of Columbia is not a thing of accident or oversight. Its cause, and likewise its vindication, is to be found in the very structure of the Federal Government. When the makers of our dual form of government were at work, they recognized that the State and the United States were to be the complement, the one of the other, each sovereign and supreme within its own sphere and jurisdiction, but each correlating the other, the two together necessary to the complete whole. But should the Federal Government, a Union of States, have its capital in territory over which a State had authority or dominion? Read the provision that was made,

and written into the fundamental law, concerning a place for the Capital City which the States and the people of the States desired for the Government they were making:

"The Congress shall have power to exercise exclusive legislation in all cases whatsoever over such District (not exceeding 10 miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of Government of the United States."

In that provision there is no possibility of statehood or of dual or divided authority, but power over the seat of Government so plenary that it is well nigh absolute, equaling the powers of a State legislature and of the National Legislature combined, and that power to be exercised by the Congress, which represents the States and the people of the States; and into that Congress not even a people in training for statehood have ever had a vote, although permitted to have a voice when the deliberations of the Congress affected their own affairs. Into that Congress and into the Federal Government may come future States and their peoples; indeed, as to the vast domain belonging to the United States where States did not exist, except potentially, it was expressly written into the Constitution that Congress should have the power to make "all needful rules and regulations," thereby providing for the care and the government necessary to the making of future States; but the district which should become the seat of the Federal Government was made to be void of power in that Government which was composed of States and which derived its powers from States and from the people of States. In a State the people can by their suffrages dominate and control every part of the machinery of their government, remaking it, if need be, from top to bottom. In the District of Columbia the people of the District are altogether devoid of political power and can exercise none, unless it be given to them by a government of which they are not factors and into the control of which they can not enter. Autonomous government by the people of the District of Columbia is not possible under the Constitution of the Federal Government, and why should a person in the District clamor, like a child for a plaything, for what he sees in use by his countrymen in the States? Why cry for something which is beyond his effective use and which, if given to him in form, would, with all its fruit, though fair to the eye, be if touched by the American Congress as tasteless to him and and as deceptive as the apples of Sodom. The States and the people of the States are supreme in the District of Columbia, the seat of their National Government.

In the District of Columbia in 1871 there existed the city of Washington and the city of Georgetown, each a municipal corporation, with a mayor and common council, and there existed also the levy court, which by reason of its functions outside of Washington and Georgetown was likewise a municipal corporation; but all those agencies of government in the District were abolished in that year (act of Cong. of Feb. 21, 1871; 16 Stat. L., 419–429) and the District of Columbia was itself constituted by Congress a municipal corporation and provided with a governor and legislative assembly. Congress put the governor and legislative assembly out of business in 1874 (act of June 20, 1874; 18 Stat. L., 116–121) and put the municipality provisionally into the hands of three commissioners as a governing board. Later, by act of June 11, 1878 (20 Stat. L., 102–108), the system was established, which has ever since obtained, of administering the affairs of the municipality by a board of three commissioners.

By this act of 1878 the commissioners are required, among other things, to submit annually to Congress, through the Secretary of the United States Treasury, an itemized statement and estimate of the amount necessary to defray the expenses of the government of the District of Columbia for the next ensuing fiscal year, and also a statement showing in detail the work proposed to be undertaken by them during the fiscal year and the estimated cost thereof, and in the act is the following provision (20 Stat. L., 104):

"To the extent to which Congress shall approve of said estimates Congress shall appropriate the amount of 50 per cent thereof; and the remaining 50 per cent of such approved estimates shall be levied and assessed upon the taxable property and privileges in said District other than the property of the United States and of the District of Columbia."

The provision just quoted is the "half-and-half plan," so called, according to which Congress has appropriated for the government of the District of Columbia since 1878.

As already stated, it was in 1871 that Congress made of the District of Columbia a municipal corporation in whose name and authority local government in the District was to be administered, blotting out the existence and authority of the several municipal corporations which theretofore had exercised governmental functions in different parts of the District; and ever since 1871 the corporation known as the District of Columbia has been the sole and only municipal corporation within the limits of the territory that constitutes the seat of the Federal Government.

The "half-and-half plan," so called, exhibits the District of Columbia not only as a municipality for local government in the District of Columbia, but as having a treasury of its own, as municipalities usually have, to be supplied by local taxation; and then appears the fact that this municipality, for the purposes of local government, seeks and receives from the Treasury of the United States aid to as large an extent as the fund raised by its own local taxation.

At once, by reason of the very terms in which we are expressing ourselves, arises a necessity for entering upon what the advocates of the half-and-half plan call a "campaign of education." The people of the States know that municipalities, which are only agencies for local government in some phase or other, bear their own expenses, and that it would not be tolerated that the people of a local community should be chronically calling on the treasury of the State for subsidies to help maintain, exploit, or develop themselves locally. And when you have explained the situation in the District of Columbia in such a way as to show that the expense of maintaining local government ought not wholly to fall upon the private owners of taxable property in the District, but ought, in part, to be borne by the General Government, whose property of every kind, including the property of the District of Columbia, is wholly exempt from taxation, then you are under the necessity of further explaining what proportion of the expense ought to be borne by the General Government. But in the District of Columbia it is not possible to separate or disentangle the common interests of the local and the General Government, or, viewing the two Governments as separate and distinct the one from the other, to apportion between them with exactness the expenses of the municipal upkeep. Public and private property alike, to a large extent, are served by the same facilities. And if a proportion were fixed as proper at one time, regard being had to conditions and circumstances then existing, the proportion would need, on similar considerations, to be refixed at another time.

It might therefore be a thing of some difficulty to educate the people of the country to a proper appreciation of the half-and-half plan as a relief measure for the people of the District of Columbia, the matter appearing in the aspect of the United States paying money into the treasury of the District to defray for the people of the District the expenses of local government in the District.

But let us for a moment clear the situation of all such notions as imply that the people of the States and the people of the District are in a kind of partnership for the government of the District, and that rights and equities exist which it is necessary to consider carefully and adjust, lest in such government one of the partners should get the better of the other. Suppose it were made to appear to the people of the States that there was no municipal treasury in the District of Columbia; no municipal government except as an agency of the Federal Government, the Government of their own creation; that into the Treasury of that Government went all the money that was raised by taxation in the District of Columbia; and that from that Treasury must come all the funds that go to the development, the care, and the government of their Capital City and the Federal municipality. Think you, under such circumstances, the District of Columbia would suffer, or the Capital City, which is growing and expanding in every part of the District according to the plan originally designed for the city of Washington, whose boundaries as a municipal corporation no longer exist, the very name of Boundary Street having become Florida Avenue?

Suppose a legislature were created by Congress and put into the hands of the people of the District for legislation local to the District, would not its acts, no matter on what subject, if not pleasing to Congress, be by Congress nullified, set aside, and modified at pleasure? Would it not soon, if suffered by Congress to continue to exist, be so stripped of power that nothing would be left to it except the remains, perhaps, of a little of the "police power" of which Congress for the United States is possessed in the District of Columbia? And of that power the Commissioners of the District, under the present system of government, have been given not a little, enabling them in some cases to make regulations which amount to legislation of a pretty substantial sort. Is it possible to detach and say of any part of legislation in the District of Columbia that it is non-Federal? Is not the whole District of Columbia and everything within it, so far as government and legislation are concerned, Federal in character? And why should people in the District cherish the notion that the District is or can be a local self-governing municipality, to be managed by the people of the District, in the government of which, however, they would want the help, pecuniarily, of the United States Government? Why not recognize that Washington as the Capital City of the United States is not like any other city, in that its purposes and character as the Federal City prevent, at the hands of the people who reside in it, either local control or local development, in the sense in which we talk when speaking of other American cities? In the States municipal government is the means by which the State permits to the people, within the scope and purview of the charter or powers granted, the right to manage their own local affairs. In the District of Columbia municipal government is the means by which the United States governs the District which is the seat of the Federal Government.

Does not Washington, planned in the beginning for the seat of government of the United States, stand already as a Capital City unrivalled among the nations of the earth, developing according to a scale so magnificent that the realization of it would have remained but a dream except for a city planned for and to be maintained by a Government that should grow to be both great and powerful? And what better typifies the magnitude, the power, and the dignity of this Government, composed of Commonwealths which stretch from ocean to ocean, than the magnificent city that unfolds itself at its Capitol?

When the owners of land in the District outside of the original cities of Washington and Georgetown, to meet the requirements of a growing population, began to plat and to subdivide and to record their subdivisions, did not Congress speak by an act entitled "An act to regulate the subdivision of land within the District of Columbia" and say:

"SEC. 5. No future subdivisions of land in the District of Columbia without the limits of the cities of Washington and Georgetown shall be recorded in the surveyor's office of the said District unless made in conformity with the general plan of the city of Washington." (Act of Aug. 27, 1888; 25 Stat. L., 451.)

And did not Congress thereupon direct that the surveyor of the District be required to establish and permanently mark points of reference for the extension of streets and avenues throughout the District?

And, as if that were not enough, did not Congress a few years thereafter, by an act entitled "An act to provide a permanent system of highways in that part of the District of Columbia lying outside of cities," authorize and direct the Commissioners of the District "to prepare a plan for the extension of a permanent system of highways over all that portion of said District not included within the limits of the cities of Washington and Georgetown"?

And in this connection direct as follows: "The highways provided in such plans shall not in any case be less than 90 feet nor more than 160 feet wide, except in cases of existing highways, which may be established of any width not less than their existing width and not more than 160 feet in width."

And was not the direction also "to lay out at the intersections of the principal avenues and streets thereof circles or other reservations corresponding in number and dimensions with those now existing at such intersections in the city of Washington"?

And was not the map thus prepared, showing the plan of the streets and avenues of the Capital City as extended throughout the limits of the District of Columbia, directed to be filed and recorded in the office of the surveyor of the District of Columbia; and did not Congress, having regard to such map, declare "no further subdivision of any land included therein shall be admitted to record in the office of the surveyor of said District, or in the office of the recorder of deeds thereof, unless the same be first approved by the commissioners and be in conformity to such map"? (Act of Mar. 2, 1893; 27 Stat. L., 532–537.)

Many cities contain large factories and have within their limits industrial plants of many kinds, on which they largely thrive, but in Washington smoke is declared to be a public nuisance, Congress, by an act entitled "An act for the prevention of smoke in the District of Columbia," having declared:

"That on and after six months from the passage of this act the emission of dense or thick black or gray smoke or cinders from any smokestack or chimney used in connection with any stationary engine, steam boiler, or furnace of any description within the District of Columbia shall be deemed, and is hereby declared, to be a public nuisance: *Provided*, That nothing in this act shall be construed as applied to

chimneys of buildings used exclusively for private residences." (Act of Feb. 2, 1899; 30 Stat. L., 812.)

Other cities, managed by local constituencies, may permit the erection of such freaks in architecture as buildings that rise in height to 40 stories and more, but for Washington Congress, by an act entitled "An act to regulate the height of buildings in the District of Columbia," declared in section 4 of the act:

"In no case shall a building exceed 90 feet in height on a residence street nor 110 feet on a business street, as designated by schedule approved by the Commissioners of the District of Columbia, except on business streets and business avenues 160 feet wide, where a height not exceeding 130 feet may be allowed." (Act of Mar. 1, 1899; 30 Stat. L., 922.)

By the act of June 1, 1910, "buildings that shall front or abut on the plaza in front of the new Union Station are not to exceed 80 feet in height, and a height of not exceeding 160 feet is permitted to buildings on the north side of Pennsylvania Avenue between First and Fifteenth Streets NW." (36 Stat. L., pt. 1, 452–455.)

What local community ever conceived for execution, or sought to execute, a city on the plan of that designed for the seat of government of the United States? Would it be possible for a local constituency to have charge of, maintain, and govern the Capital City of the American people?

But the House of Representatives is becoming dissatisfied with the "half-and-half plan" of appropriating for the expenses of the District of Columbia, as is evident from a provision inserted by the House Committee on Appropriations in the District appropriation bill which is now before the House for consideration (bill H. R. 10523, 63d Cong., 2d sess.), that provision being as follows:

"SEC. 8. That to the extent the revenues of the District of Columbia for the fiscal year 1915 shall exceed the proportionate part of the appropriations made in this or any other act and chargeable against said revenues the same shall be covered into the Treasury of the United States to the credit of 'Miscellaneous receipts.'"

The dissatisfaction in the House of Representatives is further manifested in the Crisp bill, so called (bill H. R. 9417, 63d Cong., 2d sess.), which seeks to repeal outright the half-and-half plan of appropriating for the government of the District. Whatever the reasons are that have been given in support of the Crisp bill, the underlying principle of the bill is correct. That bill, rephrased, is now on the calendar of the House of Representatives, with a report from the Committee on the District of Columbia recommending its passage with an amendment. The amendment proposed is that the estimates which are made to Congress relative to appropriations for the District of Columbia shall not, for any year, exceed the revenues of the District for that year. A better amendment would be a provision that all taxes hereafter assessed and collected upon property in the District of Columbia shall be revenues of the United States and be covered into the Treasury of the United States as revenue derived from the District of Columbia.

Such an amendment would leave untouched and wholly unaffected the form of government established for the District by the act of June 11, 1878. The Commissioners of the District, appointed under that act, would, as heretofore, submit their estimates; the Congress, as heretofore, would approve or not, just as it pleased, and, as heretofore, would appropriate according to its approval, the appropriating act omitting, of course, such words as the following, which are now used, namely, "the other half [of the following sums] out of the revenues of the District of Columbia."

All taxes collected by the District are now, as a matter of fact, as required by the act of June 11, 1878, deposited with the Treasurer of the United States, but are not technically "covered" into the Treasury as revenue of the United States.

If a State were to appropriate to itself funds which a municipality of its own creation had raised, and the municipality was thereby embarrassed in the discharge of the obligations it had lawfully incurred, the question might arise, at the instance of the parties dealing with the municipality, whether such act on the part of the State was permissible in view of the provision of the Federal Constitution that "no State shall pass any law impairing the obligation of contracts"; but no such question could arise in connection with Congress and the District of Columbia, because Congress is under no such inhibition, and because, the District deriving from Congress its authority to make contracts, Congress would see to it that all contracts by and in the name of the District, properly made, were properly fulfilled. Indeed, by express act of Congress, the Commissioners of the District of Columbia "have no power to make contracts to bind said District to the payment of any sums of money except in pursuance of appropriations made by law, and not until such appropriations shall have been made."

The District of Columbia as a municipality, unless authorized by Congress, can neither raise, hold, nor expend money; and funds belonging to the treasury of the municipality, raised by taxation in the District, are as absolutely under the control of Congress as if the name of the municipality did not figure in the matter. The officers and agents of the municipality have no other or greater authority than is conferred upon them by Congress. The municipality of the District of Columbia is but an agency of the Government of the United States created by Congress for purposes of government in the territory that constitutes the District of Columbia.

The assurance in the present system of administrative government that the needs and wishes of the District, considered locally, shall be brought to the attention of Congress, whether in estimates for appropriations or otherwise, is to be found in the following provision of the act which established for the District the present form of government, namely:

"The two persons appointed from civil life shall, at the time of their appointment, be citizens of the United States, and shall have been actual residents of the District of Columbia for three years next before their appointment, and have, during that period, claimed residence nowhere else." (20 Stat. L., 103.)

It would be no change of the system to make the civilian commissioners elective instead of appointive; and Congress, if it were so desired, might very easily and very properly make such a change and permit the people of the District by ballot to select the two civilian commissioners; and then, as heretofore, the commissioners could make their recommendations; but, as heretofore, their favorable recommendation would not be a guaranty of the passage of a measure nor, on the contrary, would their adverse report on a measure be a guaranty of its nonpassage.

It would seem also, along this line of bringing to the attention of Congress the needs and wishes of the District considered locally, that the people of the District might very properly be permitted to select by ballot a Delegate whose voice in Congress and among the Members thereof on affairs touching the District would be the voice of one specially indorsed by the people of the District as authorized to speak in their behalf.

Until the Congress shall plainly write into the statute books the true and basic relation of the District to the Federal Government involving the maintenance within the District of local or municipal government by the United States all expenses thereof to be paid from the Treasury of the United States, and, as an incident thereof, the perception by the United States of all revenues raised by taxation in the District, there will be disputes and difficulties about the situation; about the proportion of expenses proper to be borne by the United States and by the District, respectively, and about the rate of taxation in the District as related to such proportion.

A general rate upon property, according to which persons may properly be required to pay taxes to the Government under which they live, would be much more easy to fix than the relative and varying proportions in which in the District of Columbia public and private property, respectively, should be assessed for the expenses of government in the District. If the rate of taxation in the District, fairly fixed, be stable, and if the valuation of property in the District for taxation be according to just principles of assessment, then there ought to be no special cause for concern on the part of property owners and taxpayers in the District.

Congress in considering appropriations for the District might not indorse, to the extent of making an appropriation therefor, every scheme proposed in the interest of social reform or civic uplift or local development, but every work or enterprise of a municipal character entered upon in the District of Columbia needs the approval of Congress, with an appropriation, and the character of all municipal improvements in the District is determinable by Congress. It would seem, therefore, to be proper, the rate of taxation remaining stable and uniform, that Congress should provide the funds for all such varying improvements and enterprises as in a self-governing municipality find expression from year to year in varying tax rates. Or at the utmost, if the work or enterprise were of a kind of which Congress would approve and still of a kind the expense of which ought to be wholly borne by the District considered as a local community, then Congress knowing the estimated cost thereof might, by a species of plebiscitum, inquire of the people of the District whether they wished a special levy to be made for the proposed work or enterprise; and, if they voted in favor of the tax, Congress could make the requisite appropriation, the special tax, however, being an item additional to the regular and fixed tax rate and going, like all other taxes in the District, into the Treasury of the United States. It would seem to be proper for Congress, if it so desired, to provide a means by which the people of the District could definitely make known their will, if Congress in any particular matter, for the purpose of determining its own action in the premises, should desire to know what that will was.

The tax rate upon real estate in the District as prescribed in the act of June 11, 1878, was fixed with reference to a maximum rate, as follows:

"That the rate of taxation in any one year shall not exceed $1.50 on every $100 of real estate not exempted by law: *Provided*, That upon real property held and used exclusively for agricultural purposes, without the limits of the cities of Washington and Georgetown, and to be so designated by the assessors in their annual returns, the rate for any one year shall not exceed $1 on every $100." (20 Stat. L., 105.)

The rate was made absolute (agricultural land disappearing from view) by the act of July 1, 1902, which is still the law, as follows:

"That hereafter all real estate in the District of Columbia subject to taxation, including improvements thereon, shall be assessed at not less than two-thirds of the true value thereof, and shall be taxed 1½ per cent upon the assessed valuation thereof." (32 Stat. L., pt. 1, p. 616.)

Under the conditions of the Federal Constitution it is not permitted to the people of the District of Columbia to exercise more of local self-government than merely to be able to make their wishes known to the Congress of the United States, whose action in the premises is beyond control, one Congress, however, not being able constitutionally to bind or control another.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. BARTON. Mr. Speaker, the Postal System of this country is one of the largest business enterprises in the world. It is the only branch of the Government that is self-sustaining. This system is the pride of the American people, and it should be the desire of all to further extend its service and better its efficiency.

We pride ourselves on the splendid organization that we have builded, and in this day of the exceeding high cost of living we should not in making up this budget forget the men who are responsible for the splendid service given.

My colleague has stated that there have been 85 changes or advances in the various classifications, all receiving $100 advance except 3, and among the 3 not receiving their just advance is the rural letter carrier.

His city brother, performing the same kind of work where he is not exposed to such an extent to the elements, is given a uniform and an allowance of three or four hundred dollars for equipment, but the rural carrier, under much greater ad-

verse conditions, must provide his own conveyance, and in this day in handling the parcel post it means different and more expensive equipment, which he out of his own funds must provide. It has developed in the course of this argument that practically his minimum expense in equipment, feed for his horses, and natural incidentals that he can not have more than $600 for a livelihood. He goes through rain and storm, through snow and mud. He does his duty like the soldier he is, and, gentlemen, compare his wages with that of other arms of the Government service or with that of the employees of other big business and you will know that he is underpaid. The increase asked for is only $100 per annum. This does not equalize him with his city brother who is rendering exactly the same kind of service. The men he serves pay first-class postage on most of their business. Their business makes the surplus in this great Post Office Department besides taking care of the deficiency created by the second-class matter sent from the cities, and I believe in pure justice that he should have this $100 increase, thereby taking one small step in adjusting the great inequality now existing.

I also hope the Reilly amendment will prevail. We have demanded that corporations make provision for their injured, and in other departments of the Government we make this provision; and while I know it will meet with opposition, I shall vote for the amendment and believe that the good judgment of the House will write it into law.

Underpaid Rural Carriers Hauling Tons.

EXTENSION OF REMARKS
OF
HON. ALBERT JOHNSON,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. JOHNSON of Washington. Mr. Speaker, can it be possible that this paragraph granting carriers on rural routes a picayunish increase in pay of $50 a year is being stricken from the Post Office appropriation bill by the advice and with the consent of the Democratic Party? The party, it seems, has ordered that this increase shall not be, and the party will pay the penalty.

The gentleman from New York [Mr. FITZGERALD] has just said:

> There are a great many places where the men (rural carriers) are living in a luxury they never heretofore dreamed of living in.

The gentleman from New York adds—

> And that is not alone true of the rural carriers; it is true of the city carriers. * * * It is a farce to compare the conditions of the carrier in a city like New York or Chicago with the conditions in a city of 100,000 or of 50,000 population. The cost of living is infinitely different. The conditions of life are infinitely different.

Mr. Speaker, I believe that statement will be resented by city and rural carriers everywhere. With all due respect, I desire to say that I know it does not fit the situation as regards any carrier on any route in the far West.

It is a fact, Mr. Speaker, that on one route running into Shelton, Wash., copper miners are shipping ore to the smelter at Tacoma by parcel post, finding it cheaper than to freight the ore, but breaking the back of the carrier.

On another route, running north from Moclips, grocery men are shipping canned provisions, sugar, and other commodities in such quantities that the carrier is simply staggering under the load. This rural carrier went into the service under bond, taking a contract which called for one horse and a long trip over a hard trail clear up into the Queets country. Now he is required to use five horses; and hay is $25 a ton out there, and oats $32 a ton. Why, Mr. Speaker, that man is not receiving enough salary to pay for the feed of his horses. And your Democratic Party refuses to permit the trifling increase provided in this bill.

Your spokesman, the gentleman from New York [Mr. FITZGERALD], says:

> I do not believe, Mr. Chairman, that this is the year for the Democratic Party to be indulging in wholesale increase of compensation. This provision only meant a difference of $50 a year to each individual, but it meant $2,700,000 added to the expense of the postal department. Among the pledges made by the Democratic Party in the last campaign, sometimes somebody should remember that one of them was a pledge to conduct the Government economically

Great guns! New embassadorial situations provided in Paraguay and Uraguay, just as easy as one, two, three—no word said as to economy—and then when it comes to adding a trifle to these rural carriers' pay—the addition should be $300 a man, instead of the poor little $50 which has been proposed and knocked out—we are met with a cry of economy.

Let the rural carriers spread the news. And, believe me, they will. Let the rural route man, running out of Puyallup, or any other town, with three horses, two wagons, and $400 to $500 necessary equipment expenses out of his $1,100 salary for a hard 25-mile route, tell that a sudden notion for Democratic economy, hit him at this particular point of the Post Office appropriation bill. Let him carry that news, along with the messages of good cheer; along with the letter from the struggling boy away at school or at work; along with the agricultural documents which tell how to achieve success at this and that; along with the franked speeches of statesmen, who have hitched their wagons to the stars and forgotten the underpaid employees of the Government; along with the pesky little packages of free seeds from this great and generous Government; along with the 50 pound packages of ore; along with the 10-pound salmon, the tub of sauerkraut, the sack of apples, the samples from the mail-order houses, and all the other things that go and come under the new 50-pound parcel-post rule.

Mr. Speaker, under that rule the rural route men are carrying tons, not pounds, and they are denied an increase in pay of $50 a year. What does this overwhelming Democratic majority think of it?

Post Office Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. AUGUSTINE LONERGAN,
OF CONNECTICUT,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. LONERGAN. Mr. Speaker, the bill under consideration in the main meets with my approval. It has many excellent features. It liberally provides for our rapidly expanding and efficient Postal Service. The section providing for compensating employees for injuries received, without their neglect, while on duty, and similarly for the payment of sums of money to their representatives in case of loss of life during hours of employment, is in line with modern progress.

The paragraph providing for experimental village delivery service in towns and villages having post offices of the second and third class that are not by law now entitled to free delivery service should stand. The residents of the country have the rural free delivery and those of the larger communities the city free delivery. Residents of many of our towns and villages do not have free delivery service, but they are entitled to it. The fact that they do not reside in towns with a population of 10,000 or over or that the post-office receipts in their town did not amount to $10,000 at the close of the fiscal year ought not to preclude them from free delivery service. The experimental service is working satisfactorily and should be continued.

I note that an increase for rural free delivery carriers is provided for, but it is insufficient. In the district which I have the honor to represent six carriers report as follows:

Length of route and net annual income.

21 miles	$486.00
22.3 miles	390.54
21.5 miles	497.90
24.3 miles	712.00
22.1 miles	476.93
24.8 miles	649.40

As the laborer is worthy of his hire, the next appropriation bill from this committee should provide more liberally for these men. Day after day, in fair weather and in stormy, from morning until night, they serve the patrons along their routes, and it is only justice that the faithful service of these daily messengers should be adequately compensated.

I am opposed, however, to section 6 of the bill. Not because I believe the civil service is administered as claimed by some of the gentlemen—but because I think its permanency is established, and for the further reason that the highly efficient Postal Service ought not to be tampered with.

On examination we find that 47,999 employees are in the classified service who received their classification without examination. It strikes me that this is unfair and unjust, especially as in some cases, at least, others have qualified for positions so classified but were not given appointments. All positions in the classified service which are not filled by persons who attained the required standing in competitive examinations should be thrown open to examination and filled by those succeeding in competitive tests. No one should receive an appointment by the spoils system and hold it by the merit system.

The civil service is adopted by many industrial and commercial organizations as well as municipal and State governments. Such a system now obtains in Connecticut. A further evidence of the growth of the popularity of the system is found by the action of Senators and Representatives in holding preliminary examinations for candidates for appointment to Annapolis and West Point. I have made satisfactory tests of this plan.

I was among those who voted to remove deputy marshals and deputy revenue collectors from the classified service, because the marshal and collector have several deputies for whose official action they are held responsible, a responsibility similar to that of a county sheriff for the official acts of his deputies, and they ought never to have been included under the provisions of the civil-service law; but that case is not parallel to that of a postmaster and his assistants. In the former there is no special knowledge required and no supervisory authority over an entire office and its force and daily contact with the public such as is demanded of an assistant postmaster. The latter is, in part, an executive. In many cases his services to a new postmaster are indispensable. If he is an incompetent or undesirable, he may be demoted or dismissed from the service. His retention in the classified service means an incentive to the postoffice clerks and an assurance of a continuance of the classification system in the Post Office Department.

The present administration has established a reputation with the people of the country for constructive legislation. It has enacted into law two great measures, with others soon to follow. While reforms in the civil service are needed, not the least of which is that more sensible examinations be given, this Congress ought not to weaken what is accepted by the American people as a permanent institution.

Rural Carriers.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 22, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. BRYAN. Mr. Speaker, there is not the slightest room for difference of opinion as to the merits of the proposition to raise the salary of the rural carriers. I do not propose to burden the RECORD with a long statement about the matter, but I believe the proposition is so meritorious that the Committee on the Post Office and Post Roads will bring in a special bill that will not be subject to the point of order.

I was elected here as a representative of my State at large. We have a big rural population, and the rural carrier is not paid the salary he is entitled to receive. My attention was first called to the position of the rural carrier at a meeting of postal employees at Everett, Wash., last winter. I do not remember the name of the rural carrier who spoke, but he made plain the burdens and the meager salary of the rural carrier, and it seemed to me there could be no question raised here. Of course the parcel post has increased his work, but it must be remembered that these carriers going through the rural districts each day are able to spread good news or bad news. If they feel that they are mistreated by the Government, they will not give the best service.

ASSISTANT POSTMASTERS.

I am glad the President has put his foot down so emphatically upon the effort of certain members of the Democratic Party on the floor of this House to reintroduce the spoils system by throwing off the classified civil-service list the assistant postmasters. If the civil service is not fairly administered, it is the duty of the present administration to correct all existing irregularities. The time will come, and it will come soon, in my opinion, when the postmasters are all covered into the civil service. The people of the country get no advantage from the scramble of party men for the spoils of office. We have, in part at least, advanced away from that system, and it will be a sad day for the country when we return to it.

COMPENSATORY TIME FOR SUNDAY WORK.

I was glad to see the provision which was designed to amend the present Sunday compensatory time law, because the effect of the amendment would have been to abrogate the principle of the weekly rest day, so recently established in the service, by legalizing continuity of service. The present 6-day rebate limit is entirely satisfactory to the employees, because it insures a period of rest immediately following the Sunday worked. A 30-day rebate limit might mean, if the mails were heavy, continuous service for two, three, or four weeks. The employees prefer one day each week rather than two days every second week or three days every third week.

In effect the present law has had the desired result of minimizing Sunday work in the post offices, which has long been the aim of the department and the wish of the people throughout the country. Supervisory officials, mindful of the fact that Sunday work must be compensated within the following six days, have reduced crews to a minimum—just men enough to distribute the important mail. But were the 6-day inhibition removed, were the rebate latitude extended, the natural inclination of the supervisory official would be to bolster up the present Sunday crews and trust to a lull in the mails within 30 days to permit of a lawful rebate.

Practically the only Sunday work now done in post offices is the distribution of mail. Thus the rebate law affects only distributors—men who work nights, holidays, and irregular hours, and whose compensation is no greater than those who are relieved altogether from Sunday work in the service. If the change in the law is contemplated because of a desire for economy as the department states, it necessarily follows that this economy is practiced at the expense of these self-same distributors, whose services are so valuable that they can not be granted a fixed day of rest.

The proposed 30-day rebate limit is unsatisfactory to the department and the employees. The argument that it will cover the holiday mail rush by permitting greater leeway in rebating adds nothing to its value, because the present 6-day rebate law was found elastic enough during the recent Christmas congestion. In most of the large offices of the country the department technically violated the law by allowing no rebate time during Christmas week. The employees, realizing, as faithful public servants, the necessity of keeping the holiday mail in motion, uttered no protest. This proof of the elasticity of the law, the employees argued, effectually removes the only possible weakness its opponents could find in it.

While the difference between a 30 and a 6 day rebate may not seem apparent to one outside the service, yet from the viewpoint of the men affected the weekly rebate limit is much more desirable. It has been in successful operation for almost a year, and its abrogation on the plea of economy is scarcely justifiable in view of a reported surplus of $3,800,000 for the postal service. A 30-day rebate, it may be said, will not be construed to the disadvantage of the employees; yet they know from past experience that their surest safeguard is an explicit legislative act of Congress, defining in unmistakable terms the intent of that body. For this reason they want the present 6-day law rather than the 30-day, as proposed.

COMPENSATION IN CASE OF INJURIES.

There has been considerable discussion here as to compensation for postal employees in case of injury or death. I have already stated that the amount of the compensation is entirely too low. The act as it passed allows $2,000 in case of death, unless the postal employee was guilty of contributory negligence. The friends of the employees ought to look after this matter and see to it that an effort is made to induce the Senate to entirely abrogate this ancient doctrine of negligence. The compensation is for the widow and children and other dependents, and it is too late after a railway mail clerk, for instance, has been killed to raise the question of negligence.

I had the privilege on one occasion quite recently to ride on the mail car a considerable distance with a railway mail clerk. The result of this was that I became convinced that, whatever may be said of other branches of the Postal Service, the railway mail clerk is the boy that earns his pay.

Post Office Bill.

EXTENSION OF REMARKS
OF
HON. ALLEN T. TREADWAY,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 24, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. TREADWAY. Mr. Speaker, in common with the other speakers on the subject, I am in thorough sympathy in the effort being made by the friends of the rural carriers to increase their rate of compensation. No class of Government employees are subjected to greater hardships than are these faithful men who are daily the link between many isolated sections and the outside world.

In my district, in the hills of western Massachusetts, they perform their arduous task during the winter season, showing great hardihood in the face of inclemency of weather, over snow-drifted roads and while the temperature is very low. Within two weeks the thermometer in our section has reached 30° below zero, and on several occasions did not go over the zero mark throughout the day.

The editor of the Rural Free Delivery News is to be congratulated on his method of furnishing the Congressmen the statements of carriers in various sections. Some of these sent to me show that four horses are necessary to perform the work, which must be purchased, fed, and maintained, vehicles supplied, and the carrier's salary also secured from the munificent sum of the Government rate of from $770 to $1,100 a year. One carrier received, in my district, as his net salary last year $248.75 and another $264.15. I have made up the following figures from statements received from the carriers in my district, which will give a good idea as to the expenses they are under and the compensation they receive at the present time.

The average investment that these carriers had to make at the start was $514.50.

The average gross salary per year for the carriers was	$1,009.55
The average expense during the year was	503.55
Making an average net salary for each carrier of	506.00

I am very glad to corroborate the statements of other Members in behalf of the rural carriers, and urge a liberal increase in the salaries of these men.

Post Office Appropriation Bill.

REMARKS
OF
HON. ALFRED G. ALLEN,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. ALLEN. Mr. Speaker, the pending amendment in the main seeks to extend to post-office clerks, city and rural letter carriers, post-office inspectors, and special-delivery messengers the provisions of the existing law as to railway postal clerks. I have given the question a great deal of consideration, and as chairman of the subcommittee to which it was originally referred reported same favorably to the full committee, which in turn incorporated it in the bill now under discussion. Nothing which has been said in opposition thereto during this debate has caused me to change my views. In fact, I am even more strongly convinced than ever before that it should be enacted into law.

Why should not the Government pay its employee injured in line of duty a small compensation for his loss of time? It is limited to a year's salary, if his disability continues that long, but if longer it does not exceed a half year's pay additional, even if he be permanently injured and never able to again perform a day's labor. In case of death resulting from injuries received while in performance of his duties, then it provides for the payment of the sum of $2,000 to the wife, children, or other dependent relative, if any, of such employee. But in no case is the Government liable where the injury or death is the result of negligence on the part of such employee. I have in mind a case in my own city of a clerk who was severely and permanently injured by a heavy sack of mail falling upon him and injuring him about the back and spine so that he was unable to perform manual labor for more than four years and never has been able to resume his former position. Upon presenting the facts to members of the Claims Committee I was advised that it would be useless to introduce a private bill in his behalf, as the committee would not report favorably, there being no precedent, but that there ought to be a general law on the subject to cover all such cases. Now, we here propose the general law for the Post Office Department. It should pass, and now is the time to do it.

Let me now take a few minutes to discuss the postal employee, the Postal Service, and this bill generally.

To procure a position in the Postal Service it is necessary for one to file an application in writing and take a competitive civil-service examination. Should he pass the required test, his name is placed on an eligible register in the order of his percentage. If his name is reached and his personal vouchers are O. K. and he meets the approval of the postmaster, he is sworn in with much dignity and ceremony and informed that he must furnish a bond before he takes up his duties. If the position he seeks is that of a letter carrier, he is also instructed to procure a uniform for himself at his own expense.

When these necessary requirements are attended to, he reports to the supervisory officer in charge and receives the information that his position is that of a substitute, and he is told to learn the different details of his position in order that he may become accustomed to the work and be prepared to fill an assignment when called upon. This breaking-in period lasts about one week, during which time he works much, learns little, and receives nothing by way of compensation. He is then assigned to the waiting list with a number of other substitutes, and when his turn arrives and there is a temporary vacancy caused by one of the regular employees being off duty, he is assigned to the place and paid at the rate of 40 cents an hour. Should the assignment be for vacation or auxiliary work the rate of pay is 30 cents an hour. His earnings during this substitute period, which averages about four years and which might be termed his apprenticeship, are uncertain and, to say the least, provides a very precarious living.

When he receives a regular appointment, he is notified to call at the office of the postmaster, where he is again sworn in with much solemnity and is informed that he will have a regular assignment at a salary of $800 per annum. If he is diligent and punctual in performing his duties and his record warrants it, he can be promoted one grade of $100 each year until he reaches the $1,000 grade in second-class offices and the $1,100 grade in first-class offices. His automatic promotions stop here, and no matter how efficient he may be or how diligently he performs his duty he can not reach the highest grade in his office unless the postmaster sees fit to recommend him in preference to another employee. The reason for this is that a policy was adopted by the second session of the Sixtieth Congress which only made provision for promotion of 50 per cent of the employees to the highest grades.

It might be well to state that the famous Hitchcock economy administration was in a large measure responsible for this policy, for they not only made the recommendation to the Post Office Committee but stated also that not more than 50 per cent of the employees actually earned promotion to the highest grade. It might also be well to state that the first session of the Sixtieth Congress provided for the promotion of every eligible postal employee, but I am informed that then First Assistant Postmaster General Grandfield resorted to every means within his power to deprive men of promotions which they had justly earned. To illustrate, the recommendations of postmasters in all parts of the country were returned to them from the office of the First Assistant, and they were politely informed that the lists should be curtailed, as the officials were of the opinion that there were too many men recommended for promotion. It was only in offices where postmasters insisted that their recommendations were based entirely on merit and where they refused to assume the responsibility of cutting the names of employees off the list that the promotions were allowed. Hundreds of employees throughout the country, who had justly earned promotion, were deprived of it that year through the action of the First Assistant Postmaster General, a man who never worked a day inside of a post office and knew nothing whatever of the practical work performed by a post-office clerk or a letter carrier.

The custom of promoting 50 per cent was followed by each Republican Congress, but the Sixty-second Congress, which was Democratic, adopted my amendment providing for the promotion of 75 per cent of these employees. There has been much dissatisfaction with this policy, which naturally causes discrimination, although not, of course, so much since the proportion of promotions was increased. Men whose records are perfect and who are by every fair method of reasoning entitled to promotion are deprived of it. It is a system that should be remedied, and provision should be made for the promotion of every employee whose record for efficiency will warrant his postmaster in recommending him. To this end I have introduced a bill for automatic promotions to higher grades, which I hope to have enacted into law during this Congress. The promotion should be regulated entirely on merit and not on the personal preference of any postmaster or supervisory official. When we take into consideration the four years' substitute period, with its small and uncertain income, and the fact that it takes from six to seven years for an employee to reach the highest grade, he should not be deprived of that which he has justly earned because there has not been a sufficient appropriation made by Congress to advance him.

And now, Mr. Speaker, in looking over the Post Office appropriation bill I find that each year great progress is being made in the way of reforms and extensions of the Postal Service. It speaks well for the Congress, and is the best evidence of the interest taken in the only branch of the Government service that comes in close contact with the people. The Sixty-first Congress enacted a law for the establishment of postal savings banks, and during the period of time that the legislation was pending many well-meaning citizens predicted all sorts of dire consequences should such radical legislation be enacted into law. The very people who were most outspoken against postal savings bank legislation are now its strongest supporters, and they have admitted that they were mistaken in their former views.

The Sixty-second Congress enacted a parcel-post law, which has been in effect since January 1, 1913. This legislation met with strong and determined opposition, and great stress was laid on the hardship that would accrue to the small merchant, and that no benefit would be had by the residents in rural communities. The fallacy of these arguments is now admitted, as it has been proven beyond the question of a doubt that the farmer and the rural citizen are the greatest beneficiaries of the law. The success of this new parcel-post law has surpassed the original claims of its stanchest advocates and supporters, and its future possibilities can only be surmised by the most optimistic advocate of the parcel post.

Another and more advanced idea is now becoming prevalent in the public mind, and that is the establishment of the telephone and telegraph service as an adjunct of the Postal Service, and the trite argument that if it has been found advantageous and, in fact, necessary for the Government to handle the written message, then why not the spoken, may well be given most careful consideration.

With all these new additions to the Postal Service, which require the best thought and ingenuity of those in immediate charge to outline plans for the proper enforcement of rules and regulations governing this immense service, it is pleasing to note that the Congress has taken into consideration the additional responsibilities that have been placed on the employees who are intrusted with the real hard work of the service and have on each occasion recommended legislation to improve the working conditions of the men.

And now, recurring again to the pending amendment to provide compensation for employees who are injured or killed in the performance of their duties, it is, to my mind, just and in keeping with the progress of the times. While there is a Federal compensation law on the statute books—the act approved May 30, 1908—and separate laws protecting employees of the Life-Saving Service and the Railway Mail Service, yet none of these laws, strange to say, makes any provisions for the city or rural letter carriers, the post-office clerks, or special-delivery messengers. Railway mail clerks have had the benefit of a compensation law since 1900, but their occupation is of such a hazardous nature that they should be protected to the fullest extent. Sea post clerks and post-office inspectors have been covered in the act which provides for railway mail clerks, and it is well that this is so. The committee has deemed it wise to go a step further this year, and we are now given the opportunity to extend the compensation act to provide for city and rural carriers and post-office clerks and special-delivery messengers.

By the act of May 30, 1908, the United States Government established a system of compensation for industrial accident for the majority of its industrial employees, this being the first general accident-compensation law of this country. However, the principle of accident compensation had been recognized much earlier through the enactment of laws for the protection of employees in the Life-Saving Service, the act of May 4, 1882, and the Railway Mail Service act of June 2, 1900.

The principle of providing compensation to injured employees is now an established one, as is attested by the enactment of laws by the legislatures of the several States. In this respect it seems to me, Mr. Speaker, that the Federal Government is behind the times, as there are a great number of our civil-service employees who are without any protection whatever in the event of meeting with accidents in the course of their employment that incapacitate them from performing their duties. There are a number of bills now pending in Congress that will remedy this condition, and I trust that a fair compensation bill will be reported to the House at an early date, and that such a bill will be enacted into law before this session of Congress adjourns.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WILLIS J. HULINGS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. HULINGS. Mr. Speaker, I have reports from 24 rural mail carriers employed in my district.

The average rate of pay is $1,080 a year; the average cost of vehicles and equipment, $470 a year; the average cost of operating equipment, $503 a year; interest on cost of equipment, $28 a year; net pay per year, $549; net pay per day for 312 days, $1.76.

These men are employed in the northwestern part of Pennsylvania, where the country is generally rough and hilly. The routes average 24 miles in length.

A moment's reflection will convince anyone that a daily trip of 24 miles over the average road delivering mail and packages with a team or single horse will occupy the entire time of the carrier.

These men go rain or shine. Day in and day out, in summer heats or the blasts of winter, the carrier plods his way.

Last fall this matter of compensation of these men was brought to my attention.

This winter we had an unusual snowfall, from 2½ to 3 feet deep. Through much of that country it still lies drifted in places for the space of half a mile 6 to 8 feet deep, and the hauler is obliged to leave the roads and take to the fields. The temperature throughout that section frequently falls to 20° below zero and lower.

These men, exposed to all the inclemencies of a climate of great extremes, are performing a service of more value and more highly appreciated by the people served than that of any other branch of the public service.

The service costs the Government nothing. It is understood that the Post Office Department is now on a self-sustaining basis. Except that the carrying of magazines is done at a loss, the balance of the business done by the Post Office Department is a source of profit to the Government. The people who buy the stamps pay the bills. Unlike the military, a pension, or almost any other kind of an appropriation, neither the Government nor any person is taxed or contributes a penny except the persons who are served, the purchasers of the required stamps.

And yet the United States Government expect these men to serve it and the people faithfully for the pittance of $1.76 per day.

Mr. Speaker, it is not only for the rural carrier that I speak. I am acquainted with the city carriers in my home city. I wish to bear testimony here to the patient endurance, the efficiency, and the high character of these men. There is no class of men in the public service anywhere that are more deserving, and, all things considered, there is no class of men in the public service so poorly paid as the carriers.

I have seen them, late and early, trudging to their tasks with a burden of 50 to 100 pounds swinging from their shoulders, whether in the sweltering heat or the bitter cold.

I have seen them this winter breaking the road through 2½ feet of snow when the entire street car service was stopped.

I am in favor of economy, but since I have become informed of the character of the service performed by these men and observed the steady, persistent, patient, and efficient service of the carrier, whether on the city deliveries or the rural routes, I regard the compensation paid them as parsimonious, approaching a public scandal.

I also desire to be recorded in favor of the extension of deliveries to towns where the service has not yet been installed.

Deliveries are already made several times daily in the cities and larger towns.

The rural deliveries serve the people in the country daily.

Experimental deliveries have been made in the smaller towns. In every case coming under my notice this service has been highly appreciated wherever installed.

Upon the petition of some of my constituents to have such deliveries established, I have been informed by the department that the experiments have not proved satisfactory, and the appropriation for the purpose was so nearly exhausted that further extension would not be made by the department.

I am persuaded that these deliveries are so beneficial that the appropriation for the purpose should be increased and the department required to carry the experiment to more definite conclusions, so that, if at all practicable, the remaining 20,000,000 of our people not now served by daily deliveries may be so served and put upon a common footing in this respect with citizens living in the country and those living in the cities.

Post Office Appropriation Bill.

REMARKS

OF

HON. THOMAS M. BELL,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. BELL of Georgia. Mr. Speaker, it is sorely regretted that the Rules Committee failed or refused to report a rule providing for the passage of new legislation which is carried on the Post Office appropriation bill, which includes a small increase in compensation for rural letter carriers. It has been suggested that the Rules Committee's failure to do its duty in this regard was due to Executive or departmental influence. We can hardly bring ourselves to the conclusion that the head of this great Government, through its departmental agencies, would halt from the great problems which ordinarily engage the attention of a successful administration in its duty and obligations to the country to refuse in any degree whatever a small increase of pay to so worthy and needy a class of employees as the rural letter carriers. But if the conclusions reached are correct, the responsibility rests somewhere other than with the majority of the membership of this House, because it is evident that this item carried in the bill would be almost unanimously voted in if we had the privilege of a vote. It has been the prevailing rule for 40 years that new legislation for the Postal Service has been carried on the Post Office appropriation bills, and it is unfortunate at this time that we, with a Democratic majority of 140, can not, on account of Executive or departmental interference, provide for a good-roads bill in the interest of the great masses of the people in the rural sections of the country or give the smallest possible increase of pay to the rural letter carriers, who to-day receive less pay in proportion to the work done and expenses incurred than any class of Government employees.

The Rules Committee in justice to itself and to this committee and to the time-honored custom of legislation, should have adopted a rule whereby this legislation could have been enacted without endangering its passage by the objection of one man, who felt called upon to make the point of order against this item, as did the gentleman from New York [Mr. FITZGERALD]. No excuse has been given for the point of order being made against the proposed increase for rural letter carriers, and none can be legitimately offered, except that it is new legislation.

The rural letter carriers are compelled to face all kinds of weather and conditions, and no class of employees deserve more recognition at the hands of this great Government than these people. The salaries of these carriers have been increased from time to time in the same manner in which your committee now makes the attempt, but we are met with the cry of a point of order, and that made by a gentleman from the great metropolis whose citizens are not interested in the rural letter carriers.

In my judgment, Mr. Speaker, the rural delivery of mail to the millions of worthy people who till the soil and otherwise make their living by honest labor, is one of the greatest blessings given to a people in modern times, and it becomes our duty as a legislative body to see that the employees in this service, as well as the people they serve, are as generously treated as any other class of American citizens, and as an humble member of the Post Office and Post Roads Committee it is my intention in the future to continue to use my best offices along these lines. Mr. Speaker, I ask permission to incorporate in my remarks an editorial from the veteran editor of the Louisville (Ky.) Courier-Journal, Mr. Watterson, in defense of my amendment, which is a part of this bill to increase the pay of rural carriers, in which he ably defends this proposition, and which speaks for itself:

The House Committee on the Post Office and Post Roads is said to have decided upon an increase of salary for rural carriers.

This increase, it is said, will amount to about $50 a year on standard routes and will be applied to other routes in proportion. Assuredly, there is no branch of the service in which the employees are more deserving of consideration in connection with salary enlargement.

The rural carriers work for the money they get, and the establishment of the parcel post has added materially to their labors. They are compelled to furnish their own wagons, and the augmented bulk of the mail they are carrying will make it necessary in many instances for them to provide larger vehicles than they are using at present.

The carriers are assigned about as much territory as they can cover adequately, and with due regard for promptness, under the most favorable conditions. A route that is carried easily during the long summer days and at seasons when the country roads are in their best condition assumes a very different aspect in winter when the weather is severe and the roads are muddy or covered with snow or sleet. It is during the winter that the energies and resources of the carriers are most strongly taxed.

In the days of many star routes, before the Rural Free Delivery System had been established, the contractors got rich, while the men who actually carried the mails scarcely were paid enough to keep body and soul together; but the iniquitous system prevailed for many years before it was discarded.

The rural carriers are paid salaries, and consequently fare better than did the star-route carriers. There can be no disputing the fact that they earn all that they are paid. They get no "easy money" at any stage of the game, and, in view of the additional burden that has been imposed by the parcel post, it is no more than fair that they should have some additional compensation.

I also desire to incorporate as a part of my remarks some statements made by some of the carriers in my district in defense of my proposition submitted for the consideration of the committee. I know these carriers personally and know that their statements are entitled to full faith and credit, because they are among the best people in Georgia:

Statement No. 1.

Number of horses 2, cost	$440.00
Number of vehicles 1, cost	60.00
Harness, etc	15.00
Total investment	515.00
Interest on amount invested	41.20
Depreciation	50.00
Feed of all kinds	336.00
Shoeing, medicine, veterinary, etc	9.60
Repairs to vehicles, harness, etc	8.00
Incidental expenses	5.00
Total cost for the year	449.80
My annual salary	1,100.00
Net salary	650.20

Present price of corn, $0.98; oats, $0.65; hay, $25; bran, $1.75.

Statement No. 2.

Number of horses 2, cost	$300.00
Number of vehicles 2, cost	137.50
Harness, etc	22.00
Total investment	459.50
Interest on amount invested	34.05
Depreciation	106.00
Feed of all kinds	288.00
Shoeing, medicine, veterinary, etc	12.00
Repairs to vehicles, harness, etc	41.15
Incidental expenses	3.80
Total cost for the year	485.00
My annual salary	1,100.00
Net salary	615.00

Present price of corn, $1; oats, $0.57; hay, $35; bran, $1.75.

Statement No. 3.

Number of horses 2, cost	$300.00
Number of vehicles 2, cost	168.96
Harness, etc.:	
3 sets	37.00
1 pair extra	9.00
Total investment	514.96
Interest on amount invested	41.19
Feed of all kinds	376.00
Shoeing, medicine, veterinary, etc	15.00
Repairs to vehicles, harness, etc	12.00
Total cost for the year	444.19
My annual salary	1,056.00
Net salary	611.81

Present price of corn, $1; oats, $0.60; hay, $1.50; bran, $1.60.

Statement No. 4.

Number of horses 1, cost	$125.00
Number of vehicles 2, cost	125.00
Harness, etc., 1 set	15.00
Total investment	265.00
Interest on amount invested	21.20
Depreciation	66.25
Feed of all kinds	135.00
Shoeing, medicine, veterinary, etc	10.20
Repairs to vehicles, harness, etc	8.35
Incidental expenses	30.00
Total cost for the year	271.00
My annual salary is	770.00
Net salary	499.00

Present price of corn, $0.90; oats, $0.65; hay, $28; bran, $2.

Statement No. 5.

Number of horses 2, cost	$350.00
Number of vehicles 2, cost	125.00
Harness, etc	25.00
Total investment	500.00
Interest on amount invested	40.00
Depreciation	75.00
Feed of all kinds	300.00
Shoeing, medicine, veterinary, etc	20.00
Repairs to vehicles, harness, etc	50.00
Incidental expenses	25.00
Total cost for the year	510.00
My annual salary	880.00
Net salary	370.00

Present price of corn, $1.10; oats, $0.60; hay, $1.35; bran, $2.

Statement No. 6.

Number of horses 2, cost	$400.00
Number of vehicles 2, cost	120.00
Harness, etc	25.00
Total investment	545.00
Interest on amount invested	43.60
Depreciation	100.00
Feed of all kinds	300.00
Shoeing, medicine, veterinary, etc	10.00
Repairs to vehicles, harness, etc	40.00
Incidental expenses	50.00
Total cost for the year	543.60
My annual salary	1,100.00
Net salary	556.40

Present price of corn, $0.90; oats, $0.60; hay, $300 per 100 bundles.

I have other similar statements, but will not print them at the present time.

It appears from these statements that the average compensation of rural carriers, after deducting actual expenses, is less than $600 per annum. The city carriers receive more salary than rural carriers, with no expense of teams, vehicles, or depreciation of values, and yet I do not believe that city carriers are paid in excess of their duties and responsibilities.

The good-roads bill, which your committee confidently expected a rule in order to enact into law, is one which will reach and benefit the most deserving of all classes of people—the farmer, the tiller of the soil. This Government can afford to appropriate the amount called for in this provision in order to inaugurate a system of good roads throughout the country, especially if the States interested will appropriate an equal sum. There is nothing, in my opinion, Mr. Speaker, which would enhance the property values of our country as much as a good system of public roads, and nothing more needful for the benefit and convenience of humanity, and, in my candid judgment, Congress will be derelict in its duty if we do not legislate along these lines in the near future, and I sincerely trust it will not be delayed beyond this session.

Post Office Appropriation Bill.

REMARKS

OF

HON. J. M. C. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. J. M. C. SMITH. Mr. Speaker, under the privilege granted me when the Post Office appropriation bill was under consideration in the House, I desire to say that I am in favor of granting an increase of salary to the rural letter carriers of our country, and hope that their pay may be increased now according to the provisions of the bill at $1,150 per annum and ultimately to $100 per month. In stating my reason for this position I not only consider that the exacting services required by them entitles them to more pay, but also in the interest of equality there is no valid reason why the city carrier should receive more pay than the country carrier, who performs heavier work and is under vastly more expense. The city carrier, and he is not overpaid, now receives $100 per month and can eat his meals at home, while the rural carrier must furnish and maintain his own equipage, pay for his dinner and horse feed while on the route, and stand all repairs. If a conveyance is needed for city delivery, the same is usually furnished by the department. Why should the pay of the rural carrier not now be increased since under the parcel post he is now delivering as much again as formerly and at the same pay, with a present prospect of increased number of parcels and greater weight to be added, prospectively, to 100 pounds. Free delivery must be given to towns and villages to make the service uniform.

The argument made by some that if the rural carriers do not want the position or can not do the work for the wages they now receive they can resign and there are plenty who will take their places is without force. The same might be said of the President, our Senators or Representatives, and all other postal officers and persons holding official positions. It is simply a question of proper pay for the valuable services rendered by our rural carriers. The other public officials above enumerated have had their day, and this question is not open to them in this bill or discussed here.

In this connection I wish to present a letter just received from the rural carriers of Kalamazoo, Mich.:

KALAMAZOO, MICH., *January 22, 1914.*

HON. J. M. C. SMITH, *Washington, D. C.*

DEAR SIR: You no doubt will have in your possession in the near future, if you have not already, a copy of an expense account of rural carriers from this district. I note in those blanks there was no space for loss of horses by death. This matter was brought most forcibly to my attention on January 20. On going to the barn to feed my horses I found the one I expected to drive dead in the stall, which the day before, so far as I knew, was as healthy and vigorous a horse as there was in the service. This is the fourth horse that has died for rural carriers with routes emanating from this office in the last 12 months. Figuring at a nominal price of $125 each, we have a loss of $500. Some of these horses were worth more than that and some perhaps not quite so much. This added to the already high expense leaves but very little on which to support a family. Then, taking into consideration the increased volume of mail on account of parcel post, then add to that the carrying out of large amounts of city mail, which the department has required us to do for some time past, we therefore, as American citizens, would respectfully request that you, as our Representative, use your influence for the passage of some act that will materially increase the compensation of rural carriers. We ought to have at least $250 for horse maintenance.

Sincerely, yours,

F. S. Smith, No. 1; Henry Koster, No. 2; Henry H. Betka, No. 3; Alex. Fisher, No. 4; James Daniels, No. 5; L. P. Stafford, No. 6; John W. Allen, No. 7; E. S. Ludwig, No. 8; G. Stryker, No. 9; J. S. Carr, No. 10; C. T. Barnes, No. 11; Geo. L. Smith, No. 12.

This is but the common experience of every rural carrier, and no one will say that this experience is unusual or the request unreasonable. Another letter states, "Let Uncle Sam furnish his own horses. We must go every day regardless of weather." And why not? Only one reason, and that is that it is cheaper for Uncle Sam to have the carriers furnish the horses, and it requires two horses to do the work.

I am also in receipt of the expense account of many rural carriers from my district, and it will be of much interest to see just what net salary each carrier receives and just what it costs him to perform his services, and a careful comparison may be of much benefit in determining what compensation

should be paid. The difference in the net amount received by each carrier may in some instances be on account of accidents, breakage, and conditions not common or incident to each other. But with the weight limit of the parcel post increased to 100 pounds and its increasing utility and usefulness, new rigs and heavier equipage must be used and extra expense incurred for performing the duties of our rural carriers.

A summary of the expense account follows:

Carrier.	Post office.	Investment.	Annual maintenance.	Net salary.
John I. Taylor	Marshall	$200.00	$430.70	$669.30
Seward Cleveland	Coldwater	347.00	441.82	659.18
A. J. Feurguson	do	372.00	473.47	626.53

[1]Livery. [2]Livery and Auto. [3]Auto.

Accompanying the above lists is a letter of Mr. Brown, the editor of the R. F. D. News, in which he says:

From these you will see that the average cost of equipment maintenance of your carriers who have reported is $537; average salary, $1,098; leaving net salary, $561.

43,000 rural carriers have invested in equipment approximately	$20,000,000
Interest on investment, at 6 per cent	1,200,000
Depreciation, 20 per cent (very conservative)	4,000,000
Feed of only 1 horse per route, $150 per year; 43,000 routes	6,450,000
Total cost per year	11,650,000

As a matter of fact, the average requirement is two horses per route and the cost of feed per horse more than as shown above, not including repairs to vehicles, etc.

The expense indicated by the inclosed statements cover only parcel post weight of 20 pounds. What will they be with the present weight of 50 pounds and the 100-pound limit now in sight?

The rural carriers travel a total daily combined distance of 1,028,603 miles, or a distance each day of twice the distance to the moon and back. They carry not only ham and eggs, but also pigs and chickens. It is estimated that the parcel post increases the tonnage of the mails about one-fourth, and the largest part of this extra burden falls upon the rural carriers.

The Post Office appropriation bill contains a provision for paying the rural carriers $1,150 per year. This is subject to a point of order, but the honorable chairman of the committee, feeling that it should be paid them, will introduce a special bill for this amount, which it is hoped will be enacted into law this session.

These names and figures are given for comparison. An invitation is hereby extended to the employers of any other governmental department to make detailed statement of their net income, and we venture none will give a smaller amount received for the services rendered. Surely the salary of these faithful servants and good citizens was not made to meet any very high cost of living, and bran and cornstalks is not very good feed for post horses.

The average pay per day, according to the above table, would be very small pay with which to support a wife and family of children, and educate them, and pay many overhead and fixed charges. I do not think it was intended, and certainly ought not to be expected, that the rural carriers would carry the parcel-post packages even cheaper than a freight train, but that is precisely what they are doing. They have received no increase in salary since the parcel-post system went into operation. They are carrying the mail, with the parcel post added, for the same salary they formerly received for carrying only the mail. And so they are carrying the parcels for nothing, compared with their former pay.

Mr. Speaker, there is not a more complete or perfect system in any department of Government than the Post Office Department. It commands the very best talent and draws from our best young men. It is operated under such a system that renders the service prompt and efficient. To this department is intrusted the business affairs of the Nation. To the mails the most valuable and confidential messages are consigned. It pays its own way and provides a surplus. It makes us near neighbors. Its utility is incomprehensible. The farmer as well as the tradesmen of the metropolis is entitled to it. Our best citizenship has been connected with farm life. The farmer has done his patriotic duty always, and contributed to every emergency and every improvement. These splendid young men carry the news of the world to his door through bleak weather and storm, never faltering. They perform their part well now; let us perform ours and compensate them and encourage them in their splendid service.

Alaskan Altruism.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 28, 1914,

On the bill (H. R. 1739) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. MOORE. Mr. Speaker, this is an altruistic age, and foremost amongst the national altruists stands the United States. Our generosity as a nation has been due to our success as a nation, and the people generally have approved our foreign experiments, because they believed them to be patriotic and benevolent. In this Alaskan railroad matter we are brought face to face with another altruistic experiment. The lure of gold and the hope of fortune has attracted many adventurous souls to Alaska. They are settling the country and they want to develop its resources. We are told there are 35,000 of them altogether. In numbers, therefore, they do not exceed the population of Fitchburg, Mass., Quincy, Ill., Racine, Wis., or Tampa, Fla. We have as many people in one ward of Philadelphia as the total white population of Alaska. Yet despite the fact that private capital has been discouraged from entering Alaska, we are now called upon to make the people of the United States financially responsible for railroad construction there to cost $35,000,000 at the start and to run on to a possible $100,000,000, with the cost of operation and maintenance added.

THE PEOPLE PAY FOR ALTRUISM.

I am opposed to this proposition, because I believe the time has come for the people of continental United States to pay a little more attention to their own necessities and a little less to

precarious enterprises involving expenditures of the people's money where the returns are not warranted by commerce or humanity. I submit that our altruism in other respects has reached a point where it is reasonable to stop and consider our own welfare.

In 1907 Mr. Taft, then the Secretary of War, gave us an insight into our national altruism which it is well worth remembering. He told us that in the Cuban War we had expended altogether about $300,000,000, for which we got no thanks from Cuba nor anyone else. About $170,000,000 was spent to establish order in the Philippines. It is doubtful if what we did and have since done in this respect has been appreciated. We did all this, as we believed, in the interest of humanity. Every dollar thus spent was a charge upon the American people. We could have used that vast sum of money in the United States to the great advantage of our own people, but, of course, we would not have had the satisfaction of being the real altruists we think we are to-day.

Our expenditures upon the Panama Canal up to date are approximating $400,000,000. Here is a proposition treated as a military necessity, with expectant commercial possibilities chiefly justified by our faith in the good will of other nations. Glorious as has been our achievement at Panama, the burden of this great work has been borne by the taxpayers of the United States, who have taken upon themselves a responsibility for maintenance which will be enormous and without an immediate equivalent in tolls or commercial advantage. We can not relieve ourselves of the responsibilities of the Panama Canal now that it is nearing completion any more than we can honorably cast off the Philippines as an unprofitable bargain.

THE MISSISSIPPI FLOOD PROBLEM.

In the light of our experience in these and other undertakings why should we involve ourselves in the dubious problem of railroad ownership in Alaska? Our experience in other directions should lead us to be cautious about any such enterprise even if the facts that have been laid before us in support of the proposition were at all convincing. When our enthusiasm carries us into new schemes such as have been described interest in our home enterprises suffers. Our own public convenience is postponed and sometimes neglected not only because our investments have gone afield, but because of actual expenditures taken out of our home resources.

It is true that Alaska belongs to the United States and that we should have a friendly consideration for it; but if 30,000,000 people along the Atlantic seaboard are waiting for needed Federal improvements to reduce the cost of transportation because of a lack of transportation facilities, it seems, in justice to ourselves, we should not vote away the money that would set our own house in order for the benefit of 35,000 who have chosen to wander off thousands of miles from home. The great problem of the Mississippi Valley to-day is the regulation of flood waters. An expenditure of $30,000,000 rebuilding the banks of the Mississippi would save enough arable land capable of the highest cultivation to accommodate all the people of Alaska a hundred times increased in number.

PLENTY OF FARM LAND EAST.

It has been argued in the long debate over the Alaskan bill that agriculture might be made to thrive for a few months a year in Alaska if the ground were cleared at a cost of from $125 to $200 per acre. Why, gentlemen, there is scarcely a State along the Atlantic seaboard east of the Appalachian chain that would not gladly yield up enough fertile ground, much of it improved, for anywhere from $15 to $30 per acre to take care of every one of the white settlers in Alaska and give them the best market in the world.

When one recalls that the total acreage of improved farm land in the 13 original States in 1910 (census) was 83,000,000, out of a total of 161,000,000 acres, it is amazing, climatic and soil conditions considered, along with the market facilities, that the remaining 78,000,000 acres at ridiculously low prices should have no attractions for those who are willing to take their chances in a frozen country, where the initial cost of clearing the land is from five to ten times greater than they could obtain it for at home. And then, again, when we look at it from this angle, it may not be so amazing that those who have gone to Panama or to the Philippines or to Alaska should seek Government aid to give them employment, or, figuratively, in the individual sense, welcome "a remittance from home."

It is not unusual that the boy who has left the farm because the work was hard, to seek his fortune in some other country, has written home for a little help from the old folks. We have not been altogether indifferent as a Nation to our offspring in Alaska, but it is a grave question whether, because of the failure of individual operators to successfully exploit that country, we should involve the people of the United States in the hazardous undertaking of Government ownership of railroads in Alaska merely to find out whether we have gold or coal which may some day be profitable to us.

OUR PHILIPPINE RAILROAD EXPERIMENT.

We have had one experiment in Government railroad building which serves us an object lesson. We are morally but not financially responsible for the Government railroads in the Philippines. Our moral responsibility arises in consequence of investments of American capital in Philippine Railroad bonds, which have depreciated about 35 or 40 per cent. We authorized the Philippine Government to contract with the Philippine Railway Co. for the construction of railroads, and the people have been induced to put their money in an enterprise to the extent of $8,500,000. The result of this transaction is discouraging, and, the railway company being unable to keep up with its part of the contract, the interest payments, amounting to 4 per cent, are being paid by the Philippine Government, and must continue for 30 years. Therefore, in the last analysis, as the Philippine Government is financially responsible for deficiencies in the railroad management, the United States Government is morally responsible for authorizing the enterprise. The Alaskan situation is different in that the United States Government assumes direct responsibility for the success or failure of Alaskan railroads; and if this bill passes, the people of the United States will pay the loss, if there be any, out of resources which must necessarily be taken from worthier enterprises nearer at home and of more direct benefit to a greater number of people.

Funeral Exercises of John T. Chancey.

Addresses of Rev. Henry N. Couden, Chaplain of the House of Representatives, and Rev. John T. Huddle, of St. Paul's English Lutheran Church, at the funeral exercises of John T. Chancey, January 26, 1914.

EXTENSION OF REMARKS

OF

HON. JAMES R. MANN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 28, 1914.

Mr. MANN. Mr. Speaker, under leave granted me to print, I insert the following addresses delivered at the funeral exercises of the late John T. Chancey, who for nearly 60 years served this House with absolute fidelity, and who was one of its most valued employees:

ADDRESS OF REV. HENRY N. COUDEN.

Every soul that passes through this world leaves in its wake a history and takes with it only the character which has been woven into its tissues.

Life is real! Life is earnest!
And the grave is not its goal;
Dust thou art, to dust returnest,
Was not spoken of the soul.

We are born for a higher destiny than that of earth. There is a realm where the rainbow never fades; where the stars will be spread out before us like the islands that slumber on the ocean; and where the beautiful beings that here pass before us like visions will stay in our presence forever.

Death is not, therefore, a calamity, since it does not break the continuity of life; it is only an incident, an epoch in the grand, eternal march of existence. Capt. Chancey's character was striking in its simplicity, noble in its candor, pure in its motives, honest, faithful, just. If the real history of his life could be written, it would be not only intensely interesting, but it would be a valuable contribution to the history of our country. Think of it; nearly 60 years he was a picturesque and striking figure on the floor of the House of Representatives—a period in the history of that body when our country passed through some of the most trying conditions connected with its life. What a galaxy of stars, whose names and acts illumine the pages of its history; what intellectual power met in the forum, bringing to bear the most consummate skill, the most invincible logic in the problems which confronted them, the settlement of which were most vital in the progress of a nation! Always present, always active, always ready, and ever alert, he knew what was required of him, and never failed to measure up to those requirements. Sincere, devoted, faithful, he did his whole duty. His departure will be mourned by hundreds throughout the length and breadth of the Union, since he was beloved and respected by the Representatives, employees, and

pages in each succeeding Congress, and to some of us Congress will never seem quite the same.

But we are not here to pronounce an eulogy. Capt. Chancey has pronounced his own eulogy in the service he rendered to his country, more grand and beautiful than the most facile pen could write or the most gifted orator could pronounce. His work is done, and well done; his soul goes faring on and has heard the words, softer than falling flakes, sweeter than all music, "Well done, thou good and faithful servant; enter into the joy of thy Lord." His home life was as gentle and sweet as it was pure. We will not enter into those sacred precincts lest our tears stir too deeply the hearts of the loved ones he has left behind.

The stars shine over the earth,
The stars shine over the sea;
The stars look up to the mighty God,
The stars look down on me.
The stars have lived a million years,
A million years and a day;
But God and I shall love and live
When the stars have passed away.

ADDRESS OF REV. JOHN T. HUDDLE.

I know it is regarded as vain to try to gild a grief with words, and yet I can not help but feel that in sincere eulogy there is comfort. Somehow it soothes our sorrow to know before we lay our loved ones away that others share our appreciation of their worth. And so the funeral service is more than an empty form. Death is the touch that makes all men akin, and the sympathy it calls forth is a staff to those who are left in loneliness in the valley of the shadow.

We are gathered here to-day not only to pay our tribute of regard to the dead but to show the living that we share their loss and to lift up a voice of consolation and cheer in the darkness. Our subject is one that calls for no evasion. This life, so far as we know it, was honest and frank and pure, with nothing about it that could not be laid open to the eyes of men. It was characterized by faithfulness to duty in every relation and a desire to measure up to the high standards of strong, earnest manhood. Some one said of Capt. Chancey that his life was lived according to the golden rule; and those who knew him best will testify that this was true. He was a gentleman of the old days, and had a high regard for the rights and feelings of his fellow men. There was no duplicity in his nature, but with open countenance and honest heart he went about his duties, treating everyone with unfailing courtesy and kindness, and in time commanding the confidence and respect of all.

For 58 years he mingled with the Nation's distinguished men at the Capitol, and his conduct and services have been such that an honor has been given him perhaps never granted before to an employee. Several Members of the House are here to represent that body in a last tribute of respect to his memory. This exhibition of fine fellow feeling on the part of our legislators is not only a source of comfort to the family and friends but a source of satisfaction, no doubt, to the country at large. So long as we have men in high places who, in the words of Kipling, "Can walk with kings nor lose the common touch," our Nation's interests are in safe hands. This is complimentary not only to the worth of Capt. Chancey but to the sincere courtesy of the body he served. To hold one position for 58 years and win and retain the confidence of practically two generations of Congressmen and many generations of mischievous pages shows an evenness of temper, a kindness of heart, a patience of spirit seldom met with.

And it should be recalled that his goodness was not simply negative; it consisted of something more than an amiable, companionable disposition. It is said that he was a sort of missionary to the young men of the Capitol, and by his words of wholesome advice and sympathy kept them from lowering their ideals. During those years he has had hundreds and hundreds of pages under his supervision, and eternity alone will tell the influence for good he has had over the lives of these young fellows by his fatherly counsel. He derived one of his greatest pleasures from the letters he received from them after they went out and established themselves in the world, and not a few acknowledged that his wisdom and sympathy had saved them at a critical period and had been responsible for their success.

Nor were his associations limited to the Capitol, but he was connected in one way or another with several fraternal orders and came in close touch with men in the various walks of life. Everywhere he exhibited the same genial good nature and considerate helpfulness. Men liked him because he was optimistic, sincere, and genuinely good; because he was lenient with the faults of others and praised their merits instead of criticizing their failings; and because he was unobtrusively charitable to the needy and considerately thoughtful of the troubled.

But though he was a man's man and found pleasure in mingling with men, he liked his home best. Around the hearthstone all disguises are laid aside and men and women show what they really are. The disposition that can stand the tests of domestic life and keep the even tenor of its forbearance and consideration is as beautiful as it is rare. Those who knew the deceased best say that he never had an enemy; that he did not indulge in gossip; that the serenity of the home was never disturbed by any evidences of impatience on his part; but that he was a kind father, an affectionate husband, a good neighbor, and a loyal friend.

Not one, but several people in speaking of him have said he was a good man. And whence, we ask, did this goodness spring? I am convinced that it was not simply superficial graciousness, but had its source in the deeps of life. He made no special pretensions to religion, but he was a religious man. His people were Friends, and he cherished that belief and followed the inner light. Morning and evening found him on his knees in earnest prayer. It was from his daily communion with God that the peace and serenity came that dignified his bearing; that disciplined his patience; that disposed his heart to fraternal feeling and his hand to friendly helpfulness. During his last illness he suffered intensely, but he endured it with cheerful, stoical courage; was unfailingly appreciative of attention; faced death without fear, sustained by fine faith in Him in whose hands are the keys of life and death. Without a struggle he closed his eyes, wrapped the drapery of his couch about him, and laid down to pleasant dreams in full assurance that the morning would come, that the birds would sing again, and that his eyes would open on a larger, fuller life.

Leaving this outgrown shell by life's unresting sea, his spirit has gone on to occupy the more stately mansions of the soul. Beside this lifeless clay there lingers in this home and in all his haunts a stainless memory, and you who mourn his loss have this precious heritage as a comfort in your sorrow. When the days of loneliness come and you miss the familiar footfall and long for the touch of the vanished hand, recollection will bring back the sweet associations of other days and you will find blessed companionship in your memories. And not only so, but, looking forward, you will have the inspiration of anticipation, the strength which comes from the assurance of individual immortality and of recognition in that great reunion beyond. Wherefore, comfort ye one another with these thoughts, go bury your sorrow with your dead, face the future with brave hearts in the cheering companionship of the Comforter, and when life's outer gate opens for you there will greet you those whom you have loved and lost awhile.

Railroads in Alaska.

EXTENSION OF REMARKS
OF
HON. JAMES WICKERSHAM,
OF ALASKA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 28, 1914.

On the bill (H. R. 1739) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. WICKERSHAM. Mr. Speaker, in his speech in opposition to the bill to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, the gentleman from Oklahoma [Mr. FERRIS] introduced a copy of a letter from certain members of the Alaska Legislature, directed to the Secretary of the Interior, as proof that the people of the Territory of Alaska were not in favor of the bill. He said:

The Alaska Territorial Legislature have expressed themselves on this proposition, and in a letter directed to the Secretary of the Interior on April 13, 1913, signed by the president of the senate and six senators, have expressed the gravest doubt about the advisability of the construction of the railroad by the Federal Government.

I will insert this letter in the RECORD at this point:

SENATE CHAMBER,
ALASKA TERRITORIAL LEGISLATURE,
Juneau, Alaska, April 13, 1913.

To the SECRETARY OF INTERIOR,
Washington, D. C.

SIR: We are informed that it is a general opinion prevalent at Washington that the people of Alaska are unanimously in favor of a Federal Government owned, constructed, and operated railroad in Alaska.

The majority of the people, in our opinion, are opposed to the principle of Government ownership.

It is true, however, that in order to prevent the depopulation of Alaska we are in favor of any plan or system that will result in the

immediate construction of trunk-line railroads in Alaska, as an imperative necessity to the development of our vast mineral resources and extensive coal fields.

We consider "transportation" the key to the present situation in Alaska.

Yours, respectfully,

L. V. RAY,
President of the Senate.
ELWOOD BRUNER,
Senator Second Division.
B. F. MILLARD,
Senator Third Division.
CONRAD FREEDING,
Senator Second Division.
H. T. TRIPP,
Senator First Division.
J. M. TANNER,
Senator First Division.
HENRY RODEN,
Senator Fourth Division.

Hon. FRANKLIN K. LANE,
Washington, D. C.

I call the attention of the House to the fact that while this letter is signed by one who represents himself to be the president of the Alaska Senate and six others who sign themselves as "senators" from different divisions of Alaska, the document does not purport upon its face to be an official act of the legislature of the Territory. Every man who signed this letter was a member of the upper house of the Territorial legislature. Not a single member of the lower house, or the popular branch of the legislature, signed it. The Legislature of Alaska is divided into two bodies, the senate and the house. The senate consists of 8 members and the house consists of 16 members. Out of 24 members of the legislature, 7 have thus sought to prevent the passage of the Alaska railway bill by sending this communication to Washington to be used in debate at the moment when it would do the Territory of Alaska the greatest amount of harm by the opponents of the bill to authorize the President to build a railroad in Alaska out of the resources of her public lands.

It is the history of every new Territorial legislature in the West that the big interests attempt to get control of one or the other of the bodies composing the legislature so as to prevent the passage of legislation detrimental to their interests. In Alaska the smaller body is the senate. It is more easily controlled than the house, because fewer individuals must be procured to betray their constituents.

Not only did these members of the Territorial senate make and send this letter to Washington to prevent the passage of the Alaska bill, but the president of the Alaska Senate, on May 14, 1913, sent this telegram to the chairman of the Senate Committee on Territories in opposition to the railway bill:

SEWARD, ALASKA, *May 14, 1913.*

Hon. KEY PITTMAN,
Chairman Committee on Territories, Washington, D. C.

Alaska people oppose Government ownership railroads. Fear extension pernicious system, stilling individual enterprise. Prefer private ownership; Government aid open coal.

L. V. RAY,
President Alaska Senate.

In addition to these documentary evidences of opposition to the Alaska railway bill the members of the Alaska Senate, for some reason known to them but not included within the power given them in the law creating the legislature, concluded to send a lobby to Washington. It had no authority to appoint such a lobby and no fund out of which to pay their expenses if appointed. There is nothing in the act of Congress creating the Alaska Legislature which authorizes the appointment of an Alaskan lobby, and no probability that Congress or the Territory of Alaska would pay their expenses. The efforts to secure a joint resolution in the Alaska Legislature for the appointment of such a lobby was defeated unanimously in the lower house. Thereupon the upper house, by a senate resolution, which was carried by the votes of the seven men signing the letter heretofore put in the RECORD, authorized the president of the senate to appoint four of its members to come to Washington as a lobby. At least two of them are here. They are two of the gentlemen who signed the letter. A third one was Mr. Henry Roden. It was he who introduced the proposition in the Alaska Legislature of sending the lobby to Washington, and he is one of the signers of the letter. Mr. Roden is the attorney, in fact, in the Territory of Alaska for one of the Guggenheim corporations. It is understood that the president of the senate was employed by one of the railroad companies in opposition to the Alaska railway bill. At least one other of the members signing the letter was employed by another corporation in alliance with the Alaska Syndicate. Hereto attached is a certified copy of Mr. Roden's appointment and acceptance, and I think it is quite typical of the general influence which has drawn those members of the Alaska Legislature to Washington and induced seven of them to betray the trust which their constituents had imposed in them:

Know all men by these presents that Yukon Gold Co., a corporation duly organized and carrying on business under the laws of the State of Maine, hereby consent to be sued in the courts of the District of Alaska upon all causes of action arising against it in said District, and that service of process may be made upon Henry Roden, a resident of said District, residing at Iditarod, therein, and that such service, when so made on such agent, shall be valid service upon the corporation or company, and that the residence of the said agent is at the principal place of business of this corporation in the District.

In witness whereof the said Yukon Gold Co. has caused these presents to be signed in its name by its president and by its secretary and its corporate seal to be affixed this 29th day of March, 1912.

[SEAL.] YUKON GOLD CO.,
By S. R. GUGGENHEIM, *President.*

Attest:
C. K. LIPMAN, *Secretary.*

I, the undersigned, hereby consent to act as agent of Yukon Gold Co. for all purposes set forth in the foregoing certificate.

May 25, 1912.

(Signed) HENRY RODEN.

UNITED STATES OF AMERICA, *Territory of Alaska, ss:*

I, Charles E. Davidson, secretary of the Territory of Alaska, do hereby certify that the annexed copy is a full, true, and complete copy of the original appointment and consent of agent of Yukon Gold Co., a foreign corporation organized under the laws of the State of Maine, which instrument was filed in this office under date of June 26, 1912, in accordance with the provisions of chapter 23, Civil Code of Alaska, approved June 6, 1900.

In testimony whereof I have hereunto set my hand and affixed the great seal of Alaska, at Juneau, this 20th day of November, A. D. 1913.

[SEAL.] CHARLES E. DAVIDSON,
Secretary of Alaska.

Who pays the expenses of these men in Washington I do not know. Certainly the Territory of Alaska does not. Their letters and telegrams disclose their purpose here.

It is a matter of great regret to me that this record is to be made, and it would not have been necessary if the gentleman from Oklahoma [Mr. FERRIS] had not included their letter in his speech in opposition to the Alaska railway bill.

Government Railroad in Alaska—An Inevitable Step.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 28, 1914,

On the bill (H. R. 1739) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. JOHNSON of Washington. Mr. Speaker, I have gone with some detail into the pioneer steps which peopled the great Northwest. I desire, under permission granted, to extend my remarks. I desire to reaffirm, Mr. Speaker, that Alaska is to-day, beyond all doubt and notwithstanding all that has been said by the distinguished Member from Oklahoma [Mr. FERRIS] and others, the greatest asset the United States possesses. Guard it well. Do not let it lie dormant at a time when the opening of the Panama Canal is about to divert a great immigration to our Pacific Ocean ports. Open Alaska and it will give our new population a chance. Also, it will give our hardy and adventuresome young men a chance; they will help to people Alaska. There prevails to-day the same spirit that started our ancestors west from the original Colonies across the Alleghenies to people the Ohio Valley, then the Mississippi Valley, then the prairies, and finally the far Western States—all in less than a century—occupying and making habitable the territory from ocean to ocean. In all the history of mankind there is nothing that bears comparison with it.

Note the population figures. In 1776, about 2,500,000 people in the United States; in 1790, the first census gave us 3,929,214. Since then we have doubled every 25 years. In 1910 the actual population was 91,972,267. For a long time the bulk of the population went to the land. Lately circumstances have driven it to the cities. How to start the flow once more to the farms is the question. Open Alaska. Open that Territory with a railroad and with revised land laws that will once more give the poor man a chance. This is the opportunity, and it is almost providential, coming as it does at a moment of great unrest.

Alaska is not all frozen. Less than one-half lies above the Arctic Circle. At one point a single range of glacial mountains

run down to the south coast, where mountains of ice fall into the sea. There—at the location of Muir Glacier—tourists see enough ice to make them believe forever that all Alaska is frozen.

But that same glacial range runs down into my balmy Puget Sound country—western Washington—where the thermometer has never fallen to zero and rarely drops below the freezing point—32°—not even in the dead of winter.

Mr. Chairman, the real reason this railroad will be built by the Government is because such a step is absolutely necessary in the chain of events that since the beginning of this Nation have guaranteed to the United States the control of its own destiny.

This step, the authorization of the building by the Government of a $35,000,000 railway in rich and neglected Alaska, is no more startling, no more revolutionary, than any of the great acts of Congress which have made this the all-powerful, ever-advancing Nation that it is.

AN EVER-ADVANCING NATION.

From the signing of the Declaration of Independence the United States has never faltered when the time had come for the addition to or the development of its natural territory. At the time Alaska was purchased no one ever dreamed that the time would come when Alaska, lying at the top of the peaceful Pacific, should be destined to play a great part in the development of a new Pacific, which is made possible by the opening of the Panama Canal.

The extent to which the Panama Canal has focused the attention of the world on the Pacific coast is shown by the fact that the London Times published on December 31 a special number, of which 54 pages are devoted entirely to the Pacific coast of the United States, Alaska, and Canada, and to the effects of the Panama Canal on its development.

The Times discusses exhaustively the bearing the canal will have on transportation lines, and predicts a great readjustment. It tells in a series of articles all about the institutions, industries, and resources of Alaska and the far West, about the harbors and waterways and the steps being taken for their improvement. Alaska receives particular attention, and is declared to be "on the eve of a great renaissance in commerce and all the arts and industries of civilization." Government-aided railroad development in western Canada is described, as is the new city on the north Pacific, Prince Rupert, and talks of what is expected of this place, which is now little more than a frontier camp.

WORLD MOVEMENTS ON PACIFIC.

Mr. Speaker, of great import to the Pacific are the several great world movements now in progress. These are—

(1) The construction of the Panama Canal.

(2) The awakening of Asia.

(3) The opening of Alaska.

And I might add a fourth great movement—almost of world import—

(4) The end of trust control in development of great mining properties.

These great movements are noteworthy for these reasons:

(1) There are no more continents to bisect.

(2) There are no more great world majorities to come out of the sleep of ages.

(3) There are no more great domains on this northern continent to populate and develop.

(4) The settlement of trust control in the development of new territory means ultimate relief from a conservation too heavy to be borne by the people of the West and of Alaska.

On the Pacific the events of the next decade will be decisive. If Alaska is to play her part, we must not delay.

Let us in five minutes run through our school history and note how one great step in the physical and material advancement of the United States has interlocked with another. And why was this so? Was it superior intelligence of the Presidents and of the Congresses that have gone before, or was it the irresistible march of the United States to its destiny?

LOUISIANA PURCHASE.

Start with the Louisiana Purchase in 1803. Jefferson sent Monroe to France to buy the island of New Orleans for the purpose of commanding river navigation. Monroe was instructed to offer $2,500,000. Napoleon, hard pressed by war, needed money and offered the whole vast domain of Louisiana for $15,000,000. In those days that was a stupendous sum for a young Nation of scant 4,000,000 souls to pay. Napoleon demanded an immediate answer, and Monroe and the American minister accepted the offer and then notified Jefferson. Neither Monroe nor Jefferson hesitated. Thus the United States secured the great empire lying between the Mississippi and the Rocky Mountains. Most of us at first, though wrongfully, place nearly everything west of the Mississippi in the Louisiana Purchase.

But it took many more steps to secure what we now call the West. In 1804 Jefferson sent Lewis and Clarke to explore the new country. They started from St. Louis, then a town of 800, followed the Missouri River to its source, went westward over two ranges of mountains, found the upper reaches of the Columbia River, down which they boated to its mouth, which had been discovered and named in 1792—12 years before—by Capt. Robert Gray. They were gone two and one-half years. They traveled more than 8,000 miles and brought back great stories of resources and of values, which were received very much as the reports of Alaska's actual wealth and prospects are received by some nowadays.

ACQUIRING THE NORTHWEST.

But after Lewis and Clarke had crossed the Rocky Mountains neither Capt. Robert Gray, for whom my home port, Grays Harbor, was named, nor the explorers, Lewis and Clarke, were in the territory of the United States. Many more steps were necessary before that great Northwest became ours. Strangely enough, the most important of these was the purchase of Florida from Spain in 1819 for $5,000,000. That was President Jackson's doing, and was considered a headstrong and foolish act. Spain threw in all claim to the country lying north of the forty-second parallel and west of the Louisiana Purchase. From this region we have made the States of Washington, Oregon, and Idaho, but we would not have received title to what Spain willed to us had it not been for Capt. Gray and for Jefferson's explorers, Lewis and Clarke. See how all of these actions dovetailed in helping the United States to the ultimate control of its own destiny.

ALASKA PRECIPITATED THE MONROE DOCTRINE.

The Monroe doctrine comes in at this point, and, strangely enough, Alaska was responsible for the Monroe doctrine.

When in June, 1823, John Quincy Adams, Secretary of State, informed Baron de Tuyll, the Russian minister at Washington, that the American Continents "are henceforth not to be considered as subjects for future colonization by any European powers" and "that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety," the Eastern States were notified that there was a Pacific coast over which we must stand guard, and what was vaguely called the "Oregon country" began to be an issue in American politics.

The warning carried by Secretary Adams's words in the summer of 1823 was directed primarily against Russia, as that country had taken possession of what was then known as Russian America, the Alaska of a later day, which we purchased from her in 1867, and she was extending her settlements southward along the Pacific coast. This was the germ of the Monroe doctrine, as enunciated at greater length and more circumstantially in that President's message to Congress half a year later, but Secretary Adams was its real author, so far as any one man deserved that name, for the principle was proclaimed by Washington in his Farewell Address of 1796 and found expression in some of Jefferson's later state papers also.

SHADOWY TITLE.

Thus, almost before it was a local habitation or a name, the so-called "Oregon country" let the rest of the world know that it was a locality to be reckoned with. Spain renounced all pretensions to it in the treaty of 1819, by which it gave up Florida to us, and we promised that we would not attempt to assail any claims which Spain might assert to the region west of the Sabine, the Texas of a later time. After Secretary Adams's prompting to Tuyll, Russia in 1824 surrendered her shadowy title to "Oregon," leaving England and the United States as the only contestants for ascendancy there. Between those two countries the dispute was left open for 20 years longer, by which time colonization had gone to the rescue of the United States, and in 1846 England withdrew from all the territory south of the forty-ninth parallel. Perhaps the United States ought to have retained the whole "Oregon country" up to 54° 40', or Alaska, but as we were about to engage in war with Mexico, in which we gained territory which was more immediately valuable, many persons at the time thought we made a fairly good bargain.

THIS CLINCHED NECESSITY FOR MONROE DOCTRINE.

Here we see that what is now Alaska really provoked the Monroe doctrine of December 3, 1823. Part of the declaration was incited by the purpose of the Holy Alliance, the leading spirit in which was Czar Alexander I, of Baron de Tuyll's coun-

try, which had for its object the overthrow of the independent Governments set up by Mexico, Peru, Chile, Bolivia, and the other Latin-American nations which had broken away from Spain in the two or three previous years. These reactionary countries were Russia, Prussia, Austria, and the France of the restored Bourbons. Under the direction of the allies, France had already invaded Spain in the summer of 1823 for the purpose of upsetting the constitutional government which the Spanish people had created, and some of the allies, France among them, were to send armies over to the western side of the Atlantic and assail Mexico and her partners south of the Rio Grande.

This was an audacious scheme, and might have succeeded had not the United States called a halt in the conspiracy. The Latin-American countries were poor and feeble, and were wrangling among themselves. But the Government at Washington had the sympathy of England in this matter, which wanted to retain the profitable trade which it had gained with the new nations. The United States promptly sent out its note of warning, the plot was defeated on December 3, 1823, and hands off the American Continent became henceforth a cardinal principle in United States diplomacy.

But after the purchase of Florida we did not own what is now the United States. Texas and the country through to and including all of California were still outside. Texas came into the Union of her own accord, followed by war and by boundary troubles, which were settled by the United States going to the Rio Grande. That did not secure California to us, but John C. Freemont, the pathfinder, was out that way and promptly claimed that country for us. Mexico then sold California and New Mexico to us for $15,000,000 and shouldered onto us debts amounting to $3,000,000. A little later we completed the Gadsden purchase, to settle the Mexican boundary question, and paid $10,000,000 for a tract of land but 45,000 square miles in extent.

ALL WERE GREAT PROBLEMS.

All of these bargains did not go through without great dissension and discussion in Congress. Many men of great prominence were doubtful. How simple all of these steps seem now when we read them as recorded in the plain paragraphs of a grammar-school history. California in a few years found enough gold to pay the whole bill, while in the Gadsden purchase has been mined a very large part of the ore of the United States.

In my opinion the next step in the chain of progress was the opening of Japan by Commodore Perry in 1854. That was the magic touch that aroused old Mother Asia from the slumber of centuries and quickened force that should cause us to be ever alert.

Next comes the purchase of Alaska itself, in 1867, from Russia, for $7,200,000. How Seward was abused! What bitter speeches were made on this floor! Had Russia held Alaska I am inclined to believe that to-day the situation on the Pacific would be different from what it is now, and very different from what it will be 20 years hence.

Next were the opening of the land-grant railroads and the development of homesteads. Every step added to the resources and the prosperity of the Nation.

We annexed Hawaii in 1898. Then Porto Rico and the Philippines were ceded to us. One at the eastern approach of the canal, the other to the west. Was a Divine Providence guiding us?

Next the Alaska boundary problem was settled by arbitration, the new line following the mountain crests 10 leagues back from the ocean instead of crossing the leads of inlets, as the Canadians asked. This step was just as important as all which had preceded it.

Then came the discovery of great beds of coal in Alaska. And then attempt of great capital to control and develop these finds. Next the withdrawal of these, bringing to an end forever the development of new and pioneer territory by aggregations of capital.

FINAL NECESSARY STEP.

And since development can not be without great capital, what is the next step? It is a Government railroad, built as a pioneer line, which does not and can not mean an entering wedge for the General Government ownership of all railroads in continental United States. Not a bit of it. This railroad means that Alaska, unlocked, shall be opened, peopled, and made prosperous, to take its place as our sentinel and our key to the new Pacific.

Immigration—Why Conserve the West and Leave Front Door Open?

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 30, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to, and the residence of aliens in, the United States.

Mr. JOHNSON of Washington. Mr. Speaker, my colleague on the Committee on Immigration, the gentleman from Illinois [Mr. SABATH], calls my attention to the statistical statement that the population of the United States averages only 30 per square mile. I beg to suggest that these figures take no account of the millions of acres conserved and laid aside for posterity.

Think of it, more than 90 per cent of all of Arizona, 87 per cent of Nevada, more than 80 per cent of Idaho, 80 per cent of Utah, almost 70 per cent of Wyoming, 65 per cent of Montana, 62 per cent of New Mexico, half of Oregon, half of California, half of Colorado, and 40 per cent of my own State, Washington, all conserved, together with their resources, for posterity. Who's posterity? Ours or for children of southern Europe and Asia yet unborn?

Strike these vast areas from the total before you begin to figure population per acre. Remember, too, that the population in New York runs into thousands per city lot, and in Chicago nearly as bad. Remember that the plain people of these and other great cities are hungry for the land, but can not get it. They have the same longing for the freedom that goes with the ownership of broad acres as does yon serf-born peasant, who follows the primitive plow in far-away Russia.

My colleagues, but for the accident of birth I might have been that poor serf—unlettered, helpless, and almost without hope—and were I that poor creature, with my back bent to the plow, and with my thoughts turned to free America, which, not alone because of my inability to read 40 words, but because of abject poverty, I could never reach, should I ask you, the Congress of the United States, to hold open the doors, not to me, but to my children and my children's children? In fairness, I should not ask it; but you, my colleagues, by this very bill do that very thing. All that you ask in this bill is that he who comes henceforth shall show that little degree of education necessary for the reading of any 40 simple words in his own language or jargon, and that he shall be upright and free from disease.

Ah, my colleagues, were I that peasant, I could not be so far from the hope that God plants in every breast that I would think that my descendants would never read at all; that would be my hope, which would mean that the gates of the great United States would be open to them if not to me.

I have contended, in the rooms of the Committee on Immigration and here as well, by the presentation of a special report, that this test is not enough. I still hold to that opinion, but I do not fight this bill. This form of restriction is something. It will help if it shall keep out but 200,000. We have come years to get even this much restriction.

OPPONENTS FEAR FURTHER RESTRICTION.

I am told that many who oppose this bill so bitterly—opponents outside of Congress, let me make it clear—do so because of fear of further restrictive measures. They hope that by strenuous opposition to this bill they can make those who advocate heavier and more certain restriction feel that it can not be had. This explains why the plan for an absolute and positive restriction on a percentage basis finds such opposition.

And, remember, for every one who has come to these shores and found liberty—even the liberty of a congested ghetto in New York City—there are countless thousands who would come but can not. Literacy test or no literacy test, they can not come. Poverty forbids.

And, gentlemen of the Congress, the same poverty, in less degree, beyond a doubt exists in the United States—a poverty just as fatal when one desires to move his habitation in the hope of bettering the conditions of his children—the same galling, blighting poverty fetters the people of our own cities, who would, if they could, move to the land. Why, even now we are talking of governmental agricultural credits for those who get to the farms and who then can not go ahead for lack of money

to buy seed, lack of money to buy plows, lack of money to buy live stock, and lack of money to build even the humble roofs that shall shelter them in their great endeavor.

I know that the question of opening and peopling Alaska will be brought into this debate in argument against what I have said about the land.

But remember that this bill does not stop immigration. Thousands upon thousands still will come, and through the Panama Canal they will reach our Pacific shores; yes, on ships through the canal they will be carried even to the gate of Alaska itself.

Also, it must be apparent that the natural growth of our own 100,000,000 people will help to populate Alaska. The more hardy of our stock will go to Alaska as soon as a trunk line of railroad is constructed and adequate land laws provided. Their places will be taken by those who can get out of the cities. On-coming generations will clamor for the lands now conserved—yes; that land will be even needed for the present generation.

As Sedgwick said 120 years ago, we can not forever be an asylum for the oppressed of all the world. The time must come to end that doctrine, beautiful as it is and as beneficent as it has been. In my opinion, the time is here. In fact, it arrived the day we locked up our natural resources in the 11 Western States which I have named.

SHALL ALL OF THESE COME?

Suppose for a moment that to-day there were on the way to the United States the 6,000,000 oppressed Jews of Russia and Roumania, two or three million half-starved, beaten, and distressed Mexican patriots, a few million Brazilian half-breeds, other millions of wretched low-caste Hindus, who have nowhere in all the world to turn except the United States—not even to the sister lands of their vast Empire of Great Britain—a few million Japanese, who are so thick in their own land that they crowd each other for actual living space. Suppose, if you dare, that all of these, whose eyes, as we well know, turn with hope to the United States, should find means with which to arrive on our shores this very year of our Lord 1914. What kind of an outcry do you think would be heard in this land of liberty—in this asylum for the oppressed of all the world?

I contend that the Republican Party made a mistake in maintaining a tariff wall for the men who pay wages and neglecting to put up an immigration wall for the men who earn wages.

I am inclined to wonder, since the Democratic Party has torn down the tariff wall, what kind of a position would this party have been in if, instead of the goods made abroad which a few months ago packed our bonded warehouses to bursting—if instead of the goods the foreigners who made the goods had themselves been in the warehouses, ready to pop into the country on the passage of that bill. Why, if all the Japanese men, women, and children who had made the chinaware, the silk goods, the cotton goods, and the matting which has come in since the President signed the Underwood tariff bill were themselves to come here to live the roar of protest would have been something terrific.

But that has nothing to do with this immigration bill, 6060. We can partially restrict the incoming millions by passing this bill, and if the tariff bill is not satisfactory we can make one that will be. Thus, and thus only, can we have protection for the wage payer and the wage earner. Thus only can we relieve the American fathers and mothers of this generation who are actually, as Speaker CLARK puts it, "Lying awake nights wondering where their children shall find homes."

Restriction of Immigration.

EXTENSION OF REMARKS
OF
HON. GEORGE W. LOFT,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 2, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. LOFT. Mr. Speaker and gentlemen of the House of Representatives. As an employer of the Italian and Hebrew race I desire to enter my protest against this un-American measure.

If you will trace back the ancestry of the Members of this House, how many of your forefathers could read and write?

I employ upward of 1,000 men and women of the Hebrew and Italian race, and as an employer of these races of people I want to say to you that no better workmen or working women could be found in the whole world.

At the present time in the city of New York some of our largest contractors are men of the Hebrew and Italian race. Our largest merchants to-day are men of the same race. If the gentlemen from the Middle West and the gentlemen from the South will look up the records of the towns in which they reside, they will find but few, if any, Italians or Hebrews in the poorhouses.

And can America forget her distinctive indebtedness to foreigners? This country owes to Italy the old debt and more. May she not well remember that it was the son of a Genoese wool comber whose unflagging spirit revealed her existence to Europe; that the Florentine, Amerigo Vespucci, was her godfather; and that the voyages of the Cabots and Verrazano first traced the North American coast line and cleared the way for pioneer immigration.

Is it possible that the men of this House are going to vote against the country of such men in the world as Michael Angelo and other illustrious Italians, to whom the world owes a debt in almost every art and science? I have traveled through Italy—yes, all parts of it—not by the beaten path of the railroad, but by walks and by automobile, and know the class of people that you are trying to keep out, and instead of trying to keep them out we should open the doors and allow them to come in. You will remember that in this House a short time ago there were resolutions passed condemning the Russian Government for the atrocious treatment inflicted upon the Jewish people, asking them to come and we would open our doors to them. Now, in the same breath, you want to say to these same people, "Go away; we don't want you." How can you gentlemen be consistent in attempting to pass a bill of this kind?

I wish I had more time to go into the subject more fully, but the time allotted to me is limited, therefore I will plead with you gentleman to vote as a unit against this un-American bill. For the reasons I have stated I shall vote against this bill.

Appropriations for the Post Office Department.

REMARKS
OF
HON. ADDISON T. SMITH,
OF IDAHO,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. SMITH of Idaho. Mr. Chairman, I offer the following amendment in lieu of section 9.

The CHAIRMAN. The gentleman from Idaho offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 30, after line 19, insert:

"That each letter carrier in the Rural Free Delivery Service shall receive, after July 1, 1914, an allowance equal to 25 per cent of the salary he now receives, to be paid each month, for providing and maintaining the equipment used by him in transporting the mails in the discharge of his official duties as such carrier."

Mr. SMITH of Idaho. Mr. Chairman, there is no branch of the public service which affords more convenience and comfort to the people than the Postal Service; and there is no branch of the public service where the employees have more arduous and responsible duties to perform or where so much is expected of the employees than in the Postal Service. During the last few years provision has been made for slight increases in the compensation of the clerks in post offices and in the Railway Mail Service, but the compensation is still quite inadequate for the service rendered and is very much lower than is provided for employees in other departments of the Government. Regardless of this fact, the men and women in the Postal Service loyally perform their duties and faithfully serve the public, hoping that Congress will in the near future provide the relief to which they are entitled.

I wish to speak especially for the rural carriers and the star-route contractors, upon whom unusual and unexpected burdens have been imposed because of the great increase in the weight of the mails. The further increase in the weight of the mails which will result because of the more liberal regulations contemplated by the Postmaster General in connection with the parcel-post system must also be taken into consideration.

I was greatly surprised to observe when the bill was reported to the House that a liberal provision had not been made by the committee to meet the unreasonable and almost impossible conditions which had been imposed upon these carriers.

There is no good reason why a rural carrier should not be given an allowance, as are the city carriers, for equipment and the maintenance thereof. Suburban city carriers are allowed from $25 to $30 per month for maintenance of equipment, where only one horse is required, while the rural carrier is allowed nothing for maintenance, although many of them in a rough country require four or more horses to perform the service, as the horses can not stand the daily trips and must rest on alternate days.

It has been demonstrated that there is a large profit accruing to the department as a result of the inauguration of the parcel-post rates, and because of the hardships imposed upon the rural carriers incident to transporting the ever-increasing weight of the mails they should have first consideration and be given immediate relief. The weight of mail the city carrier is supposed to handle is necessarily limited, but the rural carrier is expected to be prepared to transport any amount of mail that he may find confronting him when he starts upon his route.

The increased weight of the mails is making it necessary for him to purchase larger and stronger wagons and additional horses, and if no provision is made this session for these worthy employees many of them will be forced to resign their positions, as it is impossible for them to purchase and maintain equipments and support their families on the compensation allowed.

Many of the rural carriers in my district have furnished me with information regarding their needs, which I have classified for the information of the Members, an examination of which will disclose the fact that a very small margin is left after paying the expenses of providing and maintaining the equipment necessary to transport the mails and render satisfactory service.

Route from—	Carrier's salary per month.	Length of route.	Hours on route.	Families served.	Horses required.	Value of equipment.	Horse feed per month.	Expenses of maintenance per year.	Depreciation per year.	Net yearly proceeds.

All classes of citizens agree that some relief must be afforded to these loyal employees of the Government, and the press of the country has recognized the justness of their claim, as is evidenced in the following editorials:

[From the Courier-Journal, Louisville, Ky.]

The rural carriers work for the money they get, and the establishment of the parcel post has added materially to their labors. They are compelled to furnish their own wagons, and the augmented bulk of the mail they are carrying will make it necessary in many instances for them to provide larger vehicles than they are using at present.

The carriers are assigned about as much territory as they can cover adequately, and with due regard for promptness, under the most favorable conditions. A route that is carried easily during the long summer days and at seasons when the country roads are in their best condition assumes a very different aspect in winter when the weather is severe and the roads are muddy or covered with snow or sleet. It is during the winter that the energies and resources of the carriers are most strongly taxed.

Here is what James M. Pierce, in the Farmer and Stockman of January 1, says:

"I regret exceedingly to learn that the plan to increase the pay of rural mail carriers is likely to meet with defeat in Congress. No man

deserves better of his employer. Through all sorts of weather, day after day, week after week, the rural free delivery carrier makes his rounds, connecting the farm with the near-by town and far-away city, bringing tidings of great joy and of great sorrow, carrying the welfare of individuals and of townships in his cart or wagon. The roads may be bad, the winds of winter may be blowing, the thermometer may register below zero, no matter what the conditions, faithfully and regularly comes the cheery rural free delivery man. And now, in the interest of so-called economy, the raise in pay which he so richly deserves is to be denied him.

"There is no branch of Government work which has so justified itself as the Rural Free Mail Delivery Service. Pessimists predicted dire failure for it; the experiment was tried with fear and trembling; there were even some farmers who worked and argued against it in the early days. There is not a farmer to-day who does not compliment the Rural Free Delivery Service, who would not fight to retain it. Thanks largely to the splendid type of men chosen for the work, and to the loyalty with which they have performed their task, the Rural Free Delivery Service stands as an object lesson of accomplishment. And now they propose to add to the carrier's duties by making him deliver parcel-post packages, not only in the country, but in the town from which his route emanates, without increasing his pay. It is altogether wrong.

"I believe in paying every man according to his just deserts, whether he be farmer, letter carrier, printer, or what. The rural free delivery carrier has not only done everything required of him, he has done it so faithfully and so well that an experiment, of which much was feared, has succeeded beyond the fondest expectations. The man in front of the mail sack deserves credit from his country fully as much as the man behind the gun. Reward good labor wherever it is performed and still better results will be forthcoming. Give the rural free delivery carrier the pay he deserves."

W. R. Hearst, owner of a string of newspapers from New York to San Francisco and in the South, has taken up the cause of the rural carrier. In a recent editorial, appearing simultaneously in all his papers, he says:

"In providing for the extension of the usefulness of the parcel post by increasing the weight of the package that may be carried, the Postmaster General and Congress should not overlook the rural free delivery carrier.

"This postman of the backwoods, who drives from 18 to 25 miles a day over rough country, is paid on a basis of the amount of ground he covers. For a 25-mile route he receives $1,100 a year. He must provide his equipment, which generally consists of an open wagon, a covered one for bad weather, and a sleigh when sleighing is possible.

"He is postman, money-order clerk, weigher of packages, seller of stamps, and registrar of letters. He must provide his own horses, feed and shoe them, and make an average of 4 miles an hour or report why when late. Sometimes—in fact, frequently—he is compelled to keep as many as three horses because of the strain on horses in mountainous districts. Many of them are now driving teams because of the parcel post.

"For $3 a day he must furnish a team to the Government, drive 25 miles in all kinds of weather over roads of all kinds, and may not even earn an extra dollar through carrying the chance passenger into the back country without running the risk of facing charges.

"Why should not the Government provide the horses and wagons and give to the rural carrier a chance to live? When the cost of horse feed, shoeing, wear and tear on harness and rigs, and depreciation is taken into consideration, the rural postman is lucky if he has 50 per cent of the money paid to him to keep his family.

"Thousands of these men quit the service last year, at a time when the Government was extending their usefulness at their expense. How many more of these faithful servants will be driven out when the weight of the package is made 50 pounds?"

The following news items from Idaho papers portray conditions which may be surprising to those who have given this matter no consideration:

[From the Spokesman Review.]

MAIL CARRIER UP AGAINST IT.

SPOKANE, WASH., *January 13.*

Post-office inspectors received to-day telephone calls from worried rural delivery carriers asking aid.

The carriers who ride horseback from Paradise, Oreg., to Anatone, Wash., 18 miles, notified the inspectors that a man at Paradise is ready to ship 3,600 pounds of timothy seed by parcel post.

The carrier at Elk City, Idaho, telephoned that mine owners had three carloads of concentrated ore ready for shipment by parcel post to the smelter, a distance of 60 miles over mountain roads.

—

[From the Grangeville (Idaho) Globe.]

SHIPPING ORE BY PARCEL POST.

Information comes to us this week that shipments of ore are now being made from the Ten Mile country to the Butte and Anaconda smelters in Montana, and that the Jumbo mine in the Buffalo Hump country is also preparing to ship concentrates from their mill.

These mines come within the second zone, and under the new postal regulations a ton of ore can be shipped to the points named for $23 and a fraction. Thus, by sorting the ore carefully, there are dozens of the mines in the districts contiguous to Grangeville that can furnish tons upon tons of ore that will make their operators a nice clean-up at the end of a few months. In many of the mines the ore boxes are full, it is said, and all that will be required is proper sorting and sacking to get it ready for transportation to the smelters. After they make connection with the mail service, your Uncle Samuel has pledged himself to do the rest. Lord help the mail carriers, for the Government isn't doing much of it.

—

[From the Idaho Daily Statesman.]

TON OF FLOUR BY THE PARCEL POST.

As a result of the increase in weight to 50 pounds in the first and second zones by the parcel post, over a ton of flour in 50-pound sacks was shipped through the Boise post office to-day to different points in Idaho. A large number of other bundles ranging in weight from 25 to 50 pounds were shipped out and the day was one of the heaviest here since the parcel-post law went into effect.

I have scores of letters from rural carriers in Idaho urging relief, but will only quote from a few, as the evidence of the necessity of making provision for these employees would simply be cumulative. I quote from one letter:

One thing I wish to emphasize, and that is that the vehicle which travels the full length of the route must go 9,210 miles annually. At the end of the second year it is ready for the ash heap. Do not forget that we plow through miles of drifted snow to the axle, and ofttimes not a farmer will break a single mile of the road. Where a carrier suffers an accident, like a runaway or the death of a single horse, he has incurred a loss which will require a whole year to recover from.

Here is another:

With the present salary we are not able to lay up anything for the time in the future when we must depend upon what we have done in the past. Many of us have families depending upon us and are as good and loyal citizens as those in other walks of life, and I believe should have our just deserts for service earnestly and effectively performed. While I stay in the service I shall conscientiously perform my duties, but if no relief comes I am not expecting to stay on the job for a great length of time.

Another:

The indications are that the mail will be very heavy on my route this summer, as the melon growers are preparing to send out 50-pound crates of canteloupes, which will mean that I shall have to buy a larger and heavier wagon and use four horses all the time, two making the trip one day and the other two the next.

Another:

By March 1 I will have to use at least one more horse, and before next winter two more. My rigs are already inadequate, and it will cost me about $200 to buy new ones and the harness required. Some days I have 25 or 30 pounds, and the next day I may have between 300 or 400 pounds. We have to be prepared all the time for the heavy mail.

Another:

I wish to say to you that I have used 11 horses since I went on this route, one year ago last June. As it has taken all I could make to buy horses with since I went on this route, I do most assuredly hope we may get bigger wages, as we are getting awfully discouraged with our jobs, as it takes the children all summer to make enough money to pay up what we go behind in the winter.

Another:

It must be taken into consideration that the mail carriers are taking chances on accidents, loss of horses, and have to work at home extra to take care of their horses. Being out in all kinds of weather, we are more apt to get sick and have to pay doctor bills. We are out on our routes six to seven hours and have to work at the post office mornings and evenings about two hours besides. The majority of us are trying to get along the best we can, but there is a time coming when all will have to do differently. I bought this year one extra horse and got my wagon enlarged twice for the parcel post and have to do this again. The expenses come higher every time. The length of our routes are made so that we can get around with a light wagon, but are too long for heavy wagons. Besides this the insured parcel-post packages have to be delivered within half a mile off from the route, like registered mail, which gives us much extra driving.

Another:

When all the items of expense are taken into consideration, together with depreciation, I find I have less than $50 left to feed and clothe my family and pay an occasional doctor bill. Experience is the best teacher, and I now know what I doubted before I entered the service—that the letter carrier had a hard time to keep even.

What better or more convincing proof should be required to show the immediate necessity of making ample provision for this deserving class of employees? Is it not the duty of Congress, regardless of expense involved, especially in view of the fact that the service is being conducted at a profit, to make ample provision for reimbursing them for expenses incurred in the maintenance of equipment necessary in the performance of their official duties?

STAR-ROUTE CONTRACTORS.

The relief provided for in the bill for star-route contractors is far from adequate, and a more liberal schedule for compensating them, because of the increased weight of the mails, should be adopted. Packages which have heretofore been carried by them as express or freight they are now required to carry free. In making their bids for carrying the mails they made a low estimate, because of the charge which they could make for transporting packages by freight, but since the packages which they had heretofore carried for hire now go by mail they are in numerous instances forced to carry the mails at a loss under the penalty of having their bondsmen required to perform the service.

Of course, when their contract term expires they will be relieved from the embarrassment which now confronts them, as their new bids can be estimated upon the approximate amount of weight of the mails to be carried, but during the remainder of the present contract term there should be frequent weighing of the mails, and a liberal compensation given them for carrying the extra weight so as to prevent them being forced into bankruptcy.

Post Office Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM W. GRIEST,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, January 23, 1914,

On the bill (H. R. 11338) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1915, and for other purposes.

Mr. GRIEST. Mr. Speaker, supplementary to my remarks on town and village mail delivery, delivered in the House January 16, 1914, I desire to present additional testimonials which have been received by courtesy of and through Members of the House in commendation and indorsement of the experimental mail delivery now in operation in the districts of these Members. These letters, taken in connection with those previously presented, show that the experimental mail-delivery system is a pronounced success, and they refute the information received by the gentleman from New York [Mr. FITZGERALD], who on the day of the adoption of the paragraph in the Post Office appropriation bill relating to town and village mail delivery is reported in the RECORD as saying:

Representatives in the House who live in such communities have informed me that they know this service is of no special benefit.

Among the 114 Members who have this service in their districts I have been unable to discover a single one who does not commend it and demand its retention by the Government. The letters now presented for publication, and those heretofore published, indicate a unanimous desire on the part of "Representatives who live in such communities" for the permanent establishment of a service which, it is now demonstrated, is regarded as indispensable and to the benefits of which from 15,000,000 to 20,000,000 are of right entitled.

Hon. SERENO E. PAYNE, representing Dundee, N. Y., writes:

I certainly think this service should be extended to villages of the same class where a single carrier can do the work and larger ones where two carriers can do it.

Congressman PAYNE also furnishes a letter from Mr. E. Vreeland, of Dundee, who says:

The people appreciate the service and desire to have it continued and improved. The residences should be ordered numbered and collection boxes erected. Should the service be taken away a vigorous protest will result. With the constant increase of postal business, especially the growth of parcel post, it is almost imperative that a way be provided for the quick disposition of mail matter. Otherwise larger quarters and additional help will be needed to properly conduct the business even in a third-class office.

Hon. H. H. SELDOMRIDGE, representing Littleton, Colo., writes:

I have just received a letter from the postmaster at Littleton, Colo., which substantially confirms the report made by the postmaster at Ephrata, Pa. The postmaster states that the service has been satisfactory in every way. The carrier there is handling over 18,000 pieces of mail each month. The service has grown to the extent that over 780 patrons are being served. There has been full and complete cooperation between the people and the postmaster, and a discontinuance of the service would be greatly deplored.

Hon. SAM R. SELLS, representing Elizabethton, Tenn., writes:

I have been to Elizabethton a few days ago and find that the statements of the postmaster with reference to this service are correct. The patrons of the office are very much in favor of the continuance of this delivery, and I trust that arrangements to that effect may be provided for in the annual Post Office appropriation bill.

Congressman SELLS also submits a letter from Mr. E. E. Hathoway, who says:

The patrons are well pleased with the village free delivery that we have at this office and ask that you use your influence to make it permanent. I believe that it has increased the receipts of this office. I have had a number of the patrons who are served by this delivery to ask that you do what you can to make it permanent, that it saves them time running to the office for the mail, and the business men are more than delighted with it. I hope you will do all you can for us.

Hon. THOMAS L. RUBEY, representing Lebanon, Mo., transmits a letter from F. J. Swett, who says:

In reply, permit me to say that my experience with the establishment of five rural routes justifies me to believe that the attempt to deliver mail in towns of this size, in view of the time established, is an absolute success. In other words, if this service is made permanent, in a few years there will be no demand at the general-delivery window except by transients. My conclusion regarding the delivery of mail in Lebanon is as follows: The certainty of receiving and collecting mail at regular hours will have a most beneficial effect upon the patrons of the office in saving them time and systematizing their mail, and without additional expense to the service.

Hon. JAMES A. HUGHES, representing Princeton, W. Va., writes:

I want to say that the postmaster, the city council, and all of the business interests at Princeton are enthusiastically in favor of this service, and, in fact, this service now has become a necessity. This particular town is strung out about 3 miles in length.

Congressman HUGHES submits a letter from Mr. Wirt A. French and a resolution signed by Mayor J. D. Scott as adopted by the City Council of Princeton.

Mr. French writes:

We have between 6,000 and 7,000 inhabitants within our corporate limits at this time, and I should say that the post office serves at least 7,500 people in and outside of the corporate limits. I beg to report further that the delivery system in use in our city has been of the greatest benefit to all our citizens, and we feel that if anything should occur to deprive us of same that it would indeed be the worst calamity that could possibly befall us.

The resolution reads:

Whereas it appears that our present city delivery of mails is only temporary and dependent upon the Congress of the United States for an appropriation for its continuance; and
Whereas that city delivery has been in use in our city for about 11 months, and has proven so entirely satisfactory that our business concerns and residents have become dependent upon same to such an extent that to discontinue same would, in our opinion, be nothing short of a calamity, and would result in irreparable injury to the best interests of our city and the whole citizenship of same * * *.

Resolved, That a copy of these resolutions be spread upon the minutes of our city, and that the recorder be requested to furnish two copies of same to Wirt A. French, postmaster of our city, with the request that he forward same to our Senators and Members of Congress.

Hon. BURTON L. FRENCH, representing St. Maries, Idaho, advises:

I would say that as far as the experiment has gone I am advised that it has proven a decided success. The experiment has been seriously handicapped on account of the fact that the service has been allowed but one carrier, and he has not been provided with equipment such as mail bags, etc., that would have best served him as carrier. There has been no provision made for street letter boxes, and as a result of this many people have had to go to the St. Maries post office to mail their letters who had no other reason for making the trip. The postmaster at St. Maries, Mr. Edgar T. Hawley, advises me that it is his judgment that the delivery system that has been tried experimentally at St. Maries would be a decided success in such post offices if a sufficient number of carriers with equipment could be provided and letter boxes for the collection of mail placed at suitable points. He advises that he believes that the public at St. Maries have been profited far beyond the cost of maintaining the system there, and that the general idea is a good one.

Hon. E. A. MERRITT, Jr., representing Norwood, N. Y., writes:

For the past two years the village of Norwood, N. Y., in the congressional district which I represent, has been designated as one of those for experimental test of mail-delivery service in towns and villages not eligible under the present law to receive city delivery service. The service in Norwood has proven highly satisfactory to the patrons of the office, has been of great assistance to the business men of the town, and I am informed that the postal receipts since its inauguration have increased. I therefore am most heartily in favor of that item in the Post Office appropriation bill appropriating $200,000 for continuation of this service, and also would favor any plan providing for the proper extension of this service so that all villages where it would be beneficial might be included. Therefore any assistance that I can render to that end I shall be most pleased to do.

Hon. JAMES F. BYRNES, representing Blackville, S. C., sends a letter from Mr. B. J. Hammet, who reports:

It affords me pleasure to state that the patrons of this office are much pleased and delighted with the city delivery service.

Hon. JAMES A. FREAR, representing Durand, Wis., incloses letters from Messrs. August Ender and H. A. Miles, who say that the mail-carrier service "is highly satisfactory to the patrons."

Mr. Ender writes:

In regard to your interesting inquiry, will say the city delivery is working wonders here, and our people could hardly get along without it. The revenues of the local post office have increased, and there is such a friendly feeling that we have used our paper to urge people to be still better patrons of Uncle Sam.

Mr. R. P. Wilton, chief burgess of Wrightsville, Pa., writes:

Learning of the contemplated plan of the Post Office Department to discontinue the free mail-delivery service established in 114 towns and villages throughout the United States, and realizing that the discontinuance of this service would seriously affect the welfare of the town, I called a special mass meeting of citizens to protest the action of the department and to petition Congress. This mass meeting was held Tuesday evening, January 20, and the inclosed sworn copy of resolution will convey, in a measure, the sentiment of the town. Surely, a resolution signed enthusiastically by more than 700 citizens must carry great weight.

The resolution, signed by 751 citizens of Wrightsville, reads:

Realizing that the discontinuance of free mail-delivery service established in Wrightsville, Pa., in February, 1913, would interfere seriously with the growth and welfare of the borough, and to express our appreciation of this service as now enjoyed and found necessary, it is

Resolved, That we, the citizens of Wrightsville, Pa., in special mass meeting assembled, do petition Congress and the Post Office Department to take such action that will insure a continuance of this very valuable and appreciated service.

Hon. R. W. AUSTIN, representing Lenoir City, Tenn., presents the following from S. F. Carroll:

The village delivery service for Lenoir City has proven entirely satisfactory in every respect and has been well received and patronized. The receipts of the office have increased over last year.

Hon. FRANK PLUMLEY, representing Ludlow, Vt., after careful inquiry, writes:

Extending my answer of the 7th instant to yours of the 29th ultimo, wherein you sought information concerning the operation of the experiment of mail delivery service in towns and villages, in the town or village of Ludlow, Vt., being one of those experimental tests made by the Post Office Department, I am now prepared to say to you that careful inquiry disclosed the fact that beginning with July, 4,483 pieces were delivered; August, 7,186; September, 8,310; October, 10,536; November, 9,919; December, 13,600, being a progressive and rapidly increasing use of the facility offered, and constituting a total for the six months ending December 31 of 54,034 pieces. This service was all rendered by one man, except on Christmas week, when a clerk was furnished and a team to help out a carrier, and with this assistance everything was kept cleared up each day. Collections were made by the carrier, as patrons handed him their mail as he passed by.

It being known that I was making some inquiry to get information concerning the operation of this method of helping out in their village, and a rumor having started that there was danger that the village would lose the privilege they had through it, voluntary letters have come to me from merchants and business men and citizens expressing strong commendation of the service, saying that many of the merchants patronized it; that it is the greatest benefit to ladies and people living a long distance from the office; that the village is served by a very efficient carrier, and everybody would hate very much to give up their great accommodation, and further saying that if Congress wants to take the free delivery away the people in Ludlow must enter a protest. Another asks me most earnestly to support the retention of the free-delivery proposition for Ludlow and other places like it; it is said by this person that "the experiment here is proving a great convenience and is appreciated by all our people. We hope you will see your way clear to indorse the privilege recently granted." Another says: "I certainly hope that the appropriation bill for letter carriers in towns like Ludlow will be carried through. I certainly have enjoyed having my mail and parcel post delivered. It would be a great disappointment to me to have our carrier discontinued. It saves time and is so convenient. I am sure this is the case with everyone in town. Any part you may take in favor of continuing our carrier will be appreciated by me and everyone in town." Another says: "I find upon investigation that a goodly number are taking advantage of the arrangement. I feel that there will be much inconvenience felt by a goodly number should the present arrangement be discontinued. One of the rural free delivery carriers stated that if the increase in the use continued it would not be long before a second carrier would be needed."

I will say, further, that the other information which I have from Ludlow is along the same line, and substantiates fully the quotations which I have made, and having a deep interest in every step which brings to the people their mail most readily and efficiently, and which tends, as I believe, to the development and betterment of the conditions in our towns and villages of modern size, I heartily favor the continuance and extension of village mail delivery.

If there is anything which I can do to aid you in your appreciated efforts along this line, I offer my services, and remain,

Hon. WILLIAM KENT, representing Willits, Cal., submits a letter from Mr. Charles Whiteel, who writes as follows:

Relating to experimental city delivery, would state that it is giving good satisfaction, and if it is not made permanent it will be a great disappointment to the patrons of the delivery. It has increased the receipts and made the service more thorough.

Hon. SCOTT FERRIS, representing Wynnewood, Okla., transmits an interesting letter from Mr. H. S. Shackelford and a largely signed petition from patrons of Wynnewood, which reads:

We, the citizens of Wynnewood, Okla., patrons of the Wynnewood post office, now being served as such through the experimental village free delivery, respectfully petition your honor to work for and aid in securing the continuation of same for this as well as other villages and towns of like size. We are decidedly in favor of this branch of the service, because it enables us to enjoy the same privilege that our rural neighbor enjoys, as well as our neighbors living in a city where the receipts of the office are such that they are permitted to have regular Free Delivery Service because of said regulations.

The service in this town has been very efficient and has proven beyond a doubt that the Post Office Department has made no mistake in establishing said service, and we are loath to give up this highly appreciated service.

Mr. E. E. Norvell, of Wynnewood, Okla., also writes as follows:

This service has been in operation in this city since March 1, 1913, and recently a petition was circulated for its continuation, and only one man in the whole city refused to sign the petition, yet his wife was very enthusiastic in asking for the continuation of the service.

This service fills a long-felt want by the women and children of these towns and cities, which enables them to get the daily papers, instead of them being carried to the business houses and thrown down, and perhaps never carried to the residences by their husbands and fathers, thereby depriving them of the educational advantages they would get by the reading of the daily newspapers.

The women and children of our city are the loudest in their praises of the service they are getting through this branch of the service. We have a population of 2,800, and practically the entire town is being served by the village carrier and the two R. F. D. carriers out of this office. We have been unable to ascertain whether the collection of mail has been greater than would have been mailed at the post office or not because the department has failed to furnish mail boxes for the streets.

I shall soon retire from the service as postmaster of this city, but I am very enthusiastic in my support of the village delivery service for small towns. I also take a pride in the fact that my office was the second in the State of Oklahoma to have this service established.

I also present a letter from Hon. Daniel C. Roper, First Assistant Postmaster General, who has kindly submitted data as to the number of different towns represented by applications, petitions, and inquiries filed in the Post Office Department concerning the establishment of town or village mail-delivery service:

POST OFFICE DEPARTMENT,
FIRST ASSISTANT POSTMASTER GENERAL,
Washington, January 23, 1914.

Hon. W. W. GRIEST,
House of Representatives.

MY DEAR MR. GRIEST: Referring to your letters of December 22, 1913, and January 19, 1914, I take pleasure in inclosing the data relative to experimental mail delivery service you request, showing by States the number of applications received for the institution of the service, on which no action has been taken, and the number of inquiries received on the subject of delivery at the different towns.

I very much regret that through a misunderstanding this data was not furnished you more promptly.

Yours, very truly,

DANIEL C. ROPER.
First Assistant Postmaster General.

Applications filed in Post Office Department in re experimental mail-delivery service on which no action has been taken.

NOTE.—By "application" is meant the number of different towns requesting institution of the service. By "petitions" is meant the formal request by a number of citizens for the service. By "inquiries" is meant the number of communications received in addition to the petitions and applications.

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 3, 1914.

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. BARTON. Mr. Speaker, to listen to the discussion of this bill one would naturally think that all it contained was a literacy test; but an examination will show that it provides for the exemption of idiots, imbeciles, feeble-minded, epileptics, insane, paupers, persons likely to become a public charge, beg-

gars, vagrants, persons afflicted with tuberculosis or other dangerous diseases, persons having physical or mental defects of such a nature as to affect their making a living, those who have committed a felony, persons who practice or believe in polygamy, persons who teach the unlawful destruction of property, prostitutes, procurers, contract laborers, and other provisions. It also provides a test of literacy—one must be able to read 40 words in their own language. Provisions are made in applying this test that any admissible alien or any alien heretofore or hereafter admitted or any citizen of the United States may bring in or send for his father or grandfather, his wife, his mother, his grandmother, his unmarried or widowed daughter, even if they can not read. The alien who must submit to this test is required to read 40 words in his own language, and I would not desire to so insult the people who inhabit northern Europe as to plead that they could not meet this requirement.

It is known and admitted in the discussion on the floor of this House that the only people this test affects is the people from southern Europe. To be more explicit, the Greek and southern Italians. We have received in this country 1,500,000 aliens from one of these countries of southern Europe and 850,000, or 54 per cent, of them can not read or write, and only three-tenths of them have become naturalized. From the 15th day of February, 1910, to December 31, 1913, we have received 4,278,889, making a total of 17,794,775 persons in this country of foreign birth on January 1, 1914.

The American Federation of Labor, with a membership of more than 2,000,000 wage earners; the United Mine Workers of America, with 450,000 members; the Farmers' Union, with a membership of 3,000,000 men; the National Grange, the Farmers' National Congress, the Railway Trainmen's Association, the Brotherhood of Locomotive Engineers, Conductors and Firemen, and practically every patriotic organization of this country has asked for this legislation.

In most of our States we have compulsory educational laws. We expend millions of dollars in educating our children, and it seems to me, while I do not believe that this test is the true test of a man, that we are not entirely unjust when we seek to keep up our high standards of literacy by requiring the alien to have at least enough education to read 40 words in his own language, and, further, that with this development it is reasonable to suppose that he is better prepared to grasp the genius of American Government and American institutions.

The argument is advanced that had this test been applied a hundred years ago our forefathers could not have been admitted. The ones who put forward this argument seem to forget that there is a great difference in the education of mankind from that period until now. One hundred years ago education was a luxury; now a necessity. Then difficult to secure; now almost thrust upon you. If we would make a comparison of the school systems, methods of transmission, periodicals, and all the things that go to make education of that period and now, we can then readily grasp the inconsistency of the men whose arguments are that our forbears could not have been admitted had they been forced to pass this test.

My forefathers, in common with others, probably could not have passed this test, and yet I am constrained to think, knowing their fortitude and character, had they known this test was to be applied that they would have prepared and qualified, for our people of a hundred years ago were made of that kind of stuff. My father's people were from the old sod, those of my mother from the fatherland, and I would not to-day insult the intelligence of those races to say that the great body who knock at our doors for admission can not read 40 words in their own language. An examination of the report of the Commissioner of Immigration will prove conclusively that a very small percentage of the people of northern Europe will be excluded.

I do not believe, as urged by some, that it will affect the Jewish people, who are a race of much intelligence, and whose children are taught the language of their Bible at an early age; and mighty few there would be over the age of 16 that could not read 40 words from their own Bible; and even if they can not, and make the statement that they are entering this country to escape a religious persecution, they, under this bill, can be admitted.

My colleagues who are protectionists and oppose this bill are certainly inconsistent. You stand for a tariff high enough to protect America's laboring men, their standard of wages, their standard of living, and yet by opposing this bill invite the hordes from southern Europe to swarm into this country to take away the positions from the American laborer, lower the price of his wages and his standard of living, the thing that you would avoid in the first instance.

I am not opposed to an immigrant who comes to this country for the purpose of making his home who is of sound mind and body and of good moral character and one that can be assimilated, but I am opposed to permitting bodies of men to come to this country for the purpose of taking the wages that belong to our American laborers and carrying them back to his country in time of war, as had been so recently demonstrated. There are so many good features in this bill that I propose to vote for it, believing in so doing I am casting my vote for American laborers, American home builders, and American institutions, which means a prosperous America.

Some Features of the New Income-Tax Law.

EXTENSION OF REMARKS

OF

HON. GEORGE F. BURGESS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 4, 1914.

Mr. BURGESS. Mr. Speaker, it affords me a pleasure to ask unanimous consent to have printed in the RECORD a notable address by that much loved colleague of ours, Hon. CORDELL HULL, of Tennessee, delivered last week in New York City before the State Bar Association of New York State, in which he discusses some features of the new income-tax law.

ADDRESS OF HON CORDELL HULL, OF TENNESSEE.

Mr. President and members of the State Bar Association, I desire to express my sincere thanks for your invitation to be present on this occasion and for the high privilege of participating in the proceedings of this, the largest State bar association in the United States. May I also express the great respect and admiration which I, in common with the lawyers of other States, entertain for the high professional standard, ability, probity, and learning which have always characterized the legal profession of the State of New York.

During the past year the Congress of the United States has enacted a number of laws of Nation-wide interest and importance. As a part of the legislation designed to establish a new national fiscal policy, an income-tax law has been enacted. I ask the indulgence of this distinguished assemblage while I briefly comment upon some of the features of that law.

It must be admitted that the history of all taxation reveals a constant struggle between classes, each striving to shift the chief burden of taxation upon the other. Taxation is coeval with organized society. The income tax is the outgrowth of centuries of tax legislation throughout the world. By universal consent it more nearly approximates justice in taxation than any other general tax method yet devised. More than 50 countries and States have adopted this method of taxation, and none have repealed it. To-day it is in operation in every leading country in the world save France, and she is in the act of adopting it. The same permanency may be predicted for the new law here. The incorporation of this tax as a part of the newly adopted fiscal policy of this country marks the culmination of a contest that has been waged in its behalf throughout the Nation for 20 years. Our former income-tax laws should never have been repealed. During the early seventies, when the war taxes were being gradually abolished, the ablest statesmen of that time earnestly opposed the abandonment of the income tax upon the ground that it was the most just and equitable tax then levied by the United States, and, in the language of John Sherman, because it—

Was the only discrimination in our tax laws that will reach wealthy men as against the poorer classes of people.

The income-tax law of 1894 was declared invalid by the Supreme Court upon the ground that a tax imposed upon income derived from real estate or invested personalty was a direct tax, and must therefore be levied by the rule of apportionment. From this decision the friends of the tax respectfully appealed, and sought to overturn it by securing an amendment to the Constitution of the United States. This amendment was adopted in February, 1913. Strange to say, Congress in drafting and submitting this amendment to the States, instead of dealing with this subject after the manner of the eleventh amendment to the Constitution, by making the amendment declare that "taxes imposed on incomes from whatsoever source derived shall not be construed to be direct taxes," and thereby classifying this tax, simply submitted an amendment relating alone to the method of laying a tax on incomes, and so ex-

empted the tax from the rule of apportionment. In the light of this amendment and the decision in the Pollock case, would a tax on income derived from real estate or invested personalty now be considered a direct or an indirect tax? The weight of opinion expressed in the Senate at the time this amendment was considered was to the effect that it would continue to be a direct tax. If this view be correct, under what, if any, rule shall the tax be laid? The Constitution only requires duties, imposts, and excises to be laid according to the rule of uniformity. These terms are understood to embrace all the indirect forms of taxation. Since a general income tax is no longer subject to the rule of apportionment, it can not be contended, upon the other hand, that the rule of uniformity will apply unless this tax should be treated as having been restored to the category of indirect taxation by virtue of the recent amendment to the Constitution. It is probable that in the future the courts will, as they did prior to 1894, treat a tax imposed upon income derived from real estate and invested personalty as an excise tax, otherwise its levy would not necessarily be subject to either rule prescribed by the Constitution.

Our national tax system has been justly considered inequitable, instable, and inflexible. The present Congress therefore turned to the income tax as the wisest, fairest, and most feasible means of equalizing the burdens of taxation and securing for the Government an elastic and flexible system of revenue. Unlike the intangible, indirect tariff tax, this method enables every citizen to see and know the exact amount of taxes he contributes to the Government, and to know that every dollar he pays goes into the Federal Treasury.

Edmund Burke once said:

> You can tax the shirt off a man's back by indirect taxation without serious complaint on his part.

With the income tax as a permanent part of our fiscal system, Congress can readily prevent a deficit or reduce a surplus in the Treasury without disturbing business by the simple lowering or raising of the income-tax rates. Furthermore, the cost of collecting this tax will be less than that of either the tariff or internal-revenue taxes proper.

The new law in a measure follows the English law with respect to the method of graduation and collection at the source of the income. The provisions of paragraph A, subsection 1, which impose the normal or basic tax upon individuals, is almost as broad in its scope and meaning as the English law. Some discussion has arisen relative to the application and effect of the latter provision of this subdivision upon the income of nonresident aliens derived from property owned or business, and so forth, carried on in the United States with respect to corporate interest received from this country. The question has also been raised as to the nature and extent of the jurisdiction of the United States Government thus to impose a tax that would affect the person of a nonresident alien. It may be noted here that similar provisions in the laws of most other countries has given rise to occasional controversy. A few such laws prescribe lower rates for the alien. Apart from the policy involved, this law as it affects nonresident aliens generally has always been somewhat difficult of enforcement with respect to certain classes of income. Strong grounds can be urged both for and against its provisions relating to domestic-interest income due to nonresident aliens. This law would be more acceptable to an investing nation than to those in need of capital. Citizen investors in domestic securities are opposed to giving the foreigner any advantage An international agreement prescribing as nearly as possible a standard of uniformity would be impossible at this time. Some $6,000,000,000 of foreign capital is invested in the United States, comprising stocks, bonds, mortgages, and real estate. Undoubtedly this Government has not the jurisdiction to impose a capitation or poll tax upon a nonresident alien, nor upon his income received from a foreign country. An income tax, however, while properly termed a personal tax, is a tax merely levied upon a person because of his income and according to its amount. The tax is measured by net income and taken from the general property of the citizen. Would a tax laid upon the income of nonresident aliens derived from interest on our domestic bonds which they own be within the jurisdiction of this Government? The joint opinion of Mr. Justice Bradley and Mr. Justice Harlan in United States *v.* Erie Railway Co. (106 U. S., 703) seems to be sound and appears to state the correct law on this point. Their decision was in effect that Congress may impose the tax in question and assess it against the interest income in this country due such nonresident alien bondholder, and require the tax to be retained out of the income by the debtor corporation. The receipt of income from this country is the basis for such jurisdiction.

Those foreign owners of our domestic bonds who are not content with an exemption of their interest from income taxation under recent Government rulings seem to resent the requirement that only a slight showing shall be made as to their ownership as a prerequisite to securing the exemption. This assumed attitude on their part seems to have given concern to some of our chambers of commerce. I do not think that this latest phase calls for serious consideration.

Paragraph A, subdivision 2, of the new law imposes a graduated additional tax upon that portion of the total net income of all individuals in excess of $20,000. The statutory exemption of $3,000 and $4,000 applicable to the normal tax is not allowed with respect to the additional tax. The income subject to the additional tax may be the aggregate amount of three items, namely, income upon which the normal tax is withheld at the source, income embraced in a personal return for the purpose of the normal tax, and income derived from dividends received from corporations subject to the same normal tax upon their annual net profits.

A clause in subdivision 2 which imposes the additional tax reads as follows:

> All the provisions of this section (the income-tax law) relating to individuals who are chargeable with the normal tax, so far as they are applicable and are not inconsistent with this subdivision of paragraph A, shall apply to the levy, assessment, and collection of the additional tax imposed under this section.

From this provision it is clear that no provisions of the law relating to the levy, assessment, and collection of the normal tax as to individuals can to any extent modify or otherwise affect any provision of subdivision 2, which imposes the additional tax, in any case where the former is inconsistent with the latter or where the former is not applicable to the latter. Paragraph B, subdivision 1, broadly defines dividends as taxable income. Naturally all dividends received from corporations paying the normal tax upon their entire net profits are not again subject to the same normal tax in the hands of the stockholder. Under no theory, however, can they escape the comprehensive provision of the additional tax section embracing "total net income," which is even a broader term than "total taxable net income." Any provision relating to the normal tax upon individuals must give way to this requirement of the additional tax law. It should also be remembered that the law nowhere exempts dividends from the normal tax. It only provides against their double normal taxation. The supplemental provision designed to subject the undistributed profits of corporations to the additional tax, in certain cases, is in harmony with the views I have just expressed.

Although some of the Senators of Congress expressed a contrary view, the fact should not be overlooked that the Government has full power to impose and collect an income tax with respect to the undistributed profits of a stockholder. The Supreme Court so held in the case of Collector *v.* Hubbard (12 Wall., 1). This doctrine comes from a different line of decisions from those relating to controversies between stockholders and corporations.

Paragraph C, relating to the exemption, has given rise to much discussion and difference of construction. This paragraph as finally written was agreed upon in the conference committee of the House and Senate after protracted discussion and earnest controversy. As not infrequently occurs under such circumstances, the language of the paragraph is not clear, nor is it quite in harmony with the assessment provisions of the law. It is obvious that with paragraph C eliminated from the law the net income of every man, woman, and child from $1 and over would be subject to the normal tax of 1 per cent. The laws of all Governments, after providing the method of computing the net income of a taxable person, also contain a provision allowing an exemption of a fixed amount of the same. Our former income-tax laws have allowed different amounts as exemptions. Most all of the 52 income-tax laws in operation throughout the world prescribe the family as the basis of income and unit of taxation and provide a statutory exemption that may be deducted from the aggregate net income of the family, consisting of husband and wife or husband and wife and minor children. Our former income-tax laws contained a like provision. In but rare instances has this rule, which long experience has approved, been departed from by any Government. For this tax law to go inside the family and allow each individual member—husband, wife, and each minor child—an exemption of $3,000 throws wide open the door to evasion and fraud. Any member of the family receiving income from investments might during the period of assessment easily make such distribution among members of the family as would satisfy his or her conscience and enable each to secure exemption and thereby evade taxes. The exemption is intended for the member or members of the family furnishing the income, whether husband, wife, or child, or all jointly and ratably.

Paragraph C of the present law allows each taxable person an exemption of $3,000. In case of a husband and wife living together, only one of whom has taxable income, he or she making return of same is allowed $1,000 additional exemption. Furthermore, the proviso at the end of paragraph C imposes a restriction or limitation upon the main provision with respect to the amount of exemption to be allowed a husband and wife living together in all cases where each has taxable incomes. But this does not interfere with the right of husband and wife to be taxed as individuals under the additional tax provisions. The language of the proviso, "that only one deduction of $4,000 shall be made from the aggregate income of both husband and wife when living together," can have but one meaning, and that is that the normal tax fastens itself upon the amount of the aggregate income of such husband and wife in excess of $4,000. The law is plain in its provisions that every dollar of the net income of both husband and wife, when living together, is subject to the normal tax except to the extent of the exemption to be had under authority of paragraph C. As just stated, the benefit of the exemption can only be had upon condition that their net income shall be aggregated, and only one deduction of $4,000 is then allowed to be made therefrom. If no return of such income should be made as directed by paragraph D, and if no assessment of taxes should be made upon the same as provided by paragraph E, the collector may make return for them under sections 3173 or 3176, Revised Statutes, or an action of debt would lie each year under section 3213, Revised Statutes, in favor of the Government against such husband and wife for the amount of the taxes accruing upon that portion of their aggregate net income in excess of $4,000, with costs of the proceedings. This is true regardless of the question as to whether any liens would attach or penalties accrue. An assessment is not a prerequisite to the collection of taxes legally imposed. It is seen from the foregoing that one view makes the family the basis of income and the unit of taxation and the other the individual. The new law is a compromise of both views.

The income-tax laws of all countries allow the taxpayer certain exemptions and deductions in computing his net taxable income. To frame a law providing for such deductions as are usually allowable and which can be administered with ease and convenience at the outset is not free from difficulty, by reason of the complex business conditions existing in this country. There is also naturally much difference of opinion with respect to the amount of exemption that should be allowed a taxpayer. Most foreign laws allow a statutory exemption ranging from $50 to $250. England and a few minor States allow a larger exemption.

A model or scientific income-tax law would embrace a graduated tax imposing the lowest rate at a point just above the amount of net income reasonably necessary to support an average family, and likewise imposing the higher rates upon each successive category of income. This view is based upon the experience and the teaching that a family is entitled to subsist before being compelled to pay taxes to the Government; otherwise it would have to ask Government charity in return. The weight of opinion in Congress was that a statutory exemption should be fixed at $3,000 to $4,000 at present for more than one reason. In the first place, this tax is only one source of Government revenue and should therefore be dealt with as only a part of our general revenue system. The overwhelming portion of our other national taxes and of our State, county, and municipal taxes, amounting to much more than $2,000,000,000, are paid by those who are not subject to the present income tax. It was therefore believed that the present exemptions would so apply to the taxpayers of the country as more justly to equalize the tax burdens. Furthermore, it was not deemed wise in the beginning to enact a law of almost universal application, because, like all new laws, it must first be understood by the people and become adjusted to the intricate business conditions of the country before its administration could be expected to prove entirely convenient and satisfactory. This was true of the recent corporation-tax law, the pure-food laws, the general property-tax laws of the States, and the income-tax laws of other Governments. To suddenly apply to 90,000,000 people a comprehensive income-tax law, with very low exemptions or none at all, and with all the extensions, classifications, qualifications, and so forth, necessary to be embraced in a law of such tremendously wide application, might result in the breaking down of its administration. In the future, when the revenue demands from this source shall become greater and the present law becomes thoroughly understood and adjusted to business conditions, it will be easy to lower the exemption, further extend the provisions of the law, and otherwise round it into more comprehensive and permanent form.

This is essentially a tax on gains and profits. Naturally, all laws prescribe the allowance of certain deductions necessary in the computation of such gains and profits. The legitimate expenses and losses of a business or businesses from which profits are derived always constitute a proper deduction; interest on indebtedness, State and other taxes, and like annually recurring items of expense fall within the same category of deductions.

The question has been asked, Why does the new law contain the method of collecting a substantial portion of the tax at the source of the income? The law would be complete in its administrative provisions with this provision eliminated. One answer is: To avoid the unsatisfactory conditions existing in virtually all the States under the operation of their general property-tax systems, the result of which has been that only 20 per cent of the value of all personalty, including but a nominal portion of intangible personalty, and less than one-half of the value of all realty has been given in by the taxpayer for assessment. The State and local tax burdens are thus harsh and inequitable and measurably limited to those either honest and willing enough to disclose their full property values for taxation or those whose property is not concealable. A taxpayer is practically penalized for being honest. Most European countries require a personal return for the purpose of income-tax assessment. The fact should not be overlooked, however, that the successful administration of this method is necessarily so drastic, and in some respects so inquisitorial, as likely to render the tax law unpopular in a country like ours. Human nature is such that it is more disposed in the beginning to antagonize a tangible than an intangible tax, however just the former and however unjust the latter. Foreign laws requiring a personal return would derive but a comparatively small amount of taxes unless the law should be enforced in a most rigid and drastic manner. When the English Government adopted the system of collection at the source the tax rates were reduced one-half, and yet the amount of revenue derived was the same as under the former higher rates. This method greatly reduced inquisitorialness. The inexpediency of depending upon a personal return of the taxpayer has been thoroughly demonstrated in the administration of our State property-tax systems. More than $60,000,000,000 of our national wealth consists of personalty. By far the larger portion of this huge amount is intangible personalty, most of which has always been concealed from the tax gatherer. According to a late report of the Kentucky Tax Commission, the amount of deposits in the banks of the State on January 1, 1912, was given in, under oath, for assessment at $12,847,868, whereas the true amount of deposits, according to the report of the banks, was $133,339,871. A Kentucky law imposing a tax on dogs yields a larger revenue to the State treasury than that derived from the entire bank deposits.

The report of the New York State Board of Tax Commissioners in 1910 showed that the ratio which the assessment of personal property bore to the total assessment had fallen to 5.65 per cent in 1909. The assessed value of real estate in 13 States for the year 1910 was $9,708,731,821, while its estimated true value was $28,285,821,708. This but illustrates the ill-balanced and unsatisfactory tax conditions in most of the States. Their general property tax systems have almost broken down.

Moreover, there are 30,000 Americans residing in France alone—most of them wealthy—who draw their incomes from this country. Many nonresident Americans annually receive as much as $500,000 income from interest on our corporate bonds alone. No tax method has heretofore been devised that would reach this class of persons or that would successfully reach the resident owners of our more than $40,000,000,000 of intangible personalty. In the light of the facts I have enumerated, it was deemed both wise and necessary to insert in the new law a method by which the Government might intercept the tax on certain large classes of income before it reached the owner and taxpayer. England, Italy, and other countries have long employed this method with splendid results. A number of States now successfully operate it to a limited extent. The English method of retention at the source was adopted in a modified form under the new law. It is completely applied to income derived from corporate interest due to individuals and only partially applied to other fixed annual income accruing to individuals. To require the tax to be withheld on all fixed annual income derived from rent, salaries, and other sources, as in England, regardless of amount, would necessitate the return of a large amount, either by refund or abatement of the assessment, in view of the high exemption of $3,000. England annually refunds many millions on account of exemptions, abatements, and deductions. The new law will secure the substantial benefits of collection at the source and at the same time avoid any refund of taxes on account of exemptions, and also

satisfy almost all claims for deductions at the source of the income by abating the assessment. Every individual taxpayer has a number of remedies for securing the benefit of both exemptions and deductions. There will be only a limited number of instances in which the tax will be withheld upon the entire taxable income of an individual; in most cases he will have other income of which he will be required to make a personal return, and in all such cases he would naturally claim and secure the benefit of his exemptions and deductions in connection with income embraced in his personal return.

In those instances wherein the tax is retained upon his income at the source he may at any time within 30 days prior to March 1 of each year file claims for deductions with the collector of the district in which his tax is thus retained and immediately secure an abatement of the proposed assessment, the collector notifying the person withholding the tax of the amount thereof; or if the taxpayer should prefer, he may file with the person withholding the tax for him claim for deductions, accompanied by statement of any other taxable income, which will be forwarded to the district collector, and his entire tax transaction would thus be dealt with as in case of a direct personal return to the district collector. [illegible]en where the tax is withheld at the source upon the chief am[illegible]nt of one's income, if the taxpayer has a sufficient amo[illegible] other income from which to subtract his exemption and deductions, he would thus secure the benefit of the same in his personal return to be made by March 1. But only in those limited instances where such other income is too small to permit the deductions will the taxpayer make claim for the latter, accompanied by a disclosure of his other income, 30 days prior to March 1, under the first proviso of paragraph E.

This method of collection reaches every item of fixed annual income exceeding $3,000, and not only secures the normal tax upon the entire amount to the Treasury but locates and discloses all such taxable income for the purpose of the assessment and collection of the additional tax. Whenever fixed income accruing to an individual from any source under an annual business relationship, or a business relationship continuing without limitation as to time, exceeds $3,000 the normal tax will be withheld upon the entire amount unless exemption should be claimed or unless the district collector should upon a claim for deductions abate the assessment in whole or in part.

There has been much discussion of this method of collecting the tax due on corporate interest. To the fact that the larger portion of our corporate interest is represented by coupons and the additional fact that in a great many cases the debtor corporation has an outstanding agreement with the bondholder to pay all taxes required to be withheld were due one of the chief difficulties in framing and administering the law. It may be remarked that this condition is no more the fault of the law than the fault of the peculiar and intricate business conditions which have been so contrived as to render it impossible for the States and their subdivisions to reach this class of property for taxation, save to a nominal extent.

Two substitute methods have been suggested for that provision of the law applicable to the collection of the tax on corporate interest. One prescribed information at the source instead of collection at the source. While information at the source in some respects appears to be feasible, the fact should be borne in mind that this method would require more detailed information as to the identity of the bond owner, the description of the bond and of the debtor corporation, than is required under collection at the source. Information at the source could not apply to corporate interest accruing to nonresident Americans. Information at the source, if applied to fixed rent, salaries, and other fixed income, would necessarily embrace all items of income from about $1,000 and over, with the result that the expense and inconvenience to the citizen furnishing the information would be as great, if not greater, than the law now entails, while the expense and inconvenience to the Government would be very much increased. In the language of Prof. Seligman, "stoppage at the source is the chief cause of the great success of the English income tax," and, in my judgment, it should not be abandoned here, at least until given a thorough and practical test. England, after 50 years' trial, retains collection at the source. She has carefully examined other methods of other Governments and unhesitatingly rejected them. Whichever method may be finally and permanently adopted here, we should remember that the bondholder is very apprehensive lest the States, counties, and municipalities should thereby be enabled to reach his bonds for taxation. The State and local tax rates seem to be imposed upon the theory that only 10 per cent or 15 per cent of the entire value of intangible personalty will be reported for taxation. The other substitute method proposed for collection at the source is to tax the corporation income as a whole and require the corporation to distribute the tax among its bondholders and stockholders, deducting the same from interest and dividends. This method perhaps could not be made practicable within any short period of time, unless the corporations should actually deduct the tax from the usual rate and amount of interest and from the regular dividends, or from the interest at least. If the corporation should merely pay this tax for the bondholders and stockholders without deduction, as just stated, but treating the tax as a general expense of the business, many years would be required in which to readjust and neutralize the relative interests of the stockholders and bondholders.

I am firmly of opinion that any satisfactory tax law must maintain a check on the taxpayer such as would be afforded by either collection or information at the source. When considered in the light of experience, the former seems entirely preferable, as a rule. Congress and the country would naturally prefer the method proving most effective and convenient. The policy of other countries, universally acquiesced in, does not contemplate that a tax law shall undertake completely to adjust itself to every complex and intricate business condition, especially if it was contrived to evade taxes, but that business people should make a reasonable effort, without material injury, to conform to the law. I am highly gratified to be able to say that the business people of the United States, regardless of their views as to the merits of the new income-tax law, thus far have manifested a disposition of acquiescence in the law and of readiness to lend their hearty and unreserved cooperation to the Treasury Department in an effort to make the law as thoroughly adjustable to business conditions and as practical and convenient in its administration as possible. In so doing they have shown a spirit of patriotism characteristic of true American citizens. Persons have no right to criticize a law unless they offer a better substitute method. No better method of administering this law has yet been offered.

There are two methods of computing net income—what is known as the book or credit or accrued basis, and the cash basis. Differences of opinion among Members of the two Houses of Congress and expert accountants and others are responsible for the lack of harmony of terms prescribing in each instance the exact basis upon which accounting shall be made. I think the accrued or credit basis will apply to corporations and associations with most convenience, and the cash basis will be more desirable for individuals. The taxpayer is entitled to employ the same basis in accounting for his income and in making claim for deductions, otherwise an injustice would result. I have the impression that the Treasury Department will administer the law on the accrued or credit basis.

The corporation excise-tax law was merged into the new law. The same administrative machinery and substantially the taxing provisions of the former are retained. Only a few changes were made. One change is designed in effect to impose a graduated tax upon corporations holding stock in other corporations, by reason of the superior business advantages derived therefrom. This is not an unreasonable graduation. All that class of corporations falling without the scope of the excise-tax law are embraced under the new law. The existence of a large number of corporations best adapts any country to the successful administration of the income tax. Their agency can be utilized to secure the safe collection of the income tax from the stockholders, bondholders, and their employees. Probably one-half the large incomes of the country are derived from corporate dividends. There are more than 300,000 corporations in the United States and less than 50,000 in England.

An income tax looks to the individual according to his ability to pay. Ability to pay, as demonstrated by world-wide experience, is best measured by net income. The abilities of persons are infinitely varied. The many complications of business that arise in this country require a law of great range, administered through flexible Treasury regulations. The new law undertakes to reach every item of gain or profit intended to be taxed by its general provisions, and leaves to the regulations to apply them in a manner most convenient to the Government and the taxpayers. Foreign laws are far more complex than our law. When carefully read, it is less intricate than Schedule K, or the cotton, or silk schedules of our tariff, or many of the State general property-tax systems. It is somewhat complex, because only a law containing numerous safeguards can successfully reach the hidden wealth of the country and render certain the payment of its fair share of the taxes. All other tax laws have failed to accomplished this end. The public mind will not longer accept taxation that is unfair, harsh, discriminating, and immoral, upon the theory that there may be more convenience in its assessment and collection.

The income-tax method embraces the largest single feasible taxing power of the Government. If the present English peace rates were applied here, the revenue yield would easily reach $500,000,000. The largest tariff yield was $333,000,000. To-day this country possesses more than $175,000,000,000 of national wealth—an amount so fabulous as to be beyond human conception. Its income is greater than many have believed. The present tax, in my judgment, will yield from last year's assessment several millions more than have been estimated. Under the rules of computation prescribed by the new law there are, in my opinion, more than 700,000 incomes in the United States of $3,500 and over. The new tax will be paid by several million stockholders under the corporation provision and by 500,000 to 600,000 other individuals.

Decisions construing our former income-tax laws have often been narrow and harshly technical. The tax was then in its infancy. Now that this law in comprehensive form is to become an important and permanent part of our fiscal system, it should be dealt with along correspondingly broad and practical lines, so as to give proper effect to its legitimate scope and application.

To those disposed to criticize the law upon the theory that it is too complex, I may reply that it would be easy to cite as many and as strong criticisms that have been made against every other method of taxation as have been offered against the income tax. While denying the justice of other taxes, none deny the fairness of this tax, but only object to certain of its administrative features. This objection was strenuously urged for years against the English income tax. However, we find that later it was acquiesced in and pronounced as satisfactory in its administration as any other tax law. Mr. Gladstone, who had opposed it during earlier years, pronounced the income tax "an engine of gigantic power." A later English statesman characterized it as "in reality the center and sheet anchor of our financial system."

The people should not be too impatient in their effort to apply this law to every intricate business condition in advance of the revised Treasury regulations and reasonable time in which to understand it. This course has been necessary as to all new laws.

I am well aware that in the past the greatest opposition to an income tax in the United States has come from the eastern section of the country upon the theory that it would unjustly contribute more taxes than any other section. From this view I respectfully dissent, for the reason that New York, for example, is the great center of commerce of the Nation. It is a great distributing center. Hundreds of thousands of citizens of other States come here to reside. Her great incomes are drawn from all sections of the country. These concentrated profits are chiefly the product of the great industries throughout the Nation. I deny the right of wealth anywhere to segregate itself and then upon the plea of segregation to exempt itself from its fair share of taxes. The people of other sections do not envy New York and other States similarly situated their good fortune. It is only asked that while enjoying these and other superior blessings their people shall cheerfully acquiesce in a tax law everywhere conceded to be just and fair.

In conclusion I would say that in my judgment this law will here, as it has elsewhere, commend itself to the best thought, conservative citizenship, and patriotism of the country.

And having faith in the entire good will and the sound sentiment of the enlightened public with respect to this sincere effort to lighten and fairly to distribute the burdens of taxation, I expect an approving public opinion will soon dismiss all thought of the faultfindings and precipitate judgments of those who in most cases harboring a hostile spirit have not taken the pains to learn and understand the law.

Naturalization Holdup at Philadelphia.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 2, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. MOORE. Mr. Speaker, the necessity for appointing a new Federal judge at Philadelphia has been pointed out to this House on several occasions. There is a tremendous congestion of business there owing to the continued illness of Judge Holland and the excess work that has thus been piled up upon Judge Thompson and the officers of the court. This pressure ought to be relieved in order that the business of those who seek justice in the court may be expedited.

There is another side to the question, which it is now appropriate to discuss—the delay in the naturalization of aliens who seek to become citizens of the United States. In this respect a positive hardship is being worked upon thousands whose opportunities of citizenship are being denied. From a statement of Mr. Shear, chief examiner of the Naturalization Service, Department of Labor, Philadelphia, I am able to present a few facts which show the urgency of immediate action upon the Philadelphia Federal court bill.

At the present time there are approximately 3,000 petitions filed and ready for hearing in the United States district court. At the rate of 50 per day—a fair average—it would take 60 days to clear the docket.

There are also on file in the said court approximately 4,500 applications to file petitions for naturalization. The force of clerks employed file approximately 100 petitions per week when so engaged exclusively, at which rate it would take 45 weeks to file petitions on the applications now on hand.

On days when the court is engaged in naturalizing no petitions are filed, as the time of the clerks is fully occupied in work incident to the hearing, and a certificate of naturalization must be subsequently made for each person admitted to citizenship. It will thus be seen that the 3,000 petitions on file and ready to be heard by the court and the 4,500 applications awaiting action in the clerk's office, approximately 7,500 in all, together with the court work and the time occupied in making out certificates, and so forth, will consume at least one year, and doubtless the greater part of the next two years, and that during that time no new applications can be acted upon. In other words, an applicant now presenting himself at the clerk's office must wait at least one and perhaps two years before his petition can be filed and an indefinite time thereafter, the court now being engaged in hearing petitions filed in December, 1912.

The common-pleas judges of Philadelphia will not take jurisdiction in naturalization cases, so that the Federal court is the only place to which those seeking citizenship may go.

I trust the House will speedily come to the relief of the Federal court at Philadelphia.

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. BEN JOHNSON,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 3, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. JOHNSON of Kentucky. Mr. Speaker, every argument which the human mind can conceive has been brought into service and used against the passage of this bill. Not only has every legitimate reason been brought to bear, but subjects which have no place in the consideration of this measure have been injected. Religious bigotry and race prejudice have found their way into this discussion in order to influence some to vote against the bill.

It has been urged that Catholics should vote against the bill because an anti-Catholic organization favored it. In determining for ourselves how we should vote upon this or any other bill I believe we should look over the heads of those who can see only religious favoritism or religious prejudice as a reason for supporting or opposing the measure and contemplate only the future of America, bearing in mind always that we live and our descendants are to live after us under a Constitution which gives to every man the sacred right to worship God according to the dictates of his own conscience.

That Constitution will live forever. I have not even heard of any American who would annul that provision of our organic law if he had it in his power so to do.

Some seem to believe that unless the influx into this country of the natives of other countries where the Catholic faith overwhelmingly or largely prevails is stopped, that ultimately Catholics will predominate in the United States and bring about a union of church and state. If there are those who really believe this, and are thereby moved to favor the passage of this

bill, all that is necessary to be said is, they are mistaken; and because they are mistaken and are supporting the bill as a result of misconception is no reason why those who know better should oppose them upon that ground alone instead of looking further for genuinely existing conditions as well as for arguments which are material. Those who would create religious prejudice direct their suggestions of apprehended union of church and state toward the Italian immigrant, because he comes from a country where the Catholic faith prevails among an overwhelming majority of its people.

They forget that while Italy is the residence of the temporal head of the Catholic Church, and is, as I have just said, overwhelmingly Catholic in numbers, it has not a union of Catholic Church and state. France also is overwhelmingly Catholic. Yet the Catholics of that nation only a few years ago separated church and state. It is not pretended by anybody that any provision of this bill is aimed at Catholic France, or at Ireland, or at Holland, or at Germany. Neither is it aimed at England, where there is a union of church and state. Those who favor this bill out of apprehension of a union of church and state in this country are without argument, while those who oppose it simply because the others are for it are not sufficiently broad and do not search for potent and substantial reasons beyond those fallacies.

Only a few weeks ago I attended in this city a function where William Jennings Bryan and Cardinal Gibbons were the speakers. In his address the cardinal came out flatly against a union of the Catholic Church with any nation, asserting that Catholics desired nothing more than a freedom to worship as they saw fit. He said the Catholic Church had tried both and that union nowhere had been best for the church. He emphasized that declaration by telling of the fellow who said:

> Honesty is the best policy; I have tried both.

And then he said:

> Separation of church and state is best; the church has tried both.

The Catholic can save his soul just as easily in Italy as he can in America; and the Catholic Church, as such, is not interested in the proposition of where he saves it, but only in that he save it.

Now let us dismiss the goblin feature of this discussion and turn to serious questions.

In arriving at a determination to cast my vote for this bill, I have looked beyond conditions of to-day, although I believe that the present demands its passage.

The rich everywhere—all the world over—can take care of themselves. That is the case in the United State. It is the poor who should have our solicitude. The poorest of our fellowmen are those who have to do hard, manual labor for a daily wage in order to support their families. They must have employment, and their earnings must not be minimized by those of other countries who have our sympathies. Every nation first owes support to its own deserving poor and assistance to its own struggling wage earners. Our country must observe that rule.

Our immigration laws have been so liberal that those from other countries have come to our shores in such numbers that those who have come during a very few years equal the total number of those who were in the territory of the United States when the British yoke was thrown off and this Government established.

Our Revolutionary ancestors themselves were immigrants. But they came to a vast and almost uninhabited land to build a nation. Those against whom this bill operates most wish now to come to a well-populated country to make it more difficult for those who have built it to earn bread. It is charged and admitted that this bill will affect Greeks and Italians more than those of any other nationality. And, strange to say, it is the "literacy test" which will exclude their largest numbers.

Thousands of years ago Greece and Rome stood head and shoulders above all of the known world in the arts and sciences and in letters. If we exclude only those of them who can neither read nor write their own language, then we have excluded only those who seek to come here to do manual labor. Those who can read and write their own language may under the provisions of this bill continue to come. When they have come they may enter into competition with the better-paid clerical class of our own. But he who can neither read nor write must of necessity drive out the American laborer, and the American laborer and his family are the very first to whom the American Government owes a national obligation. In the battle of life in this age the rich are the strongest, the poor are the weakest. Our own poor must have our attention before we cross the seas to find others upon whom to bestow it.

In determining to give this bill my support I feel that I have but determined to first help our own. Our own struggling poor should not be driven out of employment to give cheap labor to our powerful and rich manufacturers, or to enrich the transporting steamship companies, even though the laborer of another country be incidentally benefited.

I wish to declare that I stand for our own poor first and the others afterwards.

Providing Aid to States in Construction and Maintenance of Roads.

EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 5, 1914,

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. BYRNES of South Carolina. Mr. Speaker, I wish to call attention to the provisions of House bill 11686, providing aid to the States in the construction and maintenance of roads.

Primarily, I believe it is the duty of a State to build and maintain its roads, and I am opposed to any proposition that would result in transferring this primary duty from the State to the Federal Government. It is essential that the State shall retain jurisdiction over its roads, and if it is to retain jurisdiction and control of its roads it must necessarily assume the fundamental obligation of construction and maintenance. But while I am satisfied as to the primary obligation of the State, it is equally clear to my mind that if the Federal Government is to use the roads of the States in discharging its governmental functions of carrying and delivering the mails, it should aid and cooperate with the States in the construction and maintenance of roads which are devoted even in part to the uses of the Federal Government. This sentiment has grown during the last decade; formerly there was strong opposition to the Federal Government aiding in highway improvement. In the South there were many who regarded it as paternalism and as an encroachment upon the powers of the States, while in other sections, as well as in the South, it was argued that constitutionally the Government could not aid in the construction of highways. A still larger body of men contended that if the Government ever embarked upon such an undertaking it would go into bankruptcy. In recent years, however, these constitutional objections have disappeared. It is conceded that the Government has power to construct and maintain post roads, military roads, and roads used in the transportation of interstate commerce, and if it has the power to construct them it has power to aid the State in constructing such roads. The pork-barrel fears have also been so greatly allayed that to-day the sentiment in favor of Federal aid is as universal as the enthusiasm for good roads.

This sentiment has found its expression in the platforms of the great political parties. The platform adopted by the Progressive Party last year declared:

> We recognize the vital importance of good roads and we pledge our party to foster their extension in every proper way, and we favor the early construction of national highways. We also favor the extension of the Rural Free Delivery Service.

The Democratic Party unequivocally declared in its platform:

> We favor national aid to State and local authorities in the construction and maintenance of post roads.

And while the Republican platform contained no reference to the subject at all, we know that the rank and file of that party favor road legislation, because it is fair to assume that the Members of the National House of Representatives represent the views of their constituents, and in the last Congress a majority of the Republican Members voted for such legislation.

In endeavoring to carry out the wishes of the people as expressed in these platform declarations the Committee on Roads has framed and presented to you bill H. R. 11686.

So varied are the physical conditions of the States and so different are the constitutions and laws of the States that it is exceedingly difficult to devise a cooperative plan that will work with equal success in each State of the Union. This bill is not what I would have it, if it were left entirely to me to frame a bill on the subject, nor is it the expression of the views of any other one man. It represents the composite views of the com-

mittee reached in a spirit of compromise and after most careful deliberation.

The basis upon which the fund is apportioned between the States is equitable and just. The provision that the State shall be the smallest unit with which the National Government will cooperate is an exceedingly wise one, because, manifestly, it would be impossible for the National Government to cooperate with the local subdivisions. At the same time this bill, if enacted into law, would result in the establishment of an efficient highway department in every State of the Union. In 24 States such a department is now in existence; and, as under one of the plans proposed, a State could not participate in this Federal aid except through its highway department, and under the other plan the absence of such a department would result in the loss of 10 per cent of its fund, every State would in the course of a very short time establish a road department and place itself in position to secure this assistance from the National Government. If the bill accomplished this and nothing else, it would be of inestimable value in the improvement of our highways.

The bill provides two plans in which Federal aid will be given to the States, and allows the State to elect under which of the two plans it will operate. The first of these two plans is set forth in section 3. Under this plan the State highway commission, after consultation with the road commissioners of the counties, will select the roads to be improved during the next fiscal year; and when such work has been agreed upon by the State highway commission and the Secretary of Agriculture and the State has made available an amount equal to that apportioned to the State by the Federal Government, the State's share of the fund will be placed to the credit of the State. For instance, the State of South Carolina under this bill would be entitled to about $400,000 per year. Whenever the State shall have made available $400,000, derived from State revenues or by assessments levied upon the counties in which certain road work is to be done, a similar amount will be placed to the credit of the State by the National Government, making a total of $800,000 available for this cooperative work.

In South Carolina and in other Southern States, a road properly constructed of sand-clay mixture has proved most durable and desirable, and such roads can be constructed with free labor at $1,000 a mile, and with convict labor at a cost not exceeding $600 a mile. It can be readily seen that with an annual expenditure of $800,000 it would be but a short time before that State would be covered with a network of magnificent roads, an improvement more essential to the happiness and prosperity of the people than any I can conceive of.

Under section 4 of the bill the roads are classified, and the State will receive for such roads as come up to the specifications set forth in class A the sum of $60 per mile per year, for each mile in class B the sum of $30 per mile per year, and for each mile in class C the sum of $15 per mile per year. Under this as well as under the other section the State must cooperate, and before payment is made it must be shown that a similar amount has been spent during the previous year upon the roads approved of, either in construction, maintenance, or extension.

The bill is based upon the idea that while the Government should aid the States in the improvement of roads it should aid only those States that are willing to do something for themselves. If the State is unwilling to spend upon its own roads an amount equal to that it asks and accepts of the Federal Government, it should not receive any aid at all from the National Government. This requirement will also act as an automatic check upon the demands of the States for increased appropriations.

Under this bill the National Government does not acquire any jurisdiction over the roads of the States. It is given only such power as will enable it to see that the money which it contributes to this joint construction of roads shall be spent upon the roads for which it is given. This power is essential the National Government should have. Essential also is the inspection by the National Government provided for in section 4 of the bill. The object of that section is to induce the States to construct better roads. Where the roads are constructed in accordance with the specifications set forth in the bill the National Government will pay to the States the amounts provided for in that section, and by inspection alone can it be determined which roads of a State do come up to the specifications.

Now, some gentlemen seem to be alarmed that this bill should provide for an expenditure of $25,000,000. We pay the railroads about $50,000,000 annually for the transportation of mail, which is at the rate of about $206.50 per mile. Part of this, of course, is compensation merely for the use of the roadbeds. For the pneumatic-tube service installed in the larger cities in recent years the Government paid $925,636.40 for the fiscal year 1912. For railway mail cars our annual appropriation is about $5,000,000. The people are entitled to have their mail delivered as promptly as possible, and an appropriation for pneumatic-tube service or any other service that will facilitate the delivery of mail in the cities is doubtless a wise and proper expenditure, but the Government should not be willing to appropriate money for such facilities in the cities, and then, when it comes to paying a reasonable rent for the purpose of facilitating the delivery of mail upon the rural routes, refuse to do so, and "sponge" upon the States.

We can gather an idea as to the universality of the benefits to be derived under this bill from the fact that to-day the Rural Delivery traverses 42,000 different highways of the Nation, and comes into contact with 20,000,000 people living in the rural districts. We have in the United States 2,199,645 miles of public highway, of which 190,767 miles, or 8.66 per cent of the total, are improved. The Office of Public Roads estimates that 90 per cent of the travel over our public highways is confined to 30 per cent of our roads, and the improvement of 440,000 miles of public roads would practically meet the present demand throughout the Nation. It is therefore evident that the improvement of what may be called the rural-delivery roads, with a total of 1,010,000 miles, will more than meet the present demands of the country.

In the early struggles of the railroads in this country, when they were being constructed, the Government donated to them millions of acres of our public lands, valued at over $2,000,000,000. Since 1875 we have appropriated $592,395,000 for rivers and harbors. For pensions, our annual appropriation is about $180,000,000. We have appropriated for public buildings, up to June 3, 1911, $213,376,000, and for the purpose of road building in the Philippines and our other possessions, $800,300,000. During this period we have appropriated for the building and improvement of public highways in the United States not one cent.

Anxious as are the people of the cities for appropriations for public buildings, I believe that the business men of every city recognize that the improvement of the highways approaching the city is of greater benefit to them than the erection of an ornamental post-office building, and gladly would they consent to have a part of this immense public-building fund diverted to the improvement of the rural free delivery roads.

The failure to improve our highways results annually in a great economic waste. Three billion dollars of farm products are hauled annually. The average haul is 9 miles in the country, and the average cost 23 cents per ton per mile, which makes the total cost of hauling farm products $600,000,000 a year. According to the estimates of the Director of Public Roads, the cost of transportation over the magnificent roads of England, Germany, and France by wagon is only 10 cents per ton per mile. Even if it were half the cost of transportation in this country, it is evident that if we would improve our roads to the standard of the European roads we could save for the American people in a single year $300,000,000.

If we had such a system of good roads throughout the country the farmers would save on the transportation of the cotton crop $5,760,183; of the wheat crop, $10,256,058; of the corn crop, $12,709,278.

The average haul of cotton is 12 miles; the average load is 1,800 pounds, or four bales of 450 pounds each. At 23 cents per ton per mile the cost of transporting a 500-pound bale of cotton is therefore 69 cents a bale.

In order to appreciate these figures let me say to you that the State of South Carolina, in which I reside, last year produced 1,500,000 bales of cotton weighing 500 pounds each. At 69 cents a bale, it cost the farmers of that State $1,035,000 to transport this crop to market. Of course, this does not take into consideration the hauling of the cotton to the gin and back to the farm. It includes only the cost of hauling from the farm to the market. If the roads were improved to the standard of the European roads we would save one-half of this, or $517,500. In addition we produce something like 838,647 tons of cotton seed. It cost $3 a ton to transport it, or for the entire crop $2,515,941. The improvement of our roads to the European standard would save one-half of this, or $1,257,970.

It is estimated that the farmers of our State use several hundred thousand tons of commercial fertilizers a year, and the cost of transporting it from the railroad to the farm is more than $1,500,000. If our roads were improved, one-half of this amount, or $750,000, could be saved.

It cost the farmers of South Carolina $1,444,000 to transport their corn to market. If one-half of this could be saved by the improvement of the roads, it would be a saving of $722,000.

So that, without taking into consideration the hauling of farm supplies, it is evident that improved roads would revolutionize the profession of the farmer and greatly increase his profits.

It is not only in the reduction of the cost of transportation that the farmer will benefit by improved roads, for we all agree that a good road increases the value of the land adjoining it, the increase being estimated at from $2 to $9 per acre. In South Carolina we have 19,565,800 acres of land, and if our roads were improved so that the value of the land adjoining it increased but $1 per acre it would mean an increased wealth of $19,000,000, the taxes upon which would greatly aid in the maintenance of the roads.

In a statement by the chairman of the county commissioners in Mecklenburg, N. C., where a perfect system of roads has been constructed, he says:

As to the increase in value of real estate, we can hardly estimate it. Before we had any macadam roads to amount to anything, say, 15 years ago, land could be bought along the old dirt road at from $5 to $10 per acre. Now the same land will cost from $50 to $75 and even higher in places.

Good roads contribute not only to the financial profit of the farmer, but also to his educational advancement. Where we have good roads we have good schools and good attendance upon those schools. According to the statistics of five States where good roads prevail, the average attendance is 59 out of 100.

It is true that a man does not want to move into a community where the roads are poor. It is one of the first questions asked when he goes home seeking. The census figures show in 25 counties taken at random where 40 per cent of the roads are improved that the average increase of population is 30,000 to the county. In 25 counties showing only 1 per cent of the roads improved the average loss of the population was 3,000 to the county.

While good roads mean more to the farmer than any anyone else because he uses them more, it is the problem of the city man, whether he be merchant or laborer, just as much as it is the problem of the farmer. It is the problem of the consumer as well as the producer, because the cost of transportation enters into the cost of every commodity when it is placed on the market, and the increased cost of such commodity makes the consumer share with the farmer the burden of the bad-roads tax.

For several years we have heard the "back to the farm" movement. I believe that good roads in the country will do more to solve the problem of keeping the boys on the farms than all the organizations and movements that have been inaugurated in recent years and at the same time will assist in the solution of the problem of the high cost of living. This is a practical measure. It removes the road question from the realm of discussion to the realm of action, and when your votes shall have been cast for or against it the farmers of the country will be able to tell whether or not you have been sincere in your promises to aid in the improvement of the public roads.

Railroads in Alaska.

EXTENSION OF REMARKS

OF

HON. AARON S. KREIDER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 5, 1914,

On the bill (H. R. 1739) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. KREIDER. Mr. Speaker, the enactment into law of the pending measure before the House, which authorizes the Federal Government to issue $40,000,000 of bonds and makes immediately available a portion of the appropriation for railroad construction in Alaska, is, I fear, being considered from a sentimental and theoretical standpoint rather than from a practical or business point of view. I believe in the development of Alaska and am as anxious as anyone on the floor of this House to legislate for the benefit of its people.

RESOURCES.

We are told by those who favor the passage of this bill about the wonderful resources of the country, about its value to the United States, of its scenic beauty, about its gold, silver, copper, tin, iron, and other mineral products; about its immense coal lands, its fisheries, its forests, and its adaptabilities for agriculture.

Our attention is called to its vast area and its climate, and comparisons are made with the climates of Norway and Sweden and with Minnesota, the Dakotas, and Canada.

Our attention is called to the fact that we paid only $7,200,000 for the country in 1867, and that it is shown by official report that in 1912 its products were valued at over $40,000,000, all of which we accept as correct. We are told, however, that these vast natural resources in this rich and fertile country are so bottled up that their development is impossible in the natural, normal, and usual way, and if the Government intends to do anything for the people of Alaska now is the time. I am not unmindful of the fact that President Wilson seems to be of this opinion, and in his first message to Congress said:

Alaska as a storehouse should be unlocked. One key to it is a system of railways. These the Government should build and administer.

But before we reach a conclusion let us consider the facts and actual conditions in the case from an impartial standpoint with an open mind.

ALASKA AS IT IS.

In the first place, Alaska is a land of immense distances and great natural obstacles. I need not call your attention to its immense glaciers, high mountains, wide and turbulent rivers, and its extreme cold in the interior, 70° to 80° below zero, and its eight months of solid winter, except for a small strip of country along the southeast coast affected by the warm Japan Current, and a population of only about 35,000 white people scattered over a vast territory about one-fifth the size of the United States, principally along the rivers and along the coast line; two-thirds are men, and came from everywhere, principally from the Pacific coast and gold-producing States.

If it be true that all that is required to unlock this immense storehouse is means of transportation, let us for a moment consider the means now available. Let us first consider the navigable rivers, which are acknowledged to be the most economical known means of transportation.

Alaska has immense rivers that are navigable about five months in the year, and I notice that steamships are now operating over 4,000 miles of these rivers, as follows:

On the Yukon River, starting at St. Michael, for a distance of 2,000 miles, extending through the very heart and entire length of Alaska into British Columbia to White Horse.

In the interior on the Tanana River from Tanana to Fairbanks, a distance of 275 miles, in the very best portion of the country.

On the Kuskokwim River from Bethel to Tocotna Forks, a distance of 520 miles

On the Innoko River from Holy Cross to Diskaket, a distance of 370 miles.

On the Iditarod River from Holy Cross to Dikeman, a distance of 320 miles.

On the Koyokuk River from the mouth of Koyokuk to Wiseman, a distance of 620 miles.

In addition to those enumerated the Alaska Steamship Co., the Alaska Coast Steamship Co., and the Pacific Coast Steamship Co. ply on the inside route between Ketchikan, Juneau, Skagway, Valdez, Cordova, and westward along the Alaskan Peninsula as far as Nome.

In addition to these, not less than five different steamship companies operate boats between Skagway and the smaller settlements of the archipelago.

Mr. Speaker, I simply call attention to these water routes to show that the people of Alaska are not entirely without means of transportation, and that this vast storehouse is not locked up so securely as might be imagined from statements made here.

As to railroads, which is directly at issue in this bill, we find that there are a number of different roads mentioned in the reports, some of which are quite important.

The most important and successful is the White Pass and Yukon route from Skagway to Dawson. This route lies entirely in Canadian territory with the exception of 20½ miles from the seaboard to White Pass. At White Horse, 111½ miles from Skagway, the railroad connects with river steamers on the Yukon River, to which I have already referred.

Next is the Alaskan Northern road. This road was projected to open Matanuska coal fields, with Fairbanks as its ultimate terminus, but it fell into financial difficulties and work was abandoned. Its present terminus is Kern Creek, 72 miles from Seward, its ocean terminus.

The Copper River and Northwestern Railroads were completed to Chitina, in the Copper River Valley, a distance of 131 miles, and from there a branch 65 miles long, of lighter construction, was built to Kennicott mines.

The Nome & Seward Peninsula Railroad was constructed for a distance of 104½ miles, but I understand it is not operated, the traffic being insufficient to pay even operating expenses.

In addition, there are a number of short lines, the principal one being the Tanana Valley Railway, 45 miles long. Of the others, most have been abandoned and are not operated; as a matter of fact, I am informed there is only one railroad in Alaska except the stretch of 20½ miles of the White Pass and Yukon route that is not in the hands of a receiver, and most of the roads in the hands of receivers are not operated, and some have been abandoned. This is really the situation now. What can we do to improve it?

Some think we should pass this bill and make a trial of Government ownership and operation of railroads. I am not convinced that Government ownership of railroads is a good thing, but to those who are and want to give it a trial I would say do not try it here when you may know the proposition will be a failure, but try it out under favorable conditions, and give it a fair trial or none at all. Before we go to building railroads let us see what the Government has done to assist the pioneers to develop the country.

The natural obstacles are always great in any new and undeveloped country, and they are especially so in this land of the far north. The great fishing industries and the discovery of gold, silver, and copper, tin, coal, and so on, has had its unusual effect in bringing to this country a certain class of people in considerable numbers. Certain syndicates—among them the Guggenheims and others—secured certain valuable claims and mines and rights of way, and the Federal Government immediately withdrew these lands and canceled a large number of the claims. So far I thoroughly approve of the action of the Government, as I am a thorough believer in conservation; but the Government has adopted "reservation" in the name of and instead of "conservation." They not only withdrew these lands entirely from the public, but levied at the same time a tax of $100 per mile on the railroads. This is what forced them into the hands of receivers and caused many to be abandoned, to which I have referred.

Owing to the very light traffic and small tonnage, due to the undeveloped conditions of the country and the extreme high cost of labor and operating expenses—even though they did charge 20 cents and upward per mile for passenger service and any old rate for freight—they could not operate at a profit, and when the tax of $100 per mile was added they were simply put out of business.

What has been done to encourage agriculture, which is very essential in the development of all countries? No doubt some people have been led to believe that Uncle Sam was going to give them a fine farm in Alaska; but when they got there they found it almost impossible to secure title to a homestead. Little, practically no land has been surveyed, and the homeseeker is obliged to have a private survey made, at a cost of from $300 to $500, and then take the chance of the Government issuing a deed or patent. Large farms are out of the question; it costs too much to clear them, with labor at from 50 cents to 75 cents per hour. Bear in mind this ground is frozen from the bottom up and all the heat must come from the rays of the sun. No matter how deep you go down, it is frozen. Were you to sink a shaft 1,000 to 2,000 feet, it would still be ice or frozen ground.

The moss that grows nearly everywhere is a complete protector from the rays of the sun; if you strike a pick into it, you will think you have struck rock. Clear off the moss or other vegetation and the sun will draw out the frost about 1 foot the first year. Break this up and the next year it will thaw out deeper, and in a few years ground will thaw out so that you can raise some truck, such as cabbage, potatoes, strawberries, and so forth; but the process is expensive. With the high cost of labor, it makes an expensive farming proposition; it will cost about $125 per acre to do it; 80 acres would cost $10,000. And who would go to farming in Alaska if he had $10,000? So I do not think Alaska will be a great agricultural country for years to come. But what can we do for Alaska? Let us abandon our policy of "reservation"; adopt the policy of true conservation, which is proper and economical use. I am as much opposed to giving any syndicate, whether it is the Guggenheims or any interests, a monopoly of mines, coal lands, or railway right and terminals as anyone here, and will go as far as anyone to prevent it. I most heartily approve retaining absolute control of these resources by the Government for the benefit of the people, and thereby conserve their interests. But it is not necessary that the Government lose control in order to develop the resources of the country. A leasing system on a royalty basis, with such restrictions and regulations as may seem wise, can be adopted and railway rights and terminals can be granted, all of which can be put under the control of a commission appointed for that purpose, with absolute and well-defined powers, so that no undue advantage can be taken by any syndicate or combination, but which will be subject at all times and under all conditions to any ruling of this commission, which should and must have the power and authority to change the rates from time to time as the development of the country may warrant and who will see that the operators and the Territory of Alaska and Federal Government are fairly and honestly dealt with.

BILL IS DANGEROUS.

I feel that this legislation is ill considered and dangerous in another respect. We are told that it will cost $48,000 per mile to construct and equip standard-gauge railroads in Alaska. Is it possible that anyone believes that it will be done at this price? According to statistics, the lowest cost of building and equipping any kind of a standard-gauge railroad in the United States is about $60,000 per mile, and for the first-class road, with 90-pound steel rails and first-class rolling stock, is over $75,000 per mile. It has cost in Canada, in her railroad-building operations, over $72,000 per mile for the year 1912. In Germany, under Government contract, it has cost over $113,000 per mile; and in all Europe the average cost is said to be $121,000 per mile, while in England statistics show that the railroads cost $275,000 per mile. Notwithstanding these facts and figures, our Government engineers say that it can be done for less than $48,000 per mile. Consider for a moment—here in the United States, where labor is readily available and where steel rails and bridge material and railroad ties, and so forth, are to be had at lowest cost, without added transportation charges and delays, and where cost of living, high as it is, is still less than one-half of what it is in Alaska, where working conditions are favorable, where work can progress uninterruptedly for the entire year—and it costs at least $60,000 per mile to construct and equip a railroad. Do you mean to tell me it can be done in Alaska, where the wages, according to the Government report of 1912, for mechanics are from $5 to $10 per day, for common laborers from $3 to $8 per day, and where the transportation charges are in many instances more than the actual cost of material? I repeat, do you mean to say that under these conditions the railroads can be built for $48,000 per mile, when it costs here in the United States at least $60,000? The statement is absolutely ridiculous on the face of it.

ENGINEER ESTIMATES.

We are told it is the estimate given by the Government engineers. Well, the truth is the records of the Government show that we have had experience with estimates before given by Government engineers. Let me call your attention to a report of ex-Secretary of the Interior, Mr. Garfield, and Mr. Pinchot, who was Chief of the Bureau of Forestry, under the law providing for the construction of irrigation projects, in which they presented figures and estimates of the engineers on 32 different projects and stated the cost would be $48,000,000, and later when the representatives of those projects appeared before the committee of the House they admitted that $75,000,000 had been spent and not one of the 32 projects had been completed, but stated that $75,000,000 more will be needed to complete them.

Mr. Speaker, this $40,000,000 is not the issue, but the principle of the proposition and the hundreds of millions that will be demanded and insisted upon later is.

This bill provides that the Government has the privilege to lease these lines for a period of 10 years if they see fit. This is not at all practical. Talk of leasing a project for a period of only 10 years that costs not $40,000,000, but no one knows how much, in a country so utterly undeveloped as Alaska is, and at such a rate as to pay the interest on the bonds, is all nonsense.

I am willing that the Federal Government shall assist the people of Alaska in the proper way, at the proper time, and as the country is being developed, but not in the way it is proposed in this bill.

RESOURCES.

I do not say that the glowing picture of the future Alaska has been overdrawn, but I do say, that if Alaska is the great storehouse of natural wealth and resources, even if it does not have the agricultural possibilities as presented on the floor of this House, nothing will or can stop its development if the Federal Government will only permit it. Let us take off the shackles and give it a chance.

It has been stated that the Treadwell mine, which has produced over $60,000,000 worth of gold with gold quartz worth only $2.35 per ton, will be duplicated in various parts of Alaska, but can not now for want of transportation facilities, and that if the Treadwell mines did not happen to be located at tidewater, they never would have proved profitable. This is no doubt true, and it is no doubt true that many more mining properties will be discovered the quartz of which will be of various

degrees of value, not only mines producing gold, but silver, copper, tin, and other mineral products, and it is also true that Alaska has plenty of coal ranging in quality all the way from lignite to anthracite, many of which can not be operated profitably until the additional means of transportation are supplied. Notwithstanding these facts, my contention is that it will be much better for Alaska that development should come gradually and permanently, even if it be slowly; but the Federal Government should encourage such development by offering to the people an equitable leasing proposition, and abandon its present policy and the tax of $100 per mile on railroads and give the owners a chance to operate the lines already built and such other lines as they care to build, under the control of a commission, and then if we do not make satisfactory headway it will be time enough for the Government to build a railroad. The proposition is premature. When we speak of the resources of Alaska and its products as amounting to about $40,000,000, bear in mind that of this over $16,000,000 was gold and silver, over $15,550,000 were canned salmon, about $1,500,000 more was other salmon, fish, and fish products, leaving less than $7,000,000 of all other articles and commodities. No one will contend, I think, that you need railroads to bring the fish and fish products to the water, and the silver and gold is mostly mined at tidewater and is not locked up for want of transportation facilities, so that in the last analysis there is no development in Alaska at this time, nor any in sight, that can possibly warrant such a tremendous outlay of money as is provided for in the bill and will follow its passage.

There is no use, at this time, of building railroads at a cost of over $100,000 per mile, and I take it that no standard-gauge railroad can be built and equipped for less in that country, and the probabilities are that it will cost more.

As to actual cost of railroad construction, it is commonly reported, and I think generally accepted as true, that the line of the Copper River and Northwestern Railroads, of 196 miles, cost $20,000,000. The bridge crossing the Copper River cost $1,000 per foot; it is 1,500 feet long and cost $1,500,000, and even now this very bridge is said to be doomed on account of a glacier which is now only about 1,200 feet away and coming closer every year.

What Alaska needs first is many miles of cheap roads, rather than a few miles of expensive roads. So long as the travel is perhaps a dozen or less passengers per day, a full train, with conductor, brakeman, engineer, fireman, trackmen, station agents, and interlocking signals and switches, are not needed, and where freight traffic is perhaps a few thousand tons per year, 50-ton steel cars that weight 25 tons when empty, with a large mogul engine to pull them on a track laid on a roadbed and bridges especially built to carry them at high speed is not necessary. Three or 5 ton trucks will handle the freight on a 2-foot track, and it may be more economical that they be drawn at the start by a string of mules or perhaps by electric motor. Where rivers must be spanned or perhaps mountains tunneled, swamps filled in, hills cut through, a miniature line with steep curves and heavy grades is very much cheaper to build and to operate than a standard-gauge road.

The rule of the sane and successful business man is not to invest $1,000,000 to accomplish a result that can be accomplished with an investment of one-half or perhaps one-fourth the amount, and especially where the upkeep is a large factor. It seems to me that the time has come when our legislators should apply business principles to governmental affairs the same as they would in their own private business enterprises, and make an effort for economical administration of public affairs.

It is this inclination of voting millions upon millions of dollars of the people's money to be used for the special benefit of a certain section and for the benefit of a few people and only a few that causes the great majority of our people to become disgusted with us, and justly so. I notice that upon the passage of this bill by the Senate that the people of Seattle had a public demonstration celebrating its passage. Why? I see no such evidence of satisfaction in any other city. Why? Simply because the people of Seattle expect a direct and immediate benefit and the others do not. It is all right to appeal to our sentiment and patriotism on sentimental and patriotic matters, but this, Mr. Chairman, is a business proposition pure and simple, and should be legislated on from a business point of view, along proper and economical lines, having in view the interests of the people of the entire Nation, whose moneys we are appropriating. I certainly hope the days have gone by when upon any pretext men can come to Washington and induce the Congress to vote millions of dollars of the people's money to be used in uncertain, ill-considered, premature, and sectional enterprises.

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. WYATT AIKEN,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 4, 1914.

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. AIKEN. Mr. Speaker, while the section of country that I have the honor to represent has not as yet been affected by undesirable immigrants, the future may hold greater dangers from unrestricted immigration there than in any other section of the Southland, or perhaps of the United States.

South Carolina is the second cotton-manufacturing State in the Union. The people who operate the mills are our neighbors and friends, bone of our bone and flesh of our flesh. They are descended from the sturdy races of northern Europe, and their forefathers helped to wrest the country from British tyranny. Our people may not be spoken of in terms of caste or class. We are one people, loving the country that we have built up from savage wilds, respecting the laws of the land, growing in wealth, and looking ever forward for better things, intellectually and morally.

Mr. Speaker, we do not want these ideal social and business conditions to be disturbed by the influx of a lot of undesirable foreigners. Already certain sections of this country have been overrun by a large foreign population, so large that foreign ideas and foreign issues have displaced true American principles, and fed and fostered socialism and anarchy.

Of course, I would not close the door absolutely against the intelligent, well-meaning immigrant. This would be inconsistent with the principles on which this Government was founded. Furthermore, such a step would be not only impracticable but impossible. The comity of nations requires that our alien laws be reasonable, as the laws of other nations must be reasonable toward us.

If England should enact a law prohibiting any American from taking up residence within her borders, we would meet the insult with arms. But England may very reasonably prohibit the lame, the blind, the insane, the pauper, the anarchist, yes, and the illiterate, of this country from becoming citizens of her domain. And why? Because they become a charge, a tax on her better citizenship. They become disturbers of the peace. They become tools in the hands of designing men to drive honest labor out of employment. This country, then, should not permit the illiterate hordes of Europe to drive our own good people out of employment.

The one main feature in which the bill under discussion differs from the present law is the test of literacy; and in my judgment this is one of the strongest features of the bill. The intelligent foreigner is not willing to work at starvation wages. It is the illiterate class, those who have not the intelligence to depend on their wits, who could be herded like cattle into our factories to drive out our home labor that we need to dread most. And I may add, further, that it is the illiterate class of foreigners from whom our foreign criminals come.

I live in a section of the country where fully half the people are negroes. The crime for which so many negroes pay the death penalty outside the law is accountable, I believe, in large measure to the illiteracy of that race. Negroes with a smattering of education commit forgeries, but they rarely assault white women. It is a question with our people, then, whether it is better to educate the negro and elevate the character of this offense or leave him an ignorant brute prone to that greatest offense which means his death at the hands of the good white people of the country. There is nothing so sacred to the southern white man as the honor of the southern white woman; and believing that in giving the negro some education we lessen his brutal tendencies, or we at least increase his dread of certain vengeance, we have written a 3-mill school tax in our constitution, the proceeds of which we divide with that race. Now, this burden is on us. The negro was put in the South by the hand of destiny. Shall we look for further burdens by admitting the illiterate foreigner, who comes with his ideas of anarchy and immorality, to mix with and contaminate our purer American citizenship?

It has been said if a lion ate beef and pork and lamb it all became lion, and a critic wisely replied that if the lion ate

spoiled beef, pork, and lamb he would likely be a sick lion. Just so, if this country takes in the worthless foreign element that is yearly vomited from Europe, there will be congestion in our cities and anarchy and crime on every hand.

I repeat that this country should never close its doors to the upright, healthy, intelligent foreigners, and I may add that this country will grow less and less attractive to the better element of foreigners as the country itself grows older and more like the mother countries. Free lands are a thing of the past here, and foreign farmers of the type that have built up the mighty West, now that the Panama Canal is opened, will seek homes in the Temperate Zone of South America.

The ignorant laborer and the city drone are the classes of people who will seek to come in ever-increasing numbers; and if we would preserve our institutions, if we would protect ourselves and our children in the heritage they have carved out of the wilderness, we must raise the bars against the worthless foreign element. [Applause.]

Restriction of Immigration.

EXTENSION OF REMARKS
OF
HON. JOHN R. CONNELLY,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, February 3, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. CONNELLY of Kansas. Mr. Speaker, I want to speak upon this subject of restricting immigration because I believe that this bill should pass. I have in my district a very considerable number of Germans and French and Russians. But, sirs, they are not the class of Germans and French and Russians who think more of the land of their birth than they do of the land of their adoption. They are loyal to the land they now call their home, its laws, its traditions, and its flag. They hold in grateful remembrance the shores of their native land, but their homes are here, their children are being educated in our schools and our colleges, they uphold the rights of the boy and girl now here before those of any place in the world besides. If you would hear some of these gentlemen who are opposed to this legislation speak, you would be justified in surmising that they were sitting in a congress of the world instead of in the Congress of the greatest and best Nation that ever the sun shone upon, the United States of America. I say, Mr. Speaker, that the gentlemen who fail to vote for this limited restriction to immigration because of the fear of offending those constituents at home who were born under another flag pay these constituents a mighty poor compliment as citizens of this great country. I refuse to believe that these men and women in my district are less patriotic than I am or that they are not just as anxious for legislation that will be for the good of the people of this country as are those who can count a longer residence here. I hear a great deal of sympathy expressed for the oppressed and the unfortunate of other lands.

Mr. Speaker, I have never been accused of being an aristocrat. I have always belonged to and lived among that class of people who were not ashamed that they labored with their hands for a livelihood. All of my sympathy and all of my training has been with the humble and the poor. I want to give encouragement to the oppressed of every land, but I want the people now here to be considered first. I want every boy and every girl who now lives under the folds of Old Glory, whether he or she is from parents born here or from parents who immigrated here from other lands, to make this their abiding place—I want these to be considered first when it comes to legislating here. I have no sympathy for that sentiment that would drag its charity across the sea to the huts of the Greek, the dago, and the Asiatic to find expression so long as there is one boy or one girl here who is denied the privilege of placing their hands to an honest job at living wage. I have but little respect for him who would turn the hungry man from his door, whether worthy or unworthy, so long as he can give of food and raiment without taking from the actual need of his own brood. But I have less respect for him who, having cause for charity at home, leaves it in want while he parades his benevolence in foreign lands.

Mr. Speaker, I hear gentlemen contend that we have need of these unlettered immigrants who come here to take the work of the American workmen, because we have reached the place in our national life when our young men refuse to labor with their hands. They say that our young men refuse now to go out in the marts of actual toil and the fields of legitimate enterprise and labor with their hands as did their fathers before them. Mr. Speaker, I hope in this that they are mistaken. I hope it is not true now; I hope it will never be true. When that can be truthfully said, Mr. Speaker, then the age of true greatness in this country will have gone. I fear for that civilization that tells its growing youth that it is not honorable to callous his hands with honest toil or earn his bread in the sweat of his brow. If our young men have gotten the grievous and erroneous idea that it is a crime to work or that it is shameful to labor with their hands, I fear it is because they have so often seen labor robbed of its recompense, and this often because of sharp competition with the greaser, the Greek, and the dago.

Mr. Speaker, there is one system of protection that I believe in and another system that I do not. That system that says to every American boy, whether his parents came here a year ago or his ancestors came a hundred years ago, you shall have a fair and square chance in the great race of life; you shall not be handicapped by being chained by the side of the benighted sons of southern Europe—sirs, that protection I stand for. That other protection that takes $4 from the consumer and gives it to the manufacturer in the fond hopes that 25 cents of it will in some way be passed on to labor—that protection I detest and despise.

Mr. Speaker, I am going to vote for this bill. It has been said by many that it does injustice to people of other lands. I am more concerned that it does justice to the thousands of our own people whom it is our duty to protect and defend. If this law works good to the boys and girls of the land who are born of American parentage, it can not but also be good for that other class of boys and girls whose ancestors are of the sturdy stock who have made recent pilgrimage here from other lands and who are now entitled to all of the blessings and benedictions of this country. I do not doubt that in casting my vote for this measure that I am casting a vote in the interest of every man, woman, and child in my district.

Miss Wilson's Wedding Gift from the Representatives of the People.

EXTENSION OF REMARKS
OF
HON. JAMES R. MANN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, February 7, 1914.

Mr. MANN. Mr. Speaker, under leave to print granted me, I insert the following memorandum for Members of the House who contributed to the Miss Wilson wedding gift fund:

On October 23 the Members of the House who were in Washington proposed that the Members of the House should present a wedding gift to Miss Jessie Woodrow Wilson, daughter of the President, on the occasion of her wedding, November 25, and authorized Speaker CLARK to appoint a committee, of which he should be chairman, to call to the attention of Members of the House the proposal, and it was decided to limit the contributions to $5.

The committee appointed by the Speaker consisted of the following: CHAMP CLARK, OSCAR W. UNDERWOOD, JAMES R. MANN, VICTOR MURDOCK, HENRY A. COOPER, ROBERT L. HENRY, PHILIP P. CAMPBELL, THOMAS W. HARDWICK, ROBERT N. PAGE, BEN JOHNSON, A. MITCHELL PALMER, RICHARD W. AUSTIN, EDWARD W. TOWNSEND, H. ROBERT FOWLER, WALTER M. CHANDLER.

A notice was sent by this committee to each Member of the House stating the proposition. At a meeting of the committee ROBERT N. PAGE was selected as treasurer, and Messrs. MANN, PAGE, HARDWICK, FOWLER, and CHANDLER were appointed as a subcommittee to select the gift.

The gift which was selected is described in the following statement, which was made by the chairman of the subcommittee:

The committee carefully studied the many suggestions and designs made by jewelry and silversmith houses in Washington, Baltimore, Philadelphia, Chicago, New York, and elsewhere, as well as made a personal examination of many of the articles suggested. The committee also had the benefit of the advice and aid of Miss Clark, the daughter of the Speaker, who, at the request of the committee, studied designs both here and in New York City. Many beautiful pieces and sets of silverware were suggested and were very attractive, but the committee finally determined to select something with more of an individual and special character than the conventional tea and coffee service with its accompanying silver pieces—something which the lady will learn to love more and more with time—an ornament of personal

use which will give constant pleasure to the owner; a thing of rare and singular beauty, neither ostentatious nor glaringly ornate. The committee has accepted a special design prepared by Mr. Shaw, of Shaw & Brown, of this city, of a diamond pendant attached to a chain to encircle the neck.

As the love and respect of the whole American people will go with Miss Wilson through her entire life, this unique reminder of that love will always be with her, undimmed and untarnished by the lapse of years.

The pendant in outline is pear shaped and contains 85 small diamonds and 1 large canary diamond in the center. This large stone weighs 6¼ carats and is perfect in every particular. The smaller diamonds are placed around the large stone in concentric rings, which is built up of delicate lace work and mounted in platinum. The contrasting colors of the blue white in the small diamonds and the brilliant yellow in the canary diamond gives it distinction and beauty. The chain around the neck is also set with diamonds in delicate platinum work.

The gift will include, in addition to the diamond ornament, a very handsome silver jewel box, with the following engraved inscription: "Presented to Jessie Woodrow Wilson by the Members of the United States House of Representatives as a token of their affectionate interest and regard on the eve of her marriage with Francis Bowes Sayre, November 25, 1913."

Accompanying the gift when presented to Miss Wilson was the following memorandum:

The Representatives of the people in Congress send this gift to Miss Jessie Woodrow Wilson, with their sincerest and best wishes, as an evidence of the tender interest and hearty good will of all the people on the happy occasion of her marriage to Mr. Francis Bowes Sayre, November 25, 1913.

CHAMP CLARK, OSCAR W. UNDERWOOD, JAMES R. MANN, VICTOR MURDOCK, HENRY A. COOPER, ROBERT L. HENRY, PHILIP P. CAMPBELL, THOMAS W. HARDWICK, ROBERT N. PAGE, BEN JOHNSON, A. MITCHELL PALMER, RICHARD W. AUSTIN, EDWARD W. TOWNSEND, H. ROBERT FOWLER, WALTER M. CHANDLER,
Committee of the Members of the House of Representatives.

The gift was acknowledged by Miss Wilson in a gracious letter to the Speaker, which was as follows:

THE WHITE HOUSE,
November 21, 1913.

MY DEAR MR. SPEAKER: May I not express to you very warmly my deep feeling of the honor the Members of the House have paid me in presenting me with the beautiful diamond necklace which was brought to me yesterday in a setting worthy of its beauty? I shall treasure this gift all my life as an evidence of generosity not only but of singular courtesy and thoughtfulness on the part of yourself and the other Members of the House. I beg that you will convey to the Members my sense of deep obligation and lasting pleasure.

Mr. Sayre joins me in warm appreciation and thanks.

Cordially and sincerely, yours,

JESSIE WOODROW WILSON.

All of the fund collected has been paid over to Messrs. Shaw & Brown.

The following-named Members each contributed $5:

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. CLEMENT BRUMBAUGH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 4, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. BRUMBAUGH. Mr. Chairman, it is very apparent to everyone that both branches of Congress will pass now, as they have in the past by great majorities, this immigration bill. Realizing the above action to be inevitable, and because I desire to see the very fairest bill possible to every race and creed pass this House, I shall seek to amend this bill. Having that object in view, and having done what I consider just in that direction, I shall in the end support and vote for this bill.

I think that all, Mr. Speaker, whether friend or foe of the bill, recognize the justice and desirability of restricting certain kinds of immigration, but I do not think that restriction should be made or measured by the literacy test. I therefore desire to state that while supporting the bill I nevertheless am opposed to the literacy provision in the bill.

I regret most exceedingly, Mr. Speaker, that in this case, as with many other great measures coming before this House, it does not seem possible to eliminate the good from the bad and that sometimes they are so blended that it is difficult to differentiate between them.

If this bill were aimed at or offered any opposition to any race, creed, or religious belief, as such, I would oppose it to the last and vote against every part of the bill, but after most careful study and scrutiny of the bill I can not see that it does or intends this, or that the bill will have the effect that some fear on these lines; and therefore, on account of the many good features of this bill, which all of us, whether in favor or opposed to the bill, admit to be necessary and desirable to meet present conditions, I shall, as stated, vote against the literacy test of the bill and then, as I consider it my duty to do, support and vote for the final passage of the bill thus amended, as I trust it will be amended by this House.

Mr. Speaker, this is a bill of more than 60 pages. With many of its provisions we all agree, such as those provisions and parts of the bill that would exclude the following classes of immigrants:

Those with foul and contagious diseases.

The insane and idiotic.

The paupers and criminals.

The anarchist and those who preach and teach anarchy.

The atheist and those who preach and teach atheism.

Those who believe in assassination of those in authority.

Those who preach against and denounce all forms of government.

I take it every man on the floor of this House will favor to this extent the provisions of this bill. And again I desire to point out that it may be best, even for those opposed to all legislation on this subject, to yield to a bill like this, which is not intended to be drastic, before much more drastic legislation shall be provoked and be demanded by the great mass of the people of the United States.

But, Mr. Speaker, my objection to the literacy test is that it will not do what it is intended to do, and that is, keep out the objectionable classes enumerated in this bill, but it will tend to let in a larger comparative per cent of this very class; for, as has been so well said on the floor of this House, ignorance and

the inability to read upon the part of the immigrant, who has had no chance to acquire this education, is no crime, and neither is the ability to read or the literacy test any proof of character. The educated crook, the atheist, and anarchist university graduate will know how to conceal his real views and will have a broader field of entrance and I fear, therefore, a larger per cent of admission, while the honest, hardworking, illiterate man of purest motive and highest ideal will be too frequently barred by such a literacy test.

HISTORICAL POSITION OF DEMOCRACY REGARDING IMMIGRATION.

Historically speaking, I want to remind you gentlemen that democracy, and I use the term in its broadest and general sense, has always been in favor of immigration, assimilation, and regulated universal suffrage, and I shall regret to see anything done now upon the part of the Democratic Party, that has always been the champion of democracy, that shall violate the spirit of democracy as expressed throughout our entire history as a Nation.

GOV. ALLEN'S FAMOUS DEFINITION OF DEMOCRACY.

Away back about 1840 a young United States Senator from Ohio was taunted by an old and famous Senator of that day to give him a definition of democracy, and the young man stood up unabashed and unafraid and gave the definition that has met the approval of mankind and has stood the test of time, and it made that young Senator, who later became the great governor of Ohio, the grand old Rise Up Bill Allen, whose statue stands in yonder hall, immortal, because he spoke an immortal truth, and in the consideration of this literacy test I want to read you that definition, because it is a jewel that we should wear in our very heart of hearts. Replying to the demand for a definition of democracy, Senator Allen responded, in words that shall live forever, as follows:

Democracy is a sentiment not to be appalled, corrupted, or compromised. It knows no baseness, it cowers at no dangers, it opposes no weakness. Fearless, generous, and human, it rebukes the arrogant, cherishes honor, and sympathizes with the humble. Destructive only of despotism, it is the sole conservator of equal rights and equal obligations. The stupid, the selfish, and the base in spirit may denounce it as a vulgar thing; but in the history of our race the democratic spirit has developed and illustrated the highest moral and intellectual attributes of our nature.

THE GREATER QUESTION INVOLVED.

My friends, let us ponder well these words now. We can not afford to consider this literacy test in any spirit of selfish self-sufficiency, because the greater question of Christianity, humanity, and the spirit of the Golden Rule is all wrapped up in it, and it is from this standpoint of view that we should consider this question.

TO WHOM BELONGS THE CREDIT FOR US BEING AMERICAN CITIZENS.

It is nothing that we individually have done that causes us to be here in this God's best land on earth, rather than in some downtrodden, oppressed land beyond the seas. The credit is due to some heroic, possibly illiterate, ancestor of ours, who took his life and fortune in his hands, broke the tenderest ties of earth, and, with supreme faith in God and the future, struck out upon, to him, a trackless sea, and became the Abraham of a generation in this land of promise and of freedom. To this immigrant and to the God of all the races of the children of earth we owe the favor of where we are and what we are, and let us not forget it. [Applause.]

THE PLANK OVER THE GULF.

It is because I fear this literacy test would remove the plank on which our ancestors walked that spans the deep gulf that separates Old World tyranny and oppression from New World liberty and opportunity that I oppose this literacy test.

I do not want to deny the lifeboat that our ancestors used to other storm-tossed immigrants.

I do not want to turn his face back again to the night of despair.

I do not want to blot out the rainbow of promise from his sky of hope.

I want to help him to lift up his head into the sunlight of a new hope, to thank God, and to take on a new courage.

I do not want to deny him that blessed boon that was granted my German-Swiss-Irish ancestors, a people with whom liberty has been a passion, and of whom Cæsar said when his Roman legions overran them: "They are a brave people, who love home and liberty and are willing to die to be free." I thank God they have been willing always to grant to others that same priceless liberty they so dearly cherished for themselves.

THE IMMIGRANT IN THE HISTORY OF OUR COUNTRY.

Had I the time, Mr. Speaker, I would love to go into the history of our country and show you what havoc this literacy test would have caused our country; what it would have withheld from our country had it been in force in the past. Why, sirs, it would have turned back the parents of Andrew Jackson six months before he was born, and that great life would never have blessed his father's adopted country. It would tear from us the deathless names of history—names that have shed undying luster on every page of American history.

I wish I had time to follow my inclination and desire and go into this and show you what the immigrants have contributed to our growth and development and glory as a Nation. I would like to speak of the Irish, the German, the Swiss, the Swede, the Polock, the Hungarian, yes, and the Italian immigrant and all the others whom I have not the time to enumerate.

In many of us run the mingled blood of these, and the mingled blood of these give us our great citizenship and give us to-day the typical American citizen of the United States. Let our door be opened to all the good of these and be closed only to the undesirable of these; open to those who come to make America their homes and closed to those who come to prey upon our country and its institutions, who come to beat down wages, lower the standard of American living, and to take out of the country the wages paid them, and have no thought of becoming with us fellow American citizens, to uphold and protect the honor of our flag and perpetuate our institutions. This class, I think, should be denied entrance into our country, but not the honest immigrant who comes with an earnest desire to become one of us and who is willing to pledge his heart's blood to uphold our institutions and the honor of our flag, as so many of them have done on every battle field of the Republic in the years that have passed. [Applause.]

OUR NATION CAN AFFORD TO BE GENEROUS AS WELL AS JUST.

Gentlemen, this Nation can afford to be generous as well as just, and I hope we will never take a narrow, selfish view of our opportunities and our duty and obligation to mankind. Nations, like men, may have one of two different views of life. They may have that view of life which they please to term the survival of the fittest, which in reality teaches this doctrine: Get all you can, keep all you get, and keep on getting. I will not expand this thought; it is all summed up in that prayer of the selfish soul that made his petition as follows: "Lord, bless me and my wife, my son John and his wife, us four and no more."

Nations and men may have the other view of life—the view of duty, obligation, and gratitude; a view of life far above the view even of a square deal; the view of the helping hand, which teaches us these sentiments:

Lend a hand to one another
In the daily toil of life;
When you meet a weaker brother
Let us help him in the strife;
There are none so rich but may
In their time be forced to borrow,
And the rich man of to-day
May become the poor to-morrow.

Lend a hand to one another;
When malicious tongues have thrown
Dark suspicions on a brother
Be not prompt to cast a stone.
There are none so good but may
Run adrift in sin and sorrow,
And the good man of to-day
May become the bad to-morrow.

Lend a hand to one another
In the race for honor's crown;
Should it fall upon your brother
Let not envy tear it down.
Lend a hand to all, we pray,
In their sunshine or their sorrow,
And the prize they have won to-day
May become your own to-morrow.

GOD'S ELECTRIC LIVE WIRE OF TRUTH AND JUSTICE.

Gentlemen, I like this sentiment. It is a rule of action and conduct for nations as well as for men. I like it because it is the better view of life for nations as well as for men; because it is the safe view and has upon it the promise of the skies, for I believe that for nations, as well as for men, through God's future, there is stretched God's electric live wire of brotherhood, truth, and justice to all men, and sometimes nations, as well as men, reach out in greed and avarice and clutch that wire and die.

OUR COUNTRY'S PROUD AND EMINENT POSITION.

Gentlemen, let me remind you in closing that the United States is what it is to-day largely because of the immigrants and the immigration laws of the past. As a Nation we stand upon the highest eminence of national greatness, having carried into successful operation a system of self-government, uniting personal liberty, freedom of opinion, and equality of rights with national power and dignity.

We have a Government founded upon the hearts of men, built by the people for the common good. We have a long and glorious history, a past glittering with heroic deeds, an ancestry full of high and imperishable examples. We have a land

flowing, as it were, with milk and honey, bordered by oceans and favored by Heaven. Its wide extent and great domain has become one vast temple and hallowed asylum, sanctified by the prayers and blessings of the persecuted of every sect and the wretched of every clime. Through our gates pour the multitudes from the corners of the earth; our homes are happy, our workshops busy, our barns are full; liberty is our birthright. This has come about under the immigration laws of the past, and the God of nations has smiled down upon us in all our past. We journeyed in safety through the wilderness of foreign oppression and crossed over in triumph the red sea of civil strife, and the foot of Him who has led us has not faltered nor the light of His countenance been turned away.

Gentlemen, let us ever keep America in all its future what it has been in the past—the land of refuge for the oppressed of every race, and the persecuted of every clime; the land of welcome to God's poor of earth—and thus have vouchsafed to this Nation for the future, as in the past, the gracious favor of the Father of all the children of man. [Applause.]

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 4, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. GARDNER. Mr. Speaker, I asked unanimous consent to extend my remarks on section 38 of the bill in order to make the following record for future use in the various stages of this bill.

Section 38 is the repealing clause. The acts repealed are:

The white-slave and procurer amendment to the immigration law approved March 26, 1910. (This we reenact in section 3 and section 19.)

The immigration act of 1903, except section 34.

The immigration act of 1907, except section 34.

Section 34 of the immigration act of 1903 refers to the sale of liquor in the Capitol Building of the United States.

Section 34 of the act of 1907 refers to the appointment of a commissioner of immigration at New Orleans.

The first proviso in the repealing section is to the effect that this bill shall not be construed to alter the Chinese exclusion law or the navigation laws.

The second proviso is a repetition of section 27 of the existing law, except that the following words are inserted:

Except as mentioned in the last proviso of section 19 hereof.

This clause is designed to validate the future deportation of persons already here in this country, even though under existing law they may not be subject to deportation.

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 4, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. GARDNER. Mr. Speaker, I did not wish to take up the time of the committee in an intricate discussion, and therefore under the permission granted me to extend my remarks on section 22 of the bill, I submit certain comments on this section as a matter of record and for future reference.

Section 22, with one slight change, repeals the provisions of the act of 1907 with reference to the privileges which may be accorded to wives and minor children seeking to join aliens domiciled in this country. The Bureau of Immigration has more than once criticized the wording of the law and has suggested that the provision of the act of 1903 was changed through inadvertence. Such is not the case, however, as clearly appears from the report made on House bill 17941, Fifty-ninth Congress, first session, House of Representatives Report No. 3021. The bureau, moreover, suggests in connection with this section that wives and minors seeking to join resident aliens shall not be admitted for temporary hospital treatment unless the contagious disorder first manifested itself on board ship. The Committee on Immigration did not think it best to impose this limitation.

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. BENJAMIN I. TAYLOR,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 3, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. TAYLOR of New York. Mr. Speaker, we all realize the necessity of restricting immigration and keeping from our shores the criminal, insane, weak-minded, debilitated, and immoral of other communities. It makes no difference whether we are native or foreign born, whether we be taxpayers or only residents, we all join in recommending legislation that will keep this class of people out. They are useless and become a burden on our taxpayers.

We are divided as to the best method of restricting immigration. I am heartily in accord with the provision of the bill which increases the fine or penalty to be paid by the steamship companies in the event of their bringing to our shores undesirable immigrants. The provision which extends the period of deportation is a good one, nor can any fair-minded man complain about that provision which requires that one or more physicians and nurses shall accompany each ship carrying immigrants for the purpose of observing them during transportation, with the view of detecting those who are weak-minded, idiotic, diseased, and so forth. These are wholesome provisions, and tend to strengthen our present immigration laws and should be enacted into law.

The only provision in the bill that I disagree with is that which requires the so-called literacy test.

Previous to the Revolutionary War Benjamin Franklin, who was a wise and learned statesman, declared that the time had arrived "when great hordes from Germany should be refused admission into this country." Samuel Otis, one of our great Revolutionary statesmen, declared before the Legislature of Massachusetts at the time of the Revolutionary War that the country would soon be overrun with those of the Irish race, and that they should be excluded. Practically continuous, I believe, from that time efforts have been made to restrict immigration. There have always been found a certain number of people who declare for an unreasonable restriction of immigration and seem to be impressed with the fact that this continent was made solely for them. We all feel thankful now that the ideas of both Franklin and Otis were not put into execution. If they had, this country would have been deprived of many of its greatest statesmen, lawyers, doctors, surgeons, and generals.

When President Lincoln issued his proclamation calling for men to fight for the Union thousands of men of foreign birth joined the ranks and fought as valiantly for the preservation of the Union as those who had been born and reared here, and many of them rose to the first ranks and became officers of note.

Abraham Lincoln, while he was seeking the office of President of the United States, during his speeches in Boston, took a firm stand in favor of immigration. At that time he called the attention of the people to the fact that there were vast areas of our country unsettled and which should be populated, so that our country might grow and become the greatest on earth and contended, as many had before and since, that the man and woman who had the courage and hardiness to leave their birthplace and cross the ocean to an unknown land would, if allowed to develop this courage, make our Nation a contented and prosperous one.

Our country is growing fast and is considered more progressive and up to date than any other country in the world, which, in my belief, is due to the fact that this continuous stream of immigrants have not only brought here but have exercised this courage which they had and infused new life and activity into us as a Nation.

It was contended in Franklin's day that our country was not able to assimilate these men and women of foreign birth and

that unless immigration was restricted they would gain control and that the Anglo-Saxon race would no longer rule. This contention has been advanced ever since. Still it must be admitted that the country has assimilated these vast armies of immigrants and our original customs, forms, and method of government still prevail, and that these immigrants have not only acquired our habits, but have become loyal, patriotic citizens. Our schools to-day are filled with their children, some of whom were born in this country and many of whom were born on foreign shores. Daily they are taught to sing our national hymns and anthems and to salute the Stars and Stripes. It is a common custom to witness the struggles of the parents of foreign birth to keep their children in our public schools and give them that which they were not able to obtain—an education. The children as they grow up become Americanized and acquire American habits.

The strong, healthy, sober, industrious immigrant lands upon our shores with his family and at once begins the task of providing for them. They soon save their money, acquire a small piece of land, and become taxpayers, and in the meantime their children are being sent to our schools and shortly they are working in our factories, following different trades and vocations, and become industrious young men and women. They generally belong to the poorer classes, their income is small, and they spend practically all they receive. In this manner our domestic market has become the greatest in the world and we have become a thriving, industrious Nation.

Municipal improvements such as gas, water, sewers, and so forth, are never extended to the rural districts for the reason that they are so sparsely settled the cost of these improvements would be too burdensome to the few taxpayers. As the community grows and new families move into the village it then becomes possible to have these improvements because of the great number of taxpayers to share the cost. This same idea applies to our country. With a large population we can obtain such improvements as new railroads, good roads, and benefits of this character which make life worth living. If we had shut our doors against immigration at the time Benjamin Franklin decreed, to-day we would be a stagnant, unprogressive Nation.

It costs the taxpayers and people of this country billions of dollars a year to educate their children, thousands of whom are being graduated from our schools, colleges, and universities yearly. If you should suggest to the fathers and mothers who have deprived themselves of many of the necessities of life that their son and daughter upon graduating from high school, for example, should go out into the world and dig a ditch, they would feel insulted. It is proposed, by means of this literacy test, to shut out from this country the strong, sober, industrious man and woman of foreign birth. It is this class of men and women who are now performing our heavy and manual labor. They are digging our ditches, building our subways, extending and reconstructing old and building new railroads, and their ranks are being recruited by new allotments of immigrants who are entering our shores. The children of these immigrants attend our public schools, become educated young men and women, and absolutely refuse to take up a pick and shovel. They rightly believe that the education they have received entitles them to a higher position in life. If we shut our doors against this class of immigrant, who are we going to get to do this work? How are we going to recruit the ranks of this class of unskilled labor?

It is not the illiterate man we fear—it is the educated man. He is the fellow that is the head and brains of the Black Hand and white-slave societies, and by means of his schooled and skilled mind formulates the plans and executes the crimes that we all deplore. In my estimation, we are too prone to condemn those of foreign birth because of the crimes committed by a few of their numbers. We fail to take into consideration that there is no nation on earth that has not good and bad men and women, and we often fail to give these people credit for the good they do, for the great doctors, lawyers, surgeons, and educators, and men and women of attainment, that they have produced, for many of our most learned men to-day are either of foreign birth or of foreign-born parentage. These men and women have done a great deal toward adding to the fame of this country as a great Nation.

I do not speak this way with the idea of defending some foreign-born member of my immediate family, for the reason that among my ancestors will be found those who landed from the *Mayflower*, signed the Declaration of Independence, fought in the Revolutionary War, War of 1812, and every war that we have had. These facts are of no particular importance, except to show, as a full-blooded American, I deplore the stand taken by some in this body in favor of this bill who are themselves of foreign-born parents and have permitted bias, religious bigotry, and prejudice to paralyze their minds and warp their judgments on this subject. I do not like this spirit, and regret it should have been injected into this legislation.

I have listened with attention to the debates upon this bill. Many of the speakers have contended that these foreign immigrants have no idea of the principles of our Government, no conception of what they stand for, never did and never can become acquainted with them; that many of them become agitators and seek to destroy our form of government. It is true we have had, and I assume we always will have, labor troubles, and many men and women whose ideas, if carried into execution, would destroy our form of government. These conditions are not confined to men and women of foreign birth. We frequently find in their ranks those of American birth, and when we take the trouble to investigate we find that these agitators, when they are foreigners, are not the ignorant, illiterate foreigners, but men and women of education, every one of whom could pass the literacy test; and, after all, this is the weak point in the test. It keeps out those we want and lets in those we do not want.

I do not mean by this that I am not in favor of education and that I do not believe the educated man can not dig a ditch or do hard, laborious work. I am firmly convinced that the man who has a trained, intelligent mind can do more with a set of strong, powerful muscles than the man with only the muscles and without a trained mind. People in general do not take this view of things, as is evidenced by the fact that so many of our young men and women are leaving the farms and seeking employment in our cities and villages.

There was a time in this country when we produced in an agricultural way more than we consumed. To-day we consume more than we produce, and as our population grows the amount of agricultural and food provisions which we produce is growing less in proportion, and now it is proposed to still further hamper our producing powers by depriving our farmers and agriculturists of the labor they so much need. It is claimed that these immigrants never go to the farms; that they crowd in cities like New York, Boston, and Philadelphia. The literacy test would not remedy these conditions. Legislation looking toward the more equal distribution of these immigrants about the country and directing the location where the steamships shall land them would be proper and wholesome legislation, and really meet these objections and still give us the labor that we need.

The idea of a literacy test is not a new one. It has been proposed and discussed for many years.

President Cleveland vetoed an immigration bill, and accompanying his veto he expressed himself as follows:

> The ability to read and write, as required in this bill, in and of itself affords, in my opinion, a misleading test of contented industry and supplies unsatisfactory evidence of desirable citizenship or a proper apprehension of the benefits of our institutions. If any particular element of our illiterate immigration is to be feared for other causes than illiteracy, these causes should be dealt with directly instead of making illiteracy the pretext for exclusion to the detriment of other illiterate immigrants, against whom the real cause of complaint can not be alleged.

President Taft vetoed a similar bill, and used the following language:

> I can not make up my mind to sign a bill which in its chief provision violates a principle that ought, in my opinion, to be upheld in dealing with our immigration. I refer to the literacy test. For reasons stated in Secretary Nagel's letter to me, I can not approve that test.

The following is an extract from the report of Secretary Nagel, referred to by President Taft in his veto memoranda:

> With respect to the literacy test, I feel compelled to state a different conclusion. In my opinion, this is a provision of controlling importance, not only because of the immediate effect which it may have upon immigration and the embarrassment and cost it may impose upon the service, but because it involves a principle of far-reaching consequence with respect to which your attitude will be regarded with profound interest. * * *
>
> WOULD COST A MILLION DOLLARS.
>
> In the administration of this law very considerable embarrassment will be experienced. * * * Furthermore, the force will have to be very considerably increased, and the appropriation will probably be in excess of present sums expended by as much as a million dollars. The force of interpreters will have to be largely increased, and, practically speaking, the bureau will have to be in a position to have an interpreter for any kind of language or dialect of the world at any port at any time. Finally, the interpreters will necessarily be foreigners, and with respect to only a very few of the languages or dialects will it be possible for the officials in charge to exercise anything like supervision.
>
> TEST WOULD CAUSE SUFFERING.
>
> Apart from these considerations, I am of the opinion that this provision can not be defended upon its merits. It was originally urged as a selective test. For some time recommendations in its support upon that ground have been brought to our attention. The matter has been considered from that point of view, and I became completely satisfied that upon that ground the test could not be sustained. The older argument is now abandoned, and, in the later conferences at least, the ground is taken that the provision is to be defended as a practical measure to exclude a large proportion of undesirable immigrants from certain countries. The measure proposes to reach its result by indirection, and is defended purely upon the ground of practical policy, the

final purpose being to reduce the quantity of cheap labor in this country. I can not accept this argument. No doubt the law would exclude a considerable percentage of immigration from southern Italy, among the Poles, the Mexicans, and the Greeks. This exclusion would embrace probably in large part undesirable, but also a great many desirable people, and the embarrassment, expense, and distress to those who seek to enter would be out of all proportion to any good that can possibly be promised for this measure.

ILLITERACY OFTEN DUE TO OPPRESSION.

My observation leads me to the conclusion that so far as the merits of the individual immigrant are concerned the test is altogether overestimated. The people who come from the countries named are frequently illiterate because opportunities have been denied them. The oppression with which these people have to contend in modern times is not religious, but it consists of a denial of the opportunity to acquire reading and writing. Frequently the attempt to learn to read and write the language of the particular people is discouraged by the Government, and these immigrants in coming to our shores are really striving to free themselves from the conditions under which they have been compelled to live.

PROPER DISTRIBUTION NEEDED.

So far as the industrial conditions are concerned, I think the question has been superficially considered. We need labor in this country, and the natives are unwilling to do the work which the aliens come over to do. It is perfectly true that in a few cities and localities there are congested conditions. It is equally true that in very much larger areas we are practically without help. In my judgment no sufficiently earnest and intelligent effort has been made to bring our wants and our supply together, and so far the same forces that give the chief support to this provision of the new bill have stubbornly resisted any effort looking to an intelligent distribution of new immigration to meet the needs of our vast country. In my judgment no such drastic measure based upon a ground which is untrue and urged for a reason which we are unwilling to assert should be adopted until we have at least exhausted the possibilities of a rational distribution of these new forces.

Practically all of the heads of our institutions of learning have declared that this test is not the test required and will not accomplish what it is supposed to or remedy the evils that it is attempting to legislate against, of which the following are a few illustrations:

[Harry Pratt Judson, LL. D., president University of Chicago, Chicago, Ill.]

If we can establish a test which will exclude those who are really undesirable—that is, who are unlikely to make intelligent, industrious, and law-abiding citizens—such test I shall approve. I do not believe that the literacy test conforms to that condition.

[Bernard J. Otting, S. J., president St. Louis University, St. Louis, Mo.]

I can not respect the intelligence of the man who can make literacy the test of fitness, and I am driven to suspect some underlying motive which he is ashamed to make public in the statesman who would make this test the law.

[Edward Cummins, S. J., president Spring Hill College, Mobile, Ala.]

Read the roster of our great men these days and you will find them children of men that came over here to escape persecution without, perchance, the knowledge of the alphabet.

[Lyon G. Tyler, LL. D., president College of William and Mary, Williamsburg, Va.]

Illiteracy is a mere accident that may affect a family in one generation, but be conspicuously absent from succeeding generations.

[George Lewis Mackintosh, president Wabash College, Crawfordsville, Ind.]

Unquestionably, immigrants who could not measure up to the most rudimentary test of literacy may yet be industrious, honest, and very desirable men.

[George S. Davis, LL. D., president Normal College of the city of New York.]

It [the literacy test] would be inadequate and misleading, often resulting in the exclusion of worthy and desirable additions to our population.

[John Cavanaugh, C. S. C., president University of Notre Dame, Notre Dame, Ind.]

I am convinced that the effort to restrict immigration by a literacy test is un-American as well as unwise.

[James A. B. Scherer, LL. D., president Throop College of Technology, Pasadena, Cal.]

I used to incline toward a belief in much stricter immigration laws, but upon becoming acquainted with the sons and daughters of possibly objectionable immigrants I saw that the "melting pot" does its work effectively and advantageously.

[Stephen M. Newman, D. D., president Howard University, Washington, D. C.]

Some of the best immigrants who ever came to America could not read when they landed, but settled down into helpful American lives. I do not believe that a literacy test should be enacted.

[Herbert L. Stetson, LL. D., president Kalamazoo College, Kalamazoo, Mich.]

I believe that immigrants fleeing from religious and political persecution should not be subjected to a literacy test, should such test be enacted.

[Winthrop E. Stone, LL. D., president Purdue University, Lafayette, Ind.]

There are many valuable men and women who could be of service in this country who possibly can not read and write.

I have not viewed this question with the prejudice and feeling that many of the Members of this House have viewed it. I have no prejudice one way or the other. I believe we can find good and evil in every man, and our Christian duty imposes upon us the obligation of trying to seek, find, and improve the good. We are often too willing to judge others, and we forget, "Judge not, lest ye be judged." We all have our weaknesses and faults. Some contend that the illiterate man and woman have greater faults than those of the more intelligent. I do not believe this, as I have known men and women who could neither read nor write, who were bright, active, and industrious people, and we have all become acquainted with that type of intelligent man and woman more prone to crime, their very intelligence making them criminals.

It has been contended that this test should be passed because of the unsanitary conditions of our factories and industrial institutions, which are due to the uncleanliness of the foreigner, and that the numerous accidents which happen are due to the illiterate, stupid foreigner. Experience has taught me that the unsanitary conditions of our manufacturing establishments are due to the greed and avarice of the employer, who is not willing, first, to construct a sanitary manufacturing plant, and, second, his unwillingness to keep it up to date with modern improvements. Legislation can remedy these defects and not the literacy test. We all know that there are just as many stupid educated people as there are stupid illiterate people.

There are those who believe this bill, if passed, will help union labor. I do not see how it can. It will not help the mechanics, such as carpenters, masons, painters, machinists, and so forth. They are skilled laborers. This bill seeks only to keep out unskilled labor, and there is constantly such a demand for this class of labor that their unions can not cope with the situation. I believe in unions, union labor, and the right of men and women who labor to join together for their mutual protection, and am willing to do everything in my power to limit the Sherman antitrust law so it will not apply to organized unions, as it never should have been construed to apply to labor organizations. I say this as evidence that I am a friend and not an enemy of labor.

For these reasons, Mr. Speaker, I can not vote for the literacy test, and hope that it will not be enacted into law.

Rural Post Roads.

SPEECH

OF

HON. CHARLES M. THOMSON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 7, 1914.

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. THOMSON of Illinois. Mr. Speaker, one of the things to which we can not point with pride as a nation is our country roads. With the exception of a very few States which are favored by fortunate surrounding conditions, the state of the roads which traverse our rural districts is deplorable, and in not a few sections of the country this condition of the roads amounts to a disgrace.

The reasons for this are numerous. Some of them are present in all communities and some are not. In some districts the condition is due to mismanagement of available funds; in others it is due to a lack of such funds; while in still others it is due to the fact that necessary materials are not available in the immediate neighborhood and must be transported some distance at great cost. In practically all instances no doubt local communities would improve their roads if given the administrative machinery and the money necessary for the purpose.

The bill now before us for consideration proposes to extend Federal aid to the various States in the matter of the construction and maintenance of good roads. It appropriates not to exceed $25,000,000 in any fiscal year and specifies the method by which that money shall be made available to the various States. I approve of those provisions of the bill which in substance provide that the Federal Government is to extend financial help to those communities which help themselves in this matter of building good roads and is to bear a share of the burden of meeting the cost both of their initial construction and of their maintenance, not in any case to exceed one-half of that cost. Upon referring to the report which the Committee

on Roads has submitted to the House on this bill I note that my State, Illinois, may claim a maximum amount of $1,501,250 in any year, any portion of which may be used, with a like sum made available by the State, in the construction and maintenance of rural post roads.

While I shall vote for this bill, I do so in spite of some of its features of which I do not approve. In examining some of the other "good-roads" bills which have been introduced here I have noted features not included in the bill reported by the committee which seem to me to be very desirable. This fact is especially true with reference to H. R. 10404, introduced by Mr. WOODRUFF of Michigan.

The features of the Woodruff bill which commend it to me very strongly and which I wish the committee had incorporated in the bill reported to the House by them are these:

It places the bureau which would have to do with this question in the Post Office Department, which is vitally interested, as the efficiency of the Rural Mail Service would be very materially affected by this road improvement.

It requires that the director of this bureau be a practical engineer of road construction.

It puts the highway inspectors under the classified service, while under the provisions of the committee bill there is offered an opportunity to build up political machines through the office of State highway commissions and boards.

Under the terms of the Woodruff bill the designation of the roads which are to participate in the benefits afforded by the terms of the proposed law rests with the geographical unit in which the roads lie, while under the terms of the bill before us such designation can be made by the State highway board.

Under the pending bill no aid is afforded a community which may have been enterprising enough or prosperous enough or for other causes enabled to have already made such road improvement as would enable them to participate in this aid afforded by the Federal Government, if their improvement had been made after the law was passed, while under the Woodruff bill, provision is made for such aid to a community which has built a road of such construction and capable of such maintenance as will bring it within one of the classes of roads designated in the bill. The funds thus secured by a community would be available for further road improvement. However, in spite of the fact that these features which, in my judgment, make the Woodruff bill preferable to the one now before us, I shall vote for the passage of this bill, as I said a moment ago, for I realize that if we are to get good roads legislation in this session we must adopt the bill which has been reported by the committee.

Mr. Speaker, as a candidate for a seat in this House in the tenth district of Illinois, I subscribed to the principles of the Progressive Party, of which I have the honor to be a member. The platform of that party states, among other things, that—

> We recognize the vital importance of good roads and we pledge our party to foster their extension in every proper way.

As this debate has proceeded, Mr. Speaker, I have noted that a number of the Members of the House who come from districts in the large cities are not supporting the bill. Whether they will vote against it, I do not know. To quote from the platform of my party again, I would remind them that—

> The development and prosperity of country life are as important to the people who live in the cities as they are to the farmers. Increase of prosperity on the farm will favorably affect the cost of living and promote the interests of all who dwell in the country and all who depend upon its products for clothing, shelter, and food.

So I am supporting this bill because of the declarations of my party in its platform. But apart from those declarations I shall vote for the bill because I favor the principle of Federal aid in the matter of the construction and maintenance of rural roads.

The district which I have the honor to represent in this House lies partly within the city of Chicago and partly without that city. It includes some of the rural part of Cook County and all of Lake County. This part of the district contains a number of enterprising, prosperous cities and towns, and beyond and about them an agricultural section which is second to none.

In voting for this bill, I consider that I am availing myself of an opportunity to render a service primarily to the agricultural part of my district, but also, and quite as important, to the part of my district lying within the great city of Chicago. But our service here on general bills like this should not be measured by the needs of individual districts. This bill, seeking to afford Federal aid in the construction of rural post roads, will prove of great value not only to the country districts of the Nation, but to all the cities as well.

During a service of some years in the council of my home city I experienced much to confirm my idea of the importance of well-paved and well-cleaned streets to the well-being of a community. This fact, with reference to city streets, applies also with reference to the roads of the country. As a member of a delegation from our city council I had the opportunity of visiting the city of Detroit a few years ago, the purpose being to see the results that had been achieved in the treatment of certain streets there and also to see the up-to-date roads that had been constructed in Wayne County, through the country districts surrounding Detroit. Those country roads in Wayne County, Mich., were a revelation. With the advantage of such roads over which to reach their markets the position of the men and women of the farms was vastly improved.

The roads are the arteries of the country districts, and those districts will improve or suffer directly as the condition of the arteries is good or bad.

If the bill before us becomes a law, as I trust it may, the operation of that law will doubtless disclose imperfections. But these may be remedied as they are disclosed. The fact that the bill is not perfect does not furnish a reason for opposing it. It is a step in the right direction, and that being so, it is a step that should be taken.

Rural Post Roads.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 10, 1914.

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. BORLAND. Mr. Speaker, under the leave given to extend my remarks in the RECORD I herewith offer a letter written by me to the president of the National Old Trails Road Association, showing that I anticipated the exact attack that would be made on me if I dared attempt to improve this bill, which is labeled "A bill to aid in constructing good roads," but which should be labeled "A bill to aid in the construction of political fences."

FEBRUARY 4, 1914.

HON. J. M. LOWE,
Kansas City, Mo.

MY DEAR JUDGE: I am sending you herewith a copy of a bill which I intend to offer as a substitute for the Shackleford bill. The worst features, in my judgment, about the Shackleford bill are—

First. That it reintroduces the element of paying rental on post roads, a plan which can not fail to degenerate into a mere pork barrel and which will cost the Government an increasing amount of money without any corresponding improvement in the roads. There will be constant political pressure to raise this rental, in the face of the fact that 80 per cent of the taxes now spent upon public roads are lost in the process of administration and only 20 per cent gets upon the road itself.

Second. The bill proposes to give the governor a choice between this plan and a very vague and indefinite system of cooperation by agreement with the Federal authorities. It is highly improbable that any satisfactory agreement can be made under such circumstances, so that in the last analysis the bill is reduced to a rental proposition.

Third. The bill is drafted nominally to provide post roads, in accordance with the Democratic platform, but it is apparent that this is only a verbal badge, because the work is all put under the Department of Agriculture, and there is no requirement that the roads shall be actually used as post roads.

Fourth. The bill leaps over the State authorities and proposes to deal directly with the civil divisions of the State, which is contrary to the expressed policy of the Department of Agriculture, the Secretary of Agriculture having said that the smallest unit with which the Federal Government ought to deal is the State. It is contrary, also, to the fundamental principle of State's rights, State's power, and State's duties. It is destructive, also, of the growing and beneficent influence of the State highway departments. It can have no purpose but to aid in the building up of a local machine through the assistance of local road bosses.

What the people of this country want is roads and not politics. I learned that the bill will be brought in under a special rule at the earliest possible moment. I think they will not be able to bring it in before to-morrow night, and there is an agreement for 7 hours' debate, of which I am entitled to 30 minutes. I do not think they can vote on it sooner than Monday, but they may force a vote as early as Saturday.

I do not know that the views expressed in my bill are entirely in line with yours, but they are, in my judgment, infinitely better than the Shackleford bill, and possibly stand a show of getting more votes in the House than a straight-out appropriation for Government construction of roads, which you have asked for.

In any case, I intend to make the best fight I can in the House for the amendment to the bill, without, I am sorry to say, very glittering prospects of success and with the full knowledge that I shall be denounced as a joy rider, an automobile agent, and the enemy of the poor, downtrodden farmer.

With kindest regards, I am, yours, truly,

WM. P. BORLAND.

I also submit some newspaper comments:

[From the Independence (Mo.) Examiner, Feb. 9, 1914.]

PORK-BARREL ROADS.

The National Congress of the United States has not yet discovered the change of sentiment among the voters. In a debate held last week, in which the Shackleford pork-barrel road appropriation of $25,000,000 to be distributed among the States was up for discussion, only a very few of the Members of Congress had the courage and foresight to oppose the bill. It is gratifying to this district to know that our Member of Congress, the Hon. WILLIAM P. BORLAND, was among those who pointed out the criminal foolishness of such a measure.

There must be something in the atmosphere of Washington, some microorganism or some other peculiar form of madness, which takes away the judgment of the men who stay in the Capitol of the United States. The people of the United States have come to recognize the pork-barrel method of grabbing out national funds. The legislatures of the States have followed the Washington method and have also used the appropriation bills for the purpose of making themselves solid with their home voters. Legislation in Washington and in the State legislature is secured by trades. If one district wants an appropriation for a public building or for any other purely local purpose, the Representative from that district must trade with the Representatives from other districts who are after the same thing. In this manner sufficient votes are secured to hang a lot of appropriations on the bill, and each one grabs his share of the spoils out of the Public Treasury.

Here in Jackson County we have a fine idea of the spoils method of building roads. For 25 years this county has been expending an annual appropriation ranging from $200,000 to $600,000 on the roads. Of course we are proud of the roads which we have, but they have cost us an outrageous amount of money. In the process of building they have put fortunes in private pockets, corrupted men elected to office, have served as bribes for voters, have been the center around which have circled the vultures of politics and the machine which has nominated the tickets. Congressman SHACKLEFORD knows that such an appropriation as his bill provides would be uselessly scattered in thin spots over the United States, and that no good results could possibly come from the expenditure of this immense amount of money. If Missouri should get $2,000,000 of the appropriation in a single year, at the end of a short time the money would be gone and nobody could point out an improvement in the road system under the conditions which it would be expended.

The hope of those who want to see real first-class government and are anxious for good roads is that the President will not sign any such bill. We should be able to stop this appropriation in the United States Senate. United States Senators are just as human as the Members of Congress and are just as much politicians, only more so.

[From the Kansas City Star, Feb. 9, 1914.]

THE WRONG KIND OF "FEDERAL AID."

In opposing the "pork-barrel" road bill in Congress Representative BORLAND is proving again that he is a servant of the people and a foe of the machine politicians.

To distribute $25,000,000 among all the crossroads overseers and courthouse politicians of the Nation would be a neat "hand-out" to "the boys," but it probably would not build one mile of good roads.

The farmers, of course, would be the worst sufferers of all, because they are the ones who most of all need good roads and who most of all do not want machine politicians.

That $25,000,000 of "pork" would not come out of "thin air." It would come out of the pockets of the people—mostly out of the pockets of the farmers—and it would go into the pockets of the politicians.

The pending Shackleford bill is labeled a bill for Federal aid to roads; it is in reality a bill for Federal aid to political machines.

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. FRED A. BRITTEN.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 31, 1914,

On the bill (H. R. 6060) to regulate immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. BRITTEN. Mr. Speaker, I am opposed to this bill, and shall vote against it because of the literacy test it contains. I somehow can not bring myself into that frame of mind, apparently possessed by so many Members who are strenuously advocating the passage of this bill, when I must regard men with strong hands, stout hearts, good morals, and high ambitions, who desire to come to this country, eager to work for themselves and for the industries of the United States, as a sort of pest ordinarily kept out by quarantine regulations.

As a son of foreign-born parents I feel strongly the injustice of this bill.

When my father and his widowed mother, with his several brothers and sisters, arrived in this country in 1861 they were not confronted by an examination of their ability to read and write. And a year later, when the call had gone out for men to save the Nation and my father and his brother, Peter Britten, enlisted for service in the United States Army and were sent to the front, there to fight side by side with the native born, I am sure they were not questioned as to their ability in this direction. And when my father cast his first vote for Abraham Lincoln, in 1864, I am also certain that a test of his character and newly acquired citizenship was not demonstrated by his ability to read and write. And in the years of successful commercial life that followed, and they were counted among the leading business men of their respective communities, I am sure that those Britten boys were never questioned as to their ability to pass such a literacy test as you have incorporated in this bill.

I am opposed absolutely and unalterably to any weakening of our immigration laws whereby it would become possible for the undesirable classes now excluded to enter this country; and, so far as I am informed, I do not think it is necessary to legislate further in this direction; but when a bill is offered to this body in which is included a provision making it a condition for admission to the United States that the immigrant must have had just those advantages and opportunities which he comes here to seek, both for himself and his children, I feel that I must protest both by my voice and vote against this injustice.

There are so many things to be said against certain sections of this bill that I hardly know where to begin. You are proposing to exclude sober, honest, industrious, sound, healthy men and women—just the sort of people who helped to make this country what it is. If the bill is passed, it will be passed by the votes of men who have had the least opportunity to mingle with and observe the foreign-born American. It seems to me that you Democrats ought to pause and weigh carefully the testimony of those who come from the parts of the country where these people whom you are legislating against live and work out their appointed destiny.

A few days ago, in a speech made in Philadelphia, President Wilson said:

I feel that it would be inconsistent with our historical character as a nation if we did not offer a hearty welcome to every honest man and woman who comes to this country to seek a permanent home and opportunity.

And yet you Democrats are preparing to pass this bill, which includes a test in violation of the fundamental principles of free institutions. Never, so long as I am a Member of the House, will I refrain from protesting against a test that will exclude immigrants for want of an equal opportunity in life. I am opposed to a reorganization of human rights upon any basis of title, station, wealth, or advantage of opportunity. I am in favor of a test of character, of morality, of honesty, of brain and sinew, of industry, enterprise and thrift, of honest motives and a laudable ambition of devotion to home and family, of patriotism and loyalty to our institutions; but I am against any test that directly violates the principles of the equality of all mankind.

In our constant association with the most advanced educational advantages we are prone to forget that the people of many of our foreign countries have not the same opportunities. Our State governments have taken pains not only to make a rudimentary education available to every child, but to force it upon him by means of compulsory-education acts. For a 16-year-old boy or girl to be unable to read or write in this country is in most cases evidence either of complete mental deficiency or of a willingness to evade or violate the law.

But this is far from being so with a great many of our foreigners. Their Governments take no pains for their education, and their illiteracy is no evidence of personal incapacity. That they come to seek work under the United States shows that they realize the shortcomings of the system under which they have grown up. It is a demonstrated fact that the very immigrants most wholly ignorant of the rudiments of learning in their own tongues are most eager to learn to read and write in English. My personal knowledge of purchasers of real estate in the ninth district of Illinois, which district I represent, and in which there is a large proportion of foreign-born citizens, is that certain thrifty immigrants who purchased property on the installment plan soon after their arrival in this country at the time of purchase could make their signatures upon the mortgage known only by a mark. A little later, desiring to sell or transfer the property, they proudly affixed their signatures to the new instrument and exhibited the utmost pleasure and satisfaction in the fact that they had not only learned to read but to write.

During the debate on this bill many illustrations have been cited of the effect of this regulation had it been in operation for the last half century. At least one Cabinet officer and several Members of Congress are pointed out who would have been excluded had this test been applied to them when they came knocking at our doors. It is asserted that organized labor, or a great part of it, favors the bill, but its exactions would, it has been asserted, have excluded Mr. Gompers, the head of the American Federation of Labor, and many other labor leaders.

Many advocates of this bill seem to lose entire sight of the fact that inability to read and write does not imply the same mental and moral inefficiency in men bred in certain foreign countries that it would in the case of men who grew up in the United States. It is no doubt true, Mr. Speaker, that our alien population presents many social and economic problems. The immigrant is the new material of our civilization. It is for us to take him and work him over until the finished product is fitted for our needs. He does not, nor should we expect him to come in perfected form. At the present time he is America's man of all-work.

Eighty-five per cent of all the labor in the slaughtering and meat-packing industries is done by alien laborers. They mine seven-tenths of our bituminous coal. They do 78 per cent of the work in all the woolen mills, nine-tenths of all the labor in the cotton mills, and make nineteen-twentieths of all the clothing. Immigrants manufacture more than half the shoes in the country. Half the collars, cuffs, and shirts are made by them. They turn out four-fifths of all the leather output, make half the gloves, four-fifths of our furniture, half the tobacco and cigars, and nearly all the sugar.

And we need the men who are eager for work. That from time to time temporary depressions may produce in our land the sad spectacle of the eager man out of work does not affect the general principle that in the long run work is here for all who are fitted to do it. The Nation needs the worker and the completed work. To bar the worker from our country is as great folly as it would be for the manufacturer to think that his factory would run better if he turned out less goods.

I am convinced, Mr. Speaker, that ability to read, however desirable an accomplishment, is not sufficiently important to determine whether an immigrant is a desirable or an undesirable.

The time is coming when this great Government, seeking to place its stamp of approval or disapproval upon not only him who would come but him who would be permitted to stay, will apply a test the most important evidence of which will not be ability to read, but that of character and loyalty.

The literacy test is no test at all. Never before have I heard it argued that inability to read is a badge or a sign of bad character or bad morals. Illiteracy is no crime, nor is it a badge of crime. It is a misfortune, and any law that places a penalty on a person that has been so unfortunate as to be in such surroundings where that person could not obtain an education is unjust and wrong.

If a man's health and morals are good, do not test his ability to read and write in order to establish his value as a future citizen.

Since the beginning the United States has been known as the home for the oppressed of every land. For over a century we have maintained an open-door policy. Our forefathers, many of them, came to our shores singing the hymns of their native lands, and to-day we, their posterity, are singing, "My Country, 'Tis of Thee." These men as they came built homes; they cleared away the forests; they plowed the prairies; they made our cities vast hives of industries; and when the very existence of our country was at stake and the call came for men to save the Union, none responded more loyally than our foreign-born population. Thousands of them gave up their lives that this Nation might live. No literacy test was applied to them. When they responded to a call of duty no one tested them as to whether or not they could read.

Under the open-door policy we have prospered and grown. We have advanced in science, industry, and education. An analysis of the progress and advancement in different sections of our country will show that advancement has been greatest where the immigrant has settled, and the proposition to prescribe the literacy test to the immigrant to-day is nothing short of an insult to the immigrant of old.

In the district which I have the honor to represent 65 per cent of the population are either foreign born or the children of foreign-born parents. We have the German, the Irishman, the Swede, the Norwegian, the Italian, the Englishman, and the Jew, and the majority of them are honest, God-fearing citizens, as good as you or I. A very large percentage of the population of Chicago is foreign born, and the schools in the parts of the city where foreign-born population is most numerous are crowded with foreign children, who learn quickly, and the night schools are filled with foreign adults eager to assimilate the English language. I can take you to a night school in Chicago, Mr. Speaker, and show you room after room packed with adults who can not speak a word of English. They bring with them their children, 5 and 6 years old, and have them beside them while they try to learn the language of this country. Many of them can not read or write in any language. Later those children go to the public schools and graduate at the age of 14 and 16 years. They grow up and take the civil-service examinations, and an inquiry at the local or United States Civil Service Commission at any time will show you that their names are at the top of every civil-service list in every large city, and you can not keep them off. Do you not suppose their fathers and mothers would have done equally as well if they had had the chance?

As a contractor and builder for the past 20 years, I have had considerable experience with our foreign population, both in my building operations and in real-estate transactions, and, as a rule, I have found them thrifty business men, good citizens, supporters of education, and a discriminating electorate. They do not allow themselves to become fixed factors in annual elections, but discriminate year by year as to men, measures, and parties, and in that way show the highest grade of useful citizenship. We think of them as possessors of these qualities rather than of the mere ability to read and write.

In a bulletin just issued, Commissioner of Education Claxton states that "the least illiterate of our population are the native-born children of foreign parents." And, again, he says, "illiteracy among the children of American-born parents is three times as great as that among children of foreign parents."

Mr. Speaker, that our country is the wonder of civilization is due to immigration. Its population came to us from all quarters of the globe and is made up of all the nationalities. We have here all races, all religions, all nationalities. They represent the class that had the courage to leave their native country and the homes of their birth, their kindred, and their friends, to set out for an unknown land, where the language they spoke was not understood, and with nothing to beckon them on but the beacon light of human liberty. They aimed to establish themselves where the tyranny of monarch, the oppression of caste, and the insolence of titled wealth would not place a heavy hand upon their throats. They brought with them their courageous hearts and adventurous spirits, their strong arms, their industry, their genius and wisdom, resulting from centuries of civilization in the lands beyond the seas, and they gave them here to us, and we have become the wonder and the envy of the world.

At another point in his speech in Philadelphia the other day the President said that we ought to revere our ancestors, the people who made this country. At the same time another speaker stated that 75 per cent of these people were illiterate. Yet they made the greatest country on earth, and the result of their action has affected every nation on earth in the direction of bettering their condition. That is the result of the earnest work of the illiterates.

Had I the time, Mr. Speaker, I would like to go into the history of our country and show what havoc this literacy test would have caused, what it would have withheld from our country, had it been in force in the past. It would tear from us the deathless names of history—names that have shed undying luster on every page of American national life.

I wish that I had time to follow my inclination and desire to go into this and show you what the immigrants have contributed to our growth and development and glory as a nation. I would like to speak of the German, the Irish, the Swede, the Italian, the Jew, and the others, almost too numerous to enumerate.

In many of us run the mingled blood of these, and this mingled blood gave us our great citizenship and gives us to-day the typical American citizen. Let our door be opened to all the good of these and closed only to the undesirable; open to those who come to make America their homes and closed to those who come to prey upon our country and its institutions, who come to beat down wages, lower the standard of American living, and to take out of the country the wages paid them, and have no thought of becoming American citizens, to uphold and protect the honor of our flag and perpetuate our institutions. This class should be denied entrance into our country, but not the honest immigrant of sound body and mind who comes with an earnest desire to become one of us, and who is willing to pledge his heart's blood to uphold our institutions and the honor of our flag, as so many of them have done on every battle field of the Republic in the years that have passed.

The cry is going up from all sections for farm hands. Middle West, South, far West, all are sending out the Macedonian cry, "Come over and help us." The land that is already occupied can not be tilled for lack of labor, and millions of acres of undeveloped land, wonderful in its opportunities for agricultural and mineral wealth, stretch out on every side of us. The advantages of our American educational system are placed at the disposal of every farmer boy. He embraces his opportunities, and as he acquires knowledge he longs for a larger field of endeavor. The activities of the city, ever seeking the able, the strong, the best, allure him, and the agricultural districts are robbed of their honest heritage of labor. Who shall take his place if not the immigrant—the man who longs for labor, he who has been

denied the opportunities of education, but comes to us with clean hands, a stout heart, a perfect physical equipment, and a desire only for honest work, and an opportunity to make a home for himself and his family? And yet you men of the South, the men representing States in which there are thousands of uncultivated acres, would bar him because he can not read 40 words. Surely there ought to be other tests which will enable us to properly restrict immigration, and other ways to judge of the desirability of a foreigner becoming an American citizen with a right to rear his children here, and with them become a factor in developing this wonderful land of ours.

Ability to read is not and can not be regarded as a test of capacity for labor. On the contrary, sturdy manhood is the only test—a sound mind in a sound body and a moral sense whose development must lift its possessor always to a higher plane of living and thinking.

In closing, Mr. Speaker, I would like to emphasize the fact that I believe that the United States is what it is to-day largely because of the immigrant and the immigration laws of the past. As a Nation we stand on the highest eminence of national greatness, having carried into successful operation a system of self-government uniting personal liberty, freedom of opinion, and equality of rights with national power and dignity.

And when we consider all this it seems almost incredible that a political party that has so recently come into power should present to this body and strenuously advocate the passage of a bill which provides for a law which says to the man from foreign shores seeking admission to this country, "No matter how willing you are to become a good citizen, no matter how industrious you may be, no matter how strong you may be, mentally, morally, and physically, you can not become one of us unless, regardless of your lack of opportunity, you have learned to read."

Mr. Speaker, there are many admirable provisions in this bill, but my opposition to the literacy test is so strong that I shall have to vote against it.

Rural Post Roads.

REMARKS
OF
HON. FRANK PARK,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 10, 1914,

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. PARK. Mr. Speaker, this Congress will be distinguished from past Congresses, and probably future Congresses, for the vast amount of new legislation upon pioneer and untried lines it has enacted.

The Shackleford bill now under consideration is new and distinct legislation.

While the bill provides for national aid to the States and their civil subdivisions in the construction and maintenance of rural post roads in an amount not exceeding $25,000,000 in any fiscal year—the bill declaring distinctly for post roads—still, we know the post road is the public road, and the real design is to assist in the construction and maintenance of public roads without violating the letter or the spirit of the Constitution.

No measure has been before Congress that will influence development of our country more than this, if it becomes a law.

While the apportionment of the fund to the States is designed upon a unique basis, still, when we come to consider the great difference in density of population among the States, as well as the great difference in the number of miles of post roads in the States, due to physical area, we are forced to the conclusion that while crude in its provisions it is nevertheless equitable and just.

To apply the rule to Georgia, the State which in part I have the honor to represent. Suppose the full amount of $25,000,000 shall be expended in the year 1914 in all the States; then one-half the $25,000,000 will be expended on a population basis and the other half on a post-road-mileage basis.

Let Georgia have, in round numbers, 2,000,000 population, and let the United States have 100,000,000 population, then Georgia has one-fiftieth, or 2 per cent, of the population of the United States, and Georgia will receive of the first half of the $25,000,000 one-fiftieth of $12,500,000, or the sum of $250,000, for her share on the population basis, the calculation being based upon the next preceding Federal census.

Again, suppose that Georgia has 3 per cent of all the post-road mileage of the United States, then Georgia would get 3 per cent of the $12,500,000 set apart for good roads on the post-road-mileage basis, or the sum of $375,000, and together she would receive from the entire fund the sum of $625,000.

The State having the greatest number of population to the square mile receives a greater proportion of half the fund, and the State having the greater proportion of post-road mileage receives the greater proportion of the other half of the fund, and this in a crude way balances things up.

There is no procrustean or common-law rule by which we can measure and build new legislation, hence we must construct on an equitable basis, and, while crude in its method, this apportionment is apparently equitable.

It is provided in section 2 of the bill that on or before the 1st day of January of each fiscal year the governor of a State, in conformity with the laws of his State on the subject of roads, and in the absence of any laws on the subject of roads in his State, may choose whether his State shall receive the aid of the United States under the provisions of section 3 or under the provisions of section 4 of this act, or both.

If the governor of any State shall fail or refuse to act, then the Secretary of Agriculture of the United States will act and will choose for him.

Under section 3 of the bill the Secretary of Agriculture will cooperate with the lawful authorities of each State in the construction and maintenance of rural post roads, and during the first half of the year they may jointly consider and determine under this section the roads in such State which shall be built and maintained during the next fiscal year, as well as the material, character, and manner of such construction and maintenance.

The construction and maintenance to be conducted under such supervision as shall have been previously agreed upon by the Secretary of Agriculture and the State officials.

Under section 3, which we are considering, the United States is not to bear over one-half the cost of any road built and maintained under this section. And no joint construction of any road in the United States shall be begun in any State until the portion of the cost thereof which is to be provided otherwise than by the United States becomes available.

Under section 3 the State and the Federal Government act together in planning for the construction and maintenance of public roads in the State; and it is wise and will be expedient for the legislatures of the several States to make laws in harmony with the workings of this bill when it becomes a law. When the National Government helps the States, then the States must plan to cooperate with their civil subdivisions so as to make a harmonious plan throughout.

Section 4 of the act provides a different plan, and the States may choose this in preference to the plan outlined in section 3. The rural post roads are to be divided into three classes, A, B, and C; the general characteristics of the three classes are proper drainage, and they shall have no incline steeper than is absolutely necessary in view of the natural topography of the locality; and the main difference is that class A shall have a road track composed of macadam or other material of equal utility and cost, and shall have a smooth, firm surface. For this class of roads the Government is to furnish $60 per mile. Class B shall have a road track composed of shells, gravel, or a proper combination of sand and clay or other material of equal utility, but less expensive than macadam. This is the class of roads we have in south Georgia, and the Government is to contribute $30 per mile for their construction. Class C is to have a roadbed of nondescript material, just anything that is nearest at hand to build it with, but its general shape is to be as the others, and it is to be kept crowned and compacted by dragging or other adequate means, so that it shall be reasonably passable for wheeled vehicles, and upon this class the Government is to expend $15 per mile.

Section 4 makes the further provision that by the 1st day of March of each year the governor may file a statement in the office of the Secretary of Agriculture of the United States setting forth the location and the number of miles of each road and the total mileage of all the roads in his State which he claims come, respectively, under classes A, B, and C; and if the State has a highway department, then the governor's statement may be accompanied by a report from such department showing the total number of miles of road in the State of the several classes named, giving the location of such roads and a description in detail of their physical features, the material, manner, and, as far as may be, the cost of construction and the manner and the cost of maintenance after construction.

When the Secretary of Agriculture receives this report he shall consider and determine for himself which of the roads belong to class A, B, and C, or neither, and shall then make a

report of his determination, the respective governors of the several States filing such statements not later than the following June.

No charge shall be made for considering and determining the statement of any governor when the same is accompanied by the report of the State highway department of such State, but in all other cases shall be deducted 10 per cent of the amount that shall be payable on account of the roads in said State under the provisions of this act. If Georgia shall be entitled to $500,000 from the United States under the road law which I am considering, and shall have no State highway department to send in a statement accompanying the governor's report of the number, kind, and quality of the roads, then Georgia is penalized, as it were, 10 per cent of her half million dollars, or $50,000, which the Government takes and pays out in order to ascertain what the governor and the highway commission should already know.

"It behooves every State to proceed speedily with legislation of a local nature that will bring the road-working machinery of the State into perfect accord and harmony with the plans of the Government in order that the greatest and earliest benefits may be derived."

The whole scheme of the bill is to provide a cooperative plan by which the National Government can aid the States, and in no event will the National Government, under the scheme proposed, aid any State unless and until said State first tries to aid itself. In no event will the Federal Government pay out a cent to any State on any mile of the three classes A, B, and C until the State has covered into its treasury the money to pay at least an amount equal to that proposed to be given by the Government. To the diligent belongs the greatest benefit and help. And like the parable of the talents, the Government proposes to assist most the one who is in position to receive the most assistance, and the one that fails to use the opportunity given it shall have that which he hath taken from him and returned to others who have used their talents to advantage.

The Secretary of Agriculture is to formulate the rules upon which the workings of this system are to be based and operated.

The bill provides, further, that bridges and culverts shall be classed as parts of the road on which they are. The act is to become law and to take effect on July 1, 1914, so we have little time to get ready to act thereunder if we are to cooperate fully with the Government in this great work.

The Federal Government demands fair and complete cooperation from all the States that are to be benefited thereby. The only serious criticism I have so far heard of the bill is that there will necessarily be created a horde of officeholders to put into effect and operate the law; and that is not so serious, because it takes many offices to run any department, and we already have in the various counties and States many officers working at variance and in a thousand different ways on the same subject, whereas with this plan we will not have more officers, but will necessarily have more efficient officers.

The scheme and the plan proposed is gigantic. It pleats the United States with roads north and south, east and west, like the warp and woof of cloth, and it will soon put every man in close or remote touch with every other man in the country, because every home sits on some street or road that joins with every other street and road in the United States.

With a system of roads that can in a few years be in effective operation, and with the telephone in every rural home, and with the parcel post and postman coming daily to every man's door, our country will go by leaps and bounds where heretofore it has crawled by inches.

Restriction of Immigration.

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 4, 1914,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. SABATH. Mr. Speaker and gentlemen of the House, in that brave band of mariners that sailed with Christopher Columbus on his memorable voyage there were men representing nearly all the nations of southern Europe, but after scanning the list from top to bottom I fail to find such names as Burnett, Gardner, Dies, or Austin.

The gentleman from Alabama may have had more and better opportunities to investigate this than I have, and therefore it may not be out of place for me to inquire of him how many of the gentlemen from his State or the adjoining States whose sentiments he seems to express can trace their ancestry to these courageous adventurers who risked their lives in the discovery of the Western Hemisphere.

Strange as it may seem, I am unable to find among the names of the men in charge of the various expeditions in the 30 or 40 years following the discovery of this continent any that would indicate that the ancestors of the gentleman from Alabama had anything to do with the early colonization of our country. However, I do find the names of men coming from nationalities which the gentleman from Alabama [Mr. BURNETT], as well as some of the other gentlemen who are supporting this measure, have seen fit to class as undesirable, and whose admission to this country they are seeking to prevent.

Mr. Speaker, I wonder whether it was the intention of Queen Isabella and those others who assisted in financing these expeditions which resulted in the discovery of a new world, that the lands so discovered should remain dormant for centuries and centuries because of a lack of people to till the soil? Was it not, on the contrary, their aim to urge the migration of people to these shores and give an equal opportunity to all those who desired to come and make this country their home? Were not the Pilgrims, the Puritans, the Huguenots, and the Quakers all seeking to escape oppression, and did they not search out a country where they would be free from persecution? Yet we find to-day men so narrow-minded and so bigoted that they would deny admission to thousands of honest, hard-working immigrants of this day and age, who, for similar reasons, are leaving the countries of their birth and coming to our shores. They would refuse these immigrants admission merely because they have been so unfortunate as to be raised in a country which denied them an opportunity to receive an education.

I am inclined to believe that if the gentleman from Alabama had been present at the drafting of the Declaration of Independence he would have insisted that in our struggle for freedom we should refuse the aid and assistance and the advice and counsel of such despicable foreigners as Alexander Hamilton, Lafayette, Rochambeau, Von Steuben, Pulaski, Kosciusko, and those thousands of others who came here to battle so valiantly in our behalf during our struggle for freedom and liberty. Doubtless he would also have insisted that no matter in what dire financial straits we might find ourselves we should accept no assistance from such "undesirables" as Morris, Levy, and the many others of foreign birth who nobly placed their fortunes at the disposal of those in command when the outlook was so dark and when it was nearly impossible to secure sufficient funds to continue the struggle. It is indeed gratifying to know that the gentleman from Alabama does not voice the sentiments of the great mass of the American people.

Mr. Speaker, I feel confident that no one who has studied the growth and development of this country can deny that to the foreign-born people and their descendants belongs the credit for our progress. But, even had they not contributed so much to our country's welfare, should we not extend a welcome to those who seek freedom and emancipation from governmental oppression and despotism? Our Government guarantees, under and by virtue of the Constitution, liberty; and liberty is the goal which the alien strives to reach and which, when reached, serves as an incentive for improvement. He is ideal material for American citizenship, and it is only a short time until he becomes one of us, second to none in his loyalty and patriotism.

Mr. Speaker, the gentleman from Alabama has stated that the organized labor of this country demands this restrictive legislation, and I am satisfied that others in their advocation of this unreasonable, unfair, unjust, and un-American measure will appeal to your loyalty to the cause of labor. They will, as did the gentleman from Alabama, maintain that immigration is detrimental to the labor of this country and inimical to the best interests of our Nation.

I have the honor to represent in part the greatest manufacturing city and the greatest labor center in the world, and the strongest labor-union city in the United States, and yet I have not heard a single labor organization of my city advocating the passage of this bill. For nearly seven years I have been a Member of Congress, and during that time I have worked for and voted for every measure that I believed would better the conditions of the laboring people of this country. During my 12 years on the bench I demonstrated that I was not unfriendly to organized labor; in fact, many labor organizations have passed resolutions approving of my views and commending my stand in their behalf. I can say, without fear of successful contradiction, that my record in behalf of organized labor will stand out more prominently than the record of any gentleman

who is advocating the passage of this bill on the grounds of friendship for that cause; so it can not be said that I am opposing this measure because I am a foe of organized labor.

If I thought for one moment that immigration was detrimental to our country or to the interests of the laboring people of our country, I would rather resign my seat, yes, I would rather lose the power of speech, than to advocate the defeat of this measure; but I am fully convinced that immigration has been and is of inestimable benefit. Are not labor conditions better to-day than they were 20 or 30 years ago; are not wages higher, have not living conditions improved, does not the laboring man work shorter hours?

The gentleman from Alabama has frequently quoted from the testimony of Mr. Morrison, the secretary of the American Federation of Labor, as adduced at the hearings before the Immigration Committee some few weeks ago. I will now read a few questions that I asked Mr. Morrison during these hearings, and the answers he gave:

Mr. SABATH. Has the standard of living of the laboring man in this country improved any in the last 10 years?

Mr. MORRISON. Oh, yes; in the last 10 or 15 years the conditions have improved with their shorter hours and better wages, those that secured them; yes, sir.

Mr. SABATH. In general the conditions are much better to-day, living conditions and standards of living, among the laboring people of this country than 10 or 15 years ago, are they not?

Mr. MORRISON. Yes.

Mr. SABATH. Notwithstanding that the immigration is the greatest in the history of the United States the conditions of labor have improved, have they not?

Mr. MORRISON. The organized workers; yes, sir.

Mr. Morrison's statements are substantiated by the statistics compiled by the Bureau of Labor, and some of these I will now read. The following table shows, by percentage, the decrease in hours of work and increase in wages from 1890 to 1912 in several prominent lines of industry.

	Decrease in hours, 1890–1912.	Increase in wages, 1890–1912.
	Per cent.	*Per cent.*
Silk goods	5.8	18.8
Lumber manufacturing	3.8	29.0
Millwork	5.0	33.4
Furniture manufacturing	7.3	34.4
Boot and shoe manufacturing	6.4	34.8
Hosiery and knit goods manufacturing	7.9	36.1
Woolen and worsted goods manufacturing	6.3	49.7
Cotton goods manufacturing	8.1	61.5
Average	6.3	37.2

Now, let us compare the daily wages of the railroad employees for 1911 with those of 1892. In 1892 we find the section foremen received $1.76; in 1911 they received $2.07. The carpenters were then receiving $2.08; now they receive $2.54. Other shopmen were paid $1.72 in 1892; in 1911 we find them receiving $2.24. Trainmen formerly were paid $2.29; now they are getting $2.88. The firemen formerly worked for $2.08 a day; now they receive $2.94. Machinists formerly were content with $2.08; now they receive $3.14. Enginemen were paid $3.08 in 1892; in 1911 we find their average daily compensation amounting to $4.79; and, lastly, conductors who formerly worked for $1.90 are now receiving $4.16.

At the Thirty-ninth National Conference of Charities and Corrections Mr. Cyrus L. Sulzberger, of New York, delivered an exceedingly interesting address, entitled "Is immigration a menace?" and because of the valuable information which it contains with regard to the effect of immigration upon labor conditions I take the liberty of reading a portion of this address. Mr. Sulzberger said:

During the last 20 years, covering the period of high immigration of the so-called undesirable races, this country has undergone an economic development so tremendous in its character and importance that the mind staggers in the attempt to grasp the figures. During that time the population of the country has increased about one-half. The production of coal, which is the measure of economic activity, is almost three times what it then was. In other words, the economic growth of the country has been six times as great as its numerical growth. The output of our factories has increased in 10 years from $11,000,000,000 to over $20,000,000,000, and the number of wage earners engaged in producing that output increased from 4,700,000 to 6,600,000. During precisely the period when the so-called undesirable immigration was greatest wages advanced most rapidly. The average wages in all industries in 1880 were $344. According to the census of 1910, taken the year previous, when the effects of the panic of 1907–8 were still felt, average wages had advanced to $518, being an increase of exactly 50 per cent. That the immigrant is a factor in lowering wages is an argument that can not be sustained by any ascertainable figures.

Continuing, Mr. Sulzberger said:

In Illinois average wages in 1909 were $588; in New York, $555; in North Carolina, $275; in South Carolina, $282; and in the whole United States, $518. That is to say, in Illinois wages are 14 per cent above the average for the whole country; in New York they are 5 per cent above the average; in South Atlantic States they are 30 per cent below the average; in the south Central States they are 20 per cent below the average.

Also, in this connection, I desire to insert some figures compiled by the Hon. O. P. Austin, Chief of the Division of Statistics, Bureau of Foreign and Domestic Commerce, which appeared in an article by Mr. Austin, entitled "Progress of American commerce and industries, 1870 to 1912."

Statistical statement comparing conditions in 1870 with those of the latest available year.

	1870	1911
Population	38,558,371	95,410,503
Wealth, estimated (latest official figures)	$30,068,518,000	$130,000,000,000
Money in circulation	$676,284,427	$3,276,786,613
Per capita	$17.51	$34.26
Individual deposits in all banks	$2,182,512,744	$15,906,274,710
Deposits in savings banks	$549,874,358	$4,212,583,599
Depositors in savings banks	1,630,846	9,597,185
Imports, total	$435,958,408	$1,653,426,174
Exports, total (domestic and foreign)	$392,771,768	$2,204,222,088
Manufactures for use in manufacturing, exported	$13,711,708	$309,151,980
Manufactures ready for use, exported	$56,329,137	$598,367,852
Manufactures, total (except foodstuffs) exported	$70,040,845	$907,519,841
Farms	2,659,985	6,361,502
Farms and farm property, value of	$8,944,857,749	$40,991,449,090
Farm produce, value of	$1,958,030,927	$8,417,000,000
Manufactures produced, gross value	$4,232,325,442	$20,672,051,870
Wages paid in manufacturing	$775,584,343	$3,427,037,884
Spindles in operation in cotton mills	7,132,000	29,523,000
Coal mined, gross tons	29,496,054	447,853,900
Petroleum produced, gallons	220,951,290	8,801,354,016
Pig iron produced, gross tons	1,665,179	23,649,547
Iron and steel manufactures, exported	$13,483,163	$230,725,352
Railways, mileage in operation	52,922	249,992

It can readily be seen from these statistics that the wonderful development which this country has undergone is due to a great extent to the large numbers of people who have come from other countries to establish themselves in the United States. Should we now enact legislation which would halt our progress as a nation?

Mr. Speaker, let us consider further the claim that immigration is detrimental to organized labor. To whom does organized labor owe more for its existence than it does to that wise and fearless leader, Samuel Gompers, for many years the president of the greatest labor organization in the world, and pray tell me, was he not an immigrant? Was not John Mitchell, who has devoted his life to the cause of the miners of this country, born in Wales? Was not the Secretary of Labor born in Scotland? The majority of the executives of the American Federation of Labor were immigrants, and not only the officers of that great organization but fuly 50 per cent of its members are of foreign birth or foreign parentage. If credit were given to those who deserve it, we would find that immigrants have been instrumental in the organization and development of practically all of the great labor organizations of this country.

Mr. Speaker, for years I have heard gentlemen on the floor of this House demanding the passage of bills similar to the one we now have under consideration, and I notice that, with very few exceptions, the gentlemen who plead the hardest for the passage of these measures, which they claim will so materially benefit the cause of labor, have no labor problems to contend with in their districts, have no immigrants in their districts, and not only are not in a position to judge as to the merits of this legislation, but would not be affected by it were it enacted. These gentlemen point to the overcrowded conditions in the large centers, the congestion in such cities as New York, Chicago, Philadelphia, Boston, St. Louis, Baltimore, Pittsburgh, and the faraway San Francisco. Oh, what great solicitude do these gentlemen display for the residents of these cities!

Have you ever heard any Representative from the cities that I have mentioned, or from any of the other large cities, demand the passage of these restrictive measures? I have not. Why, then, do these gentlemen from the rural districts take such a great interest in this question, when in fact the passage or defeat of this measure would in nowise affect them; is it because they are such humanitarians? Oh, no, Mr. Speaker; for if they were they would be pleading for the elimination of the hardships to which the poor immigrants are now subjected, instead of seeking to impose still greater ones upon them and subjecting them to tests which will make it impossible for thousands upon thousands of the most deserving to gain admission to this great country.

Mr. Speaker, I honestly and sincerely believe that the labor organizations which have declared themselves in favor of this legislation have been misled and that they are being taken advantage of by designing forces that have but little in common

with them; forces that for years and years have endeavored to secure the passage of laws that would close the doors of our country to the thousands and thousands of honest men and women who come to our shores fleeing from oppression and persecution and seeking refuge and liberty. These forces were active long before the existence of organized labor in this country. In years gone by the people banded together with this object in view were called the Know-Nothings, later on they bore the title of the American Protective Association, and now in order to mislead the American people they are parading under the name of Junior Order of American Mechanics. There is another order founded and maintained for the same purpose, and this is known as the Patriotic Order of Americans, while we have also the Immigration Restrictive League and the American Farmers' Union.

For years these organizations have maintained a paid lobby in the Capital for the purpose of conducting a campaign in favor of restriction, and they have stopped at nothing in their efforts to create prejudice in the minds of the American people, not only against immigration but against the foreign-born citizens of this country as well. Unfortunately these organizations and these individuals have been fairly successful in their efforts to create a false conception of the results of immigration, and I regret to say that many statesmen, who through lack of time have been unable to give this vital question the study that it deserves, have been led astray by these false and misleading articles and now stand ready and willing to enact legislation which must appear to any sound-thinking and unprejudiced man as ridiculous.

Mr. Speaker, upon a careful study of this subject we find that 100 years ago the same arguments were interposed in support of restrictive measures as we find advanced by the men advocating the passage of the Burnett bill, for the immigration restrictionists of those days classed the people coming to this country then as undesirable and favored their exclusion. The same arguments were made as to the tendency of the immigrants to congest in the cities, and it was maintained that the effect of immigration was to reduce wages and lower the standard of living.

The report of the Immigration Commission quotes the following from Nile's Register of 1817:

> The immigrants should press into the interior. In the present state of the times we seem too thick on the maritime frontier already.

Consider that statement carefully, gentlemen, for you must remember that it was made when there were only about 5,000 immigrants coming to our shores each year.

Again, the commission's report quotes from the Second Annual Report of the Managers of the Society for the Prevention of Pauperism in New York City, 1819:

> As to the emigrants from foreign countries, the managers are compelled to speak of them in the language of astonishment and apprehension. Through this inlet pauperism threatens us with the most overwhelming consequences.

In the year following this report there were only 8,385 immigrants who came to make this country their home, and yet we find these men speaking of this immigration in language of "astonishment and apprehension."

It would seem, as years went by, it was discovered that, after all, no difficulty had been experienced in the assimilation of these immigrants that had been the cause of such great apprehension, and therefore they were immediately classed as "desirables," whereas those seeking admission a few years later were still regarded as a menace. In a paper entitled "Imminent Dangers to the Institutions of the United States of America through Foreign Immigration," and so forth, published in 1835, the author compares the immigration of earlier years with that of his day and says:

> Then we were few, feeble, and scattered. Now we are numerous, strong, and concentrated. Then our accessions of immigration were real accessions of strength from the ranks of the learned and the good, from enlightened mechanic and artisan and intelligent husbandman. Now immigration is the accession of weakness, from the ignorant victims of the priest-ridden slaves of Ireland and Germany, or the outcast tenants of the poorhouses and prisons of Europe.

Remember, these are the sentiments expressed in the year 1835, when there were less than 50,000 people admitted to this haven of refuge.

At a meeting of the delegates of the Native American National Convention, held in Philadelphia on July 4, 1845, there was published an address in which occurs the following statement:

> It is an incontrovertible truth that the civil institutions of the United States of America have been seriously affected, and that they now stand in imminent peril from the rapid and enormous increase in the body of residents of foreign birth, imbued with foreign feelings, and of an ignorant and immoral character.
>
> The almshouses of Europe are emptied upon our coast, and this by our own invitation, not casually or to a trivial extent, but systematically and upon a constantly increasing scale.

In 1845, the year this address was delivered, there were some 114,000 immigrants who came to make this country their future home.

All of the above articles from which I have quoted refer to a class of immigrants which to-day even the most rabid restrictionists refer to as "desirable." It would seem that, as at one time in our history, the dead Indian was regarded as a good Indian, the restrictionists have only regarded as good immigrants those that did not seek admission to this country.

The birth of the Republic and the inception of the agitation for the exclusion of immigrants were coeval. The demand has been insistent, unreasonable, and unsubsiding. Born of prejudice, this desire to shut out foreigners grew up with eyes closed to the light, blindly ignoring all knowledge that would demonstrate the folly of its reasoning. In the earlier days its advocates stubbornly refused to read with unprejudiced eyes a single page of the country's history upon which was chronicled a patriotic deed or which recited an achievement of any character that was the contribution of the class marked for their disfavor. Impelled by motives that were completely out of harmony with the fundamental principles of the Republic, this element never gave thought nor consideration to the economic effect of exclusion or restriction of immigration, but persisted with a zeal that bordered upon the fanatical in its attempts to foist upon the country views that were narrow and ill-advised. Statesmen of every decade of our national life have been confronted with this question, but to their everlasting credit those clothed with power and exercising influence in shaping legislation have turned deaf ears to the prayers and threats of the exclusionists and continued the liberal policy adopted by their forefathers.

Mr. Speaker, some of the supporters of this bill have maintained that our country is becoming too thickly populated, that we have already within our borders nearly all the people we can accommodate, and that for this reason it is imperative that immigration be restricted. This statement, like so many others, emanating from the opponents of immigration, is most misleading. The fact of the matter is that in 1910, according to the Bureau of the Census, the density of population of the United States, or, in other words, the average number of people per square mile throughout the United States, was only 30.9. Contrast this average density with that of some of the individual States, such as Illinois, with a density of 100.6; Ohio, with a density of 117; Maryland, with a density of 130.3; Pennsylvania, with a density of 171; Connecticut, with a density of 281.3; and Massachusetts, with a density of 418.8. They talk of this country being overcrowded. Why, 125 years ago the density of population of Maryland was greater than that of the United States to-day, and in 1810 there were six States whose density of population was greater than that of the United States to-day. These restrictionists rave about our country becoming too thickly settled. Let us consider some of the European countries. In the German Empire we find there are approximately 312 people to every square mile; in Italy, 315; and in the United Kingdom, 374. Just think, gentlemen, with a population of only 300 per square mile this country could support over 900,000,000 people. Is it not the height of absurdity to claim that immigration should be restricted because we have not room for these people?

Mr. Speaker, it has also been stated by those favoring the passage of this measure that the incoming immigrants all flock to the large cities, there to increase the present congestion. This is not true. It may be a fact that these immigrants go first to the cities, but their residence there is only temporary. Gentlemen, I state without fear of contradiction that there is nothing closer to the heart of the incoming immigrant than his desire to become possessed of a piece of land which he can call his own, and he does this at his very first opportunity. Hundreds—yes, thousands—of these people are leaving the cities each year and settling on farms. The statistics will show that a large percentage of the people residing in the rural districts of the northern, western, and northwestern sections of our country are of foreign birth or foreign parentage.

I have before me figures taken from a report of the Bureau of the Census which show that in 1910 in the States of New York, New Jersey, and Pennsylvania 31 per cent of the rural population was of foreign birth or foreign parentage; in the States of Ohio, Indiana, Illinois, Michigan, and Wisconsin 32 per cent was of foreign birth or foreign parentage; in Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas 40 per cent of the people residing in the rural districts were of foreign birth or foreign parentage; in the States of Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, and Nevada we find the parentage the same—40 per cent of the rural population is foreign born or of foreign parentage; and lastly, in the States on the Pacific coast—Washington, Oregon, and California—we find that over 42 per cent of the

people who are making their homes on the farms are of foreign birth or of foreign parentage.

Now, Mr. Speaker and gentlemen of this House, I ask you if this is not conclusive proof that the immigrant does go on the farm; that he does not remain in the larger cities; and that he is one of the pioneers in the "back-to-the-land" movement?

For the further edification of the gentlemen who are of the opinion that this influx of immigrants is harmful to our country, I wish to read some additional statistics taken from a report of the Director of the Census, which show that in the States of Ohio, Indiana, Illinois, Michigan, and Wisconsin 75.4 per cent of the farm land is improved, whereas in Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida you will find but 46.7 per cent improved. In the States of Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas you will find 70.6 per cent of the farm land improved, as contrasted with 53.9 per cent in Kentucky, Tennessee, Alabama, and Mississippi.

You will find that in those States where there is a large percentage of the farm land improved there is also a large percentage of the rural population composed of these same "undesirable" foreigners, as my friends from the South choose to call them, while in the Southern States, which have such a large percentage of native-born whites, you will find a very small percentage of the farm land improved.

This again emphasizes the fact that wherever you go you will find that the farmer of foreign birth or foreign parentage is thrifty, industrious, and a willing worker. He should be considered a national asset of inestimable value. Before immigration commenced millions and millions of acres of land in the Middle West, Northwest, and West were dormant and unproductive. These lands could have been purchased then for $2 or $3.00 an acre; now one hundred times that will not buy them. The thousands upon thousands of honest, thrifty, and industrious immigrants who amid untold hardships settled upon the prairies and swamps of this country have converted these lands, heretofore useless and of practically no value, into veritable gardens, and large and enterprising cities have sprung up almost overnight. Our country has unlimited resources, which it will take centuries to develop, and we have thousands upon thousands of acres of land lying idle now for lack of sufficient people to till them.

Mr. Speaker, I am satisfied that the gentleman from Alabama [Mr. BURNETT], the gentleman from Mississippi [Mr. HARRISON], and the gentleman from Tennessee [Mr. AUSTIN] are expressing the views of a certain element in the South which is opposed to immigration, but I am glad to know that there are some southerners who recognize the value of immigration. Only a few months ago the Southern Commercial Congress convened in Washington, and I will now read short extracts from the remarks on immigration of some of the gentlemen attendant upon this convention. We find Gov. William E. Glasscock, of West Virginia, stating that:

> Perhaps this mixture of the various branches of the Aryan family may bring forth the finest race that civilization has yet known, and who knows but what the people we are now wont to call the dregs of Europe may not add to that civilization some element not to be found in the so-called stronger nations?

A careful investigation developed the fact that in the 16 States represented by the committee there were 200,000,000 acres of unimproved farm lands and nearly one-half as much more of so-called wet lands, which are reclaimable by drainage for agricultural purposes. Therefore about one-half of the unimproved farm lands in the United States are in these 16 Southern States. In fact, the unimproved farm lands of the South are of greater area than the improved farm lands. Having this in mind, Mr. F. H. La Baume, agricultural and industrial agent of the Norfolk & Western Railway Co., said:

> We must educate the South to the advantages that are to be obtained through foreign immigration. * * * The South, due to its small foreign population, is not familiar at all with the foreigner.

This conference finally adopted resolutions to—

> Recommend to the several States of the South the urgent necessity of establishing in each State a State immigration bureau for the purpose of disseminating reliable information regarding the resources, the possibilities, and opportunities of the South, to be supported by the State's machinery and money under the indirect supervision of the governor of each State, with a good, practical business man in charge, whose duties shall be to cooperate with the United States Government, the transportation companies, the commercial bodies, the real estate men, the press, and the Southern Settlement and Development Organization in placing the country properly before the people of the world; and that said State bureau, if found expedient and practical to do so, add to its functions a farm-labor department, with a further view of placing good, able-bodied men and women, who are experienced farmers, upon the land, to the end that we may produce more food for the nonproducer and aid the welfare and happiness of the people.

Now, Mr. Speaker, in the past this prejudice against immigrants has not been confined to the South. Only three years ago 20 Bulgarian farmers, between the ages of 18 and 31, all in perfect health, were denied admission by Mr. Keefe, who was then the Commissioner of Immigration, on the grounds that they were "undesirables." Yet, within the past year or so the world has looked with awe and admiration on the remarkable battle waged by these people in their struggle for liberty and freedom from religious oppression. Will anyone to-day claim that these people, although strange to us, are "undesirables" and that they should be denied admission to our shores?

These inhabitants of southern and southeastern Europe surely deserve our sympathy rather than our condemnation. It goes without saying that some of them are guilty of criminal offenses, but you will find in these races as great a proportion of law-abiding citizens as in any others. Humanity was never destined to be perfect, and we must allow for a certain percentage of weaklings in any nationality. Every nation numbers among its citizens a certain proportion of criminals, while statistics will show that there is less crime in the districts where foreign-born citizens reside than in sections tenanted almost entirely by our so-called "pure" Americans. I desire to quote in this connection some pertinent statistics contained in a special report of the Census Bureau, published in 1907:

White prisoners of known nativity.

	Per cent native.		Per cent foreign born.	
	1890	1904	1890	1904
Continental United States	71.8	76.3	28.3	23.7

These figures are based upon investigations which were made in 1904, and conclusively demonstrate that the percentage of foreign-born inmates of our reformatory and penal institutions has been constantly decreasing, for they show that while the foreign population has increased, the percentage of offenders has decreased. On the other hand, the percentage of native prisoners has increased. And this report shows that the crimes of a grave nature committed by foreign-born prisoners is extremely small, most of the convictions being upon minor charges, usually the infraction of municipal ordinances. I have frequently heard certain gentlemen before our committee charge that the present immigration is below the standard of the immigration which we received prior to 1890; that it fills our charitable and penal institutions. These are but bare statements, unsupported by facts, and are easily disproven by the statistics prepared by the Bureau of Immigration, and in proof of my assertion I desire to quote here some figures taken from the report of the Commissioner General of Immigration for 1912, showing that the deportations for the fiscal year 1911-12 were, as follows:

African (black)	16
Armenian	1
Bohemian and Moravian (Czech)	6
Bulgarian, Servian, and Montenegrin	4
Chinese	11
Croatian and Slovenian	18
Dalmatian, Bosnian, and Herzegovinian	3
Dutch and Flemish	22
East Indian	3
English	138
Finnish	19
French	42
German	152
Greek	33
Hebrew	90
Irish	56
Italian (north)	20
Italian (south)	138
Japanese	4
Lithuanian	6
Magyar	20
Mexican	109
Polish	81
Portuguese	2
Roumanian	4
Russian	14
Ruthenian (Russniak)	15
Scandinavian (Norwegians, Danes, and Swedes)	46
Scotch	18
Slovak	14
Spanish	9
Spanish-American	3
Syrian	8
Turkish	4
Welsh	1
West Indian (except Cuban)	6
Other peoples	6
Total	1,142

This is conclusive proof that the opposition to the present-day immigration, as voiced by the professional restrictionists and my Republican friends HAYES, GARDNER, and AUSTIN and

my Democratic friends BURNETT and DIES, is unjust and unfair, for the percentage of deportations among immigrants regarded by the restrictionists as belonging to the so-called "desirable" races—the English, French, etc.—is far in excess of that among the races that are classed by the gentlemen whom I have just named and other restrictionists as belonging to the "undesirable" races.

The prejudice against the immigrant from southern and southeastern Europe which now asserts itself is identical with that which was prevalent in the early days of German and Irish immigration; restrictive legislation is being urged by that selfsame element which in the past leaped to conclusions without familiarizing itself with pertinent facts and data. The good qualities of these immigrants were not known at that time, but to-day who can deny that the Germans and the Irish possess the very best qualifications for American citizenship? Within the last 50 years, since the inception of Bohemian and Polish immigration, these people have conclusively demonstrated their worthiness of American hospitality. Five years ago I succeeded in overcoming the prejudice and bias which had previously been exhibited toward Bohemian immigrants by showing that they are far above the average in education, industry, and thrift.

I dare say that no one can successfully contradict the assertion that the Germans, the Irish, the Bohemians, the Poles, Swedes, and Norwegians, and the Danes are desirable immigrants. They have all proven beyond doubt their worthiness, and their citizenship has given us eminent satisfaction. Every student of economics knows that Jewish immigration has greatly aided and benefited our country by opening and enlarging our commercial marts and finding new markets for our products. The progressiveness of the Jewish immigrant has in numerous other ways resulted advantageously to the entire country.

Then there is the Polish immigrant, ever loyal, sincere, and industrious. Long before the emigration of the Pole to America was his worth and desirability demonstrated, for in the days of the Revolution those eminent and valiant Poles, Gen. Thaddeus Kosciusko and Count Casimir Pulaski, whose statues were unveiled in this city a few months ago, together with many of their countrymen fought by the side of the immortal Washington for our freedom from the despotism and oppression of England.

Mr. Speaker, the problem of immigration is one which settles itself. Our present laws are strict enough in every respect. We now exclude idiots, imbeciles, feeble-minded persons, epileptics, insane persons, paupers, persons likely to become a public charge, professional beggars, persons afflicted with tuberculosis or a loathsome or contagious disease, persons mentally or physically defective, persons who have been convicted of a crime or misdemeanor involving moral turpitude, polygamists, anarchists, prostitutes, contract laborers, assisted aliens, and, at the discretion of the Secretary of Labor, children under 16 years of age unaccompanied by one or both of their parents.

As an example of the increasing severity of our laws, let me state that while in 1892 only 1 alien out of every 600 was barred, to-day we find that 1 alien out of every 52 is denied admission, an increase of nearly 600 per cent. This, too, notwithstanding the fact that the examinations conducted prior to their embarkation are much stricter than formerly.

Mr. Speaker, the Democratic Party—the party that has survived since our independence—the party that stands for justice and freedom, for progress, and for personal, civil, political, and religious liberty, was nearly continuously in control of our Government from the time of our independence until 1860, and, although many efforts were made by the various political parties to pass restrictive legislation, especially between the years of 1820 and 1860, the Democratic Party stood firm for broad and liberal policies. It stood then, as it should stand to-day, for the fundamental principles of our free Government. We have been, and I hope we will continue to be, in favor of the policy that this land of ours should ever be a refuge for the oppressed and persecuted of every nation.

In upholding the sacred traditions of the country and of the Democratic Party, the Democratic platform of 1884 contained the following:

We oppose sumptuary laws which vex the citizen and interfere with individual liberty.

In reaffirming the declaration of the Democratic platform of 1856 that the liberal principles embodied by Jefferson in the Declaration of Independence and sanctioned in the Constitution, which makes ours the land of liberty and the asylum of the oppressed of every nation, have ever been cardinal principles in the Democratic faith.

And in the platform of 1892 we had the following:

We condemn and denounce any and all attempts to restrict the immigration of the industrious and worthy of foreign lands.

Are we now to renounce the broad and liberal attitude that we have assumed and enact a measure which will bar from our shores countless thousands of worthy and deserving immigrants?

When, some years ago, a measure similar to the one which is now before us was presented to that great statesman and illustrious Democrat, Grover Cleveland, for his signature, he returned it without his approval, and I wish to read here the message which accompanied it:

MARCH 2, 1897.

To the House of Representatives:

I hereby return without approval House bill No. 7864, entitled "An act to amend the immigration laws of the United States."

By the first section of this bill it is proposed to amend section 1 of the act of March 3, 1891, relating to immigration by adding to the classes of aliens thereby excluded from admission to the United States the following:

"All persons physically capable and over 16 years of age who can not read and write the English language or some other language; * * *."

A radical departure from our national policy relating to immigrants is here presented. Heretofore we have welcomed all who came to us from other lands except those whose moral or physical condition or history threatened danger to our national welfare and safety. Relying upon the zealous watchfulness of our people to prevent injury to our political and social fabric, we have encouraged those coming from foreign countries to cast their lot with us and join in the development of our vast domain, securing in return a share in the blessings of American citizenship.

A century's stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work.

A contemplation of the grand results of this policy can not fail to rouse a sentiment in its defense, for however it might have been regarded as an original proposition and viewed as an experiment, its accomplishments are such that if it is to be uprooted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties, and guarded against difficult or oppressive administration.

It is not claimed, I believe, that the time has come for the further restriction of immigration on the ground that an excess of population overcrowds our land.

It is said, however, that the quality of recent immigration is undesirable. The time is quite within recent memory when the same thing was said of immigrants who, with their descendants, are now numbered among our best citizens.

A careful examination of this bill has convinced me that, for the reasons given, and others not specifically stated, its provisions are unnecessarily harsh and oppressive, and that its defects in construction would cause vexation and its operation would result in harm to our citizens.

GROVER CLEVELAND.

Mr. Speaker, in my humble way I have endeavored to prove by my arguments and by the statistics I have submitted that immigration has been of great benefit to our country. I believe that, notwithstanding all of the charges and accusations which have been made against the immigrant and against immigration, I have produced enough evidence to convince any unprejudiced man that my contentions are correct. I have shown that the wages in the last 10 years have been materially increased, hours of labor decreased, the standard of living improved, and the standard of citizenship maintained on its high level.

The enemies of immigration claim that the educational test will keep out the ignorant, and they maintain that these illiterate aliens do not assimilate as quickly as the literate. I believe that the statistics will show that the gentlemen are in error as to this conclusion, for it is a well-known fact that there is a higher percentage of literates among the children of illiterate parents of foreign birth than among the children of literate immigrants or even among the children of the native born.

It is maintained that the literacy test will keep out between 25 and 30 per cent of the immigrants. For the sake of argument I will admit that this estimate is a fair one; but I ask you gentlemen if it is just to endeavor to accomplish indirectly what could be brought about directly. If you desire to restrict immigration, why hide behind the subterfuge of the literacy test? Why not come out openly and declare that you are opposed to immigration and that you propose to limit it in some way? Is it fair, is it equitable, to discriminate against a class of people merely because, through no fault of their own, they have been prevented from securing an education in their own countries? Is it right that we should say to them that because, on account of political and religious oppression in their countries, they have been denied the advantage of an education they shall not enter our shores?

But, Mr. Speaker, why should I argue on the merits of the literacy test when I have before me the statements of the greatest men in this country, men whose opinions should and will carry much greater weight than mine?

A few moments ago I read the message of President Cleveland vetoing a bill containing the literacy test. Now I desire to read an extract from President Taft's veto message last year, when he returned the Burnett bill without his signature. President Taft said:

I can not make up my mind to sign a bill which in its chief provision violates a principle that ought, in my opinion, to be upheld in dealing with our immigration.

When asked as to his views on this question, Cardinal Gibbons made the following statement:

I am not in favor of any educational test as applied to immigrants desiring to enter the United States. Such a law, if passed, would, in my opinion, work great harm, for illiteracy is by no means always ignorance. If the immigrant is industrious and thrifty he will make a useful citizen, whether he be literate or illiterate. The educated schemer is in more ways than one more dangerous than the honest workman, even though he be illiterate.

Secretary Nagel, in his letter to President Taft advising him to veto the bill, directs his attention to the fact that—

The people * * * are frequently illiterate because opportunities have been denied them. * * * Frequently the attempt to learn to read and write the language of the particular people is discouraged by the Government, and these immigrants in coming to our shores are really striving to free themselves from the conditions under which they have been compelled to live.

Prof. Emily Greene Balch, Wellesley College, at a meeting of the American Economic Association at Washington, D. C., expresses herself as being opposed to the literacy test, and, further, says:

I believe that it is a fact that most Americans have an entirely false conception of the real significance of peasant illiteracy, which need not connote a lack of either energy or intelligence.

At a hearing before the Immigration Committee, Miss Grace Abbot, of Chicago, widely known as a deep student of sociology, testified that—

The literacy test is no guaranty of character, and it seems to me its adoption would be a departure from American traditions which would not be beneficial to the American industrial situation.

Herman Stump, former Commissioner General of Immigration, delivered himself of the following views on the subject of immigration when testifying before the industrial commission:

A young, able-bodied man who comes from a foreign land to settle here, with energy and willingness to work, is an acquisition to the country, and while we do not want him to occupy the positions which education would enable him to occupy, we want him to occupy the positions where it does not matter much whether he knows his A B C's or the simple rule of three or anything else.

Not only have prominent individuals throughout the country gone on record as being opposed to this unjust and unreasonable test, but various newspapers and periodicals have contained strong editorials urging the elimination of this provision. I now propose to quote extracts from some of these editorials.

The New York Christian Work had the following to say:

There could hardly be a more deceptive test of real worth. * * * The test of immigration should be health and morality.

We find this in the editorial columns of the Philadelphia (Pa.) Telegraph:

We have a cure for illiteracy in our public schools, and in every immigrant family there is a passionate desire to embrace that opportunity. Exclude the physically and morally unfit, if you will, but do not put up the bars against the untaught of Europe, who still look to America as a land of refuge and opportunity.

The New York Sun made the following comment upon this test:

Keep out, as far as human sagacity will do it, the criminal, the crazed, the diseased, the defective. Will, energy, industry, honesty, these are not dependent on spelling out aloud or sprawling a few words with a pen. * * * Men, women, and children who can work and save, these are always needed, and no pedantry of Congress should keep them cooling their heels at the gates.

The following I quote from the Washington Post:

It would be poor national economy to turn healthy white immigrants back from our ports simply because they can not read or write. Most of them realize what they have lost in having had no opportunities for education in their own country, and they inculcate in the minds of their children the realization of the inestimable benefit of education. Some of our finest stock would be lost to us if the literacy test ever became effective.

Now I read from an editorial in the Chicago Examiner:

The errors committed in efforts to regulate immigration spring usually from an entire misconception of the worth of the immigrant as a factor in our progress. * * *

Our Nation was founded by immigrants, though we call them more politely "Pilgrim Fathers" or "first settlers." It has been maintained and built up by the steady inflow of the eager and ambitious of every nation. To change the policy by which this great annual contribution of humanity has been made welcome is dangerous.

I also quote below extracts from a translation of an editorial appearing in the Jewish Morning Journal, of New York City:

The hundreds of thousands of immigrants who are already here control the tide of immigration much better than it could be done by law, because they come into constant personal relations with those who want to come here, and they inform the would-be immigrants when there is work for them here, when the country really needs immigrants. Those who arrive at present come to relatives or friends, and they come only when their American friends understand that the conditions at the place where they live can bear an increase in population through immigration. When times are bad in a certain locality or in the entire country fewer immigrants come to our shores. When the tide of immigration is large, that in itself indicates that there is a great demand for the kind of work which these immigrants do. If these conditions were not true, our country would not be able to absorb so easily a million immigrants in one year. The economic argument against additional restrictions is stronger now than it was at the time when a great number of the newcomers had no friends to whom to turn the first day they came. * * *

We all know that the question of illiteracy is nothing but an excuse. No one is foolish enough in Washington or elsewhere to believe that a man who can not read or write can not be a painstaking and useful workman or that he can not become a useful citizen. Everybody agrees that the literacy test is only an excuse, a means to reduce immigration in general. Were it only practicable, an attempt would be made to exclude red-haired or brown-eyed people. Every exclusion of a considerable number of people under such a subterfuge must enrage the entire foreign-born population, and this time their rage will take a more definite political course than has been possible on former occasions.

Time will not permit of my reading all of the numerous resolutions, petitions, and letters which I have received protesting against the passage of this bill, but I will quote brief excerpts from a few of these.

The resolution adopted by the Workmen's Circle says in part:

Whereas it is a violation of the moral law to exclude any human being from the opportunity of escaping from economic, political, or religious oppression, * * * Now, therefore, be it

Resolved, That the Workmen's Circle, representing over 45,000 members in good standing, protests against the Burnett immigration bill (H. R. 6060) as an unjust measure which militates against the best ideals of this Republic.

The following is from a letter addressed to me by the Italian Journal, a large Italian newspaper in New York City:

The Italian Journal, voicing the sentiments of all of the Italians in the United States, favors the enactment of stringent laws for the exclusion of criminals, but maintains that the Burnett bill, while not improving to any extent the existing provisions against the immigration of criminals, will prevent the admission of healthy, industrious, and law-abiding immigrants whose useful labor would be a considerable contribution to American prosperity.

The president of the American Association of Foreign Language Newspapers, in expressing the views of this national association, says:

This bill is calculated to place a restriction upon desirable immigration and is based upon a test false in its purpose and iniquitous in its effect. * * * Strong and healthy immigrants (so sorely needed to continue their fundamental labor in developing the great resources of this country) would be debarred by this inappropriate and unjust literacy test.

I received a protest from the German-American State Alliance of Ohio and the German-American State Alliance of Kentucky, assembled in joint session, representing 60,000 American citizens, and this is what they have to say with regard to this legislation:

We are of the opinion that the men and women engaged in the labor of producing and upbuilding the wealth of our Nation do not require an educational test. What we need are physically well-built men and women, desirable immigrants, who on account of their moral worth would improve the citizenship of our country.

The board of commissioners of Cook County adopted resolutions strongly protesting against the passage of this bill, and from these resolutions I now quote:

Whereas the conditions in some of the countries of Europe are such that moral, honest, and industrious men and women can not secure an education, and seek to come to this country in the hope of improving themselves under the beneficent influence of free institutions and our free Government: Therefore be it

Resolved, That we hereby cheerfully give testimony to Members of Congress, before whom the new restrictive immigration measures are pending, that the foreign-speaking citizenship of our community is a most desirable element, and that neither the paupers nor disturbers come from the moral, honest, and industrious peasant, artisan, or craftsman of Europe, who, although they may not be sufficiently schooled to pass educational or literacy tests, come here and make worthy and desirable citizens.

The United Lithuanian Societies of Chicago, representing 50,000 Lithuanian Americans of Illinois, in their protest say:

Whereas we feel convinced that the educational or so-called literacy test is not a true test of character, integrity, or general fitness of the individual who may seek admission to this country: Therefore be it

Resolved, That we protest against the enactment of an immigration law requiring an educational test.

The citizens of Cincinnati were so aroused over this proposed legislation that they assembled in a mass meeting, and I quote below a brief extract from the resolutions which they adopted:

Be it resolved, That all legislation restricting immigration beyond keeping out the criminal and the diseased is both unjust and unwise, and in flagrant contradiction to the principles laid down in the Declaration of Independence.

The Polish National Alliance, representing 110,000 Polish Americans residing in the United States, in its protest says:

We feel convinced that literacy or educational tests would and do in no wise indicate morals, conscience, honesty, integrity, and industry of those that desire to come to our land from foreign shores. * * *

The present immigration laws and restrictions * * * are sufficient to keep out of our country all unhealthy, vicious, and undesirable elements.

Mr. Speaker, as the chairman of the Immigration Committee has said, the passage of this bill would not to any great extent affect the class of people in whom I am directly interested. I venture to say that the people whom I represent would suffer very little, as I have no Italians, no Sicilians, no Greeks in my

district. The majority of the people there come from a section of the country that statistics will show has only a small percentage of illiterates. Only a little over 1 per cent of the Bohemians are illiterates, and the same thing is true of the Germans, the Irish, the Swedes, and the Hollanders. There may be a larger percentage of illiterates among the Jewish and the Polish people; I can not give the exact figures as to these races.

My motive for presenting the cause of these people before you arises purely from a desire to see justice and fair play. The literacy test provided in this bill will not serve to keep out the viciously inclined, the criminal, or the really undesirable alien, and I certainly believe that it would be a grievous mistake to place an embargo on willing hands and brawny muscle. How much more desirable it would be to increase the efficiency of our existing machinery for distributing the arriving aliens, so that the supply might reach our vast and scattering demands.

Before I conclude I wish to emphatically deny the truth of certain statements which have been made with regard to the stimulation of emigration by the foreign Governments. Several times it has been charged that the foreign countries, especially Austria-Hungary, Germany, and Italy, are encouraging and aiding emigration to this country. Those accusations, like many others made by the restrictionists, are not based on facts.

The truth of the matter is that these Governments are using every effort to prevent emigration, and they have been especially active during the past six months. Several steamship companies which were charged with being instrumental in stimulating immigration have had their agencies closed and have been compelled to stop soliciting business. These Governments claim that the majority of the able-bodied men and women are emigrating, and that only the weak, the feeble, and the aged remain at home, and therefore they are doing all within their power to reduce this emigration to a minimum, recognizing that through it they are losing their most desirable citizens. A careful examination of the report of the Commissioner General of Immigration will show that during the last 10 years 88 per cent of the immigrants that came to this country were between the ages of 14 and 45. In other words, we are getting the very cream of the other nations, and yet of these picked immigrants there were over 16,000 debarred during the fiscal year of 1911-12.

Mr. Speaker, in conclusion I can but repeat my assertion that the passage of this bill will mean the closing of our doors to thousands upon thousands of honest, industrious, law-abiding immigrants who would make citizens of which any nation might well be proud. It is sincerely to be hoped that the Members of this House will vote to continue this country as the haven of refuge for the oppressed and persecuted of all nations.

Rural Post Roads.

EXTENSION OF REMARKS

OF

HON. HANNIBAL L. GODWIN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 12, 1914.

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. GODWIN of North Carolina. Mr. Speaker, I was denied the privilege of being on the floor of the House during last Tuesday when the final vote on the Shackleford good-roads bill was taken. I was called away to my home in North Carolina on the saddest mission of my life—that of attending the funeral of my mother—and was therefore unable to return in time to be present when the vote was taken. I have been told that the bill passed the House by a vote of 284 for the bill to 42 against it.

The majority by which the bill was passed shows, in my judgment, the sentiment of the country in favor of good roads.

I would not attempt to make any remarks at this time except for the fact that I have been, during my services in Congress, a firm believer in good roads. I believe that good roads, good schools, and good drainage will do more than any other three measures to better conditions of rural life and insure the peace and happiness of our people in the country. Therefore I feel that I would be unmindful of my duties should I let this opportunity pass without a word in behalf of one of the most important questions that is now being considered by the people of this country.

Nothing is more essential to the prosperity, the intelligence, and the happiness of the people than easy and convenient ways of travel and transportation. The degree of a country's civilization may, in a measure, be gauged by its highways.

The term highway is not to be limited to mere roads, but must be held to embrace oceans, rivers, canals, railways, and every other means over which people or property may be carried.

No country has a more extensive and adequate system of highways than the States of this Union. With their vast coast line, indented by multitudinous harbors; their canals; their innumerable rivers, with unbounded possibilities for navigation; their millions of miles of well-constructed and efficiently maintained railways; their more than 2,000,000 miles of roads of varying degrees of perfection, the American people may well be proud of their possessions and their achievements in the matter of highways.

Whatever doubts may have formerly existed, it is now generally conceded that the Federal Government has authority to construct and maintain roads which are used for Federal purposes. This granted, it follows that it also has authority to aid the States in the construction and maintenance of roads which are in part devoted to Federal use.

There are at least three sources from which Congress gets power to legislate in relation to roads: First, to provide military roads; second, to provide post roads; third, to provide roads over which interstate commerce may be carried.

Primarily it is the duty of the States to provide their inhabitants with roads, and it would be a long step backward if congressional legislation should afford them any means for avoiding this fundamental obligation. On the other hand, to provide an adequate system of roads lays a heavy burden upon the taxpayers of a State, and it is no more than justice that the Federal Government should contribute to the upkeep of the roads of the States which it uses in the performance of Federal functions.

It can not be doubted that an overwhelming majority of the people want Federal road legislation; but, unfortunately, they radically differ in opinion as to what such legislation should provide.

Many of us have worked for a number of years trying to create a sentiment in favor of Federal aid to road building and road maintenance. For several years I have been an ardent advocate of this proposition. While I favor contributions by the National Government, at the same time I think the roads should be under State control. The sentiment in the House in favor of good roads has grown so rapidly that to-day we have a Committee on Roads in the House. That important committee has worked out a plan that in my opinion should become a law at this Congress, and the people of the country will get Government aid for building and maintaining their roadways.

Good roads will mean new rural routes. Rural routes mean good mail service to the people in the country. It brings the people of our country into closer touch with each other. The vast amount of reading matter, daily papers, weekly papers, magazines, and the like, go out to the people who do not reside in towns and cities, and thereby they are enabled to keep abreast with the times. The value of this Rural Free Delivery Service to the country can not be estimated in dollars and cents. There should be no hesitation on the part of any Member of the House to put this service upon a sure footing. The country needs and must have that efficiency in the Postal Service which will give our people every convenience. Our Postal Service should be second to none in the world. We should be first among the nations of the earth in the service that means so much to the happiness, peace, and prosperity of our citizens.

Coupled with the extension of the Rural Free Delivery Service we have also given to the people the Parcel Post System. The farmers of the country were clamoring for the parcel post. In certain quarters merchants thought they were opposed to it. It has developed, however, that since it has gone into operation and has proven to be such a wonderful success and of such great convenience to everybody the merchants, farmers, and all other classes are praising it. In this connection might be mentioned the Postal Savings Bank System which we have given to the people and which, in my opinion, will be a great success.

There is a great demand for the reduction of the postage rate. If I had an idea that to reduce the postage rate would impair the efficiency of the Postal Service, I would not favor the reduction. I am convinced, however, that to adopt a plan that will give the people a 1-cent postage rate will not impair the efficiency of the service, and it will result in a great saving to the people of the country. It is another benefit they should reap.

What the American people want is efficient service. In making recommendations regarding vacancies in postmasterships in the district I have the honor to represent I have at all times kept the question of efficiency in mind, in order that the people might have the very best possible service. The good of the public is paramount to individual ambition. The people of the country will not be satisfied with anything short of the very best mail service. In order to insure the best mail service and to get the best and most efficient postmasters, it occurs to me that it would be an excellent idea if the Postmaster General and his assistants were required to effect a readjustment of the salaries of the postmasters of the country, from the smallest to the largest offices. "The laborer is worthy of his hire." In many cases the salaries of the postmasters in some of the smaller country post offices are so ridiculously small that the postmasters can not afford to devote their time to the discharge of the duties of the office.

The result is that in many cases the public is put to an inconvenience and denied efficient service. With the establishment of the parcel post and its enlargement additional and greater burdens have been placed upon the postmasters of the country and upon the rural free-delivery carriers. In order to get the most efficient service it will be, in my opinion, necessary to increase the salaries of the rural free-delivery carriers, as well as the salaries of the postmasters.

But to return to the Shackleford bill, which provides for national aid for the several States in the construction and maintenance of rural post roads, it is deserving of the most careful consideration. It involves the sum of $25,000,000 to be distributed under certain conditions to the States, equally in the ratio of their population and the total number of miles of post roads within their borders. This method of apportionment is a most natural, and at the same time a most logical, plan. The element of population measures to an extent the need of highway betterment and the mileage of existing post roads, verifies this need, and at the same time indicates the degree to which the people of the respective States have progressed in road building. We have come to realize that public roads are a most essential feature of country welfare. We know that along with road improvement in the rural districts go better schools, better farms, and more attractive country life. We also realize that farm products are not at present marketed quickly and cheaply by the farmer, and that this fact tends to inconvenience the farmer and cause fewer people to engage in agricultural pursuits.

The bill emphasizes the intimate connection of agriculture and highways by placing the administration of the provisions of this act in the Department of Agriculture.

I am in favor of this bill. It is a natural extension of the great highway movement that began several years ago by the establishment of State aid for highways. Those who have followed the history of the State-aid movement realize that it has been increasingly successful from year to year, so successful, in fact, that nearly all of the States of the Union have established highway departments and have made appropriations for some form of State aid. More than 25,000 miles of first-class highways have been created by the State highway departments. These roads constitute only a portion of the system of highways that is so much needed and which this bill will help to complete.

When it is realized that a saving of a few cents per ton-mile in the marketing of produce of farms and forests in this country will mean an economic saving to the people on this one item of $25,000,000 annually, the question of the desirability of an investment of national funds for road construction is answered.

There are nearly 3,000 counties and several thousand townships in the country, and they have contributed most liberally to their roads. Until the advent of the State-aid principle, local officials have been forced to build their roads as best they could. They have spent since the year 1904 about $1,000,000,000 in this work, and the existing condition of local roads to-day is conclusive evidence that more money and better methods are needed. The provisions of this bill not only make available financial aid from the Federal Treasury, but they go further; they establish a system for country highway work and they provide for competent leadership and continuing progress in that work.

This bill approaches the subject in a spirit of cooperation. In section 3 the Secretary of Agriculture is authorized to cooperate with the officers of the several States in the construction and maintenance of rural post roads. The Secretary of Agriculture and the State officers jointly determine the roads in each State which may be constructed and maintained during the fiscal year with the funds allotted by section 1 to that State. The section provides that the construction and maintenance shall be under the supervision agreed upon by the Secretary of Agriculture and the State officers. It wisely provides that the United States shall bear no more than one-half of the cost of any construction or maintenance work. This provision alone eliminates the possibility of any raid upon the Federal Treasury, because where the money in the several States must be spent equally with the funds of the Federal Treasury it will be spent wisely and carefully on the roads in that State which most need improvement.

The operation of this section is carefully protected by the provision that no work shall commence until the portion of the cost to be borne by the locality has been made available. There is every reason to believe that under the provisions of this section there can go forward the construction and improvement, according to the best modern methods, of a yearly increasing mileage of main and market roads throughout the country. It is perhaps surprising that this action has not been taken sooner. The example set by the States in their successful work along almost similar lines is ample to demonstrate the success of the principle. There can be made available to every State in the Union the skilled services of trained highway engineers from the Federal Government whenever requested, and under the joint agreement of the Secretary of Agriculture and the State officials.

Section 2 of this bill provides that the governor of each State, on or before the 1st day of January in each fiscal year, in the absence of any law of the State, shall elect whether Federal aid for the construction and maintenance of rural post roads in that State shall proceed under the provisions of section 3, which I have outlined, or under the provisions of section 4, or partly under both sections.

Section 4 provides for the classification of the post roads in the respective States into three classes, and provides that when the mileage of each class has been determined by the governor and the State highway department, and verified by the Secretary of Agriculture, that the United States shall pay, on account of these roads, the sums of sixty, thirty, and fifteen dollars per mile of such road in the respective classes, and that these payments must be applied to the construction, maintenance, or extension of such roads to which paid, and that the State or civil subdivisions thereof shall expend an equal amount on the said roads. By the provisions of this section there should result a wholesome influence on a large mileage of roads in those States where the upkeep of long stretches of country road is particularly burdensome. The aid on this classified mileage is essentially a maintenance feature, and particularly for roads in class B and in class C, if wisely administered, should improve the existing methods of maintenance and repair.

The people of this country expect the National Government to aid them in the construction and upkeep of their roads. Their attention has been sharply directed to the importance of road conditions by the introduction of the Rural Delivery Service and by the establishment of the parcel post. The full benefits of these wise provisions can only be realized by the establishment and maintenance of good highways. The several States and their subdivisions are anxious to cooperate in this work, and this bill will mark the beginning of a period of highway betterment which can not fail to have a profound influence on the economic life of the Nation. I hope it will become a law before the end of this session of Congress.

The Immigration Bill.

EXTENSION OF REMARKS
OF
HON. L. C. DYER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, February 4, 1914.

On the bill (H. R. 6060) to regulate the immigration of aliens to, and the residence of aliens in, the United States, and for other purposes.

Mr. DYER. Mr. Speaker, the last census of the United States—1910—gave the population as 91,972,266. This did not include Alaska, Hawaii, Porto Rico, and persons in military and naval service stationed abroad. These amounted to 1,429,885. The population of the United States to-day is, of course, much greater and is most likely nearer to 100,000,000 than to that shown at the last enumeration. Of this population 81,731,957 were put down as white and 9,827,763 were put down as colored. Of the white portion of the people 13,515,886 were foreign born, 12,916,311 had foreign parentage, and 5,981,526 were of a parentage that either the father or the mother was foreign born. These figures show that a very great portion of

the people of our country were either foreign born or were of foreign parentage.

Therefore, in passing laws for the whole people of this country, it is our duty to give consideration to the citizens of foreign birth and foreign parentage as much as to the native born. Let us not enact laws that will bring discredit upon any portion of our people, but be fair and square to them all. From personal observation and knowledge, and from reading the history of my country, I am fully convinced that the foreign born, and those of foreign parentage, have made as splendid citizens, and exhibited as great a patriotism for this Nation, as have the native born. It is no sin that many of those who have come to our shores were uneducated. History has shown that they readily adapted themselves to the conditions and institutions of the United States, and that they and their children have and are making splendid progress in acquiring useful knowledge that has better fitted them to discharge the duties of American citizens. The greater the wrong would be if our Government, National and State, should not afford every opportunity for the education and training of the mind and the heart of all our people to do their duty in assisting to continue this great free Government that we now have—the best under the sun, and the greatest haven and hope to the downtrodden and oppressed of foreign lands.

During this debate not much has been said concerning one large part of the population of our country. I refer to the colored people. That this people should receive patriotic and careful consideration, I propose to point out briefly at this time. The thirteenth census (1910) of the United States gives the total population of our country at 91,972,266, and 9,827,763 of them as colored. So large a portion of our total population ought to and does deserve the careful consideration of the Congress of the United States. This people have been here since they were forcibly brought to America in 1619, and sold as slaves. From that small beginning slavery grew rapidly in the Southern States, especially, and when President Lincoln issued his proclamation, declaring the colored people free men and women, their number had increased and multiplied till there was a total of 3,953,760 slaves, and 487,970 free, making a total at that time of 4,441,730.

Now, Mr. Speaker, let us see what this people have done since they were given their freedom. It has been 50 years, and a long enough time for them to test their fitness to become and to be fairly treated as a part of our great American citizenship. Have they shown themselves worthy? Have they proven their loyalty and love for this country, its Government, and institutions? I say they have, Mr. Speaker, without hesitation, and the proof is abundant. In the first place, I want to show this by their progress and what they have accomplished in education. Let us apply the literacy test to them. When they were freed they had no property and no education. What they have done, therefore, in educating themselves has been in the past half century. In my judgment, when all things are considered, they have accomplished wonders.

The first public school for colored children was opened in March, 1864. In 1868 North Carolina and South Carolina established public-school systems. The public-school system of Georgia was established in 1870. The first report of enrollment, however, was for the year 1876–77, when 571,506 colored children were reported as enrolled. During the year 1911–12 about 2,000,000 colored children were enrolled in the public schools. The Census Bureau reported that in 1910 there were 3,422,157 colored children of school age in the United States. The number of colored public-school teachers in the States is about 30,350.

The Commissioner of Education reported for 1911, 150 public high schools for colored persons. These schools had 513 teachers, 2,021 elementary students, and 9,641 secondary students, a total of 11,662.

In 1910 there were 2,227,731 illiterate colored people in the United States. The percentage of colored illiterates 10 years of age and over was, in 1890, 57.1; 1900, 44.5; 1910, 30.4. In urban colored population the percentage of illiterates in 1910 was 17.6; in rural population 36.1. The percentage of illiterates in colored population of the North was 18.2; South, 48; West, 13.1. The highest percentage of illiterates in colored population, 48.4, is in Louisiana; the lowest percentage, 3.4, is in Minnesota and Oregon.

There are more than 540 institutions devoted to the secondary, higher, and private training of the colored people. Many of these institutions are elementary schools. The investigation now being made by the Phelps Stokes Fund and the United States Bureau of Education will determine the grade of colored educational institutions. The statistics for 238 colored schools are: Teachers, 3,398; total students, 70,095; elementary students, 40,945; secondary students, 23,834; collegiate students, 3,227; professional students, 2,089; students being industrially trained, 35,402. Of the total number of students 58.3 per cent are in elementary grades and 4.6 per cent are taking collegiate courses.

Among the first of our colored people to graduate from college in the United States were John Brown Russwurm, who graduated from Bowdoin College; Theodore S. Wright, from Princeton Theological Seminary; and Edward Jones, from Amherst College. About 700 have graduated from northern colleges. Oberlin has graduated a larger number than any other northern university or college. In northern colleges and universities, on a whole, they have made good records and have carried off many honors. Alain Leroy Locke, of Philadelphia, Pa., graduated from Harvard University, A. B., magna cum laude, 1907. This same year he won the Rhodes scholarship from Pennsylvania to Oxford University, England, where he was a student for three years. For two semesters, 1910–11, he was a student at Berlin University. He is now assistant professor of English and instructor in philosophy and education at Howard University. The degree of doctor of philosophy, which is the highest earned degree conferred by educational institutions, has been conferred by American universities upon colored men as follows: Edward A. Bushet, Yale University, 1876; William L. Bulkley, Syracuse University, 1893; W. E. B. Du Bois, Harvard University, 1895; Pezavia O'Connell, University of Pennsylvania, 1898; Lewis B. Moore, University of Pennsylvania, 1896; T. Nelson Baker, Yale University, 1903; James R. L. Diggs, Illinois Wesleyan University, 1906; Charles H. Turner, University of Chicago, 1907; Richard R. Wright, jr., University of Pennsylvania, 1911; George E. Haynes, Columbia University, 1912; C. G. Woodson, Harvard University, 1912.

The first colored man to be regularly admitted to the practice of law in the United States was Macon Allen. He was admitted to the bar in Maine.

The first admitted to practice before the United States Supreme Court was John S. Reck. On motion of Charles Sumner he was admitted February 1, 1865.

The first colored woman lawyer was Charlotte Ray. She graduated from Howard University in 1872.

The churches have also played a great part in the education, development, and betterment of the colored people. This has been in addition to the benefit they have and are receiving from a religious standpoint. Some of the most splendid churches in the land to-day are owned and used by the colored people, and through the influence and agencies of these churches over $1,000,000 is annually collected for the cause of education. The colored man and colored woman has also entered and established reputations for themselves as musicians, artists, painters, sculptors, poets, actors, and inventors. I have not the time to enumerate and point out the great things they have accomplished along these lines.

When it comes to the various trades, we find that the colored man and the colored woman are making splendid headway; 62.2 per cent of them are engaged in gainful occupations. In agricultural pursuits there are 2,143,176; in professional service there are 47,324; in domestic and personal service there are 1,324,160; in trade and transportation there are 29,154; and in manufacturing and mechanical pursuits there are 275,149. The number of colored farmers has also increased. The 1910 census gave the number as 893,384, and as occupying in acreage of land a total of 42,609,117 acres.

During these past 50 years the colored people have accumulated property to the value of $600,000,000; they have established banks, and they now have in existence 62 banks, and do a banking business amounting to $20,000,000 a year. No other people, no other race, can point to the progress made by the colored people in the same length of time. When they were freed they had no property and no education, and all that I have pointed out as having been accomplished by them has been in a remarkably short time.

I have not been able to go into the matter fully, but I commend to the Members of this House a careful study of this great race of people, their history, their progress, and their future. Let us consider carefully in legislating, to the end that every opportunity may be given them to advance in the various pursuits of business. The same help should be given to the colored farmer as to the white farmer in making him acquainted with the best and most up-to-date methods in agriculture as well as in the various other trades and ways of business and the professions.

The same consideration should also be given the colored people in the education of their children. They should have good schools, good teachers, and the necessary facilities for teaching should be provided. There should be trade schools, agricultural colleges, and the most modern and up-to-date methods af-

forded them for taking their places in the great avenues of business.

I do not believe it is necessary to point out the fact that the colored people of this Nation love the country, its flag, and its institutions as well as any other Americans, but for the benefit of some who perhaps do not know how patriotically the colored man has stood by his country in the hour of danger let me call your attention for a few minutes to some things that have been done by the colored man along that line.

They were found in all branches of the patriot Army. They generally served in the same regiments with the white soldiers. Connecticut, however, had one complete company of colored soldiers, and Rhode Island a complete regiment. According to an official report, there were in the Army, under Gen. Washington's immediate command, on the 24th of August, 1778, 775 colored soldiers. It is estimated that there was an average of 35 colored soldiers in each white regiment. This does not appear to include the colored troops furnished by Connecticut, New York, New Hampshire, and Rhode Island. There were altogether about 3,000 colored soldiers.

Some of the most heroic deeds of the War of Independence were performed by colored men. The first martyr in the Boston massacre, March 5, 1770, was Crispus Attucks. Samuel Lawrence, a prominent white citizen of Groton, Mass., led a company of colored soldiers to the Battle of Bunker Hill. It was the colored man, Peter Salem, who, at the Battle of Bunker Hill, fired the shot that mortally wounded Maj. Pitcairn. Solomon Poor, another one, so distinguished himself at the Battle of Bunker Hill that a petition was drawn up by some of the principal officers to secure him recognition by the Massachusetts Colony. Austin Dabney, another, rendered such conspicuous service in the Revolutionary War that he was freed and the Federal Government granted him a pension. The State of Georgia also granted him a considerable amount of land. The Black Legion, organized in 1779 in St. Domingo by Count D'Estaing, consisted of 800 young freedmen—blacks and mulattoes. At the siege of Savannah on the 9th of October, 1779, this legion, by covering the retreat and repulsing the charge of the British, saved the defeated American and French Army from annihilation.

A large number of colored sailors were in the Navy during the War of 1812. It is estimated that one-tenth of the crews that manned the vessels on the Great Lakes were colored. They served faithfully in all the battles of the Great Lakes and in the Battle of Lake Erie rendered very effective service. In the celebrated picture of Perry's victory on Lake Erie is seen a colored sailor.

Gen. Andrew Jackson, September 21, 1814, issued a call to the free colored men of Louisiana to enlist. As a result 500 of them were organized into two battalions. These battalions distinguished themselves in the Battle of New Orleans. The Legislature of New York, October 24, 1814, authorized the raising of two regiments of men of color. As a result, 2,000 colored men were enlisted and sent forward to the Army at Sacketts Harbor.

One hundred and seventy-eight thousand nine hundred and seventy-five colored soldiers were enlisted in the War of the Rebellion. These made up 161 regiments, of which 141 were infantry, 7 were cavalry, 12 were heavy artillery, and 1 light artillery. The first colored regiments to be organized were the First South Carolina, in which the first enlistments were made May 9, 1862; the First Louisiana Native Guards, September 27, 1862; the Fifty-fourth Massachusetts, February 9, 1863; the Second Carolina Volunteers, February 23, 1863.

July 28, 1866, Congress passed a law that colored regiments should be a part of the Regular Army. Under this act the Ninth and Tenth Cavalry, and the Thirty-eighth, Thirty-ninth, Fortieth, and Forty-first Regiments of Infantry were organized. March 3, 1869, a consolidation act was passed, and the Thirty-eighth and Forty-first were reorganized as the Twenty-fourth Regiment of Infantry; the Thirty-ninth and Fortieth were reorganized as the Twenty-fifth Regiment of Infantry. These regiments were stationed on the frontier and rendered valuable service in the military operations against the Indians, extending from Dakota to Mexico. The Ninth and Tenth Cavalry won the reputation of being the best Indian fighters on the frontier.

At the outbreak of the Spanish-American War in 1898 the four colored regiments were among the first troops ordered to the front. Here again they won great distinction by their bravery and daring. Colored soldiers took a more conspicuous part in the Spanish-American War than in any previous war waged by the United States. At the first battle in Cuba, Las Guasimas, the Tenth Cavalry played an important part by coming to the support of Col. Theodore Roosevelt and the Rough Riders. The Twenty-fifth Infantry took a prominent part in the Battle of El Caney. The Ninth and Tenth Cavalry and the Twenty-fourth Infantry rendered heroic service in the famous Battle of San Juan Hill.

No less have the colored people shown themselves worthy in times of peace. There are of record many instances of heroism displayed by them, and many medals for bravery have been awarded to them in time of peace as well as in war.

I am one of those anxious to do everything in my power to help and assist these 10,000,000 people to progress and become of greater use and benefit to themselves and to the Nation. I want to see them enter useful occupations and want them to have the opportunity to fit themselves properly for same. To that extent Congress can and should render the necessary help and assistance, and the States of the Union should also do their part, to the end that proper consideration for the worth and achievement of the colored people may be realized and fulfilled.

Rural Post Roads.

EXTENSION OF REMARKS

OF

HON. GEORGE F. O'SHAUNESSY,

OF RHODE ISLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 10, 1914,

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. O'SHAUNESSY. Mr. Speaker, I am against this bill. I rise more particularly for unanimous consent to have inserted in the RECORD a certain report, and reports supplementary thereto, by the United States Department of Agriculture, Office of Public Roads, made to Hon. Aram J. Pothier, governor of Rhode Island. The Office of Public Roads was appealed to when criticism was made of certain roads in Rhode Island. I submit that the reports which I will print in the RECORD show gross incompetency on the part of those charged with road building in Rhode Island. They show that the State of Rhode Island has been careless of the people's money in so far as political and not business methods have obtained in the building of roads. The roads have been poorly built and their maintenance terribly neglected.

It is shown by the reports that rock excavation was paid for twice—once as rock excavation and once as earth excavation. It is shown that a large quantity of tar was purchased on the simple specification that it should be similar to a material previously furnished, when no records were available to show what the character of the previously furnished material had been. A former contractor, not an engineer, was employed as State engineer. Some members of this engineer's family were awarded contracts by the State board. No explanation has ever been given by this State board why all the automobile registration and license fees, which were legally designated for the purpose of maintenance, were not used when requests for additional funds were being made. I am compelled to ask this question: Has there been graft or incompetence, or both, in the building and maintenance of public roads in Rhode Island? What is the answer of the Republican Party in Rhode Island to this question? What is the answer of the voter to that question? He can not answer unless he registers on or before June 30, 1914. If he registers, his answer can be placed in the ballot box in November. Do you want to have a voice in the election of the next governor of Rhode Island? Do you want to take part in the selection of a Congressman to represent you? Do you want to be a vital force in determining National and State policies? To do so you must register on or before June 30, 1914.

NOVEMBER 10, 1913.

Mr. VERNON M. PEIRCE,
Chief Engineer, Office of Public Roads.

DEAR SIR: In compliance with your order based upon the request of the Hon. Aram J. Pothier, governor of Rhode Island, in a letter dated July 23, 1913, for a report upon the cost of construction, present condition, and future construction for the roads of the State of Rhode Island, the following is respectfully submitted:

The State road board of five members was provided for by chapter 982 of laws of 1902 later amended giving to each member of the board a salary of $500. The salary was augmented in 1900 by $500 for each member of the board from automobile fund.

The automobile law was passed April 13, 1904, and provided for administration by the secretary of state, but section 8 reads, "All moneys collected * * * shall go to the support of the public roads in this State under the direction of the State board of public roads * * *." This was amended May 26, 1908, by chapter 1592, which shifted

administration to the State board of public roads, and section 10 reads, "All moneys collected * * * shall be turned over to the general treasurer to be used for the repair and maintenance of State roads and highways in this State * * *." Amendment was made in 1909 providing for payment annually, from the moneys collected, of $500 to each member of the board and $1,500 for clerical assistance. This was amended in 1910 raising the amount that could be paid "for clerical assistance and other expenses that may be necessary * * *" to $3,500, "the balance to be used for the repair and maintenance of State roads and highways * * *." Amendment in 1912 raised the amount for clerical assistance, etc., to $4,000, and amendment in 1913 to $5,000. It will be noted that until 1908 the money accruing from automobile licenses, etc., could be expended for construction or maintenance, but after this date on repair and maintenance only. Reference to the table below will show that since 1908 all of the money available for maintenance has not been spent for that purpose.

Year.	Receipts.			Disbursements.	
	Appropriations by general assembly.	Paid by towns for extra width.	Automobile registration and license fees.	Construction.	Maintenance, including oiling roads.
1903	$100,000.00	$8,068.37	.....	$88,648.80	.....
1904	100,000.00	2,609.23	$2,322.00	122,026.87	.....
1905	125,000.00	7,206.21	1,684.00	97,017.68	$3,321.86
1906	225,000.00	8,065.56	2,146.00	207,604.83	9,178.86
1907	430,000.00	3,224.90	2,330.00	249,317.17	20,580.23
1908	80,000.00	11,706.58	32,030.50	327,379.04	16,315.74
1909	300,000.00	15,384.36	50,265.90	339,950.90	21,403.81
1910	330,000.00	17,956.64	66,056.33	338,810.85	57,233.88
1911	.....	2,182.28	82,764.28	24,256.19	81,593.49
1912	854,166.37	213.86	104,689.06	364,885.87	96,058.50
	2,544,166.37	76,618.02	344,288.09	2,159,808.29	305,686.37

Total disbursements for construction	$2,159,808.29
Contracts let 1912, work done 1913	257,884.69
Grand total	2,417,692.98
Total disbursements, for maintenance, including oiling roads	305,686.37
For reconstructing, in 1912, roads previously built by the State	240,722.55
Grand total	546,408.92

The above table shows appropriations made. Of the State money made available other than from automobile license, the following amounts were from 30-year-term bond issues: 1906, $200,000; 1907, $400,000; 1909, $300,000; 1910, $300,000; 1912, $600,000. The 1912 issue was for construction, reconstruction, and maintenance, the others for construction only. Appropriations from current revenues were made in 1903, 1904, 1905, 1906, 1907, 1908, and 1912 for construction, maintenance, and improvement; in 1910, for maintenance and improvement; in 1913, for repair, reconstruction, and maintenance, and for construction of connecting links.

In 1913 an act was passed by the general assembly ordering an especial election on June 3, 1913, to approve or reject propositions to issue bonds for charitable institutions and for $700,000 for construction and maintenance of State highways; the issue for highways was rejected.

For an inspection of the roads and an investigation of the records a visit was made to Rhode Island. A general inspection was made of every road built by the State board of public roads. Several roads constructed in 1912 were selected and an investigation made of the records. In the case of the Putnam Pike Road, in the town of Gloucester, the investigation was thorough. The length of the road is 4.86 miles; width of surfacing, 14 feet; depth of surfacing, 6 inches. The estimated cost as given by the road board in its 1912 report is $43,320.10; the amount expended, about $55,500, or about $11,600 a mile. The survey notes show that the surveys were fairly well made; but the work was not sufficiently thorough to enable the preparation of proper plans. In some heavy cuts cross sections were not sufficiently extended; an insufficient amount of culvert information was obtained. To the preparation of plans sufficient study was not given. Not enough care was taken in balancing adjacent cuts and fills; the proposed work is not shown in sufficient detail; the stationing of structures and detailed plans for them are partially missing; the location of rockwork is not shown or platted on cross sections with sufficient definiteness to enable an approximate estimate to be made of quantity or to give contractors a good idea of its location. Without assistance, it is impossible to tell by the cross sections to what lines construction was done. It is said that as soon as the office men have time the extra lines on the cross sections will be taken off and then the platted slopes will show the lines to which the contractor is supposed to have done his work. Sufficient care was not taken in the preparation of estimates to provide for all construction work; this is evidenced by the large amount of extra work paid for. The specifications are very loosely written and inadequate to accomplish their purpose. A few defects are—no statement as to what shall be paid for under the head of grading—quality of broken stone not properly specified; quality should be determined by board and not by contractor. Specifications call for side ditches, plans do not. Specifications lack a clause to prevent payment for same excavation as both rock and earth. There is no description of how to build the bottom course of the road; the bottom course must be solid and unyielding, yet nothing is said, as should be, about filling it before rolling, with sand, gravel, or stone screenings; it can not be properly filled after the top course is put on. The method of treating the top course is described but little better. The specifications should have been clear and explicit, describing in detail each class of work and the method of performing it. All vagueness raises doubt in the minds of prospective bidders, and the result is higher prices.

The advertisement for proposals was not sufficiently wide or of sufficient duration. The advertisement calling for bids states that the plans and specifications would be on exhibition from April 3 to April 10, 1912, from 10 a. m. to 3 p. m., except on Saturday and on Sunday. The only engineering paper in which the advertisement could be found is the Good Roads Magazine of Saturday, April 6. This advertisement was for 25 roads, some for construction and some reconstruction. Five days between the hours of 10 a. m. and 3 p. m. is not sufficient time for a contractor to go over the plans of 25 projects, and a much greater time is insufficient, if it is impossible, as was the case, for the contractor to get copies of the plans to take with him when he goes over the proposed location. The class of road advertised was water-bound macadam for the Putnam Pike; a unit price for bituminous surfacing was requested, but no yardage given. The low bidder was Amos D. Bridges Sons (Inc.), at $37,093.88; the next was Bonfiglio Perini, at $37,807.13; Bridges bid 19 cents a square yard for bituminous surfacing and Perini 10 cents. Using these prices for bituminous work and a square yardage of 39,931, Perini's lump sum became the lower. The contract was let to Perini to build a bituminous macadam road at $41,800.23. The price for bituminous surfacing did not include the material, as it was furnished by the State. Perini's final estimate amounted to $41,058.03; 5,802 square yards bituminous surfacing unbuilt, at 10 cents, equal to $580.20, and 1,350 linear feet of subdrain unbuilt, at 12 cents, equal to $162, made up the difference between contract and final payment. This is less than the final estimate would have been had Bridges been awarded the contract. Nevertheless had bids to build a bituminous road been asked for and quantities for bituminous surfacing stated, the contract might have been let for less.

Before construction the road was staked out, but no levels were taken afterwards. No levels were taken on rock excavation. There was a little over 5,000 cubic yards paid for. The appearance of the exposed slopes does not indicate a rock excavation of 5,000 cubic yards. No levels were taken for partial or final estimates. These estimates were made in the main office from the inspectors' weekly reports. Upon termination of the work the contractor was paid the full amount of his contract, except as stated above. Contract earth excavation was figured to a 1½ to 1 slope; there will be found some earth slopes which were excavated to a steeper slope than this, though the difference is not great. In the estimate for grading the full amount of excavation was given, no deduction being made for the included rock, which was arbitrarily put at 5,000 cubic yards. The full excavation was paid for, and so was the 5,000 cubic yards of included rock; 5,000 cubic yards of grading was paid for at 67 cents a cubic yard ($3,350), and also as rock at $1.65 a cubic yard ($8,250).

The extra work for which the contractor was paid amounted to over $6,500. This consisted of earthwork, the building of drains, culverts, bank walls, etc. The subdrain, at 12 cents a linear foot, provided in the contract was cut out and a V drain substituted, at a cost of about 80 cents a linear foot, paid for as extra work on force account.

Surveys, plans, estimates, specifications, letting of contracts, and supervision of construction are all inadequate. The conditions on the above road are typical. On contract work no force accounts are kept except for the extra work. It is therefore impossible to say whether labor paid for as extra was not engaged in doing work paid for in the contract estimates or on work paid for as extra on the unit-price basis. On one contract there was objection made by the inspector to the payment of a bill for extra labor which he claimed did work that was paid for on the unit-price basis. For extra work the specifications state that the contractor shall be paid the actual cost of all materials furnished, as shown by paid vouchers, and for labor and teams at the price bid or agreed to plus 15 per cent. Some of the extra work was paid for upon the unit-price basis and some on force account. Although the 15 per cent contract allowance was upon labor only, a considerable number of bills were found with 15 per cent added to charges for materials furnished. In one instance there is a charge for cement furnished and for freight on cement, to both of which 15 per cent was added. Many bills were paid for extra work that does not appear on inspectors' weekly reports. These bills, though sometimes rendered from six to eight months after work was done, usually have the name of the inspector written on them.

The contractors' estimates were prepared by the drafting department, passed to the bookkeeper for entry in his books, presented to the board for approval at one of its weekly meetings, and transmitted to the State auditor for payment. The auditor's books only show total charges against the separate appropriations. The books of the board's bookkeeper show charges against the various projects, with the exception of engineering charges, which are entered separately. The bookkeeper's books have not been balanced up for the last fiscal year, on account of lack of time to do the work. It was stated that this work would be done later, at a less busy time. In going over road vouchers, one payment for a small amount was found duplicated. There is an instance where a mistake of $4 was made in carrying out an extra-work item, viz, "1 man 2 hours, at 22.22 cents, $4.44." There is an extra-work item of 40 hours of single-team hire at 25 cents an hour overcharged (contract No. 1251, voucher of June 25, 1913). The vouchers of but few roads were gone over. One road was advertised as bituminous bound and built water bound; tar was delivered to the road and sent away again; the contractor shipped to the road machinery to build a bituminous road and shipped away again; the result was two bills for extra work and freight charges on tar. On this road, which was but 1 mile long (contract 1268), 181½ cubic yards of grading were paid for as rock, at $3 a yard, and as earth, at 90 cents a cubic yard. On the Exeter-Richmond Road (contract 1260) 1,731 cubic yards of excavation were paid for as rock, at $2 a cubic yard, and as earth, at 55 cents. On one road, Foster (contract 1262), after contract had been let and work in progress for some time, it was concluded that some of the unit prices were too high, and attempt was made to shift to carrying on the work by force account. This work is still in progress, but whether it will be paid for on unit-price basis or force account I was unable to ascertain.

I was informed that at times during construction members of the board gave to contractors orders which were contradictory to those given by its engineers. About 930,000 gallons of tar were purchased without proper specifications, received, and used without previous test by the board. The only specification was "that the material shall be similar to the tarvia furnished to the State Board of Public Roads of Rhode Island in 1908 for construction of south section on Boston Neck Experimental Road." I was unable to find any record of any test of the material furnished in 1908. This tar was delivered at different points throughout the State. Sometimes too much was delivered at one point and had to be shipped to some other point. Stone was furnished and used without test. There is no laboratory for the making of tests. Extras on many of the contracts run from 15 per cent of the amounts paid on the contracts to much higher percentages. I would also call attention to the fact that during 1912 the man occupying the position of engineer to the board was the father of some of the members of one of the contracting concerns that were awarded several contracts. This, to say the least, seems to me to have been unwise.

The construction work done in 1912 was of a road 6 inches in thickness, the top 2 inches of stone and tarvia mixed usually in a

cubical mixer. No flush coat was used. As early as the late fall of 1912 some sections of the work which had been laid during 1912 began to ravel badly, and to prevent complete disintegration a flush coat of tarvia was applied. More raveling took place in the spring of 1913, and there was extensive criticism by the citizens of the State. The work that had raveled or showed signs of raveling was given a surface application of heavy cut-back oil-asphalt and stone screenings or gravel. About 42 per cent of the 1912 work was thus treated and now appears to be in good condition. Some of the work required extensive patching before it was possible to put on the surface coat. On account of the expense of this and other extra work, it was necessary to curtail some of the work remaining uncompleted and complete some sections in water-bound macadam.

The failures in 1912 construction, as nearly as can now be determined, were due to one or more of the following causes, namely, use of an insufficient quantity of bitumen, lack of proper grading of stone, lack of specifications and tests to insure delivery of proper bitumen, lack of tests to insure use of proper stone, careless manipulation of the top course, and lack of a flush coat.

Reference to the table on page 2 will show that the general assembly provided a considerable amount of money which could have been used for maintenance but was not. This seems strange, in view of the repeated statements in the annual reports of the board calling attention to the necessity for maintenance. That insufficient maintenance work has been done is shown by the condition of practically all but the roads recently built. In some cases, the present condition of the other roads is only fair, and sometimes even bad, and unless an efficient and comprehensive system of maintenance is at once established, it will soon be necessary to rebuild many of such roads. The surfaces of these poor roads are in some cases badly worn and must be replaced before they may be efficiently maintained; in others the surfaces are wearing rapidly and prompt measures must be taken to prevent the necessity of resurfacing in the near future. This statement is based upon an inspection of every road in the State built by the State board of public roads.

The present system of maintenance is to send men over the roads in the early spring to clean out all holes, fill them with broken stone and stone chips, and give the entire road surface a light coating of coarse sand and fine gravel. Later in the season all the roads are oiled once, and some of them twice, with very light road oil—this year, Standard No. 4. The roads are not swept previous to the application of the oil, which is at the rate of about one-third of a gallon per square yard. As a result there is on the surfaces of the roads a layer from one-eighth to one-half inch deep of oily sand and dust, except where there is considerable automobile traffic, in which case the sand and dust is swept off, the stone left bare, and disintegration follows.

It is evident from the above that the cost of construction has been in excess of what it should have been, and that the present condition of the roads is not such as should be expected with an organization controlled by a board in existence since 1902 without any change in personnel. During 1910 some of the road work was well done, but the experience then gained seems not to have been used in 1912. In proper progress toward a more efficient conduct of work experience must guide in order that there may be an orderly advance toward the development of the higher type of construction demanded by changing conditions of traffic. I believe it necessary to recast the whole scheme of road organization in order to secure for Rhode Island the best results for the future, and I make the following recommendations:

1. Make no more appropriations for construction work until the roads which have already been constructed have been properly repaired and put in condition for economical maintenance.
2. Maintain the roads which have been constructed in such a manner as to prevent deterioration.
3. Issue no more bonds, either for construction or maintenance.
4. Impose a direct tax of 1 mill for purpose of construction, reconstruction, and maintenance.
5. Amend the automobile law, raising the rates for automobile trucks, and specify that the funds derived be applied to road maintenance solely, except for such an amount as is necessary to pay the expenses of conducting the automobile division of the department.
6. Establish a State highway department with a single responsible head, to be appointed by a committee of three, consisting of the governor of the State, the chief justice of the Supreme Court of Rhode Island, and the professor of civil engineering in a reputable university of the State, and removable by the governor for malfeasance in office.

It does not seem necessary to make any statement in favor of recommendation No. 1. It is self-evident that what has been constructed should be properly maintained, and that if a road is in such condition that maintenance cost is excessive, it should be put in shape to be maintained economically. In order to carry out this recommendation the legislature should not be asked to appropriate a sum of money without a detailed statement as to just how it is proposed to expend it. Detailed statements should be given for each road upon which it is proposed to do work. Specific appropriations for this work should be made by the general assembly. The method of doing the reconstruction work should be left to the head of the State highway department. In general he should pursue the following course: (a) Divide the roads now constructed into 5-mile sections; (b) make a thorough inspection of each section and prepare a list of those needing reconstruction and those in condition for efficient and economical maintenance; (c) arrange the list of those needing reconstruction in the order in which they should be reconstructed; (d) after proper examination of the sections prepare estimates in detail, showing quantities and amount of money needed to put each section in condition for efficient and economical maintenance; (e) prepare an estimate showing the amount of money needed for the maintenance of the balance; (f) if the total of the estimates obtained in (d) and (e) falls within the amount which may be made available, a copy of the estimates in detail should be transmitted to the general assembly, requesting appropriation; if the totals are excessive, first cut down the reconstruction work and increase the maintenance until the total of the estimates falls within the amount that may be made available and then forward as amended, leaving the balance of the reconstruction work until the following year; (g) as soon as the money is made available prepare specifications covering all the work to be done, advertise for a period covering at least 20 days in local papers, engineering papers, and magazines, let contracts, and proceed with the construction.

Recommendation No. 2 may be more easily carried out if No. 1 has been followed. In this case appropriation should be made by the general assembly for maintenance only, and the requests to it should show the amounts needed for the maintenance of each road as stated in No. 1. The system of maintenance should be left to the head of the State highway department. It is likely that he will establish a patrol system on roads difficult of maintenance, using one patrolman on each section of 5 miles, and a gang system on those roads which require little attention; in both cases he will insist upon continuous inspection. He should generally dispense with the use of light road oils and use instead a heavy grade of bitumen to be covered with good stone screenings.

Recommendation No. 3: Bond issues, serial or otherwise, should not be made to raise money to pay for temporary work. The State issued bonds in 1906, and with the proceeds of the sale built certain roads. Some of those roads have just been reconstructed and others are badly in need of it; yet taxpayers must continue for over 20 years paying interest and sinking fund charges on this bond issue—must continue paying for something that has disappeared. The general assembly even authorized the use of money from the 1912 bond issue for reconstruction and maintenance.

Recommendation No. 4 follows No. 3 of necessity. The roads are being built for present use and should be paid for from current revenues. Future generations should not have saddled upon them the expense of constructing a road which they must reconstruct. The present tax rate in Rhode Island is very low and is on a 60 per cent rate of valuation. With the addition of 1 mill the rate will still be lower than in most of the other States. A little over $500,000 a year will thus be provided, which, together with the money obtained from the automobile tax, should be sufficient.

Recommendation No. 5: The automobile truck is as destructive, if not more so, than the lighter passenger machine and should be taxed in accordance. The amount needed for State road maintenance will always be in excess of the receipts under the automobile law, and these receipts should all be expended for such maintenance except as specified above. This is especially true, because the money thus employed is largely used to repair the damage done by automobiles.

Recommendation No. 6: This is the main recommendation. The law of 1902 created an organization with no responsible head. Responsibility can not be definitely fixed in a board with five heads. It will be found that in practically every case where an enterprise is semi-successfully carried on by a board or commission that one member dominates and the other members become either subordinates or useless. Where there is no dominant spirit there is no policy; there is vacillation, and progress, if attained, is accidental. Whatever progress has been made in the Rhode Island road work has been made in spite of the board's existence, not because of it. The surveys, plans, estimates, specifications, etc., are not sufficiently thorough and definite, because the directing body is unfamiliar with requirements or lack unanimity in arriving at directions to be given. In order that the road work and the automobile bureau may be efficient and economically progressive, they must be conducted by one man, who should be a civil engineer proficient in highway work. The United States Government in its treatment of the Panama Canal question was forced to one-man control after costly experiments in the other direction. Rhode Island is now paying $5,000 a year in salaries to the board, together with a considerable sum for traveling expenses. There is, in addition, a chief engineer, who receives a salary and expenses. The chief engineer and the responsible head should be one and the same person, and he should be paid the salary to which the position entitles him. The present bill limits the allowance for engineering and clerical assistance. Some of the results of this are the unbalanced books, uncompleted plans, and minor mistakes made in vouchers by conscientious but overworked office men. The law should give the departmental head the power to appoint all of his subordinates, subject to any civil-service regulations, and to fix their salaries, subject to the approval of the governor. He should be empowered to employ a firm of certified accountants to install a proper accounting system for both road work and automobile bureau work. A well-equipped laboratory, with a chemist in charge, should also be installed to make tests of all materials before they are used in a road.

After reorganizing legislation there should follow legislation enabling the head of the State highway department to make use of all the able-bodied male convicts in the State on the State highways. This legislation should be so framed as to prevent interference with the work by the prison authorities. The convicts should be used in stone quarries to prepare crushed stone and stone screenings for use on the roads. It will be found that this use of the convicts will not only enable the doing of work which would otherwise remain undone, but it will build up these derelicts physically, mentally, and morally so that when their terms of confinement are at an end they may be discharged in such a sound condition that they shall be fully able to take a useful place in our industrial organization. The State of Rhode Island with its small compact area is better able to make use of its convicts than most of the other States.

It will be noted that little has been said about future construction. All of the money necessary should go toward putting the roads already built into condition for maintenance and maintaining them. Whatever is left over should be appropriated for new construction and only so appropriated after the submission of estimates in detail showing just where and how the money is to be expended. The method of doing the construction work should be left to the head of the State highway department, but in general he should pursue the following course: A list should be prepared of the roads upon which construction work may be done, and the roads should appear upon this list in the order of their importance. Surveys should be made of these roads in the order in which they appear upon the list, and plans, specifications, and estimates prepared. This work should be done just sufficiently far ahead to prevent delay in submitting estimates to the general assembly for appropriations. The class of road to be built should be left to the judgment of the head of the department. He should decide this by the importance of the road as determined by the character and volume of traffic that it will be called upon to bear.

I wish to express my appreciation of the courtesy shown by the members of the State board and the employees who were all most kind in furnishing every opportunity for a complete examination.

Very respectfully,

T. WARREN ALLEN,
Senior Highway Engineer.

Additional information furnished in a letter to the governor of Rhode Island in response to his request of December 1, 1913:

DECEMBER 6, 1913.

HON. ARAM J. POTHIER,
Governor of Rhode Island, Providence, R. I.

DEAR SIR: I have the honor to acknowledge receipt of your letter of December 1, relating to the recent report on the highways of Rhode Island made to you by this office.

The six questions you ask relating to the highways of Rhode Island have been fully considered and answered below as well as it is practicable to do so:

1. What sections of the State highway system in Rhode Island appear to be most satisfactorily constructed?

It is the opinion of the representatives of this office who have inspected the State highways of Rhode Island that the work principally done in 1910, as exemplified by the Jamestown-Narragansett Avenue Road, the East Greenwich Road, and the Cumberland-Lincoln Road, is distinctly superior in results to any other. These results are quite obvious to anyone making even a general inspection. The roads constructed during this year were by the mixing method, which consisted in mixing the stone with tar before it was placed on the road and then sealing the top, after rolling with an oil-asphalt coating. It was ascertained that during this year careful records were kept of the materials used and check analyses and tests made on the tar and oil-asphalt. The following year the laboratory conducting these tests was abolished.

2. How do the State highways of Rhode Island compare with those of other States in point of—

(a) Construction.
(b) Durability.
(c) Materials used.
(d) Cost of construction.
(e) Efficiency of maintenance.

It is impossible to answer this question fairly and intelligently without an investigation in each State with which comparison is made of practically the same nature as that made in Rhode Island, and even with that data such a comparison would be of little significance. The only fair criterion is an ideal condition for each road, in so far as it is possible to conceive of it. For instance:

(a) As regards the construction in Rhode Island, it might be inferior to that of Connecticut, but superior to that of Vermont, and still be far below the standard of the best.

(b) The durability of your best roads and of those of other States is still unknown; the durability of some of your roads was short lived, as some have been rebuilt and others are in need of it; the same statement applies to roads in many other States.

(c) The stone used, although unsatisfactory for water-bound macadam, is satisfactory for bituminous macadam; this may or may not be true in other States. The bituminous material used in the roads referred to in answer to question No. 1 would appear to be all right. I would not care to venture an opinion as to the bituminous material used in 1912, because there were no specifications, no adequate tests made, and the period of use has been too short to judge by it. It is impossible to make a comparison of bituminous material used with that used in other States on account of absence of analyses.

(d) The cost of construction, as stated in the former report, was greater than it should have been, and for the reasons stated, but these costs per mile may be less than the cost per mile of some Massachusetts roads or greater than some in New York. Such a comparison is unfair, however, because, as stated, conditions are dissimilar. Take the Putnam Pike, for example: This road cost more than it should, one reason being that the rock excavation was paid for both as rock and earth excavation. This road cost approximately $11,000 a mile, yet it might be found that a road in Massachusetts of the same length cost $14,000 a mile, perhaps because on the Massachusetts road there was a much larger quantity of grading or a more expensive type of construction.

(e) The system of maintenance which obtains in Rhode Island could be greatly improved, but this is equally true of every other State in the Union. It is the lack of maintenance throughout the United States which brings more of a burden upon our taxpayers than any other phase of our road problem.

3. Is Rhode Island using the most approved and up-to-date methods in adapting its State highways to the increasing traffic and the changed conditions in traffic as they now exist?

The type of construction employed in Rhode Island—that is, the mixing method, including a seal coat, and lately the penetration method—we consider thoroughly modern, but often the manner in which this method has been applied has not been of the best.

4. What construction materials do your engineers consider most durable, practical, and economical?

The materials which should be used in road building should depend upon the character and volume of traffic to which each individual road is subjected, with a reasonable allowance for an increase. The information which we have on hand indicates that the traffic on most of the roads of Rhode Island is and will be largely that of automobiles, with a considerable increase in automobile trucks and horse-drawn vehicles of the average type. For such roads we recommend a top course of broken stone of the best varieties, cemented with a good bituminous binder, flushed with a suitable asphaltic material, and finally covered with a layer of clean stone screenings, such roads to be laid on a foundation capable of sustaining the increased weights of motor trucks. Recommended specifications are attached for the bituminous-macadam wearing surface. Where the traffic is excessive it is economy to use more expensive types of construction similar to those of city streets.

5. What construction materials does your office recommend for trunk roads as best suited to withstand the heavy through traffic?

The answer to this question is the same as that to question No. 4. This office tests the qualities of road materials free of charge for any State.

6. What should be the cost approximately per mile of constructing such a trunk road?

It is impossible to estimate the cost of constructing any road, even approximately, until a survey, plans, and specifications have been made and quantities computed. It is not infrequent for the cost of grading alone to exceed the cost of all other items of construction. The average length of haul for the materials of construction is frequently a serious item of expense.

We would add that until the reorganization recommended is effected there should be little trouble in following recommendations Nos. 1, 2, and 3 of the report. We believe it will be a serious mistake in proceeding with any of the construction until the roads have been put in proper condition for economic maintenance, and as this work should be paid for by direct appropriation, there should be no delay in its prosecution. If in our report you read "road board" where the "chief" of the recommended organization is referred to, there will be little difficulty in following out the recommendations before new legislation becomes effective.

I have the honor to be, sir, your very obedient servant,

L. W. PAGE, *Director.*

JANUARY 28, 1914.

Hon. ARAM J. POTHIER,
Governor of Rhode Island, Providence, R. I.

DEAR SIR: I am in receipt of a "statement" addressed to you by the Rhode Island State Board of Public Roads January 6, 1914, which constitutes a reply to its critics on the part of the board. I have reviewed this statement with considerable interest, and since a large part of it is written with an evident purpose of discrediting our report forwarded to you November 26, 1913, I deem it advisable to offer an explanation of some of the questions raised. I therefore offer the following reply to some of the paragraphs under "Discussion of Federal Report," beginning on page 13 of the statement.

WHERE IS INFORMATION COMPILED BY MESSRS. VOSHELL AND REEVE?

My letter of November 26, transmitting the report of Mr. T. Warren Allen specifically stated that this report included information obtained from the investigations made within the State of Rhode Island by Mr. J. T. Voshell, senior highway engineer, and Mr. C. S. Reeve, chemist. For some reason this statement does not appear to have been given publicity. The report of Messrs. Voshell and Reeve was not furnished you originally, as it only covered the subjects of construction and maintenance, and your request for an investigation by this office included also an investigation of administration. In consequence Mr. Allen was assigned to review the investigation made by Messrs. Voshell and Reeve, and also to investigate the administration by the State board in order that a complete report might be prepared. My letter of November 26 also stated why it was impracticable to employ one man continuously on the investigation. In view of the fact that the State board tends to raise the question that information has been withheld, I take pleasure in handing you herewith a complete copy of the original report of Messrs. Voshell and Reeve, which I think you will find to be entirely consistent with the report of Mr. Allen and that he simply provided additional information as a result of his investigation.

METHODS OF CONSTRUCTION IN 1910 ARE STILL IN USE.

In a general way this is true; in a specific sense the reply of the board is decidedly misleading. The 1910 work, which was complimented by the representatives from the Office of Public Roads, consists of a wearing surface of crushed stone and tar prepared by the mixing method, which after being thoroughly compacted was finished by the application of a seal coat of heavy oil asphalt, and screenings. In the 1912 work the very essential seal coat was omitted. That the seal coat is essential was very evident, as without it the roads began to ravel and were rapidly disintegrating. It seems that the board recognized this fact, and early in 1913 applied a cut-back, oil-asphalt seal coat to about 42 per cent of the 1912 construction, and members of the board expressed themselves as intending to later apply a seal coat to the balance of the 1912 construction. It is therefore evident that the board omitted one of the vital factors of the 1910 construction and did not revert to it until forced to do so in an effort to save their 1912 work.

FALSE STATEMENT REGARDING TESTS IN 1912.

On page 9 of Mr. Allen's report is the following sentence, to which the board presumably refers:

"About 930,000 gallons of tar were purchased without proper specifications, received, and used without previous test by the board."

This statement is true. That we had information regarding the fact that tests were made is shown by reference to page 17 of the report of Messrs. Voshell and Reeve, from which I quote the following:

"Reports of 15 tests of this material were found in the office of the State board—8 of which were reports of analyses made by the manufacturer furnishing the material; 3 by Calder and Strickland, of Providence, R. I.; 3 by Lawrence Experiment Station; and 1 by the Office of Public Roads."

Our information, however, did not go to show that any of the tests made by the board were made previous to the acceptance and use of the material, but rather on account of the fact that the material being used was varying in character and that some member or members of the board deemed it advisable to have a few tests made. The attitude of the board with regard to testing materials is indicated by our correspondence with their assistant engineer, Harold E. Miller, in 1912. On February 23 he wrote requesting information relative to the procedure to secure the services of this office for making tests of bituminous materials, and was advised under date of February 26 that while it was not our purpose to undertake all general routine testing for public-service bodies, we are at all times glad to make a reasonable number of tests from time to time. Blanks and instructions for shipping samples of bituminous materials were sent him. Only one sample of the material contracted for during that year was ever submitted in acceptance of the above offer. While tests of the various shipments used would have proven valuable as matters of record, it is questionable whether a material could have been rejected on the basis of tests, since the "contract for the same did not call for a definite specification." The above quotation is from a letter from Assistant Engineer Miller, under date of July 25, 1912.

QUALITY OF STONE NOT DETERMINED BY CONTRACTOR.

A reference to page 15 of the report of Messrs. Voshell and Reeve probably makes this criticism clearer and more accurate. The omission of any statement as to the kind of stone proposed for use by the contractor would permit of gross irregularities in that he could base his price, for instance, on Connecticut trap rock, and afterwards substitute, by verbal assent, a cheaper local stone.

LABORATORY FOR TESTING MATERIALS.

While a testing laboratory may not be a sure guaranty against difficulty in securing first-class materials, it is a guaranty against the use of inferior materials. I think that the quotation from the 1912 annual report of the Massachusetts Highway Commission supports this contention.

UNFOUNDED CLAIM REGARDING ADVERTISEMENTS.

In regard to the above, I can only state that after a careful search of the Engineering News of April 4, 1912, and the Engineering Record of March 30, cited by the board as the dates which they advertised in these two journals, no such advertisements can be found. The only mention is in the contract news of the papers. We did make an oversight in stating that the board had advertised in the Good Roads Magazine, as we find that the only mention in that journal is in the contract news. The only statement regarding this advertisement made by Mr. Allen has not been answered:

"The advertisement for proposals was not sufficiently wide or of sufficient duration. The advertisement calling for bids states that the

plans and specifications would be on exhibition from April 3 to April 10, 1912, from 10 a. m. to 3 p. m., except on Saturday and on Sunday. * * * This advertisement was for 25 roads; some for construction and some for reconstruction. Five days between the hours of 10 a. m. and 3 p. m. is not sufficient time for a contractor to go over the plans of 25 projects, and a much greater time is insufficient if it is impossible, as was the case, for the contractor to get copies of the plans to take with him when he goes over the proposed location."

On page 16 the board discusses in a rather sarcastic manner the "criticism of insignificant errors," but they fail to discuss the much larger error, that of paying twice for rock excavation—once as rock excavation and once as earth excavation. They fail to discuss the purchase of a large quantity of tar on the simple specification that it should be similar to a material previously furnished, when no records were available to show what the character of the previously furnished material had been. They also fail to explain the peculiar situation resulting from their employment as State engineer a former contractor who is not an engineer, some members of whose family were awarded contracts by the board. They also fail to explain why, when continually requesting additional funds for maintenance and complaining that the roads were not properly maintained because of lack of sufficient funds, they did not use all the automobile registration and license fees which were legally designated for that purpose. I feel that these questions are of far greater importance than those which are discussed in the "statement," which has caused this communication to be sent you. In criticizing my letter of December 6 to you, the board comments upon my replies as being evasive, and their failure to detect in the replies any specific criticism regarding their methods of construction and maintenance. In this connection I respectfully call your attention to my replies to your questions No. 1, No. 3, No. 4, and No. 5, and contend that my answers thereto are in no sense evasive. Questions No. 2 and No. 6 are of such character as to not permit of definite and specific replies, as noted in the beginning of my answer to each of these questions. As to the inability of the board to detect any specific criticism in my replies, I may say that there was no intention of offering criticisms, since I did not understand your questions to invite them. Such criticism had been fully accomplished in the report previously sent you.

I trust that the above discussion will serve to place the results of our investigation before you in a better light, and that it may be given such publicity as it deserves, for the purpose of removing any discredit which may attach to our work as the result of the statement of the board.

Very respectfully,

_____ _____,
Director.

(Inclosure: Report V. & R.)

Rural Post Roads.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 10, 1914,

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. LONERGAN. Mr. Speaker, the Democratic platform of 1912 denounced the profligate waste of money taken from the people through lavish appropriations of recent Republican Congresses. I am opposed to the appropriation called for in the bill under consideration. In my opinion the already established appropriations impose enough responsibility upon the country, and the added burden which will result from this entering into new fields in road construction is unnecessary and inadvisable. I believe that I voice the sentiments of my constituents in opposing this bill; therefore I shall register my vote against it.

The action of Congress in regard to the Alaskan railroad project can not be urged as a precedent justifying the expenditure called for in this measure. There is no parallel in the cases, because in the Alaskan case a bond issue of $35,000,000 is authorized by the act, and no appropriation is required. The Alaskan bill provides for a redemption fund into which shall be paid 50 per cent of all money derived from the sale of public lands, and into which shall go the net earnings of the railroads above maintenance charges and operating expenses.

In this age the building of highways is a matter for State control and direction. Believing that it was a State's business and duty to improve its own roads, many of our States have spent millions during years past on their systems of highways, while other States have not been nearly so interested and active in road building. Under this bill, how do those States fare which have their roads already established? Are those States rewarded for their progressiveness? Why not provide for the maintenance of roads already built?

CONNECTICUT'S ROAD POLICY.

For instance, take the State of Connecticut, which I have the honor in part to represent. That State has been following a definite policy in highway improvements for years. The last session of the Connecticut General Assembly appropriated $1,500,000 for road construction and repairs. The appropriation was apportioned as follows:

Five hundred thousand dollars per year for the improvement of State aid roads, by which is meant those highways for the improvement of which the towns contribute a portion of the expense. This contribution is based on the grand list of the individual towns. Towns having a grand list of $1,250,000 or less pay one-eighth of the cost of improvement, while towns having a grand list over $1,250,000 pay one-quarter of said cost. The law provides that not more than $20,000 shall be allotted to any one town for a period of two years, but the law does permit the expenditure of the two years' appropriation in one year. The maximum amount allotted to any town under the appropriation of 1913–14 was $10,000, although the greater number of towns received only $8,000. The reason for this is that while there was $1,000,000 to allot, the requests from the towns aggregated nearly $2,800,000, so it became necessary to scale the allotment to come within the amount available.

In addition to the State aid fund there is an appropriation of $1,000,000 a year—$2,000,000 for the two years ending September 30, 1915—for the construction and maintenance of trunk-line highways. This trunk-line fund has been divided so that $1,000,000 has been set apart for the construction of trunk-line highways and $1,000,000 for the maintenance of trunk-line highways already built and those which are to be constructed during the term ending September 30, 1915.

Figures are given herewith to make clear just what Connecticut has appropriated on its roads during the past 19 years:

APPROPRIATIONS.

Table I shows the annual appropriations made by the Connecticut highway commission for State-aid roads for a number of years. In addition to this, the sum of $5,500,000 has been allotted during the same period for the improvement and maintenance of the trunk-line highways. Of this $3,000,000 ($1,000,000 in the State fund and $2,000,000 in the trunk-line fund) represent the appropriations available October 1, 1913.

TABLE I.—*Annual appropriations.*

1895–96	$450,000
1897–98	400,000
1899–1900	350,000
1901–2	450,000
1903–4	450,000
1905–6	459,000
1907–8	1,000,000
1909–10	1,000,000
1911–12	1,000,000
1913–14	1,000,000
Total	6,559,000

Table II shows the maximum amount allotted to each town during the above term of years.

TABLE II.—*Maximum amount allotted.*

1895	$2,940
1896	2,850
1897	3,000
1898	3,000
1899–1900	4,500
1901–2	5,200
1903–4	5,670
1905–6	5,250
1907–8	7,872
1909–10	10,000
1911–12	9,000
1913–14	8,000

A comprehensive idea of the Connecticut method is given in the following extracts from a paper read by Connecticut State Highway Commissioner Charles J. Bennett before the Connecticut Society of Civil Engineers, in Hartford, February 11, 1914:

A STATE DEPARTMENT.

It seems necessary first to emphasize the fact that this department is a State department acting for the benefit of the whole rather than for any particular part, and as a State department should act independently from any county, city, or town government. The general idea of the public in regard to this department has been that the highway commission has existed for the purpose of developing roads in different towns with the view rather to the benefit of the town system of highways than of the State system. The above idea is natural and follows closely the system of small-town government which obtains in this State, but it seems to the writer that there is a broader conception of the subject which should develop and establish itself, beginning at once. This conception should be the idea of a State highway system which should benefit first the State as a whole and through this benefit the individual component parts thereof.

A GENERAL SYSTEM.

With this idea in view, therefore, the highway department of Connecticut has been developed to establish a general system of highway construction for the State; to maintain these highways after construction and gradually to bring conditions to such a point that the system will be connected link by link, so that the roads will serve all parts of the State with the greatest benefit to the greatest number of people. Speaking plainly, this is a very difficult proposition, to be approached with great care and considerable study. In order to reach the desired end there must be an organization formed which shall be complete and self-operative, and the mind of the executive must be comparatively free to cope with the larger phases of the problem and to secure the very best solution.

PURPOSES OF APPROPRIATIONS.

The road appropriations made by the State are for two purposes: First, for trunk-line roads, and, second, for State-aid roads. The oper-

ation of the trunk-line law requires that all trunk highways which are designated definitely by the legislature shall be constructed by the State alone—that is, the towns do not contribute toward the expense of construction, nor do they have any voice in the type of roads or location thereof. These roads are a portion of a highway system to connect the different parts of the State one with the other, and to connect also with the trunk highways of other States. The endeavor must be to connect these trunk highways so as to secure as many continuous highways as is possible.

OPERATION OF STATE LAW.

The State-aid roads are to be built by the State with the aid of the town; that is, the State pays three-quarters of the cost in case the town has a grand list of over $1,250,000 and seven-eighths of the cost where the town has a grand list of less than $1,250,000. The operation of the State-aid law is difficult, for each town, no matter how small a portion of the money it may be required to contribute, feels that it should have the entire voice in the location of the road to be built and in the expenditure of the money, etc. This spirit, however, is not so strong in the State of Connecticut that it works to material disadvantage, for it is possible, with some few exceptions, to convince the towns that the ultimate benefit to the State requires the expenditure of money on certain roads which do not entirely meet with the town's approval.

DIVISION OF DEPARTMENT.

The department itself is divided in three parts: Division of construction, division of repairs, and division of accounts and records. Each one of these parts is directly under the supervision of an official who has complete charge of all the work in that branch and who reports directly to the highway commissioner. It must not be considered, however, that these departments are independent, for they touch at many points and overlap frequently. Therefore there must be a complete understanding between the three departments; that is, each must know what the other is doing, and each must be in complete accord personally with the other.

WEEKLY REPORTS.

The division engineers or inspectors themselves make weekly reports to the office of the progress of the work in their charge. The progress is shown graphically on a chart upon which is plotted a curve showing the theoretical progress of the work. The actual weekly progress of the work is plotted on this curve, and it is easy for the deputy commissioner to see how the progress of any contract compares with the time set for the completion thereof. The department has also arranged to collect a penalty for the noncompletion of work within certain specified time, and has given the contractor an allowance for the number of days bid for the completion of the work. Thus the man who bids the shortest time gets a material advantage.

CONSTRUCTION DEPARTMENT.

The construction department is organized entirely along engineering lines, and with the reports of progress and monthly unit estimates it is possible to keep track of the expenditures of money and to turn over to the accounting department such information as will enable them to keep close watch of the department's expenditures.

MOST IMPORTANT FEATURE.

Second, the section of repairs. It is considered that this is the most important feature of the highway department's work. There is a large amount of money invested in highways in the State of Connecticut, and full benefit must be secured from this investment by repairs to the roads made continuously until the condition of the road is such that it will be economical to entirely rebuild rather than keep in repair. The above actually exemplifies the policy in connection with the repairs of highways. The repair department is organized in the same manner as the construction department, with an engineer at the head, who has charge of the repairs of all highways, both trunk line and State aid.

HOW STATE IS DIVIDED.

The State itself is divided into eight divisions, not politically but along lines which make it possible for the division engineer to reach each part of his division easily from headquarters. The division engineers make surveys and plans for roads to be constructed; have supervision of contract work and have charge of the inspectors, who are kept on the work during construction. They also make out monthly estimates of the cost of the work done, which are submitted to the office and checked by the office before final payment.

WORK OF ENGINEERS.

The work of the division engineers has been broadened considerably during the past year, and their authority increased. In the first place, there has been practically no survey work done by outside engineers. The department's own forces have carried on this work, and to good advantage. When surveys were made by private engineers, either by contract or by the day, there was a large amount of slipshod and poor work, plans which gave insufficient information for advertisement and which were incorrect in many instances. When the man who makes the survey has to carry out the work he will be more careful with his work and will give information enough so that his estimates can be easily and correctly made.

ON THE UNIT SYSTEM.

All the work of the State on highways has been put upon the unit system; that is, instead of securing prices per foot for the construction of roads, the work is now done by the unit—that is, cubic yard, square yard, ton, etc. The installation of this unit system has made it easier for the contractor to figure the work, and although increasing the overhead charge for engineering has materially decreased the cost of the work. The installation of the unit system also has made it possible for the engineer to modify lines or grades and to extend the work slightly without making supplementary agreements changing the original specifications.

A system of inspection is gradually being built up whereby a corps of inspectors is continuously employed, making it possible to get experienced men and to keep them interested in the work and to secure the best results. The value of experienced inspectors on construction work is evident, and in order to secure experienced men the work must be continuous and sure.

CHARTS OF EXPENDITURES.

In addition to the system of bookkeeping there are graphic charts of expenditures kept. On these the total appropriation is platted with a theoretical curve of expenditures in which the ordinates are expenditures in dollars and the abscissæ are time elapsed. At the end of each month the actual expenditure of money is platted graphically on this chart and a visible comparison reached immediately, so that we can see at a glance just how our rate of progress compares with the theoretical progress that we have planned. The endeavor in working this accounting department is to secure a system whereby it is practically impossible for the department to overexpend on any appropriation.

SPENDING OF APPROPRIATIONS.

In the spending of the two appropriations we have devised certain graphical means of showing how much the appropriations are in each town and how much work is being carried on, whether trunk line or State aid. Two maps have been prepared, one of which shows at a glance the amount of appropriation available in different towns for State-aid roads and the other shows the distribution of work over the State, whether trunk line or State aid, the number of active contracts, the number of inactive contracts, and the number of proposed surveys. This map also shows graphically the date of last inspection by the commissioner or the deputy commissioner of any particular piece of work. These maps are valuable for the general supervision of the department, giving an immediate idea of conditions which exist at any particular time.

UNDER CIVIL SERVICE.

The above in general has outlined the organization of the highway department. There are some general features in connection with our work which need comment. In the first place, the department has recently been put under civil service. The operation of any civil-service law is difficult, providing the civil service commission has the voice in the employment of certain men who have passed examinations. There is nothing difficult, however, in the operation of the civil-service law if the authority in charge of the department is given the right of removal for cause. The best means of getting good work from a man is his knowledge that the right of removal lies with his superior officer, and this is the only clause in the civil-service law which should be made plain. The operation of this law in this department will make it possible for the employees to hold their positions through changes in political administrations, which is wise and will give good results.

The Treaty with the Qui-nai-elt Indians—How Fare the Fish-Eaters?

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

Tuesday, February 17, 1914,

On the bill (H. R. 12579) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1915.

Mr. JOHNSON of Washington. Mr. Speaker, in connection with the consideration of House bill 12579, the Indian appropriation bill, I desire to present a copy of the treaty between the United States and the Quinaielt and Quillehute Indians; concluded on the Quinaielt River, in the Territory of Washington, July 1, 1855, and at the city of Olympia, January 25, 1856; ratified by the Senate March 8, 1859; proclaimed by the President of the United States April 11, 1859:

JAMES BUCHANAN, PRESIDENT OF THE UNITED STATES OF AMERICA.

To all and singular to whom these presents shall come, greeting:

Whereas a treaty was made and concluded on the Quinaielt River, in the Territory of Washington, on the 1st day of July, 1855, and at the city of Olympia, also in said Territory on the 25th day of January, 1856, between Isaac I. Stevens, governor and superintendent of Indian affairs in the Territory aforesaid, on the part of the United States, and the hereinafter named chiefs, headmen, and delegates of the different tribes and bands of the Qui-nai-elt and Quil-leh-ute Indians, on the part of said tribes and bands, and duly authorized thereto by them, which treaty is in the words and figures following, to wit:

Articles of agreement and convention made and concluded by and between Isaac I. Stevens, governor and superintendent of Indian affairs, of the Territory of Washington, on the part of the United States, and the undersigned chiefs, headmen, and delegates of the different tribes and bands of the Qui-nai-elt and Quil-leh-ute Indians, on the part of said tribes and bands, and duly authorized thereto by them.

ARTICLE 1. The said tribes and bands hereby cede, relinquish, and convey to the United States all their right, title, and interest in and to the lands and country occupied by them, bounded and described as follows: Commencing at a point on the Pacific coast, which is the southwest corner of the lands lately ceded by the Makah Tribe of Indians to the United States, and running easterly with and along the southern boundary of the said Makah Tribe to the middle of the coast range of mountains; thence southerly with said range of mountains to their intersection with the dividing ridge between the Chehalis and Quinaielt Rivers; thence westerly with said ridge to the Pacific coast; thence northerly along said coast to the place of beginning.

ART. 2. There shall, however, be reserved for the use and occupation of the tribes and bands aforesaid a tract or tracts of land sufficient for their wants within the Territory of Washington, to be selected by the President of the United States, and hereafter surveyed or located and set apart for their exclusive use, and no white man shall be permitted to reside thereon without permission of the tribe and of the superintendent of Indian affairs or Indian agent. And the said tribes and bands agree to remove to and settle upon the same within one year after the ratification of this treaty or sooner if the means are furnished them. In the meantime it shall be lawful for them to reside upon any lands not in the actual claim and occupation of citizens of the United States, and upon any lands claimed or occupied if with the permission of the owner or claimant. If necessary for the public convenience, roads may be run through said reservation on compensation being made for any damage sustained thereby.

ART. 3. The right of taking fish at all usual and accustomed grounds and stations is secured to said Indians in common with all citizens of the Territory, and of erecting temporary houses for the purpose of

curing the same; together with the privilege of hunting, gathering roots and berries, and pasturing their horses on all open and unclaimed lands: *Provided, however,* That they shall not take shellfish from any beds staked or cultivated by citizens: *And provided also,* That they shall alter all stallions not intended for breeding and shall keep up and confine the stallions themselves.

ART. 4. In consideration of the above cession, the United States agree to pay to the said tribes and bands the sum of $25,000, in the following manner—that is to say: For the first year after the ratification hereof, $2,500; for the next two years, $2,000 each year; for the next three years, $1,600 each year; for the next four years, $1,300 each year; for the next five years, $1,000 each year; and for the next five years, $700 each year. All of which sums of money shall be applied to the use and benefit of the said Indians under the directions of the President of the United States, who may from time to time determine, at his discretion, upon what beneficial objects to expend the same; and the superintendent of Indian affairs, or other proper officer, shall each year inform the President of the wishes of said Indians in respect thereto.

ART. 5. To enable the said Indians to remove to and settle upon such reservation as may be selected for them by the President, and to clear, fence, and break up a sufficient quantity of land for cultivation, the United States further agree to pay the sum of $2,500, to be laid out and expended under the direction of the President, and in such manner as he shall approve.

ART. 6. The President may hereafter, when in his opinion the interests of the Territory shall require, and the welfare of the said Indians be promoted by it, remove them from said reservation or reservations to such other suitable place or places within said Territory as he may deem fit, on remunerating them for their improvements and the expenses of their removal, or may consolidate them with other friendly tribes or bands, in which latter case the annuities, payable to the consolidated tribes, respectively, shall also be consolidated; and he may further, at his discretion, cause the whole or any portion of the lands to be reserved, or of such other land as may be selected in lieu thereof, to be surveyed into lots, and assign the same to such individuals and families as are willing to avail themselves of the privilege and will locate on the same as a permanent home, on the same terms and subject to the same regulations as are provided in the sixth article of the treaty with the Omahas, so far as the same may be applicable. Any substantial improvements heretofore made by any Indians, and which they shall be compelled to abandon in consequence of this treaty, shall be valued under the direction of the President, and payment made accordingly therefor.

ART. 7. The annuities of the aforesaid tribes and bands shall not be taken to pay the debts of individuals.

ART. 8. The said tribes and bands acknowledge their dependence on the Government of the United States, and promise to be friendly with all citizens thereof, and pledge themselves to commit no depredations on the property of such citizens; and should any one or more of them violate this pledge, and the fact be satisfactorily proven before the agent, the property taken shall be returned, or in default thereof or if injured or destroyed, compensation may be made by the Government out of their annuities. Nor will they make war on any other tribe except in self-defense, but will submit all matters of difference between them and other Indians to the Government of the United States, or its agent, for decision, and abide thereby; and if any of the said Indians commit any depredations on any other Indians within the Territory, the same rule shall prevail as is prescribed in this article in cases of depredations against citizens. And the said tribes and bands agree not to shelter or conceal offenders against the laws of the United States, but to deliver them to the authorities for trial.

ART. 9. The above tribes and bands are desirous to exclude from their reservations the use of ardent spirits, and to prevent their people from drinking the same, and therefore it is provided that any Indian belonging to said tribes who is guilty of bringing liquor into said reservations or who drinks liquor may have his or her proportion of the annuities withheld from him or her for such time as the President may determine.

ART. 10. The United States further agree to establish at the general agency for the district of Puget Sound, within one year from the ratification hereof, and to support for a period of 20 years, an agricultural and industrial school, to be free to the children of the said tribes and bands in common with those of the other tribes of said district, and to provide the said school with a suitable instructor or instructors, and also to provide a smithy and carpenter's shop, and furnish them with the necessary tools, and to employ a blacksmith, carpenter, and farmer for the term of 20 years to instruct the Indians in their respective occupations. And the United States further agree to employ a physician to reside at the said central agency, who shall furnish medicine and advice to their sick, and shall vaccinate them; the expenses of the said school, shops, employees, and medical attendance to be defrayed by the United States, and not deducted from their annuities.

ART. 11. The said tribes and bands agree to free all slaves now held by them and not to purchase or acquire others hereafter.

ART. 12. The said tribes and bands finally agree not to trade at Vancouver Island or elsewhere out of the dominions of the United States, nor shall foreign Indians be permitted to reside on their reservations without consent of the superintendent or agent.

ART. 13. This treaty shall be obligatory on the contracting parties as soon as the same shall be ratified by the President and Senate of the United States.

In testimony whereof, the said Isaac I Stevens, governor and superintendent of Indian affairs, and the undersigned chiefs, headmen, and delegates of the aforesaid tribes and bands of Indians have hereunto set their hands and seals, at Olympia, January 25, 1856, and on the Quinaielt River, July 1, 1855.

ISAAC I. STEVENS,
Governor and Superintendent of Indian Affairs.

—

DESIGNATED FOR ALL FISH-EATING INDIANS.

EXECUTIVE MANSION, *November 4, 1873.*

In accordance with the provisions of the treaty with the Quinaielt and Quillehute Indians, concluded July 1, 1855, and January 25, 1856 (Stats. L., vol. 12, p. 971), and to provide for other Indians in that locality, it is hereby ordered that the following tract of country in Washington Territory (which tract includes the reserve selected by W. W. Miller, superintendent of Indian affairs for Washington Territory, and surveyed by A. C. Smith under contract of Sept. 16, 1861) be withdrawn from sale and set apart for the use of the Quinaielt, Quillehute, Hoh, Quit, and other tribes of fish-eating Indians on the Pacific coast, viz: Commencing on the Pacific coast at the southwest corner of the present reservation, as established by Mr. Smith in his survey under contract with Superintendent Miller, dated September 16, 1861; thence due east, and with the line of said survey, 5 miles to the southeast corner of said reserve thus established; thence in a direct line to the most southerly end of Quinaielt Lake; thence northerly around the east shore of said lake to the northwest point thereof; thence in a direct line to a point a half mile north of the Queetshee River and 3 miles above its mouth; thence with the course of said river to a point on the Pacific coast, at low-water mark, a half mile above the mouth of said river; thence southerly, at low-water mark, along the Pacific to the place of beginning.

U. S. GRANT.

TREATY NOT KEPT.

Mr. Speaker, the terms of this treaty have not been kept by the United States Government. I desire to present a letter from the Clallam Tribe of Indians:

PORT GAMBLE, WASH., *January 5, 1914.*

Hon. ALBERT JOHNSON, M. C.,
Washington, D. C.

DEAR SIR: We, the Clallam Indians of the State of Washington, beg to call your attention to the fact that we sent, a year ago at this time, Messrs. Andrew P. Peterson and Charles Fitzgerald as delegates from the Clallam Tribe. We have a claim against the United States Government in that they failed to fulfill their part of the treaty of Point No Point, that of January 26, 1855 (12 Stat. L., 933).

On January 6, 1913, dated at Washington, D. C., our delegates presented a petition to the honorable the Secretary of the Interior. They were promised an answer in a week or 10 days. They were, however, compelled to leave the National Capital before this was given them. Early in March, 1913, the present honorable the Secretary of the Interior, according to the Seattle papers, decided to allot all (fish-eating) Indians of the Pacific Northwest that are unallotted at the present time on the Quinaielt Reservation. We beg you to use your good office with the Secretary of the Interior. We ask for a commission to be appointed to look into our claims and to prove to us conclusively that the United States Government has fulfilled their part in the treaty with the Clallams. We have witnesses living at present that were present at the time of treaty.

Hoping that what we humbly ask of you will receive your due consideration, we beg to remain,

Respectfully, yours,

The CLALLAM TRIBE,
Per PETER E. JACKSON,
Port Gamble, Wash.

—

CUSHMAN INDIAN SCHOOL,
Tacoma, Wash., March 29, 1913.

Mr. PETER JACKSON,
Port Gamble, Wash.

SIR: I have your letter of the 24th instant, making inquiry as to the allotment of Clallam Indians. The Secretary of the Interior, under date of March 5, 1913, rendered a decision that the Clallam and other "fish-eating" Indians of western Washington were entitled to allotment on the Quinaielt Reservation. I have not as yet received instructions as to how to proceed with the enrollment of these Indians. When I receive proper instructions I will communicate with you again.

Very respectfully,

H. H. JOHNSON,
Superintendent and Special Disbursing Agent.

In reply to this and other requests the following statement was prepared early this year in the office of the Commissioner of Indian Affairs:

JANUARY 19, 1914.

Mr. PETER E. JACKSON,
Port Gamble, Wash.

MY FRIEND: I am in receipt, by departmental reference, of your letter of December 28, 1913, with which you transmitted a copy of a letter from Charles Fitzgerald and Andrew P. Peterson, addressed to the Secretary, regarding allotments to the Clallam Indians on the Quinaielt Reservation.

Prior to the early part of 1913 the office advised members of the Clallam, Cowlitz, and other "fish-eating tribes of the Pacific coast" that in order to obtain allotments on the Quinaielt Reservation it would be necessary for them to become affiliated by enrollment with the Indians of that reservation. On a further examination of the treaties with the respective tribes in the State of Washington and the provisions of the Executive order by which the Quinaielt Reservation was created the office was led to conclude that those members of the Clallam, Cowlitz, Squaxin Island, and Port Gamble Bands and other "fish-eating Indians of the Pacific coast" who had not been provided with land elsewhere were entitled to allotment on the Quinaielt Reservation without the necessity of showing affiliation with the Quinaielt Tribe proper or enrollment therewith by adoption or otherwise. That is, membership in one of the "fish-eating bands of the Pacific coast," coupled with the fact that the applicant was unallotted, would entitle him to an allotment on the Quinaielt reserve, as that reservation was specifically created by Executive order to provide for such Indians, in addition to the Hohs, Ozettes, Quillahutes, and Quinaielts. Accordingly the matter was presented to the department, and on March 5, 1913, the recommendations of the office were approved.

With this in view it will not be necessary for unallotted members of the Clallam Band to procure adoption by the Quinaielt Indians as members of that tribe in order to obtain allotments on that reservation, but it will be necessary for the unallotted members of the Clallam Band to produce satisfactory evidence showing their right to membership in the Clallam Band and that they have not heretofore received an allotment as such. Mr. Charles Fitzgerald, of the Clallam Tribe, was advised to this effect by office letter of September 11, 1913.

With reference to your request for the appointment of a commission to look into your claims attention is invited to office letter of August 5, 1913, wherein it was pointed out that the provisions of the treaty of Point No Point (Jan. 26, 1855, 12 Stat. L., 933) with the Clallam and other tribes of the Pacific coast have been carried out by the Government, and that there seems to be no additional moneys arising therefrom due these Indians. While all of the Indians, members of the tribes parties to this treaty, have not yet been allotted, it is believed that sufficient land for allotment purposes can be found on the Quinaielt Reservation and the unallotted members of these bands of "fish-eating Indians" will receive lands there, it is hoped, when the valuable timber

within that reservation has been marketed and the remaining tribal lands thereby made available for allotment purposes.

The copy of the communication inclosed with your letter from Messrs. Peterson and Fitzgerald, as delegates of the Clallam Tribe, indicates that these Indians are willing to forego the demand for a cash settlement of their claims against the Government, which, as above stated, are without foundation if the department will authorize allotments to the Clallam Tribe, on the Quinaielt Reservation, giving them patents in fee and including in such allotments all timber growing thereon.

When Mr. Charles Fitzgerald and Mr. Andrew P. Peterson were in this city during the early part of 1913 they suggested this matter to the office and were advised orally that there was no authority under existing law which would enable the department to allot and simultaneously issue patents in fee simple for lands within the Quinaielt Reservation; that if made, the allotments would be subject to the provisions of the general allotment act, which provides for the holding of the lands allotted in trust for a period of 25 years from the date of the original patent for the benefit of the allottee, or, in case of his decease, for the benefit of his heirs, determined according to the laws of the State of Washington. It was pointed out, however, that other legislation authorized the issuance of patents in fee to Indians found competent, but that existing laws do not permit of the issuance of trust patents to Indian allottees, to be followed immediately thereafter by the issuance of patents in fee, without satisfactory competency to receive the same being shown.

As delegates of the tribes, these two Indians were further advised that under the general allotment act we are confined to a given number of acres of agricultural or grazing lands, and that such law did not contemplate the allotment of lands chiefly valuable for timber purposes; that timber valuable for commercial purposes was regarded as a tribal asset, to be administered for the benefit of the tribe at large rather than given to individual Indians by an allotment of land in severalty. It was stated, further, that the office hoped to market this timber at a satisfactory price, and, when the timber had been removed, to allot the lands to Indians then found entitled, according to their character and value for agricultural and grazing purposes.

Inadequate transportation facilities within and adjacent to the Quinaielt Reservation renders it difficult to find a ready and satisfactory market for the valuable timber there, and until these conditions are improved, or until the price of lumber per thousand feet increases materially, it is doubtful whether it would be wise to dispose of this timber in the immediate future. If by holding on for two or three years longer the price per thousand feet can be doubled, it will augment greatly the income of the Indians from this tribal asset.

Allotments have heretofore been made to some 690 Indians within the Quinaielt Reservation, covering, in the aggregate, some 54,989 acres. A special allotting agent was on this reservation with a view of continuing the work there, but owing to the number of Indians entitled, and the fact that practically all the agricultural and grazing lands had theretofore been allotted, it became necessary to suspend field operations until the timber on the tribal lands can be disposed of.

The office desires to assure you, however, that it has the interests of the Indians of this reservation constantly before it, and from a careful perusal of this letter, in conjunction with the correspondence heretofore had with you, it will be seen that we desire to cooperate with you fully, in order to protect your rights.

For his information a copy of this letter has been furnished Special Agent McChesney, now in charge of the Cushman School.

Your friend,

E. B. MERITT,
Assistant Commissioner.

Now, note the situation. The outside Indians want land, as provided in the treaty. That part of the land in the Quinaielt known to be agricultural has been allotted. Further allotting has been stopped. The office will not sell the timber until it is worth double its present price. The Indians do not want the denuded land. The reservation has poor transportation facilities. It even has no bridge at the entrance to it. It has no tribal funds of consequence. The reservation is supposed to contain oil. Indians who have received allotments are without means. Only recently one head of a family owning more than 800 acres of valuable timber was obliged to borrow $200 from the Government in order to care for his wife, who was dying of consumption. The delay was so great that she died about the time he had completed the transaction. Is this right? Is it fair?

I submit one letter, which is a sample of many received:

PORT WILLIAMS, WASH., *February 6, 1914.*

Hon. ALBERT JOHNSON,
Washington, D. C.

DEAR SIR: * * * What good do you really think the logged-off land will do us?

If this timber is to be sold and we get nothing for the timber, as I understand it, how are we to go ahead to improve this land without funds, because we, as Clallams, are financially embarrassed, so to speak, and particularly the older members of the tribe? There are two that I know of who have to beg in order to exist. Mr. Johnson, it seems a pity. My very heart aches for these two old men, and what makes it more so, more pitiful, is when one thinks all this part of the Northwest belonged to them at one time. Now, at Dungeness, when these very same Clallams want to fish they are not allowed to unless they pay for the privilege. Yet they are Government wards. These Clallams have great faith in you, and seem to think you will do more for them than anyone has done yet.

I wish I could talk with you. I could tell you better just what the Clallams have received by the agents of the Government; how their village was completely burned at Port Townsend by a Government agent and were forced to the Hoods Canal to live. The Clallams did not, however, remain there. This was about 45 years or so ago, as my mother was a girl at the time and remembers all this. Laying all this aside, I am sure you will do the best you can for us.

Respectfully,

MRS. T. MAHER.

In my opinion, Mr. Speaker, the condition of the Quinaielt Indians is steadily growing worse. This year a bridge leading to their reservation, a bridge which was built entirely at the expense of the county, is out. One of the county commissioners writes to me that the county is not disposed to rebuild the bridge. Here is his letter:

ABERDEEN, WASH., *January 21, 1914.*

Hon. ALBERT JOHNSON,
Washington, D. C.:

Your letter of the 15th received. The county commissioners considered the matter of the Moclips Bridge on the Quinaielt Indian Reservation at our last meeting (the 19th), and have practically agreed to do nothing further about it. It would be useless for us to build a bridge if the Indian Department will not build a road to connect it with the beach above. As I wrote you, the former agent said this would not be done.

Inasmuch as these Indians have plenty of property, which they should use for their own purpose, we will let them furnish their own bridge or get none. The only business done north of the Moclips is for the Indians and a couple of traders. The lack of a bridge and the extra expense will, no doubt, serve to reduce the price the Siwash will get for their fish

The way the affairs of these Indians are handled makes it apparent the quicker they are starved to death the better they will be off—get them out of their misery. Uncle Sam is a generous and protective old gentleman, but he is wonderfully nearsighted. Under his watchful eye these Indians go on short provisions, while he saves their money. Fifty years from now the Quinaielt Indians will be public charges of this county and their property will be frittered away in "administration expenses."

I take a great interest in this tribe, as I have known them since 1890; know most of them by their first name, in fact, and am very sorry that the general treatment received by them is so bad.

Yours, sincerely,

PHIL S. LOCKE.

—

NO UNITED STATES MONEY FOR BRIDGE.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, February 12, 1914.

Hon. ALBERT JOHNSON,
House of Representatives.

MY DEAR MR. JOHNSON: I have your letter of the 12th instant, forwarding one from Mr Phil S. Locke, of Aberdeen, Wash., requesting that the Government assist Chehalis County in reconstructing the Moclips Bridge across the Moclips River, the north end of which rests upon the Quinaielt Indian Reservation.

I have to advise you that the available balances in the applicable funds for expenditure for the benefit of the Quinaielt Indians will not permit of an expenditure therefrom sufficient to assist the county commissioners in reconstructing the Moclips Bridge, as outlined in Mr. Locke's letter.

However, I am taking the matter up with the superintendent of the Quinaielt Reservation and asking for a full report upon the matter. Upon its receipt I will be very glad to give the matter careful consideration and advise you further. In the event that Government assistance is given the county commissioners in reconstructing this bridge, a special appropriation would be necessary, owing to the depleted condition of the agency funds, as stated above.

Very truly, yours,

CATO SELLS, *Commissioner.*

THE PROPOSED FISH HATCHERY.

Now, then, a word as to the proposed fish hatchery. For the Quinaielts the appropriation is as follows:

For support and civilization of the Quinaielts and Quillehutes, including pay of employees, $1,000.

Which means that the employees will get that sum, and the civilization of the Quinaielts will be advanced by means of ozone. The bill provides $400,000 for teaching Indians agriculture, horticulture, and the care of green timber. Why should not a little be spent in showing them how to continue the supply of the fish on which they have lived all these years? Efforts have been made to provide a hatchery, as the following correspondence will show:

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, February 6, 1914.

Hon. ALBERT JOHNSON,
House of Representatives.

MY DEAR MR. JOHNSON: I have your letter of January 16, 1914, in regard to the necessity of establishing a fish hatchery on the Quinaielt River in order to replenish the supply of salmon in that river and its tributaries.

The bill (H. R. 2485) introduced in the first session of the present Congress was not referred to this office for report, as the location of the proposed hatchery is not on Indian land. I am informed that it was referred to the Commissioner of Fisheries, who made a favorable report on it.

The importance to the Indians of maintaining the run of salmon in the Quinaielt River is realized by this office, and I shall be glad to do whatever is possible to further the establishment of the station.

Inclosed herewith is a copy of a letter written to-day to the Commissioner of Fisheries.

Very truly, yours,

E. B. MERITT,
Assistant Commissioner.

—

FEBRUARY 6, 1914.

Hon. HUGH M. SMITH,
Commissioner of Fisheries, Washington, D. C.

MY DEAR MR. SMITH: My attention has been called to H. R. 2485, to establish a fish-cultural station in the State of Washington, which was introduced during the first session of the Sixty-third Congress. I understand this bill was referred to you and received favorable report.

My purpose in writing you now is to call your attention to the vital importance to the Indians of the Quinaielt Reservation of maintaining the run of salmon in the Quinaielt River and its tributaries. Those Indians make the greater part of their living from the fish taken from

these streams, and if opportunity offers I shall be glad to join with you, if that is permissible, in urging favorable action thereon.

Very truly, yours,

E. B. MERITT,
Assistant Commissioner.

Mr. Speaker, without criticism of the Committee on Indian Affairs or of anyone connected with the management of Indian affairs, I desire to reaffirm that conditions of the Quinaielt and allied tribes of Indians are in a tangled and unsettled condition and rapidly growing worse instead of better. With the probable discovery of oil in commercial quantities on the reservation, a firm hand will be needed there. The Indian agent at the Cushman School, Tacoma, has endeavored to look after the Quinaielts. He has done and is doing his best. He is 150 miles away, and, owing to the condition of the country, he might as well be 3,000 miles away. An agent is needed on the ground, with authority to provide some kind of policy for Indians who are rich yet poor, who are helpless, and who are led to believe they are not helpless. Mr. Speaker, these Indians are our wards. As guardians, what are we doing for them?

Rural Post Roads.

EXTENSION OF REMARKS

OF

HON. MICHAEL K. REILLY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 10, 1914.

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. REILLY of Wisconsin. Mr. Speaker, this bill appropriates $25,000,000 for the purpose of assisting the various States in the construction and maintenance of rural highways.

I am a firm believer in good roads, and I am entirely in accord with the purpose of this bill.

In voting Federal aid to the various States for the construction and maintenance of country roads this Congress is but keeping a party pledge, made in its national platform.

The Baltimore platform pledged the Democratic Party, if intrusted with power, to the extension of national aid to State and local authorities in the construction and maintenance of post roads.

The passage of this measure does not mean in any sense the inauguration of a new policy on the part of the National Government. It simply means the extension of an old policy long pursued by our Government.

The National Government has almost, since its very foundation, been expending money for the purpose of improving the transportation facilities of the country. Millions have been voted from the Public Treasury for the improvement of rivers, harbors, and for the construction of railroads, highways of commerce, for the purpose of facilitating and cheapening the cost of transportation.

We have in this country something like 2,300,000 miles of country roads that are no less highways of commerce than our railroads, our rivers, or our lakes.

Over these country roads are carried each year the products of an industry representing an investment of about $40,000,000,000 and constituting the most valuable and important product of our Nation.

While we are developing into a great manufacturing Nation, still agriculture is, and must necessarily continue to be, our greatest industry, and more vitally important to all the people of this country than any other industry.

This bill marks a new departure on the part of the National Government only in the sense that it is the first time that the Government has made any large appropriation for aid of the improvement and betterment of our country highways. For more than a century the agricultural population of this country has been contributing in taxes for the improvement of other highways of commerce, and in this bill, for the first time, the general funds of this country are to be used with the view of bettering the rural highways.

The constitutional authority for this law is found in the power of the National Government, under the Constitution, to provide post roads.

We have in this country to-day about 35,000 rural carriers, employees of the National Government, who travel each day about 1,000,000 miles of rural post roads.

The rural mail carriers are, of course, vitally interested in the good-roads movement and in securing the enactment of the bill into a law. These patient, hard-worked, underpaid servants of Uncle Sam know the highways of our country better, probably, than any other class of our citizens. Day in and day out, no matter what the condition of the weather or the roads, their duty compels them to go forth and travel the country highways in delivering the looked-for letters and newspapers to the residents of our rural communities, and it seems that Congress would find ample justification in expending national funds in making less difficult the task of our army of rural mail carriers, whose services are so essential in the life of a modern rural community.

Under the terms of this bill the $25,000,000 appropriated will be apportioned among the various States as follows: One-half in the ratio which the total population of the State bears to the total population of all the States, and one-half in the ratio which the total mileage of the rural post roads of a State bears to the total mileage of the rural post roads in all the States.

Section 3 of this bill provides one method whereby the part of this appropriation which will go to any State may be utilized by the said State, and reads as follows:

SEC. 3. That the Secretary of Agriculture is authorized to cooperate with the officers of the several States, having lawful authority in that behalf, in the construction and maintenance of rural post roads. That between the 1st day of February and the 30th day of June in each fiscal year the Secretary of Agriculture and the officer, or officers, of each State having lawful power to act for the State, may jointly consider and determine the roads in such State which, under the provisions of this section, may be constructed and maintained during the next fiscal year and the material, character, and manner of such construction and maintenance; that the several States shall afford such inspection and supervision of said construction and maintenance as shall be required by the Secretary of Agriculture; that in no case shall the United States bear more than one-half of the cost of the construction and maintenance of any road under the provisions of this section; that the Secretary of Agriculture shall not commence such joint construction of any road in any State until the portion of the cost thereof which is to be provided otherwise than by the United States has been made available.

This section of the bill, it will be seen, provides for the expenditure of the money received from the National Government, together with a like sum appropriated by the State, for the improvement of such highways in the State as may be determined by the Secretary of Agriculture and the proper officer or officers of the State.

Under this section it will be possible for the State to improve highways selected by the proper officers and the Secretary of Agriculture in any way or according to any plan that may be agreed upon by said officers and the Secretary of Agriculture, the only limitation being that the National Government shall not pay more than one-half the cost of the roads constructed.

Section 4 of this bill provides another method whereby the money appropriated by the National Government may be used in the improvement of highways in any State. The material part of section 4 reads as follows:

SEC. 4. That certain roads in the States which are adapted to use by the United States as rural post roads shall be divided into three classes to be known as class A, class B, and class C.

Class A shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, well drained, with a road track composed of macadam or other material of equal utility and cost, constructed and maintained in such manner that it shall have a smooth, firm surface.

Class B shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, well drained, with a road track composed of shells, gravel, or a proper combination of sand and clay or other material of equal utility but less expensive than macadam, constructed and maintained in such manner that it shall have a smooth, firm surface.

Class C shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, with adequate drainage and ample side ditches, with a roadway constructed so as to quickly shed water into the side ditches and kept crowned and compacted by dragging or other adequate means so that it shall be reasonably passable for wheeled vehicles.

* * * * * * *

That at the end of each fiscal year the United States shall pay on account of the roads so determined to be in classes A, B, and C, as follows: On each mile in class A the sum of $60, on each mile in class B the sum of $30, and on each mile in class C the sum of $15: *Provided*, That if in any State the aggregate of said sums would exceed the amount which for that fiscal year has been apportioned to such State under this act to be expended under the provisions of this section, then said sums per mile shall be reduced pro rata so that their aggregate shall not exceed said amount.

* * * * * * *

That such payments shall be made, to such officers in the respective States as the governors thereof shall indicate as being lawfully entitled to receive the same, by the Treasurer of the United States upon warrants drawn upon him by the Secretary of Agriculture: *Provided*, That this act shall not be construed as authorizing any governor to create any new office.

* * * * * * *

The bill provides that the governor of the State may select under which section his State will participate in the funds provided by this bill, and in case he should fail to make a selection

the Secretary of Agriculture may make the selection for the State.

Under section 4 the roads improved must be rural post roads, and the amount contributed by the United States will be $60 per mile for roads in class A, $30 per mile for roads in class B, and $15 per mile for roads in class C, with the proviso also the same as in section 3—that the State must provide an equal amount.

Under this section the bill aims at the expending of National and State funds in the improvement and maintenance of all the roads traveled by rural mail carriers. This section is designed to meet the requirements for a great many States where there are no macadam or expensive highways and where the most desirable and satisfactory roads are those of clay or gravel.

The provisions of this bill are to be carried out under the direction of the Secretary of Agriculture with the heads of the road departments of the various States.

Under the terms of this measure the State of Wisconsin, which I have in part the honor of representing, will receive approximately $750,000 from the National Government to be used in improving the rural highways of the State.

Wisconsin has already done a great deal in the way of improving country roads, and there are few States in this Union that have a better system of country roads than the State of Wisconsin. In many sections of Wisconsin the farmers take great pride in their roads, and the result is that, without any outside assistance at all, many agricultural districts of Wisconsin have some of the best rural roads in the country.

The good-roads movement, born about a decade ago, has spread rapidly all over the country, with the result that in almost 40 States of the Union there are departments of public highways, and many State governments have gone directly into the work of assisting local communities in the construction of roads.

In the matter of good roads the United States is away behind many of the countries of Europe. In ancient days Rome was famous for her magnificent country highways, and in modern times many of the leading countries of Europe have spent large sums in building and maintaining the many rural roads. Germany, in particular, has been successful in constructing what is probably the best system of rural highways in the world, and it is probably this one fact as much as anything else that is responsible for the stability of the rural population of that country.

The good-roads movement in our day is no sentimental affair, but it is the result of a conclusion based upon study and investigation that better roads in our agricultural districts will result in an enormous saving to the people.

It is said by those who have investigated the question that it costs 25 cents per ton-mile to transport farm produce over country roads to market, 7 mills per ton-mile to transport the same produce over railroads, and from 1 to 3 mills per ton-mile over water routes. Thus it will appear that the problem of transportation is a vital one from the standpoint of economy in marketing the products of the soil.

Good roads will mean not only cheaper transportation and lower cost of living, but they will also mean more social life, more religious life, more educational opportunities, and better conditions for those living in the country.

We are living in an age when the rural sections of our country are being depopulated by a constantly increasing stream of humanity passing from the farm to the city.

The telephones, the rural mail, the parcel post have all contributed to the making of rural life more inviting, and there can be no doubt at all but that better roads will play an important part in turning back the stream of youth that is now depopulating the rural sections of the country.

In recent years there has been a movement known as the "back to the farm" movement. This movement is fathered principally by those living in the cities, and is indicative of the deep concern felt by a great many leaders of thought in this country regarding the best conditions that should exist in the rural communities.

What we want to-day is not necessarily a movement back to the farm, but rather a movement that will tend to keep the boys and girls born and reared in the country and trained in agricultural life on the farm, and if we are going to keep the young men and women of to-day who have grown up on the farms in the same line of work pursued by their fathers and their mothers, we must improve and make more attractive the conditions surrounding life in rural communities.

I can not agree with the gentlemen representing large cities who have opposed this bill, that the results to follow from its enactment will not be for the interests of those who live in the city as well as for those who dwell in the country.

While this bill necessarily aims at the improving of the pike that passes the farm, and does not take into consideration the street in front of the humble homes of residents of our cities, still the money expended in improving the country roads in its results will be just as beneficial to city life as to country life.

The inhabitants of the cities look to the farmer for their food supply. Short crops, poor crops, poor methods of farming, and depopulated rural districts all mean higher cost of living for the toilers of the city.

While it is true that along the highways to be improved will be found only the homes of farmers, it is also true that at one end of every rural highway there is a consumer who is deeply and vitally interested in the conditions that exist at the farmer's end of the highway, and who is also deeply interested in the facilities provided for transporting the farmer's product to his table. This law, if taken advantage of by the various States, will be instrumental in increasing the rural population, and thereby increasing the number of producers, to the direct benefit of the consumer, no matter where he may reside.

This bill does not call for the expenditure of State and National funds in the construction of a great national highway from ocean to ocean. The purpose of this bill is to improve and make passable at all seasons of the year the rural highways, so that the millions of dollars worth of products of our farms can be transported to the market as readily and economically as possible, and not the building and maintenance of expensive boulevards over which pleasure trips may be taken, and over which those who are not engaged in the great work of transportation may find easy and pleasant access from State to State or from ocean to ocean.

This bill is fundamentally designed to help the farmer, to make his life the more pleasant, to make his surroundings more inviting, to make it possible for him to keep his boys and girls at home, and to make for the betterment of all our country by making possible the building up in this country of a prosperous, contented, and efficient agricultural population, the backbone of the Nation.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HOWARD,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 17, 1914.

Mr. HOWARD. Mr. Speaker, the bill which I have introduced is designed to create a system of agricultural banking owned, managed, and controlled by the farmers of the country, and designed primarily to help the small farmer who needs assistance.

Under this bill a small number of farmers in a given section can organize a local rural bank with a small capital, whose operations are confined to a small district. This is the foundation principle of the system. The farmers can help themselves, without waiting for outside help. They can create an institution of a size and scope to meet their needs. Owning the stock of this institution and having a double liability as stockholders, they will most carefully guard their loans. Familiarity with local conditions will enable them to fairly appraise the value of lands offered as security for loans, and to see that the money borrowed is used for the improvement and upbuilding of the farm. Personal knowledge of the needs of the individuals in the restricted district to which their operations are confined will insure an intelligent and neighborly interest in the needs and operations of the bank's customers, and local pride and self-interest will insure their active attention to and support of the institution, whose success means success for the community, and whose failure means personal loss to each stockholder. The inability to make loans outside of the restricted area prevents any tendency to speculation; and the personal familiarity with land values, coupled with the liability for any loss, tends to secure a fair and conservative appraisement of values, which, after all, is the real foundation on which the security of land-bank bonds must rest.

The local banks can only pay a restricted dividend, and this also will tend to promote conservatism of management. The dividend authorized is a fair return for the money invested, and

the surplus profits, instead of being dissipated in extra dividends, are accumulated and are ultimately used to buy in at par and cancel the outstanding stock of the bank. Thereupon the local bank becomes mutualized, and the subsequent profits are available to the customers of the bank, thereby, in effect, reducing the rate of interest on farm loans, and furnishing the farming community with cheaper money and lower interest rates as the bank grows stronger.

The amount of stock in a local bank that may be owned by one individual is limited, and adequate provision is made to prevent the control becoming vested in any set of individuals, and to prevent the exploitation of the bank's credit and resources for the benefit of any individual or set of individuals.

These local banks are permitted to make long-term mortgage loans—that is, loans for not less than 5 years nor more than 35 years, secured by first mortgage on farm lands at not exceeding 50 per cent of the appraised value in the case of improved lands, and not exceeding 40 per cent in other cases—such loans in all cases containing an amortization provision, requiring the repayment of the loan in small periodic payments—to the extent of fifteen times their capital and surplus. In addition, they are authorized to make short-term mortgage loans—that is, first-mortgage loans running for less than 5 years, and without the amortization provision—to the extent of five times their capital and surplus. These local banks also have the right to carry on a regular banking business only to the limited extent that seems necessarily incident to the exercise of the above privileges.

Each local bank is required to invest a part of its capital and surplus in the stock of a State national farm-land bank and a part in stock of the United States farm-land bank, in which the State farm-land banks are also required to invest to some extent. Thus the local banks are owned and controlled by the farmers, and these local banks in turn own and control the State banks and the central or United States farm-land bank. In this way the farmer controls, manages, and operates the entire system designed for his benefit. He is aided to the extent that he needs aid, and he can secure the aid by his own act, when he desires to secure it. The control can not be taken from him. On his small investment in stock of the local bank he receives a fair return. The extra profits of the system all come back to him in the shape of lower interest rates, and coincidentally with this his original investment, with interest, is returned to him.

The long-term mortgages taken by a local bank are indorsed or guaranteed by it, and forwarded to the State bank, which represents the combination of a proportion of the capital and credit of all the local banks in that State. These long-term mortgages are then guaranteed by the State bank and forwarded to the central bank, known as the United States land bank. The central bank then takes these mortgages, each of which is guaranteed by a local and by a State bank, deposits them as a trust fund, and against the security of these mortgages issues and sells its national land-bank bonds. These national land-bank bonds are issued in series, and the mortgages securing a series must all be on land in the same State, because of the varying laws in the different States as to registration, conveyancing, taxation, foreclosure, and so forth, of land. The total profit to the local, State, and central banks can not altogether exceed an annual charge of 1 per cent of the balance due on the mortgages. That is to say, that if the central bank can sell its national land-bank bonds at par on a 4 per cent basis, then the rate of interest paid by the farmer on his mortgage can not be more than 1 per cent in excess of that rate. The farmer in such case could not be charged over 5 per cent on the loan, and would also have to make the amortization payments annually or semi-annually, which payments would be used to retire and pay off the principal. On a 35-year loan in the instance above this would not exceed an annual charge of 1 per cent of the principal. So that a farmer borrowing $1,000 for 35 years, under the conditions above, would not have to pay over $30 every six months, or at the rate of 6 per cent per annum. This amount would, at the end of the period, have paid off not only the interest but the principal as well.

The system which my bill proposes involves a central bank, and I appreciate that there is a strong sentiment in this country against any central-bank idea. Upon fully understanding the matter, however, I am persuaded that the American people will become convinced that the central-bank idea is unquestionably desirable in agricultural banking, which is entirely distinct from commercial banking.

The whole theory of the mortgage bank is to give to the individual borrower the benefit of the collective credit of the community, so as to secure for him the best terms and the lowest interest rate. Under the bill which I have introduced this idea is carried to its logical conclusion, so that each farmer who borrows money on mortgage gets the benefit of the collective credit of all the other farmers of the country, through the system of guaranties above outlined, and through the instrumentality of the central bank, which is owned and controlled by himself and the other farmers.

The danger of centralization in commercial banking is the danger from the influence and control of a large part of the cash of the country by a few individuals. The central bank in agricultural banking represents collective credit, not collective cash. The commercial bank gathers together, holds and controls the cash of the community, and by the control of that cash may exercise an undue influence. The agricultural bank collects together the credit of the community, puts it in shape, guarantees it, and then sells its obligations, representing this collective credit, to the investor, immediately distributing the proceeds to the farmer borrower. How could a bank exercise control over my actions by holding my obligations, due 35 years from now, and which, when it reached maturity, would have been liquidated by the small semiannual payments that I had made in the meantime? I am convinced that the American farmer will see that the arguments against a central commercial bank do not apply to a central agricultural bank; that if he wishes to borrow on the best terms and at the lowest interest rate he should utilize the collective credit, not only of his own community and State, but also of all the farmers in the country, through a central bank; and that the bogy man of danger to his interests from the control of a central bank will be quickly dissipated when he understands that he himself is to have and exercise this control, of which he is asked to be afraid.

Under the bill I have introduced the local banks can guarantee long-term mortgages to the extent of fifteen times their capital and surplus. The State bank can then in turn guarantee these mortgages, each of which has already been guaranteed by the local bank, to the extent of one hundred times its capital and surplus. The mortgage then goes up to the central bank, which issues land-bank bonds against the same.

The security of the mortgage held by the central bank therefore consists, first, of the land itself, at not exceeding 50 per cent of its appraised value, such appraisement being made by local parties, familiar with the land, and who will be liable and lose money in case of an improper appraisement; second, of the guaranty of the local bank, with the double liability of its stockholders; third, of the guaranty of the State bank, with a large capital, and representing, in large part, the collective credit of the local banks of the State; and, fourth, of the amortization provisions, required to be inserted in each mortgage, by which periodic payment of principal is required, so that when the mortgage becomes apparently due, according to its face, it has already been paid off by these small annual or semiannual payments, and no liability is left for the guaranteeing bank or banks.

The purchaser of land-bank bonds of the central bank has all of the above security, and in addition has the security of the resources and credit of the central bank, representing in a large degree the collective credit of the farmers of the country.

The provisions of the bill as to the business to be transacted by each of the banks, as to the supervision and control of the same by the Federal Government, and as to all the details of operation, have been carefully worked out, and will, I believe, receive favorable consideration, as they are fully understood. I believe that the bill is correct in its basic principle, because it enables each farmer to get the benefit of the collective credit of all the farming population; because it permits only one central bank to issue land-bank bonds, thereby tending to standardize the same, and tending toward greater uniformity in interest rates to farmers throughout the country; because it removes competition between individual banks representing different States and sections for investment of money, which must mean higher interest rates for the farmer; and because the system of banking outlined in this bill starts with the farmer and ends with the farmer. He controls the local bank, the State bank, and the central bank. He can not be ousted from the control. He gets the profits. He manages the system and must himself suffer if he mismanages. The system is based on cooperative action of the farmers. If they want improved facilities, they can get them. If they do not want them, they do without. Their personal interest, their work, their money, and their credit must be enlisted. Without these, no system will succeed. Agricultural banks must be owned and run by the farmer in order to succeed—and this is what is provided for in the bill I have introduced.

DETAILED REVIEW OF BILL H. R. 12746.

The general plan of the bill which I introduced in the House of Representatives on January 31, 1914 (H. R. 12746) involves:

1. The creation in the Treasury Department of a division of farm-land banking, to be under the general direction and charge

of a farm-land banking board, composed of the Secretary of the Treasury, as chairman, Secretary of Agriculture, and the Comptroller of the Currency, the work of the division to be under the direct charge of a director of farm-land banking, to be appointed by the President, by and with the advice and consent of the Senate, and who shall serve for five years and be eligible for reappointment. The salary of the director is placed at $7,500, and an assistant director at $6,000 per year is provided for. The director of farm-land banking is authorized to employ the necessary clerks and assistants, and is required to make an annual report to Congress in regard to farm-land banks. The salaries and operating expenses of the farm-land banking board and of the director of farm-land banking, his assistants and employees, are to be provided for in the appropriation for the Treasury Department.

The general duties of the farm-land banking board are to formulate and adopt rules and regulations governing the operations for farm-land banks, and these rules and regulations are to be enforced by the director of farm-land banks. Provision is made that the rules and regulations shall be adopted and the directors shall be appointed within 90 days after the passage of the act.

Power is given to the division of farm-land banking, upon the recommendation of the director, to issue charters for local and State national farm-land banks, as provided for in the act; to exercise supervision and control over all farm-land banks established under the act, under general rules and regulations and under like general rules to withdraw or forfeit the charters of local and State farm-land banks or liquidate them when necessary.

Power is also given the division of farm-land banking, by general rules and regulations, to specify the conditions under which the privileges, or certain of them, authorized in the act shall be extended to local and State farm-land banks, and to provide for the extension of such privileges, or certain of them, only to those local and State farm-land banks operating in those States which have met the requirements of the division of farm-land banking as to the simplification of land-title registration and conveyancing; as to simplification and economy of methods of securing farm loans and foreclosing the same; as to the removal of any taxation upon mortgages; and as to the removal or waiver of any exemptions in regard to farm mortgages.

2. The creation of a system of national farm-land banks, comprising:

(a) Local banks, such as "Doeville National Farm Land Bank," limited in their operations to a county or other small political subdivision of the State.

(b) State banks, such as "Virginia National Farm Land Bank," limited in their operations to a given State, and acting as a clearing house and reserve agent for the local banks in that State.

(c) A central bank, to be known as the "United States National Farm Land Bank," to act as a clearing house and reserve agent for all the State and local farm-land banks, and to alone issue and sell collateral trust bonds or national land-bank bonds. These national land-bank bonds will be the obligations of the central bank, issued against the deposit of mortgages or deeds of trust on farm lands at not more than 50 per cent of the appraised value of such lands, when the lands are improved, and at not more than 40 per cent of the appraised value of other farm lands. The mortgages or deeds of trust, before being used by the central bank as collateral security for its national farm-land bonds, must be in each case guaranteed both as to principal and interest by the local bank of the county or other subdivision where the land is located, and must be then likewise guaranteed by the State bank of that State. Moreover, all such mortgages or deeds of trust must contain a mandatory provision for the repayment of the principal by the amortization plan; that is, by the payment, annually or semiannually, of small amounts on account of the principal, which payments will be sufficient to pay off the mortgages or deeds of trust at their maturity.

The general powers incident to corporations are given to all farm-land banks, including the right to continue for 50 years and reserving the right of change, amendment, or repeal of the charters so granted by Congress, provided that the rights of creditors of such banks are not affected by such action.

The bill enumerates certain general provisions applicable to all farm-land banks, as follows:

1. The capital stock, the income derived therefrom, the mortgages held by said banks, and the national land-bank bonds issued by the central bank are exempted from all taxation.

2. Every bank is prohibited from lending money upon the stock of any other farm-land bank, and no bank is allowed to lend to any one individual more than 20 per cent of its capital and surplus; but this latter provision does not apply to the guaranty of real-estate loans of local and State banks.

3. Each director is required to take a proper oath for the faithful performance of his duties.

4. Examinations by the directors are required by each bank at least once every three months.

5. Examinations of the affairs of each bank by examiners appointed by the director of farm-land banking are provided for substantially as examinations of national banks are provided for under the Federal reserve act.

6. In the case of every farm-land bank the director of farm-land banking is required at the time of organization to designate some individual who is not an officer or director of the bank and who is not objectional to the directors as Federal fiduciary agent, to be the representative in that bank of the division of farm-land banking.

The duties of this Federal fiduciary agent are specifically defined at great length in the case of local and State banks as well as in the case of the central bank. This agent practically acts as the Government representative to see that the requirements of law are complied with as regards farm-land loans:

A. In the case of local banks this agent is required—

(1) To certify that each mortgage or deed of trust is properly recorded and that the same is a first mortgage, and to certify that each note or bond purporting to be secured under such mortgage or deed of trust is so secured.

(2) To have joint possession or control with the local bank of all amortization payments or payments on the principal of mortgages held by the banks, so long as such payments remain in the possession of the banks, and to see that proper credits are made upon the mortgages or deeds of trust when such principal payments are received. No disposition of such amortization or principal payments can be made without his consent in writing.

(3) To have supervisory control over all entries in the mortgage ledger, where a detailed statement of all mortgages held by the bank as an evidence of long-term loans is kept.

B. In the case of State banks—

(1) To have joint possession and control with the bank of the mortgages sent to the State bank by the local bank after being guaranteed by the local bank.

(2) To have joint possession and control with the State bank of all amortization payments coming into its possession from the local banks. Such amortization payments made on mortgages sent by the local bank to the State bank must be forwarded by the local bank to the State bank.

(3) To have supervisory control of the mortgage ledger kept by the State bank.

C. In the case of the central bank—

(1) To certify to each collateral trust bond or national land-bank bond issued by the central bank against mortgages deposited with it, which mortgages have previously been guaranteed by a local and a State bank.

(2) To have joint possession and control of the mortgages held by the central bank, each of which has been guaranteed by a local and State bank. No mortgages can be withdrawn or changed without his consent in writing.

(3) To have joint control with the central bank of the amortization payments on such mortgages. These amortization payments are forwarded from the State bank to the central bank when the mortgages on which they are made are held by the central bank as a security for national land-bank bonds. The amortization payment under this plan goes from the local bank to the State bank and from the State bank to the central bank, always resting with the last guarantor of the mortgage.

(4) To have supervisory control of all entries in the mortgage ledger kept by the central bank.

D. To perform such other duties as the director of farm-land banking may prescribe. The salary of each Federal fiduciary agent is fixed by the joint agreement of the bank and of the director of farm-land banking and is paid by the bank.

7. The seventh general provision for farm-land banks prescribes what real estate may be purchased, held, and conveyed. The requirements are the same as in the case of national banks.

8. The eighth general provision, relating to farm-land banks, prescribes that the par value of the stock shall be $100 per share. The provisions regarding the stock are substantially the same as in the case of national banks, except that no person can vote in person or by proxy more than 10 per cent of the outstanding stock at any stockholders' meeting.

9. The ninth general provision provides for an increase of capital for any bank substantially as with national banks.

10. The tenth provision provides for a decrease of capital for any bank substantially as with national banks, except that no reduction can be made which will reduce the proportion that the

capital and surplus of the bank bears to the outstanding guaranteed mortgages below the proportion provided by the act.

11. The eleventh general provision provides that the affairs of each local and State bank shall be managed by not less than five nor more than nine directors. It also specifies the requirements as to citizenship and residence of the directors and requires that each director in a local bank must own at least two shares of stock; otherwise the provisions are substantially similar to those in the case of national banks.

12. The twelfth general provision provides for the election of president and vice presidents from the membership of the board.

13. The thirteenth general provision provides for double liability on the part of stockholders of local banks.

14. The fourteenth general provision defines this liability in the case of executors, and so forth, substantially as with national banks.

Sections 10 to 13, inclusive, provide for the incorporation of local banks by any number of natural persons not less than 10. It is specified that the name "National Farm Land Bank" shall be a part of the title of every local and State bank under this act, and that these words shall not be used by institutions other than those incorporated under the act. Local institutions are to be prefixed by a descriptive title and followed by the name of the county and State in which the bank is to operate. The other information to be contained in the articles of association is specifically outlined, and provision is made for acknowledging and filing the certificate.

It is provided that each local bank shall, upon being organized, have the following powers:

(1) To accept and pay interest on postal savings deposits and other time deposits from the National Government; to accept and pay interest on State time deposits, on time deposits of public funds, and on time deposits from individuals or corporations.

(2) This is the principal and distinguishing feature of the farm-land banks: To guarantee the payment of loans upon farm lands located within the county or other political subdivision in which such local bank is operated, provided—

(a) That such loans run for not less than five years.

(b) That such loans are secured by a first mortgage on farm lands located within such county, or are used to retire existing mortgages so as to make them a first lien. Mortgages on lands outside of the county can be accepted as additional security, and provision is made for loans on land lying partly in two counties.

(c) That such loans do not exceed 50 per cent of the appraised value of productive farm lands or 40 per cent of the appraised value of other farm lands.

(d) That every such loan contain a mandatory provision for amortization by annual or semiannual payments.

(e) That every such loan may be paid off in whole or in part, upon reasonable notice, at any interest period, after such loan has continued for five years under rules prescribed by the division of rural banking.

The local banks are also authorized to sell and trade in mortgages guaranteed by it, and to invest its deposits in short-term farm loans, maturing within five years, which comply with the requirements of (b) and (c) next above. The local bank can also guarantee such short-time loans, and sell, buy, and trade in the same.

The local bank can also use its capital stock, surplus, and deposits as a revolving fund for the temporary purchase or holding of long-term first-mortgage loans or short-term first-mortgage loans complying with the above requirements; or it can use the same for the purpose of buying and holding temporarily national land-bank bonds of the central bank, but the capital, surplus, and deposits can be permanently invested only in United States bonds, in bonds of the State in which the bank is located, or in other securities approved by the division of farm-land banking.

The local banks can also do such general banking business as is incident to the foregoing.

Section 14 provides certain limitations upon local banks, as follows:

(1) The local bank can guarantee long-term mortgages not exceeding fifteen times its capital and surplus, and short-term mortgages not exceeding five times its capital and surplus.

(2) The capital and surplus of each bank are liable—

(a) For its guaranties on long-term mortgages.

(b) For its guaranties on short-term mortgages.

(c) For its deposits or other obligations.

This provision gives added strength to the long-term mortgages and discourages deposits except as an incident to mortgage loans.

(3) The administration charge or profit on long-term loans is limited to an annual charge of 1 per cent upon the amount unpaid on the loan. This entire 1 per cent may be retained by the local bank if the guaranteed loan is then sold. This encourages the securing of local investment in mortgages guaranteed by the local bank. If the mortgage, so guaranteed, is sent to the State bank, then one-half of this profit goes to the State bank for its guaranty. If the State bank guarantees the mortgage and sends it on to the central bank, then the State bank gets only one-fourth of the profit, the central bank gets one-fourth, and the local bank keeps one-half.

(4) The payments to be made by borrowers must, in all cases, be sufficient to pay the interest upon the loan, the administration charge or profit, and the amortization payments sufficient to retire the loan by the time it matures.

(5) Dividends to stockholders of local banks are limited to 6 per cent. Surplus earnings, after the payment of dividends, are used to create an earned surplus until the same is double the amount of paid-in capital. When the earned surplus is double the amount of paid-in capital, then the capital is bought in by the bank at par and paid for out of the surplus. Thereafter the earnings of the bank go to the depositors and borrowers in proportion to the business done under rules provided by the division of farm-land banking. This means the ultimate mutualization of the bank, the repayment to the stockholders of the money invested in the bank, and reduced interest rate to the farmer borrowers, for after the bank is mutualized the profits go to them. The farmer borrowers have created the surplus out of the interest charges which they have paid. The investor in the stock of the local bank has received 6 per cent on his investment, and the investment is tax free. When the surplus earnings are sufficient the investor in the stock receives back his money, and thereafter the farmer borrower gets the benefit of any profits.

The value of this provision can hardly be overestimated. It will insure to the investor a good return on his money and the ultimate repayment of his investment. It insures to the farmer constantly decreasing interest rates. It appeals to local pride and encourages safe and conservative management, because the farming population itself is ultimately to get the benefit of this management.

Section 15 provides for the appraisement committee, who are to appraise all property on which mortgage loans are made and are to make a written report.

Section 16 provides for insurance on any buildings upon the farm which are considered in the appraisement of the property on which a mortgage loan is made, and further provides that in appraising property for long-term loans buildings and destructible property shall not be valued at more than 20 per cent of the total appraisement.

Section 17 prohibits the operation of branches by local banks.

Section 18 provides for the conversion of existing land-mortgage companies and other State institutions into local farm-land banks.

Section 19 authorizes local farm-land banks to receive on deposit postal savings deposits, and to place as security for such deposits the national land-bank bonds issued against mortgages in the State where the local bank is situated. The local bank is authorized to buy these national farm-land bonds for the purpose of so using them.

This provision creates each local bank as a purchaser of the land-bank bonds issued by the central bank, and thereby helps to create a market for the national land-bank bonds. The purchase of these national land-bank bonds under this provision by the local bank does not exhaust its reserves materially, because such national land-bank bonds are immediately used as security for the deposit of postal savings funds. In effect, the local banks obtain deposits of postal funds and use these funds for the purchase of national land-bank bonds, which bonds are then placed as security for such deposits.

It is a serious question as to whether the Government should invest postal savings funds directly in national farm-land bonds. Under this provision the Government simply deposits the postal savings funds with the local banks and takes as security therefor the national land-bank bonds issued by the central bank. These national land-bank bonds must be issued against mortgages on lands in the State where the local bank is situated. These mortgages must be guaranteed by a local bank, and the assets of the local bank are primarily liable on this guaranty. The mortgages must then be guaranteed by the State bank and forwarded to the central bank. The central bank issues its land-bank bonds against these mortgages at par. The local bank can then buy these national land-bank bonds, and deposit them as security for postal savings deposits with the local

banks. The mortgages guaranteed by the local banks are being constantly reduced by amortization payments. As these mortgages are so reduced, the national land-bank bonds, issued by the central bank, are proportionately retired. The deposits of postal savings must be constantly secured by these national farm-land bonds at such figure or percentage as the postal savings trustees may decide.

Section 20 provides for the reserves to be held by local banks, and provides what proportion of such reserves may be held with the State bank or with the central bank.

Section 21 provides that each local bank upon its organization shall invest 10 per cent of its capital and surplus in stock of the central bank, and 20 per cent of its capital and surplus in stock of its State bank. The proportion of capital and surplus so invested must be always maintained, and the stock of the State and central banks so held by local banks must be held as a permanent investment and not sold, collaterated, or disposed of. This stock is to be carried on the books of the local bank at its book value.

By this means the farmers own the local banks, the local banks own the State banks, and the local and State banks own the central bank. Thereby all the profits of the entire system drain back in the local banks. These profits are used—

First. To pay a fair return of 6 per cent, free from tax, to the investors in the local bank;

Second. To repay the amount of their investment to such investors; and

Third. After this is done the profits of the local bank go to the borrowers and depositors from the local banks, thereby, in effect, reducing the rate of interest paid.

Section 22 provides for the organization of a State bank in each State as soon as 30 or more local banks have been organized in that State.

Section 23 outlines the details of such organization and the statements to be contained in the articles of association. The minimum capital is placed at $60,000, which would be 20 per cent of the capital of 30 local banks each organized with the minimum capitalization of $10,000.

Section 24 provides for the acknowledgment and preservation of the organization certificate.

Section 25 outlines the specific powers of State banks, as follows:

(1) To act as a clearing house for local banks in that State, to accept deposits from them, and pay the same rate of interest on all such deposits.

(2) To guarantee long-term loans as herein provided which have been first guaranteed by a local bank, provided that the amortization payments on such mortgages so guaranteed are turned over to the State bank, to be by it turned over to the central bank when the State bank sends on such mortgage guaranteed by it to the central bank.

(3) To rediscount short-term farm loans guaranteed by local banks having not more than two years to run; but the rate of rediscount must be the same to all local banks in the State. The State bank can hold such rediscounted short-term loans as a temporary investment, can sell the same with or without its indorsement, and afterwards buy back and resell the same.

(4) To use its capital stock, surplus, and deposits as a revolving fund for the temporary purchase or holding of long-term or short-term mortgage loans guaranteed by a local bank, and to use the same in buying in national land-bank bonds of the central bank. The capital and surplus can not be permanently invested in anything except United States bonds, bonds of the State in which the bank is located, or other securities approved by the division of farm-land banking.

(5) To exercise such general banking powers as are incident to the foregoing powers and to act as broker in selling short-term mortgage loans.

Section 26 outlines the limitations on State banks, as follows:

(1) The amount of long-term loans guaranteed by a State bank shall not exceed a hundred times its capital and surplus.

(2) The administration charge of the State bank for guaranteeing such long-term loans shall not exceed an annual charge of one-fourth of 1 per cent of the amount unpaid on the loan, another one-fourth going to the central bank.

(3) The commissions of the State bank for acting as broker in selling short-term loans and its rates of rediscount to local banks shall be subject to the supervision of the division of farm-land banking.

(4) The amount of short-term mortgage loans which can be guaranteed by a State bank shall not exceed five times its capital and surplus.

Section 27 provides for the investment of 10 per cent of the capital and surplus of the State bank in the capital stock of the central bank, as above outlined.

Section 28 provides for the election of directors for the State bank, each local bank having one vote. It also provides for the election by the local banks from the board of directors of a president and vice president for the State bank.

Section 29 provides for the reserves to be maintained by the State bank and provides what proportion of such reserve must be kept within its own vaults and where the balance may be kept.

Section 30 provides for branches of the State bank within the State and for the keeping of reciprocal accounts with other banks.

Section 31 incorporates the central bank under the name of "United States Farm Land Bank," with a capital of not less than a million dollars, and with the right of indefinite increase. Its principal place of business is fixed at Washington, and its charter continues for 50 years, with the right of renewal and subject to amendment or repeal by Congress, provided that the rights of creditors are not thereby affected.

Section 32 outlines the specific powers of the central bank, as follows:

(1) To act as a clearing house and reserve agent for State and local banks and to pay the same rate of interest on deposits from such banks. Also, to receive postal savings and other governmental deposits.

(2) To have general banking powers, including the power to discount short-term farm loans for local banks, maturing within two years and guaranteed by State banks; to trade in short-term mortgage loans and paper guaranteed or indorsed by it; to buy and sell Government and State bonds; and to act as a broker in handling Government, State, county, municipal, and similar securities.

(3) To issue, sell, and trade in its national land-bank bonds provided—

a. That the mortgages against which such bonds are issued have been first guaranteed by a local and State bank.

b. That such mortgages comply with this act.

c. That its national land-bank bonds so issued are subject to call at par at any interest period or after a specified time (not longer than five years from date of issue), as may be provided in such bonds.

d. That such national land-bank bonds shall always be protected by the deposit of an equal amount in face value of first mortgages, maturing not less than five years after that date, and guaranteed by a local and State bank.

e. That all amortization payments on mortgages so held as security for such national land-bank bonds shall be forwarded to the central bank, held in the joint possession of the bank and the Federal fiduciary agent, and used in retiring its national land-bank bonds issued against such mortgages, so that the amount of national land-bank bonds shall never exceed the amount of the mortgages held as security therefor.

f. That as amortization payments are credited upon the mortgages a corresponding amount of national land-bank bonds shall be called in and paid.

g. That the mortgages held as security for such national land-bank bonds shall at all times be in the joint possession and under the joint control of the central bank and of the Federal fiduciary agent for said bank.

h. That the national land-bank bonds issued by the central bank shall be issued in series. All the national land-bank bonds of a given series must be secured by mortgages on lands in one State.

(This provision will enhance the selling value of the land-bank bonds, because the laws governing registration, foreclosure, exemption, etc., of the mortgages securing the same will be the same in the case of such mortgages and because each of such mortgages covers land in the same State.)

i. That no land-bank bonds shall be issued against a mortgage maturing earlier than five years after its date.

(This provision insures the issue of land-bank bonds only against mortgages containing an amortization requirement.)

(4) To use its capital stock, surplus, and deposits as a revolving fund for the temporary purchase or holding of mortgages guaranteed by a local and State bank until land-bank bonds can be issued against same; or to use its capital and surplus for trading in its national land-bank bonds, so as to maintain the price of the same; or to use them in rediscounting short-term mortgage loans guaranteed by a local and State bank, and maturing at not longer than two years, provided that such capital and surplus can only be permanently invested in United States Government securities.

(5) To act as a depository for the National Government, and particularly to receive deposits of postal savings funds and to invest the same or such portions of the same as it may by law be authorized to invest in Government, State, county, and municipal bonds, or in long-term, first-mortgage, farm bonds.

(6) To rediscount for national banking associations farm loans held by them, and to rediscount with such association short-term farm loans held by it which comply with the provisions of section 24 of the Federal reserve act. Such rediscount by a national banking association of short-term farm loans is to be considered and treated as a farm loan under section 24 of the Federal reserve act.

It seems probable that the farm loans authorized under section 24 of the Federal reserve act will probably be small in number and amount, as a commercial bank will naturally not desire to tie up its funds in farm mortgages. This provision enables the commercial banks to rediscount for the central bank, taking short-term farm loans held by it, which have been guaranteed by a local and State bank, and treating these as loans under section 24 of the Federal reserve act. The practical effect of this will be to make available some of the funds in the national banks for the use of short-term farm loans through a system of rediscount; whereas it seems improbable that any large amount of relief will come to the farmers by reason of the direct operation of said section 24 of that act.

Section 33 provides for the reserves to be kept by a central bank.

Section 34 provides for the management and control of the central bank by a board of governors, consisting of nine members. Four of these are appointed by the President, by and with the advice and consent of the Senate, to serve for life or during good behavior. Vacancies among these four will be filled in like manner. The remaining five governors are selected by the stockholding banks, and arrangement is made for their serving for eight years. The election of these five governors is held by the State bank, each State bank casting as many votes as there are local banks in the State, and each local bank having the right to instruct how its vote shall be cast.

From the five governors selected by them the stockholding banks select two, and also select one of the four named by the President. From these three so selected the President must name one as president and two as vice presidents of the central bank, and a new election for president and vice presidents takes place every eight years. In case of a vacancy in the office of president or vice president, the board of governors fill the vacancy for the unexpired term from among their number.

The salaries are fixed as follows:

Each member of the board of governors, $10,000 per year; each vice president, $12,000 per year; the president of the bank, $15,000 per year.

All governors are required to devote their entire time to the work and are prohibited from being interested financially in any local bank. Each governor is required to give a bond for $100,000.

The foregoing seems to be a fair and just method of selecting the directors of the central bank. The majority of the directors are chosen by the stockholding banks, and each of these directors serves for eight years. A minority is appointed by the President and the Senate and hold office for life. This insures a permanence in office of some of the members, while the control rests with the farmers themselves through the local banks which they own and control.

Section 35 provides that the central bank shall not be permanently organized until at least 12 State banks have been organized. Provision for a temporary organization of a central bank, under the direction of the farm land banking board, is made in this section.

Section 36 provides for the creation and operation of branches of the central bank, both within and outside of the United States, under the direction of the division of farm-land banking.

Section 37 enumerates certain privileges granted to national land-bank bonds, issued by the central bank, by making them available for the following purposes:

(1) As security for the deposit of postal savings funds in any farm-land bank.

(2) As a local investment for trust funds and estates administered by United States courts.

(3) As a security for loans from national banking associations to farm-land banks under the provisions of section 24 of the Federal reserve act, as above outlined.

But these privileges are extended only to national farm-land bonds of the central bank issued against mortgages on lands located in a State which—

(a) Exempts such mortgages from all State taxation or assessment, direct or indirect;

(b) Withdraws or cancels or waives the right to claim any exemption of such mortgages;

(c) Provides for registration of land titles, for conveyance, and for foreclosure, so as to give reasonable protection to the holders of mortgages in the opinion of the division of farm-land banking; and

(d) Accepts the land-bank bonds of the national farm-land banks, issued against mortgages in its State as a local investment for the funds of saving investors in that State, of trust funds and estates controlled by the courts of that State, and as a local investment for the reserves of insurance companies in that State.

Section 38 provides that any borrower may pay off his mortgage, or any part thereof, on any interest period after the first five years, in cash or by presenting to the bank the national land-bank bonds of the same series as those issued against his mortgages. It also provides that the central bank can buy in its national land-bank bonds, cancel them, and, at the same time, release a corresponding amount of mortgages; but the central bank, when it calls in such land-bank bonds for payment, must pay for them at par.

This provision is obviously fair, and encourages the individual farmer to invest in national land-bank bonds of the series in which his mortgage is used.

Section 39 exempts national land-bank bonds from all taxes, assessments, or charges.

Section 40 places all matters relating to the organization and operation of farm-land banks under the division of farm-land banking.

Section 41 appropriates a million dollars to be temporarily invested in the stock of the central bank until this stock can be taken up by State and local banks. This money is to be repaid to the Treasurer of the United States, with interest at 2 per cent, in amounts of not less than $50,000 each, as and when stock in the central bank is taken up by the local and State banks.

The necessity for first incorporating the central bank before the State and local banks is obvious. Until the State and local banks are organized, the control of the central bank is under the farm land banking board. As the State and local banks are organized, this money is repaid to the Treasury.

Section 42 appropriates $100,000, to be expended under the direction of the farm land banking board in organizing the central bank and in helping to organize local and State banks.

Section 43 provides for offenses committed under this act.

Section 44 repeals all acts inconsistent with this act.

Address of Hon. S. D. Fess Before Alumni of Brown University at Annual Meeting Held in Boston January 28, 1914.

EXTENSION OF REMARKS

OF

HON. GEORGE F. O'SHAUNESSY,

OF RHODE ISLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 19, 1914.

Mr. O'SHAUNESSY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of Hon. S. D. FESS before the alumni of Brown University at its annual meeting held in Boston January 28, 1914.

The address is as follows:

ADDRESS OF HON. S. D. FESS BEFORE THE ALUMNI OF BROWN UNIVERSITY AT ITS ANNUAL MEETING HELD IN BOSTON JANUARY 28, 1914.

Mr. Chairman Lingham, President Faunce, and men of Brown, next to the honor of being a member of your association is to be invited to a Brown dinner. I esteem it more than an ordinary honor to be invited to be here at this time. As a student of our history, as well as a practical educator up to within the last year, I have been fairly familiar with the great work in the world of better living that your great institution represents. In the truest sense it has been a center of culture, a real seminary of ideas, a training ground for leadership. I will not be guilty of the common error of the stranger coming to you to tell you of your achievements. That had better be left to those more familiar with your progress. Neither will it be expected that I shall call the honored roll of your distinguished alumni. However, if the greatest discovery ever made, either by individual or institution, is a man, it would be an inspiring theme to examine this part of the activity of Brown.

Without reaching back into your history, but limiting ourselves to the present generation, it would be easy to point to a dozen leaders in various departments of life's activities who have admirably held aloft the banner of your alma mater. Just now I am thinking of an honored alumnus whose great powers have exalted every post he has occupied, first as a leading barrister in the Nation's metropolis, then as the fearless chief executive of the Empire State, and now the bench of the highest judicial tribunal of earth. If he would care to leave that post, it would not require a credulous mind to predict still a higher rank, dependent upon his willingness to accept the call. Every son of Brown is proud of Justice Charles E. Hughes.

Over in my State of Ohio we love to share with Brown the honor of claiming a leader in another field, the late John Hay, in my judgment America's greatest diplomat. It is easy to allow the enthusiasm of the hour to carry one beyond prudential utterance, but I guard my words when I say this son of Brown, introduced to the international world by McKinley, took higher rank as an international statesman than any other American. That rank rests not alone with his ability to induce a much-provoked European concert to withhold its desire, if not determination, to partition China, and thereby to preserve the integrity of the Celestial Empire, within whose grasp is wrapped the future of the millions of the Orient, but it also bears the stamp of peaceful adjustment by the treaty which bears his name. The Hay-Pauncefote treaty superseded the unfortunate Clayton-Bulwer treaty of 1850 and gave us carte blanche authority to begin and complete the world's greatest engineering feat. In this treaty we accomplished by peaceful methods what other great international minds had failed to do even by the threat of war, and at a time when the adverse contracting party held the whip hand, because of the well-defined desire of our people to undertake the gigantic task. It now remains for our Congress to show its appreciation of this achievement of this son of Brown by respecting the terms of the agreement.

In the field of university administration this country is inclined to look upon the rise and progress of the great Michigan University, whose alumnæ figure prominently in every center in the Nation, as the earliest and one of the best examples of what a State university should be. Of all the great university presidents in our land President Angell, another son of Brown, stands as the Nestor. A similar influence is operative on the far Pacific coast, where Dr. Benjamin Ide Wheeler, another son of Brown, directs the university activities of California's great State university. All Brown men honor such men as E. Benjamin Andrews, J. Franklin Jameson, and scores of others, but with due regard for the splendid achievements of the later Brown men, I surely do not indulge in irresponsible vaporing when I assert that the most illustrious son of your famous alma mater was the educational statesman, Horace Mann.

Only a short distance from where we now sit, in front of the capitol of his native State, with its gilded dome, stands a superb statue of Horace Mann; and near by it stands a second statue of an equally historic figure, his great contemporary, Daniel Webster. Of all the many great sons of Massachusetts, native or adopted, heroic in war and peace, the Pilgrim State saw fit to give an equal recognition with the Nation's "expounder of the Constitution" to the Nation's greatest educator.

When Horace Mann entered Congress, in 1848, as the successor to John Q. Adams, it was the case of an educator whose reputation had extended to Europe succeeding the most notable political figure in America.

Adams had been educated in Europe, and had served his country in the Diplomatic Service for years. He had held honorable positions in his State, was premier in Monroe's administration, and was in turn his successor as President from 1825 to 1829.

In 1831 his most important service was begun when he entered Congress, where he remained the most distinguished factor in the period of the development of an organized public opinion for human freedom. At his death, in 1848, a less distinguished man, but equally brilliant as a speaker and superior as a scholar, Horace Mann, the educator, succeeded him.

The educator was enjoying the acme of his popularity at the time. A son of Brown, in which he became in rapid succession a tutor in Latin and Greek, then a student of law in the famous Judge Gould School at Litchfield, Conn., a brilliant young barrister, with rare prospects before the bar; a constructive legislator in both the lower and upper house of the Massachusetts General Court, being speaker of the upper house, then the head of the State Board of Education from 1837, the author of the State system of hospitals, the founder of the common-school system of Massachusetts, the normal-school system of the United States, and the district library system of his State; the author of a dozen voluminous reports which attracted attention in Europe, some of them being translated in French, and at least one ordered printed by the German Emperor and gratuitously distributed to all the schools of Prussia; the editor of the School Journal for 10 years, the popular lecturer upon educational themes before the country, the author of the Modern Teachers' Institute, Horace Mann, the educator, the editor, the reformer, the scholar in politics, the educational statesman, came to his public duties as a Congressman in 1848 with a better equipment than the best of his contemporaries. His four years as a Member of the lower House were distinguished by the same devotion to the higher instincts of the race which his career as an educator had foreshadowed.

All his energy was devoted to measures of a constructive and a remediable character. His independence of party for the mere sake of party fealty had won opposition from the old line or regular party leaders. His heroic attack upon Webster after his 7th of March speech, which is a classic in American political satire, was at once pronounced by friend and foe a great performance, but the price of his political defeat in a nomination convention.

The Webster influence in 1850 succeeded in defeating his renomination by a single vote. Then the distinguished educator-statesman declared he would be bound by no party ties and would compel the people of his State to pass verdict upon his conduct in Congress. He accordingly entered the race as an independent, in opposition to the regular party nominee, and was triumphantly reelected over the powerful influence of Senator Webster and friends.

On September 15, 1852, he was nominated by the Free-Soil Democracy for governor of his State, the party that sent Charles Sumner to the Senate as Webster's successor in the same year.

On the same day he was elected president of Antioch College in Ohio, just then opening its doors. His choice of the head of the college rather than the head of his State has been one of the crowning incidents in the chapter of altruism in American life. The choice meant the leaving of the center of culture and a host of friends, numbering Sumner, Parker, Emerson, and the Concord School, to go West, upon the confines of civilization, to take up the work of the educator, which was destined to cost not only his health but his life, as future events proved.

The choice was dictated by the same altruistic, constructive impulses that had been his dominating traits from the beginning. His passion was accomplishment for humanity. He claimed that man's greatest enemy was ignorance, and the true remedy, the only remedy, was education. As ignorance was the race's worst crime, knowledge, spiritual and intellectual knowledge, was its greatest boon. His conception of education was so comprehensive that he amazed his friends at his grasp and his enthusiasm over its possibilities. His yearning to discover the latent possibilities of childhood to each child became a ruling passion with him. His conception of the final reaches of human endeavor, spiritually and intellectually speaking, was not spasmodic. It was the result of sane conviction.

His graduating theme at Brown at the age of 23 was "The Progressive Character of the Human Race." This proved the bent of the young collegiate's mind.

When as a young man he was invited to address a concourse of New England people on a patriotic occasion, July 4, he chose as his theme "The Debt Each American Owes to Posterity."

These suggestions throw light upon the ruling motives in his public career. Indeed, his whole life was but an enlargement of these ideas expressed in youth.

The sight of a hopeless cripple, mentally as well as physically, induced in his mind an inquiry into the cause, with a possible plan for relief. He instituted an inquiry as to the number of such unfortunates in his native State. After fortifying himself with an overwhelming array of facts, a practice invariably followed by him, he sprung a surprise by supporting a bill to establish the State hospital. This called out virulent opposition in which Mann was ridiculed as the schoolmaster. One politician charged him with the enthusiasm of the sophomore. The end of the contest was the hospital at Worcester, the first of a system that now covers the entire country as with a mantle of hope for the helpless.

A fundamental principle with him was, if the race is elevated it must begin with the child, not the adult. In other words, there was more in formation than in reformation in character building.

Another principle fundamental was that the process of cleaning up a boy must begin with his mind rather than with his body. Seek self-respect first, with an assurance that other desirable results will follow. Consequently the greatest boon to mankind is a possible practical common-school system to which will be admitted all children, without discrimination between the

poor and the well to do. He demanded the doors of the schools must swing wide to the very least well to do.

The steps in perfecting this system were:

1. Common schools supported by taxation.
2. Normal schools to train teachers.
3. School committees to be paid.
4. County institutes to be established.
5. Survey by school registers was inaugurated.
6. Cooperation of home and school by library system.
7. Popular education through the lyceum.
8. Carrying it to the people by means of the educational journal.

In 1837, at the age of 41, he accepted the position of secretary of the State board of education. One of his friends expressed his surprise that he would deflect a brilliant career as a lawyer for the work of the educator. Mr. Mann, in reply, began to unfold the field open before him as a builder of character, until his friend was convinced of the wisdom of his step. However, his friend insisted that he should change his title from secretary for one that meant something, to which the educator said:

If my title does not mean enough, it is my duty to make it mean more. I much prefer to be a creditor to a title rather than a debtor.

To another friend who deplored the fact that the law was to lose a brilliant advocate he replied, "Let the next generation be my client."

To his great Scotch friend, George Comb, the author of the "Constitution of Man," he wrote "henceforth all my energies shall be devoted to the youth of my State."

During his 10 years' service in the Massachusetts Legislature he showed his disgust for the tactics of the practical politician, the mere timeserver. To-day he would probably be called an insurgent or an irregular party man. While he recognized the importance of teamwork, he refused to bury his individuality or to lose his identity. He despised the modern caucus method, which binds a Representative in Congress to vote with his party for party regularity sake as against his own judgment. It was along these lines against which he rebelled and was read out of the party. Such a thing as permitting some one else to do his thinking was inconceivable.

From these facts it can be readily understood why he declined the governorship of his State to accept the presidency of Antioch College. Before he accepted he had to be assured that the authorities would agree to certain conditions which he named. He required its doors open to men and women alike without any discrimination. This was a strange doctrine in 1852. He demanded it to stand for religious education upon a nonsectarian basis. At this time it was not thought that a religious institution could be presided over by a layman. He required that it must accept students without discrimination between the races. That was regarded as a most vicious innovation by most of the educated people of all nations. He also required the introduction of the elective system in the college course.

The first catalogue of Antioch has a footnote explaining the meaning in college circles of the word "election." He also insisted that entrance requirements should not permanently exclude those who could not meet all the requirements. He also required means for the education of the poorer young men and women on the grounds that the brightest talent will most often be found among the youth of least means. The children of the well-to-do would not need the help of the State as those of the poor. The latter by education could be made self-supporting and often leaders of men.

The greatest service to mankind will be rendered by that institution that will take these future wards of the State and place them upon their own feet, and virtually convert them into real constructive forces for the Nation. With this conviction dominant, he named his own conditions, which were met at once.

For six years, his last years, he labored in the field of higher education. He introduced many features then unknown, now universally accepted. He emphasized the value of health and introduced the teaching of physiology; also the value of outdoor sports, the precursor of the modern athletics. It may be of interest to know that the national game of baseball was started upon the campus of Antioch by the first game played between the Cincinnati Reds and the college team. This was after the death of President Mann.

The last days of the educator were somewhat distressed by the burdens of the college finances. His wonderful life was realizing the climax in the materializing of his great principles.

These principles were set forth in his masterful address, his inaugural address, 1853, upon the occasion of his installation as the head of the college. This address is still pronounced as one of the most notable ever delivered upon the subject of education in this or in any other country.

To a friend he said: "If these buildings should save a single boy to a useful life, they would be paid for." His friend expressed his surprise at his enthusiasm, when Mr. Mann answered: "If the boy that was saved were my boy, I would not give him up for all the money required to erect these buildings."

Perhaps no man of the Nation has so many and varied achievements attached to his record for the constructive uplift of humanity as Horace Mann. He thought not only in the problem of state, but rather in that larger sphere of cosmopolitan philanthropy that included in his public concern the future generations.

He seemed to abhor the theory that a thing is good simply because it is old or to be avoided simply because it is new. His force fully exemplified Lowell's dictum that new occasions demand new duties and time makes ancient good uncouth.

He was a reformer of the truest type, whose chief concern could not be limited by the present, but must extend to the future. This principle kept his gaze fixed upon the youth of the country and his education as the chief function of the State. He broke with tradition and invited the fiercest condemnation of the self-satisfied.

When he urged the establishment of the State hospital system to care for the unfortunates he was opposed by some would-be statesmen and ridiculed by others as an impractical theorist, espousing measures with the enthusiasm of the sophomore that had no place in the statute books.

When he took a determined stand in favor of laws for the suppression of intemperance and traffic in lotteries he was again ridiculed as an erratic reformer who believed he could make men moral by law.

When at the age of 41 he voluntarily left the practice of law to take up the work of building the school system of his State even his very best friends doubted his wisdom and his enemies questioned his sincerity.

In that day, as to-day, men could not understand how any but a money consideration could be the determinant in the choice of a life work.

To both opposition and ridicule he had but one answer. Man's success is not measured by what he gets out of life, but by what he puts into it. No work limited to the time, no matter how remunerative, can be compared with that for the generation to come, no matter how poorly appreciated.

His proposals for the establishment of the common-school system, including the normal schools for training teachers, were attacked as a wicked waste of the people's money, to do what was better done by private schools at no expense to the State. Nor did this opposition cease with the success of the enterprise. His greatest struggle was to save the system against the attacks of its enemies after it had been established. Strange to say the most bitter struggle came from the educators of his own State, and especially from the city of Boston, where the schoolmasters united to bring his efforts to ridicule.

Is Benjamin Kidd justified in his statement that the most persistent and bitter opposition to reform comes from the educated classes of a country? The answer might be sought in legislation both in State and Nation.

When he was urged to enter the race for Congress in 1848, after he had been at the head of the educational movement for 11 years, he agreed to do it, provided he would not be compelled to leave off altogether the direction of his reforms in education.

In Congress his first speech indicated his future activities in that body. It was the right of Congress to forbid the existence of slavery in a Territory, the position taken by Seward in 1850, two years later, and by Lincoln so forcibly in his debate with Douglas 10 years later, when Lincoln declared to a protesting friend that he was seeking larger game.

In this field he proved himself a worthy successor to the "Old Man Eloquent."

His abandonment of further political life to resume the work of the educator as the first president of Antioch College is also in keeping with this high type of altruism which abhors mere salary and position when it is at the expense of the greatest service for mankind.

The various innovations he introduced in higher education, called by him the "New experiment," have become so universally accepted by all educators that it would appear they never had any opposition.

In this rôle he is not only the country's highest type of the altruist, but one of the most signally successful constructive figures in American life.

On the monument standing upon the campus at Antioch, where his body rested for two years, are placed these words, taken

from his address to his students and which best reflect the purpose of his wonderful life:

Cherish in your hearts these my parting words, be ashamed to die until you have won some victory for humanity.

I have here but merely sketched the actual achievements of this wonderful man, a son of Brown, yea, Brown's most distinguished alumnus, as well as the country's greatest educator.

I speak with some feeling of this man and his work for higher education. I am now president, serving without salary, of the college which he opened and gave the last six years of his life to its upbuilding.

When at home I tramp almost every day over the campus made sacred by his feet. I live in the house in which he died. I breathe the college air still surcharged with his spirit. I daily hear his standards referred to in the work of character building. I will therefore in this presence of Brown Alumnæ, to which he belonged, be excused for expressions of appreciation of his nobility of life.

Now, I beg you to indulge me a moment on a theme of most interest to me outside the future of Antioch, his "great experiment."

In addition to the wonderful program this man had in mind, much of which he lived to see universally accepted, he hoped the Government would fulfill the desires of Gen. Washington to establish at the capital of the Nation a national university. It is perhaps not in order upon this occasion and with this presence for me to speak of this at length. Suffice it to say that Gen. Washington left $25,000 to begin the enterprise. Had that sum been placed on compound interest it would amount by this time to something like $4,000,000. Gen. Washington's wishes were indorsed by official recommendations by Presidents Adams, Jefferson, Madison, Monroe, John Quincy Adams, and Jackson. It was revived by President Grant and repeated by President Hayes. It has been recommended by Supreme Court judges, Cabinet officers, members of the Army and Navy, professional and business organizations, and women's clubs. It has been urged by the National Educational Association, representing the most important body of molders of public opinion in the Nation. It is also backed by the Association of State University Presidents.

I have introduced a bill looking to the consummation of this long-deferred hope. I anxiously await the approval of an effort to make our capital, already the greatest scientific center of the earth, the mecca of the world's research students. We do not mean to multiply learners so much as to increase learning. Not to increase scholars as much as augment scholarship. When Sir Humphrey Davy was asked what his greatest discovery was, "Michael Faraday," replied the great scientist, without a moment's hesitation.

If Brown's greatest find is a great scholar, then America's greatest duty is to assist your great work of discovery. I hope to see the day when Brown, in her training ground for leadership, finds a rare figure, he need not go to Berlin for the advanced expert research, but he may come to Washington as a better place. I hope you will give me your moral support to induce our Government to unlock her rare museums, bureaus, laboratories, and stations for expert training, to the promising men and women, and make it possible for such to spend their lives in the discovery of new truths of science and philosophy. Is there any greater function of government? This is what Germany has done, and is in part the explanation of the high rank that Empire has taken since the establishment of the great university at her capital. Of course such an institution could not injure any other as Brown, since its very existence must depend upon these institutions which must feed it. The national university—a purely graduate research institution, not conferring degrees—and the more than 400 other institutions of higher learning must be mutually helpful, each largely dependent upon the other. It is neither to duplicate nor to supersede but to supplement your work.

No fear either of partisan or sectarian control need be harbored. What political or sectarian influence would be able to wrongfully influence a group of research scholars made up of men of the type of your distinguished President Faunce or our Nation's distinguished President Wilson. Such men, on the contrary, would exert a most salutary influence upon the life of the Capital.

What will be done, if the university can be established, is suggested by what has been accomplished by the Smithsonian Institution since its founding in 1846. To-day it has to its record not less than 12,000 titles, representing its contributions to the advancement of knowledge. It is in correspondence with at least 60,000 people, representing all parts of the world. It has an official affiliation with every learned society of the earth. Starting with the munificent gift of $515,000, it has not only preserved the original gift but it has added through friends of knowledge additional gifts, until it now has a million dollars at its disposal. Besides, it has buildings which will amount to almost, if not altogether, that sum. It also has collections, procured by governmental exchanges at small cost, to the value of another million. All this with no hint of influence of partisan or sectarian bias. If such an institution, under such management, with a half million endowment to start with, can accomplish so magnificently, what might be expected from a national university for research, with an unlimited fund at its disposal?

While I did not come here to speak of this, it is what is in my mind, and I trust I have not offended the amenities of the occasion by intruding this note which is dominant in my thinking just now. I repeat that I esteem it as no small honor to be invited to be with you at this time. I have had a taste of the Brown life, for which I sincerely thank you. Good night.

Railroads in Alaska.

EXTENSION OF REMARKS
OF
HON. CLEMENT BRUMBAUGH,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 18, 1914,

On the bill (S. 48) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. BRUMBAUGH. Mr. Speaker, the Committee on the Territories of the House of Representatives gave long and careful study during the past summer to the bill which is now, through the honored chairman of the committee, presented to this House for the development of the great, rich wonderland of Alaska.

The committee invited and held extensive hearings, hearing freely and fully at great length experts and others from all parts of the United States, Canada, Alaska, and the world at large.

The results of our labors—the complete reports of the hearings—are printed in book form and have been available to all. It is but fair to state that the committee approached the consideration of this great subject with open minds, and that those of the committee who could or would attend the hearings, and thus make up their decision from the evidence in the case and the facts deduced, have given their support to this measure, moved to that position wholly by the justice and benefits of this great measure both to all the people of the United States as well as to the people of Alaska themselves.

PRESIDENT WILSON'S STATEMENT FOR ALASKA.

We are more than gratified that our position is so completely sustained by our great President, whose wonderful grasp of affairs and fine statesmanship has not only met every delicate emergency with consummate ability, but whose keen sense of right and justice is leading the thought of the world to higher planes and better things.

You all heard what he said in his masterly address before the House and Senate December 2 last on the subject of the need, the benefits, and the justice of Alaskan development. The President speaks of Alaska as a great storehouse, and points out that the development of Alaska is an imperative duty that confronts us. I want to refresh your minds with his clear, logical, and forceful statement, based on reports obtained from most minute and thorough inspection of all parts of Alaska. The President says:

A duty faces us with regard to Alaska which seems to me very pressing and very imperative; perhaps I should say a double duty, for it concerns both the political and the material development of the Territory. The people of Alaska should be given the full Territorial form of government, and Alaska, as a storehouse, should be unlocked. One key to it is a system of railways. These the Government should itself build and administer, and the ports and terminals should itself control in the interest of all who wish to use them for the service and development of the country and its people.

But the construction of railways is only the first step; is only thrusting in the key to the storehouse and throwing back the lock and opening the door. How the tempting resources of the country are to be exploited is another matter, to which I shall take the liberty of from time to time calling your attention, for it is a policy which must be worked out by well-considered stages, not upon theory, but upon lines of practical expediency. It is part of our general problem of conservation. We have a freer hand in working out the problem in Alaska than in the States of the Union, and yet the principle and object are the same, where we touch it. We must use the resources of the country, not lock them up. There need be no conflict or jealousy as between State and Federal authorities, for there can be no essential difference of purpose between them. The resources in question must be used, but not destroyed or wasted; used, but not monopolized upon any narrow idea of individual rights as against the abiding interests of

communities. That a policy can be worked out by conference and concession which will release these resources, and yet not jeopard or dissipate them, I for one have no doubt, and it can be done on lines of regulation which need be no less acceptable to the people and Government of the Nation at large, whose heritage these resources are. We must bend our counsels to this end. A common purpose ought to make agreement easy.

A FAIR, JUST MEASURE.

We believe the bill herewith presented is a fair, just, and reasonable measure that merits the favorable action of this House. The bill is not only a measure for the development of Alaska, but, as conditions now exist in Alaska, it is a measure for the very preservation and salvation of Alaska.

PRESIDENT ROOSEVELT'S GREAT SERVICE.

President Roosevelt did a great service to future generations when he pried the hands of the special interests of greed and avarice, who were planning to take and appropriate this richest country on earth, loose from the throat of Alaska. But to stop there and to continue in the resultant cessation of activities would and must mean the destruction of Alaska.

We must start Alaska on a new life of industrial freedom and development, or, more properly speaking, simply give Alaska a chance to start and give her that assistance to start that any sensible Government has always given any frontier land; just as the United States in the past has given every new frontier part of the United States assistance to start. And then let Alaska free to work out her own destiny, and Alaska will work it out and answer the call of the future with fine American States, of fine American citizens to safeguard the Pacific coast and make all possible future wars with the Orient impossible. [Applause.]

GIVE ALASKA UNBIASED CONSIDERATION.

I trust this great question will be considered by this Congress—as all great questions ought to be considered—without party or sectional bias or interests, but with an eye single to the honor and glory of our great land we all love so well and to the great needs of this great Alaska, of such splendid and wonderful possibilities, whose trustees we are, and bound, therefore, by every honor and tradition of the past to treat her fairly, as we have been treated in like cases in every part of our national domain by the Government of the United States.

Mr. Speaker, we know so little about the real Alaska, and the little we know has been all so incorrect, that it may be appropriate to describe briefly the Alaska we would develop.

FALSE CONCEPTIONS OF ALASKA.

Possibly no country on earth has suffered so much by the conception held of the whole land as obtained from the parts of it which are usually visited as has Alaska. The traveler sails along the 7,000 miles of coast line and sees nothing but a high range of snow-capped mountains, with but three gateway valley inlets through them into the great interior beyond, or he visits the Klondike, one of the worst climatic regions on earth, and comes away saying and thinking that like these is all Alaska. He does Alaska the same injustice that a traveler would do the United States who saw only the eternal snow-capped Pikes Peak of Colorado, knew nothing of the beautiful world beyond, and went away saying and thinking like Pikes Peak is all of the United States.

ALASKA DESCRIBED BY COMPARISON.

Possibly the best way to describe Alaska is by comparison. To continue thinking of Alaska as a glacier field of snow and ice and mountain limitless wastes is to do violence to truth and ordinary inteiligence. Alaska has wide areas of valley lands and timber, with as many varieties of climate as can be found in the northern parts of the Middle States. The warm Japan Ocean Current does for many parts of Alaska exactly what the Gulf Stream does for Great Britain, Ireland, Norway, and Sweden, and many parts of Alaska have a northern temperate climate, where people can live in all the comforts of the northern Temperate Zone.

ALASKA A WONDERLAND OF WONDERFUL POSSIBILITIES.

We must wake up to the truth and to the fact that here is a great tract of land larger than Norway and Sweden, capable of outranking in population and wealth both of these combined, with a much better climate and much better farm lands, infinitely richer mineral deposits, with rivers navigable more miles than the Mississippi or the Ohio, with valleys where future American States can be planted, where ten to twenty millions of people can live just as comfortably and successfully as they can in northern Minnesota, Wisconsin, the Dakotas, or Canada. In fact, Alaska is a great slumber land awaiting the awakening touch of development; ready to give happy, comfortable homes to millions of people; ready to give and guarantee a cheaper coal supply to all the people of the United States for centuries to come; ready to give us the greatest copper, gold, and silver mines the world has ever known; ready to grow a future brave, strong, hardy race of men and women such as inhabit Norway and Sweden, future American citizens to safeguard our Pacific coast, to defend the Government that will nourish it into life, and to give back to us and to do for us infinitely more than we can or need to do or give to Alaska. With this view and conception of its future let us think of Alaska, and thus come to know the possible Alaska of the future and appreciate the grandeur and patriotic responsibility of our part in this great measure now before us.

ALASKA BY COMPARISON.

Alaska's importance and value to the United States can best be comprehended by comparison with other lands of like climate and soil. As a history-making epoch event the purchase of Alaska stands second in importance only to that great epoch-making event in history known as the Louisiana Purchase. The Louisiana Purchase consummated by Jefferson doubled the then existing area of the United States and gave us the great domain of the Union along the Mississippi River from the Gulf of Mexico to Canada and out to the mountain ranges and beyond, and therewith gave us full possession and ownership of the great Mississippi River and its tributaries. The consummation of the Louisiana Purchase by that great future-seeing President and statesman, Thomas Jefferson, was one of the great epoch-making events in the history of the world, and has been regarded by the world as the very flower of consummate statesmanship. It changed the map of the world and the destiny of the Governments of the earth.

Second only in importance to this momentous event of history is the purchase of Alaska from Russia, consummated by Secretary Seward in 1867. During the darkest days of the Civil War, when we feared that England would declare for the South, Russia's mysterious fleet stood out to sea. Later Secretary Seward desired to find a way to pay our moral financial obligation, and he found the excuse to pay the debt by buying from Russia, for $7,200,000, what was supposed to be worthless Alaska. It has turned out to be like buying a hidden gold mine with a copper 1-cent piece, and our income, measured in dollars and measured in benefits and blessings to all, will prove a like prosperous investment and return on every dollar spent to develop Alaska.

Mr. FESS. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman yield?

Mr. BRUMBAUGH. I regret I can not. I have but a little time. When I have finished I will yield to the gentleman with pleasure.

Mr. FESS. I wanted to ask the gentleman about the ridicule that Mr. Seward suffered when he bought Alaska.

Mr. BRUMBAUGH. I thank the gentleman. I remember very well that history so states that fact; Seward's folly they called it, I believe.

ALASKA HOLDS THE FUTURE GOLD SUPPLY OF THE WORLD.

We gave $7,200,000 for Alaska. Last year we took out of Alaska, in gold alone, about $22,000,000. In the last 14 years we have taken out of Alaska, in gold, silver, copper, coal, fish, and furs, about $475,000,000. On account of the lack of shipping and railroad facilities, we have hardly begun to scratch the surface of Alaska. No one can estimate the billions of undiscovered wealth awaiting us in this undeveloped, unknown wonderland. In fact, Alaska holds the future gold supply of the world. The Transvaal now furnishes 40 per cent of the world's supply of gold. When we shall have permitted Alaska to develop in a normal, natural way, Alaska will furnish 40 per cent of the world's supply of gold.

COMPARISON AS TO SIZE, CLIMATE, VALLEYS, HOMES, AND OPPORTUNITIES.

Any attempted description of this wonderland must necessarily be both brief and very incomplete. Alaska in size: The shape of Alaska is that of a large rectangle with two long, broad wings. If Alaska were imagined to be placed upon the map of the United States, the first wing would begin at Columbia, S. C., and the body of Alaska would cover the States of Illinois, Missouri, Kansas, Iowa, Nebraska, Wisconsin, Minnesota, and North and South Dakota. The second broad, long wing would reach from Illinois down through the States, through Texas, and out into the Pacific Ocean. The body of Alaska lies alongside of British Canada; it almost touches the Empire of Russia, while its wing reaches down from out of the Western Hemisphere into the Eastern Hemisphere, sweeping north of the Empire of Japan. In square miles Alaska is larger than Norway, Sweden, Finland, England, Scotland, and Ireland combined. It is one-half larger than the thirteen original States; it is as large as the United States east of the Mississippi River; it is twelve times the size of the State of New York; and in its present undeveloped condition, with but few of its known gold mines imperfectly worked, it produces yearly as much gold as

the great gold-producing State of California. It has a climate as varied as that of Texas and Dakota, while it holds in its great area the greatest gold and copper mines and coal fields on earth and waits to house and home millions of American citizens. Its climate is more inviting, its soil more productive, with more acres of farm lands, than that of the great nations of Norway, Sweden, or Finland, which house and home more than 11,000,000 of the earth's hardiest, healthiest people. The rivers abound with valuable fish; one-half of the world's supply of salmon comes from Alaska. On account of the Japan Current the valleys have the same climate as the northern parts of the United States or Canada. The summers there are long enough to permit the crops to ripen nicely. The winters for the interior valleys are about like the Dakotas or Minnesota and adjoining Canada.

Alaska's great river, the Yukon, is navigable more than 2,000 miles, and is said to discharge one-third more water than the Mississippi. The Tanana River is the Ohio River of Alaska. Alaska has more coal in her hills than Pennsylvania, Ohio, and the Virginias; more copper than Montana and Arizona; more gold than California and Colorado; more tin than Wales; more fish than the balance of the waters of America.

THE POSSIBLE ALASKA—FARMING AND AGRICULTURE.

From Government reports—not statistics furnished by the "interests" or by their paid lobby—let us see what Alaska might become in a very few years as an agricultural country. In Europe and Russian Provinces lying north of altitude 60°, like Alaska as to latitude—Alaska lies between 54° 30′ and 71°—the census statistics show us that there are now living in such valleys as they have fit for cultivation, together with the population of the cities, more than 11,000,000 people. There is under cultivation 8,373,000 acres of land, which produce yearly as follows: Wheat, 6,000,000 bushels; rye, 36,000,000 bushels; barley, 26,000,000 bushels; oats, 120,000,000 bushels; potatoes, 110,000,000 bushels; and about 8,000,000 tons of hay. The live stock is as follows: Horses, 2,000,000; cattle, 6,000,000; sheep, 4,000,000; hogs, 2,000,000; goats, 400,000; reindeers, 500,000.

FUTURE ALASKA COMPARED WITH NORWAY AND SWEDEN.

Compared with the above, let us see what Alaska could do. A study of the topography, climate, native plants, and crops shows that the conditions are very similar in the two regions, with the advantages in favor of Alaska. All the above could be produced in Alaska and more. In 1910 Prof. C. C. Georgeson, a man of wide practical experience, whom all agree is thoroughly trustworthy and reliable, estimated the tillable and pasture land of Alaska at 64,000,000 acres, as against 8,000,000 acres in the above Provinces, which sustain more than 11,000,000 people. Mr. J. W. Neal, who is in charge of the Government agricultural experiment station farm at Fairbanks, Alaska, states that by actual survey there are 9,700,000 agricultural acres of land in the Valley of the Tanana. This valley alone could, therefore, support more people and raise more agricultural products than the Provinces of Norway and Sweden and Finland, with all the live stock, crops, and people above mentioned.

AGRICULTURAL POSSIBILITIES OF ALASKA.

Most people are incredulous when told of the fine agricultural possibilities in Alaska, because they imagine that the country lacks sunlight. They forget that every spot on the earth's surface during the course of the 12 months has the same amount of sunshine. The shortest day in Alaska is the 22d day of December, when it has not more than 2 or 3 hours of sunshine, but 6 to 8 workable hours of twilight. On the 22d day of June the Tanana Valley has from 21 to 22 hours of direct, vigorous sunshine and heat; and all the crops mentioned above are grown, matured, and harvested in the 4 months of this most constant sunshine and heat. During these 6 months the Tanana Valley has three-fourths of the year's sunshine—more sunshine in a like period of time than any point on the earth's surface south of it; more sunshine than California, Ohio, Georgia, or Florida has in the same period of time.

Mr. Speaker, I know the facts I have stated and the deductions I have made about the climatic conditions and the agricultural possibilities of Alaska possibly will be doubted by some and disputed by others. I have not given statistics furnished by the agents or interests of the Morgan-Guggenheim Syndicate, but statistics furnished by the departments of the United States Government itself. Of the immense, inexhaustible mineral deposits of coal, gold, copper, tin, lead, zinc, and so forth, there can be no dispute, and I therefore omit reference to these. I want to back up these statistics by the best possible evidence—the testimony of uninterested parties who know Alaska from personal observation. I believe it is reliable information we all want, and that when we find these things to be true that our sense of right, justice, as well as of national security and profit, will lead us to vote for this bill.

In the Washington Post of January 12, 1914, there appeared an interview with the Rev. Dr. P. T. Rowe, Bishop of Alaska. The reverend bishop resides at Sitka, Alaska, and I desire to here insert his testimony on Alaska as given in said interview. The reverend bishop spoke as follows:

CHATS OF VISITORS AT THE CAPITAL.

"Alaska and Alaskans are becoming impatient at the continued attitude of the Federal Government in retarding development of the Territory," declares the Rev. Dr. P. T. Rowe, of Sitka, Bishop of Alaska, at the Raleigh. "With a generous policy toward Alaska, even as liberal a policy as the Government has shown toward the Philippines, Alaska will not only go forward with giant strides, but will profit the rest of the country as well as itself.

"Two things are necessary in the course to be pursued by the General Government—a change in the opposition to the extension of transportation facilities and the releasing of the coal lands. I know these are hackneyed subjects in Washington, but they are live ones in Alaska, and Alaska will not become the great Territory that is possible until the Government has changed its tune. The possibilities in Alaska lie not only in its great mineral deposits—gold and copper—but in its coal and fisheries and its agriculture, and the last named is by no means the least. Prof. Georgeson, the Government agent at Sitka in charge of farm experiments, told me recently that the Tanana Valley alone is capable of producing sufficient crops to take care of 5,000,000 people. And the Tanana is not the only agricultural land in Alaska.

"It is well known that the coal deposits in Alaska are enormous. Our industries are crying for it, but it has been locked up securely in the name of conservation. We have to get our coal now from Australia, and to pay $25 a ton for it. While I was in Nome, not long ago, two great freighters reached port with several thousand tons each. The Government established a naval base at Seward, but what good is it without coal? Suppose we were to have a war with some eastern country, where would we get our coal? We could get all we need in Alaska at $5 a ton.

"Instead of encouraging the extension of transportation facilities, the Government imposed a tax of $100 a mile annually for the operation of the little narrow-gauge roads that were built to provide a route to the mining regions, and, of course, these roads had to stop work. The Guggenheim-Morgan road, which runs for a distance of 198 miles, has discontinued extension work because it costs too much, I suppose, for fuel.

"All we want is a fair chance in Alaska, as liberal a policy as that shown to the Philippines, and the Territory will discover remarkable development. The gold production has not shown any falling off in the last year despite the obstacles placed in the way of development by the Government, but the population has remained stationary. The best part of the gold output is that it has disclosed quartz mines, which proves that it is permanent."

SECRETARY LANE'S STATEMENT.

I want to call attention to the statement of Secretary Lane, a thoroughly informed man on Alaskan affairs. In a letter to the Senate committee, among other things, Secretary Lane says:

DEPARTMENT OF THE INTERIOR,
THE SECRETARY OF THE INTERIOR,
Washington, May 15, 1913.

MY DEAR SENATOR: My opinion is requested as to Senate bills 48 and 133. These measures, in a word, provide for the construction by the National Government of a railway system in the Territory of Alaska.

I favor the adoption of this policy. I believe it to be that under which Alaska will develop most safely and most speedily, and under which the resources of that Territory will most certainly become available to the whole people.

There is but one way to make any country a real part of the world—by the construction of railroads into it. This has been the heart of England's policy in Africa, of Russia's policy in western Asia, and is the prompting hope of the new movement in China. Whoever owns the railways of a country determines very largely the future of that country, the character of its population, the kind of industries they will engage in, and ultimately the nature of the civilization they will enjoy. The policy of governmental ownership of railroads in Alaska seems to me to be the one that will most certainly make for her lasting welfare.

To many of our people Alaska is little more than a land of natural wonders, here and there dotted with mining camps and fishing villages. If Alaska is to be nothing more, it is almost a matter of indifference as to who builds her railroads. I have talked with many who know that country well, and I am convinced that we should think of Alaska as a land not only of mines and fisheries, but of towns, farms, mills, and factories, supporting millions of people of the hardiest and most wholesome of the race. If this conception of a possible Alaska is a true one, our legislation should be such as to most surely bring about this possibility, and it seems to me there is less of hazard as to Alaska's future if the Government of the United States owns the railroads which will make its fertile interior valleys accessible from the coast and bring its coal, iron, copper, and other mineral resources within the reach of the world.

This is a new policy for the United States. Very true. This is a new part of the United States. And policies properly change with new conditions. The one determining question in all matters of government should be: What is the wise thing to do? The ancient method of opening a country was to build wagon roads. The modern method is to build railroads. To build these railroads ourselves and control them may be an experiment, but such a plan does not suggest scandals more shameful or political conditions more unhealthy than many we have known in the new portions of our country under private ownership. And in the end we will be free to establish and maintain our own chosen relationship between Alaska and the rest of the United States unhampered by threats of confiscation or the restraining hand of any merely selfish influences. We can only secure the highest and fullest use of Alaska by making her railways wholly subordinate to her industrial and social life and needs—true public utilities.

Respectfully,

FRANKLIN K. LANE.

Hon. KEY PITTMAN,
Chairman Committee on Territories, United States Senate.

These are the words of a statesman, words of patriotic statesmanship. [Applause.]

I desire to further verify the statements I have quoted concerning climatic conditions and agricultural possibilities of Alaska from another witness. I want to briefly quote from the facts condensed and published by Mr. R. H. Stretch, whom, I am informed, is a gentleman of wide experience, trustworthy, conservative, and reliable.

I herewith desire to insert quotations from his compilation of facts on Alaska:

THE VALUE OF ALASKA TO THE UNITED STATES.

Alaska is a land whose area is equal to one-fifth of the United States, or 12 times that of the State of New York. Its production of gold for the year 1912 was $17,398,943; that of our gold State, California, whose population is 37 times as great, was only $19,928,500.

Alaska's per capita production of copper, the mining of which is only begun, is now equal to the per capita production of Montana. It has coal fields of greater area than those of Pennsylvania and arable lands greater than the entire State of Oregon. Tin, iron, gypsum, and oil are found in commercial quantities, and its marble quarries rival those of Vermont.

The reindeer industry, established in 1902 with 1,280 head, has spread until the 47 herds number 38,000 head and promises to become a valuable source of food supply, while the extent of its fishing grounds exceed those of all the States combined and are excelled nowhere in the world.

Its undeveloped water power exceeds that of the entire Pacific Coast States.

On an investment of $7,200,000 Alaska has given us in return, since 1867 (and by far the greater portion since 1899, or only 14 years), as shown in the reports of the United States Geological Survey, Director of the Mint, and other official documents:

Gold	$213,018,719
Silver	1,824,364
Copper	13,377,194
Coal	355,489
Other minerals	993,119
Fisheries and furs	240,830,168
Total	470,399,053
And produced in 1912, as per preliminary estimates:	
Gold, silver, and copper	21,580,000
Other minerals	360,000
Fish and furs	18,120,132
Miscellaneous	394,046
Total	40,354,178
The commerce of Alaska for 1912 was:	
Imports	26,758,341
Exports	45,982,719
Total	72,741,060

These results have been obtained at a cost to the Government of about $13,000,000 over and above the revenues collected in 45 years, showing a profit to the Nation of practically $450,000,000 on an investment of $20,000,000. Contrast this with the money spent in the Philippines on an alien nation, and with the results which will not bear comparison. If Alaska has achieved so large a measure of success under adverse conditions of every kind, what may not the results be under more favorable auspices?

SCENIC ALASKA.

Alaska is a country unique in its geographical situation, unique in its climate, and unique in its physical beauties. Point Barrow, its northernmost cape, is warmer than any point in the world as far north of the Equator, and its southern shores, bordering the North Pacific Ocean, are likewise warmer than any point in the world in similar latitudes during the winter months, as the result of the beneficent influence of the Japan Current.

* * * * * * *

CLIMATE.

Alaska has its mountain areas, with their snow fields and glaciers, with the loftiest summits in the Union, and broad expanses of mossy tundra, but it has also wide areas of valley lands and timber, and nearly as many varieties of climate as can be found in the Eastern and Middle States, controlled largely by the principal mountain ranges and by the Japan Current, which does for Alaska what the Gulf Stream does for Great Britain, Ireland, and Norway. The following remarks are as true to-day as when written some years ago:

* * * * * * *

It is not possible to judge of the climate of a country by a look at a map to see how far north it is of the Equator. When many people in the Eastern States, who are more or less acquainted with the inhospitable coast of Labrador, find on a map that the bulk of Alaska lies north of Labrador they appear to conclude that the conditions of life must be infinitely worse up there and that the stories of its ice and snow must be true. The town of Fairbanks, in Alaska, with its mines, farms, electric lights, and all the comforts of modern life, is more than 1,500 miles north of New York and 300 miles north of the southern tip of Greenland at Cape Farewell.

* * * * * * *

CLIMATE PROVINCES.

(Authority, maps of the U. S. Weather Bureau.)

Special features easily divide the Territory into six natural subdivisions, according to rainfall, temperature, and latitude, the details of which are shown in the accompanying tables.

First. Southeast Alaska, 300 miles long by 125 miles in width, and the coastal region as far west as Cook Inlet is characterized by a heavy rainfall and moderate temperature, the average of the latter for the three winter months being similar to that of Boston and New York. The southeastern portion covers the Alexander Archipelago of some thousand islands, heavily timbered, possessing many available garden spots and a rank floral vegetation. In a narrow belt, lying between the ocean and the Chugach Mountains, this region extends westerly to Cook Inlet, and all its ports for the entire distance of 900 miles are open the year round to the commerce of the world.

Second. The second region covers the southern coast of the Alaska Peninsula, has a moderate rainfall and similar temperature, but it is almost timberless, the forests giving place to grazing lands. Like the first region, its harbors remain open during the winter.

Third. This covers the entire coastal region of Bering Sea from Unalaska to Point Barrow and beyond, and is characterized by wide areas of tundra and treeless plains, but, like many parts of Arctic Russia, is capable of supporting great herds of reindeer. As might be expected in its 2,000 miles of coast line, the rainfall and temperature vary greatly, both diminishing as we go northward. Including the snowfall, the total annual precipitation ranges from 84 inches at Unalaska to only about 7 inches at Point Barrow, where the average snowfall is only about 13 inches, showing that a far-north latitude does not necessarily involve great depths of snow.

Fourth. The Copper River Valley, being protected from the heavy rains of the coast by the lofty Chugach Mountains, possesses a comparatively dry climate, with colder winter conditions, and is much less thinly timbered than the first region lying to the south.

Fifth. The Kenia-Susitna region offers a compromise between the first and fourth regions, the rainfall being moderate and the average summer temperature about 54°. Much of this region is heavily timbered and contains large areas of good farming land.

Sixth. This covers the central area, containing the great valleys of the Yukon and Tanana. Protected as it is on the south by the lofty Alaskan Range, with its extensive snow fields, it is well watered, although the average precipitation ranges from only 13 to 20 inches, while the thermometer in summer climbs to 90° or over in the shade, and the average summer temperature is about 58°, or somewhat higher than any other of the five regions, while the average of the low summer temperature is only slightly less than in southeastern Alaska.

The meaning of the foregoing details may be better appreciated from the following items, taken from the daily reports of the Weather Bureau, January 6, 1912, covering 43 cities of the United States and southern Canada, and many such days might be duplicated:

Dutch Harbor reported a minimum of 20° above zero; 20 places in the United States reported lower.

Eagle reported 16° below zero; 6 places reported lower.
Nome reported 4° above zero; 12 places reported lower.
Sitka reported 34° above zero; 33 places reported lower.
Tanana reported 4° below zero; 3 places reported lower.
Valdez reported 18° above zero; 18 places reported lower.

Los Angeles and San Francisco were the same as Sitka, while Denver (22° below zero), Huron (18° below), and Winnipeg (30° below) were colder than any place in Alaska.

Sitka had a larger maximum in a list of 45 than 25 other places, among which were Chicago, Kansas City, Montreal, St. Louis, Denver, and St. Paul. Few people realize the ameliorating influence of the Japan Current.

The length of the day at all latitudes is the same on March 21. On June 21 the length of the day at various places in Alaska is closely as given below:

	Degrees.	Hours.	Minutes.
Ketchikan and Prince Rupert, latitude about	55	17	20
Skagway, Cordova, Valdez, and Steward, latitude about	60-61	18	50
Fairbanks, Eagle, Ruby City, Nome, latitude about	64-65	22	00
Bettles and Coldfoot	67	24	00

NOTE.—The places mentioned are approximately in the latitudes given.

I have dwelt upon the climatic conditions because you will be told by some who follow me that the Japan Current has no effect on Alaska.

Table of Government experimental stations. Climate compares very favorably with towns in Minnesota, Wisconsin, the Dakotas, Washington, and Canada.

FISHERIES.

VALUE, $17,391,578 FOR 1912—TOTAL VALUE TO 1912, $167,420,118.

[Report of governor in 1911.]

Seventeen thousand nine hundred and thirty-two persons were employed in the fishing industries and the capital invested was:

In vessels of all kinds	$5,559,534
Sea fishing apparatus	27,782
Shore fishing apparatus	724,383
Shore property	7,564,023
Cash capital	8,795,665
Total	22,671,387

Of this sum, $19,931,215 was invested in the salmon cannery industry, producing 2,823,817 cases of salmon, valued at $14,593,237. In 1912 the product was 4,060,189 cases, valued at $15,551,794.

The value of mild-cured salmon was	$419,138
The value of pickled salmon was	203,988
The value of fresh salmon was	108,922
The value of frozen salmon was	18,024
The value of codfish was	240,030
The value of halibut was	822,370
The value of herring was	201,909
The value of whales was	104,084

SEALS.

VALUE, $416,992.40 FOR 1911—TOTAL VALUE TO 1912, $52,252,135.

The immense herds of seals which annually resort to the Pribilof and St. George Islands in Bering Sea for breeding purposes was estimated at 123,600 on a recent count, being a slight increase over the previous year, and was estimated to consist of mature males, 3,885; young males from pups to 3 years old, 35,781; mature females, 41,480; young females from pups to 2 years old, 42,454; or a total of 39,666 males and 83,934 females.

The former leasing system has been abandoned, and the islands are now under the direct management of the United States Government. The following details are from the annual report of the Department of Commerce and Labor.

	1910	1911
Number of sealskins taken	12,920	12,002
Gross receipts for same	$435,083.90	$415,992.40
Average per skin	$33.68	$34.74
Net receipts for same [1]	$403,946.94	$383,862.28
Estimated receipts to United States under old lease system	$131,007.00	$122,720.45

[1] From which must be deducted the costs of management.

These herds, numbering 123,600, are all that are left of the 4,000,000 to 5,000,000 which formerly made these islands in Bering Sea their summer rendezvous. Overkilling, raids by poachers of various nationalities, and pelagic, or open-sea, killing having wrought the destruction. Under present conditions and the stoppage of pelagic sealing the herds seem to be increasing in number.

FURS.

VALUE FOR 1912, $370,519—TOTAL VALUE TO 1912, $22,216,872.

While the number of fur-bearing animals in Alaska is undoubtedly much smaller than in the days of Russian occupation, the annual output of skins is still an important industry, as may be judged from the following official table covering the year ending December 31, 1912:

	Number.	Value.	Average value.
Bear, black	618	$5,676	$9.18
Bear, brown	23	864	37.65
Bear, cinnamon	9	90	10.00
Bear, glacier	1	10	10.00

GRAIN CROPS AND GRASSES.

[United States agricultural reports and C. C. Georgeson, in charge of experimental stations.]

That oats, barley, and rye can be grown successfully has been demonstrated at the experimental stations in the Yukon-Tanana Valleys, as well as in that of the Copper River, and also by the farmers around Fairbanks and in the Susitna Valley, who have cut barley for hay, giving 3 tons to the acre. Much time has been devoted to the study and growth of all kinds of grain from northern countries, and the end is not yet. In the rooms of the bureau may be seen handsome sheaves of all these grains and their cleaned products, 60-day and Finnish oats, as well as hull-less and beardless barley.

The rapid growth of grain applies also to the grasses. Timothy springs up wherever imported hay has been fed to stock, and is rapidly becoming acclimated. Among the 40 native grasses redtop attains a growth breast high in 30 to 40 days, and also seems to be the richest in nitrogen among its congeners. It grows everywhere, but is said to rebel against annual cutting, so that cropping every other year is recommended.

Several kinds of vetches and peas make excellent wild fodder, but do not take kindly to cultivation, so that experiments are being made with varieties of alfalfa from Siberia living under conditions similar to those in Alaska, the same being the case with Siberian wheat.

VEGETABLE CROPS.

[United States agricultural reports and C. C. Georgeson, in charge of experimental stations.]

It is possible to grow magnificent vegetables in all parts of Alaska, except on the tundras and mountains. To Alaskans they are no novelty, but to strangers unacquainted with the country they are a constant surprise. They include all the products of the Temperate Zone in America, and the bureau has in its exhibit potatoes, turnips, beets, rutabagas, sugar beets, carrots, parsnips, kohlrabi, celery, rhubarb, radishes, onions, cabbage, cucumbers, peas, and even tomatoes, and in one or two very favored spots, even melons have ripened. The samples, both for size and quality, will compare with the markets of New York, although grown more than 1,500 miles north of that city. Every family can have its garden, which will not only furnish the necessities of life, but will beautify the home with a wealth of flowers. These facts have become so well known that notice of them has practically disappeared from the reports of the agricultural stations; but as the potato is so important an item in the daily menu, every effort is being put forth to secure those varieties best adapted to the climatic conditions of rainfall and sunshine. The following facts are from the latest reports of the station located at Fairbanks, in the Tanana Valley, only about a hundred miles south of the Arctic Circle.

Twenty-seven varieties of potatoes yere cultivated during the season of 1911, of which three were planted on June 1, nine on June 9, and the remainder on June 10. They matured between September 11 and 22, with a yield at a rate varying from 7,260 to 18,876 pounds per acre on the experimental plats. In the open field three varieties produced 5 tons per acre after sorting and grading on second-year unfertilized ground. The character of the potato depends much on the kind of soil and method of cultivation. The best results are said to be secured by allowing the potato to sprout and setting them out on the surface of the ground with plenty of room between the rows, then covering with about an inch of dirt, to be subsequently well ridged up. On a gentle southern exposure of silty soil, such as is favored by the birch, potatoes grow to a large size and possess a fine mealy texture.

Cabbages from department seed made heads weighing from 8 to 12 pounds. Cauliflower was as fine as grown in any country. One gardener claims to have sold 16 tons of cabbage from half an acre in 1910.

There are several notices of the growth of sugar beets (but no information as to their sugar content), and these, with other root crops such as rutabagas and carrots, can be grown in quantity for winter feed to stock.

Summing up the question, C. C. Georgeson, the best of all authorities, says: "All these vegetables can be grown and are grown as far up as the Arctic Circle and beyond. This is not saying that they can be grown with equal success in all places and in all conditions, for on this point the elevation, rainfall, soil, and local conditions as to climate are important factors. Nor do I say that there is not now and then a cold summer, in which only the hardiest of these things make satisfactory growth. But under normal conditions and with good culture all of these vegetables are grown successfully even beyond the Arctic Circle."

WILD FRUITS.

Alaska is a land of berries, not only in the profusion of fruit but in the great variety of species.

Currants, both red and black, abound in southeast Alaska, and in lesser degree elsewhere, and both are remarkable for the size of the fruit and the length of the bunches, rivaling, if not excelling, the best of the cultivated forms.

Strawberries of good size and excellent flavor abound in and on the coast belt from Yakutat to the Copper River Delta, and have been crossed with cultivated varieties, producing plants of more luxuriant growth than either of the parent forms both as to foliage and fruit. Some hundred varieties of these hybrids are under cultivation at the Government experimental stations.

Raspberries are characteristic of the interior regions, especially of the Yukon and Tanana Valleys.

Blueberries are universally distributed and fruit in profusion, the berries attaining a diameter of half an inch. So abundant are they that two ladies near Nome put up 119 gallons in one season.

Huckleberries abound through the Pacific coast and interior regions and form attractive pasturage for bears, both black and grizzlies.

Cranberries, both high and low bush, are characteristic of the interior plateau and Seward Peninsula.

Salmon berries grow luxuriantly in all the coast regions bordering on the Pacific Ocean.

If further proof of the climatic conditions and the agricultural possibilities or the wisdom of Alaskan development were needed, the following report should be to all fair-minded people conclusive:

In the fall of 1912, by act of Congress, the Alaskan Railway Commission was appointed. The personnel of this commission was as follows: Jay J. Morrow, major, Corps of Engineers, United States Army;

Alfred H. Brooks, United States Geological Survey; Leonard M. Cox, civil engineer, United States Navy; Colin M. Ingersoll, consulting engineer.

Briefly, the duties of this commission were defined by the act of Congress to examine railroad routes from the seaboard to the coal fields and to the interior and navigable waterways, and to recommend in respect to most available routes for railroads in Alaska, which will best develop the country and the resources thereof for the use of the people of the United States.

In their conclusions they state that "the commission is unanimously of opinion that this development should be undertaken at once and prosecuted with vigor; that it can not be accomplished without providing the railroads herein recommended under some system which will insure low transportation charges and the consequent rapid settlement of this new land and the utilization of its great resources." They state further that "the data presented shows that the United States possesses in Alaska a frontier territory of great size and of wonderful industrial possibilities. The commission believes that its climate is favorable to permanent settlement and to agriculture; that its mineral resources are vast and as yet but little exploited; that its population is sparse, but only by reason of its inadequate transportation facilities; and that its people are of the same type of hardy pioneers that have carried the United States frontier to its present limits."

The commission's report to Congress is embraced in House Document No. 1346, Sixty-second Congress, third session.

Does any sincere, candid man think that this commission would have so reported if Alaska were the bleak, useless country its enemies would have you believe it is?

Mr. Speaker, the opposition to Alaskan development has been very severe, and painted a very dark picture of Alaska. But has not this been the same with every new part of the United States? Read the speeches of Congressmen and Senators when the development west of the Mississippi River was contemplated. Daniel Webster thought it could never be inhabited. Other Senators said nothing can grow there—a vast worthless land. And so we have the critic and pessimist to-day. What charlatans this Government board, to state the above if Alaska is what the opponents of Alaskan development say it is!

Mr. HARDY. Will the gentleman permit an interruption right there for a very brief question?

Mr. BRUMBAUGH. If it will not be taken out of my time. I want to finish within the limit of my time.

The SPEAKER. The Chair will state that it will be taken out of the gentleman's time.

Mr. HARDY. Does it not appear to the gentleman that the whole question before the House is whether we shall give the resources of Alaska away to private parties or build these railroads and own them ourselves?

Mr. BRUMBAUGH. That is the whole thing in a nutshell. I have prepared some tables from Donaldson's great work on the public domain, and I wanted to read them to show what the Government has done for the newer parts of the United States in the past, but the table is so long that I omit it.

DEVELOPMENT OF ALASKA—WHY AND HOW.

The question very naturally arises, first, why should the United States spend the people's money to develop Alaska; second, if we consider development, how shall we develop—by Government control, by Government assistance, by gift, or subsidy? In answer to the question why the Government should assist in the development of Alaska, it can be argued that in fairness we owe this to ourselves and to Alaska as well; that every consideration of duty, obligation, and wisdom demands it, as well as every consideration of national security and national gain. If the development of Alaska is properly safeguarded and the people's rights protected, then the citizens of the United States as well as the Government can hardly fail to realize $100 for every $1 expended on Alaska.

SAFEGUARD THE FUEL SUPPLY OF THE FUTURE.

By taxation all the people of the United States helped purchase and pay for Alaska; Alaska therefore belongs to all the people of the United States. The fuel supply of the future is so essential to future generations that these deposits should always be safeguarded to the people of Alaska and the people of the United States, and never be surrendered to corporate or private interests to promote any scheme of development of Alaska. Why, even those representing the interests admitted before the committee that we could get 10,000 miles of railroad built in Alaska if we would give Alaska away to have it done. Do you suppose the syndicate interest would do this in a useless and worthless land?

Again, it can be argued that the Government has always assisted to develop its frontier or its Territories; that this has been the policy of the Government in the past.

Donaldson, in his great work on Public Domain, a book of over a thousand pages, sets forth in detail what the United States has done to assist the development of different parts of the United States. I had thought to present a table dealing with this subject, but I find the United States has done so much for so many sections to assist in their development that the entire book is full of tables setting forth the work and the amounts expended.

GOVERNMENTAL HELP TO FRONTIER SECTIONS.

The Government began by assisting in the building of the first railroad in the United States—the old Baltimore & Ohio—from tidewater at Baltimore through the forests to the Ohio River; and this road, with assistance of the old national pikes, told the story of the future greatness of Ohio, Kentucky, Indiana, Illinois, and the other great interior States. Later the Government assisted the great Territories of the West in building the Pacific Railroad, which told the story of the great West.

LET THE GOVERNMENT SPEND MONEY TO ASSIST THE PEOPLE RATHER THAN ON BATTLESHIPS.

In fact, the Government can always and everywhere afford to expend the people's money where that expenditure gives protection to life and property, security to homes and home builders, assistance in opening up new fields to labor that helps to make the necessaries of life more plentiful and cheaper. In fact, the millions that the Government yearly puts into the building of battleships that float the seas in idleness, at great constant expense, to challenge quarrels, can better be spent in opening up such a land as Alaska, providing cheap homes for pioneers, and in assisting its citizens in the flood-swept districts of the country to make safe their homes and the lives of their little ones by assisting in building fortifications to prevent such disasters as befell the cities of Ohio and Indiana and other sections of the United States in the recent great flood which devastated some of the best portions of our fair land.

RAILROAD DEVELOPMENT IN ALASKA.

The prime essential in the development of Alaska centers, of course, is railroad building. There has been already constructed in Alaska about 500 miles of railroad. This is all owned by private interests and does not penetrate the interior, and renders, therefore, little aid to the great interior development desired by all.

The consensus of opinion is that some railroad should be built from the south sea of Alaska up through the interior, so that by branch lines it would open the great coal fields and gold fields of the country and the great river valleys for home builders, ending at some great river navigable to the western ocean. Such a railroad, if but one is built, can be constructed with about 400 miles of trackage, with a cost of about $20,000,000, that will give over 7,000 miles of traffic by railroad and water, not to speak of the branch lines of the railroad, thus opening up to civilization the great valleys that are able to house and home millions of settlers, support great cities, and give outlet to the greatest coal fields of the world. Such a road, accomplishing such great results, would cost no more than two battleships, or less than one-fortieth of that spent on the Panama Canal, or less than we yearly spend on the Philippines.

THE GREAT ADVANTAGE AND VALUE OF SUCH RAILROAD DEVELOPMENT.

The desirability and immense value of such development and its supreme importance to the United States is most apparent to all. Consider a few of the great results that would come therefrom. The southern shores of Alaska furnish the best sea harbors for our vessels and battleships on the western coast, better than at Seattle or Hawaii. These immense, unusued harbors on the southern coast of Alaska are on the shortest line by over 1,500 miles from San Francisco and Seattle to the Philippines, Japan, or the Orient. These unusued harbors would provide the best and safest defenses for our Navy. It costs this Government $3,000,000 a year to ship the coal from the United States used by our vessels on the Pacific, while within 25 miles of these harbors we have coal in inexhaustible supplies—six years' shipping coal bill will build the Alaska railroad.

FUTURE FUEL SUPPLY OF THE UNITED STATES.

Again, consider the fuel supply of the United States. There are used in the United States yearly 400,000,000 tons of coal. There are used 85,000,000 tons per year more coal west of the Mississippi River than is mined west of the Mississippi River. It is plain, therefore, to all that the price of coal is fixed by the few Atlantic States for all the people of the United States. Coal is selling on the western coast for from $8 and $10 to $12 per ton. Government experts, who have made an examination of the situation, report that at our present consumption of coal there is enough coal in Alaska, now explored, of the finest quality, to say nothing of the unknown coal fields of Alaska, to supply our needs for 500 years. In Alaska there is one coal field in area as large as the coal area of the State of Pennsylvania. Now, should we make it possible for Alaska coal to come out to the ocean by this railroad, and then into the United States, a few Atlantic States could not fix the price of coal for all the people of the United States, and should it save but $1 per ton on the price of coal, it would save in our coal bill to the people of the United States $400,000,000 yearly, or twenty times the cost to build the railroad each year, to say nothing of the value of the railroad in opening up the great valleys to home settlers from the United States and the coal supply for our fleet on the Pacific coast.

Having been designated by the chairman of the committee to prepare a report on the quantity and quality of coal deposits in Alaska, I desire herewith to insert one page of that report:

On the 20th instant I directed a letter of inquiry to the Navy Department, asking for information in regard to any tests of any kind that may have been made by that department in the past concerning the quality of coal deposits contiguous to the southern coast of the Territory, and also the coal deposits in the Matanuska coal field, together with any information concerning the quantity of said coal deposits. On the 23d instant I received the following reply:

NAVY DEPARTMENT,
Washington, September 23, 1913.

Hon. CLEMENT BRUMBAUGH, M. C.,
House of Representatives, Washington, D. C.

MY DEAR MR. BRUMBAUGH: In answer to your letter of the 20th instant, the tests of the Bering River coal are not yet completed. The final test is now being conducted at the engineering experiment station at Annapolis, Md., and upon its completion the complete report of the investigation of the Bering River field will be sent to the Congress.

No detailed reports have yet been received from the expedition in the Matanuska field. The test of the coal from this field will not be completed until next summer. The department regrets, therefore, that it is not yet in possession of any first-hand facts on this latter field.

Sincerely, yours,

JOSEPHUS DANIELS.

At the same time information was requested from the United States Geological Survey, Department of the Interior. On September 25, 1913, I received the following communication from the Hon. Alfred H. Brooks, geologist in charge:

DEPARTMENT OF THE INTERIOR,
UNITED STATES GEOLOGICAL SURVEY,
Washington, September 25, 1913.

Hon. CLEMENT BRUMBAUGH,
House of Representatives.

MY DEAR MR. BRUMBAUGH: Referring to your request for reports dealing with the coal resources of Alaska, I am sending herewith a copy of a summary report on the coal of Alaska, entitled "Alaska coal and its utilization" (Bulletin 442 J). This contains information in regard to all the coal fields of Alaska in concise form. The tonnage estimates are only near approximations, but the data on quality and occurrence of coal is a summary of all the information at hand. The information contained in this report was the basis of the matters relating to Alaska coal fields contained in the report of the Alaska Railroad Commission. On the last pages of this report you will find a bibliography giving a list of publications issued by this survey relating to the coal resources of Alaska.

I am also sending you a copy of a report on railway routes in Alaska, in which there is some reference to the occurrence of coal along the various routes described. This report is entitled "Railway routes from the Pacific seaboard to Fairbanks," and is contained in Bulletin 520 A. This report does not differ materially from that of the Alaska Railroad Commission; it was, however, published previously, and is not as detailed, but emphasizes the commercial conditions.

I am also sending you a copy of a detailed report on the Bering River coal field. This is contained in a publication entitled "Geology and mineral resources of the Controller Bay region" (Bulletin 335). The Matanuska coal field is described in a report on the geology and coal fields of the lower Matanuska Valley (Bulletin 500), which is included with the other publications.

A report entitled "The Bonnifield region" (Bulletin 501) includes a description of the Nenana coal field, which contains only lignitic deposits and occurs on the south side of the Tanana Valley, about 50 miles south of Fairbanks. This is one of the fields which will be traversed by several of the proposed railways.

A general map of Alaska, included in Bulletin 520 A, shows the distribution of the coal fields of Alaska so far as they are known. A reference to the bibliography contained in Bulletin 442 J shows that the members of the Geological Survey have published nearly a hundred different reports and articles dealing with the Alaska coal fields. I think, however, that the reports referred to above and which are sent herewith will probably be all that you will be interested in for your present purposes. I need hardly add that if there are any other of the reports which you desire I shall be glad to send them to you promptly.

Yours, very truly,

ALFRED H. BROOKS, *Geologist in Charge.*

Those most competent to speak with authority, on account of years of study and investigation of Alaska and its resources, regard the bulletins referred to by Mr. Brooks in the above communication as the most reliable reports available on this subject. They are recommended, therefore, to those desiring more complete information on this subject than is proper to attempt in this report.

Attention is called to the following extracts from said bulletins discussing the quantity and quality of Alaska coal deposits. It is not deemed important to discuss the quantity and the quality under separate headings, as the application is easily discernible.

In an address on "The future of Alaskan coal," delivered before the American Mining Congress in 1911, Alfred H. Brooks, one of the greatest living and most reliable authorities on Alaska, discussing coal deposits of Alaska and some proposed railroads at that time, spoke as follows:

"As is now generally known, the chemical quality of the coal of the Bering River and Matanuska fields leaves little to be desired. These fields include high-grade steaming and coking coals comparable to the best coals of the East, and also some anthracite.

"The character of the Matanuska coal is less well known, as but few openings have been made on the beds. Locally these appear to be somewhat less disturbed than the coals of Bering River field, but this may be offset in cost of mining by the fact that a large number of intrusives are present. While there are differences of opinion as to the percentage of coal from these two fields that can be commercially mined under present conditions, the fact remains that they include much workable coal of a higher grade than any in that part of the North American Continent tributary to the Pacific Ocean."

The consensus of opinion appears to be that the best way to insure the building of the railroad without scandal, collusion, quarrels, and delay is to put the matter entirely in the hands of the President, authorizing him to locate the road and construct the same. No President has ever won and held the love and confidence of the people more fully than has our great President, and men of all parties feel that this great trust and responsibility is safe in Woodrow Wilson's hands.

ALASKAN DEVELOPMENT INEVITABLE.

Alaskan development is bound to come in some form or other. It is inevitable. If we do not provide for it, some more just and sensible Congress will. We should not let our incorrect knowledge and information of Alaska work to the detriment of this great undertaking. Because Alaska is not now settled and developed like Norway and Sweden argues nothing. Oklahoma was the same for centuries. The geographies of our grandfathers had Illinois and Missouri marked "The Great American Desert," and little development occurred therein until the Government gave assistance. Kansas, Nebraska, Colorado, and the great Oregon country remained undeveloped until the Government assisted in the construction of the Pacific Railroad. The poet Bryant, in his "Thanatopsis," compared Oregon to the Barcan Desert of Africa in these words:

Take the wings
Of morning, pierce the Barcan wilderness,
Or lose thyself in the continuous woods
Where rolls the Oregon, and hears no sound
Save his own dashings—

And so forth.

OBJECTIONS AND THE OBJECTORS.

Mr. Speaker, the objectors to Alaskan development may all be classified under two general heads or classes—the constitutional argument need hardly be referred to: First, Government ownership of railroads. Those who say they fear that Alaskan development would commit the Government to Government ownership of railroads. The Government-ownership problem is not in this question at all. Because the United States Government in the past assisted many, many times in many places did not commit the Government to the policy of Government ownership of railroads, and neither will this great commendable statesmanship and humanitarianlike piece of work commit the Government in any way to the policy of Government ownership of railroads.

THE FELLOW WHO JUST OBJECTS.

Second. Those who object to the Government doing anything anywhere except in their own locality, but do not object to it there. In fact, when I hear some of these Representatives of sections of our country where the United States Government has done so much, talk, I marvel that they have it in their hearts to do so poorly by Alaska. They just object. The great Jefferson found them crying unconstitutional and objecting to the expense of the Lewis and Clark expedition that made known to the world another world west of the Mississippi River, but the great Jefferson, with faith in the right and the future, did just what his great successor, President Wilson, is now recommending to be done.

THE LOGICAL POSITION OF THE OBJECTORS.

What is the logical position of the objectors who would prevent Alaskan development? For the defeat of railroad building either prevents Alaskan development or hands Alaska over to the syndicate to exploit—a prey to the interests—because without railroads by the Government none but the syndicate can get in or out of Alaska. Everyone must be aware of this. Without meaning to impugn the motives of anyone, yet it appears to me their position, logically, is this:

Those who would defeat railroad building in Alaska are willing and would continue the useless expense of $3,000,000 a year shipping coal to our Pacific Fleet. They would continue to expend millions on naval harbors at Hawaii, far out from our coast in the ocean, where coal must be hauled at great expense, and leave unused the fine natural harbor nature has made for us on the south Alaska coast with inexhaustible coal within 25 miles.

They would continue to leave our Pacific Fleet in peril; continue to buy coal from Japan and Australia; ship it from West Virginia and Pennsylvania, playing thus into the hands of the coal monopoly and Shipping Trust. They would leave the coal monopoly go on with the demand resting on West Virginia and Pennsylvania, largely, and let the high prices of coal continue for all time. They would be willing to leave our Pacific coast open to all the dangers of attack which our foolish policy of nondevelopment of Alaska invites.

They would keep out of Alaska all settlers, all home builders, all but the "interests." They would say to the people of Alaska,

as brave a race of pioneers as ever braved pioneer dangers in any land or any age, "Bone of our bone, blood of our blood, leave the land where sleep your dead, or stay and starve."

They would say to the United States Government, "Pull down the flag of progress in Alaska, scuttle the ship of enterprise, beat the retreat on a magnificent opportunity, and abandon a magnificent responsibility."

Gentlemen, it will not be done; Alaskan development is bound to come. If we can not see the opportunity and do it, then some wiser Congress will; for God in His wisdom, I believe, would not permit Alaska to be forever blighted by such senile senility and such supine stupidity as such action as nondevelopment would imply and impose. [Applause.]

We should develop Alaska, because it opens up future homes for future American citizens, and we are legislating well when we open up cheaper homes for the poor. We can thus draw from our congested places in our great cities and solve the labor problems there. The farmers of the United States can find added markets in Alaska and Alaska can furnish the farmers and the business enterprises of the United States with the great fuel supply of the future and prevent coal monopoly and coal famines of the future.

We should develop Alaska, because it gives the needed harbors and the greatest security to our ships at sea necessary to guard the Pacific coast. The Pacific coast defense is of the utmost importance, and coal is the one great essential. The United States is now purchasing coal in Japan and Australia and we are shipping coal from the coal fields of West Virginia and Pennsylvania to our Pacific Fleet. Our naval vessels use 250,000 tons per year on the Pacific coast. In case of war we do not have and could not get enough coal to our fleet on the Pacific coast to last 60 days, for coal is a contraband of war, and during time of war could not be sold to us by any other country. Still more serious is the fact that our coal is carried almost entirely in foreign built and owned vessels, which could not be done in time of war.

We should develop Alaska, because we are pledged to that policy by the Baltimore platform of 1912, which promises immediate development of the resources of Alaska. In fact, platforms of all parties have promised this for the last 25 years. Besides, this has been the policy of the Government in regard to all the new parts of our country in the past. The Government spent $8,000,000 in the building of the old dirt roads or pikes over the Alleghenys through Pennsylvania; it assisted Kentucky, Ohio, and other interior States by building the old Baltimore & Ohio from Baltimore to the Ohio River; it assisted the Territories of the West by giving the immense sum of 155,504,994 acres of land up to the year 1868 as a bonus to railroads through the West. In the Government's policy of the past referred to its help was purely a gift and it owned no part of the road in the end, but in now assisting in the development of Alaska the Government can get all its money back and not be out one cent; still own its own railroad, and can then operate it, lease it, or sell it as it may desire, and leave open this great country to future civilization for millions of American settlers and good, cheap homes for the future poor.

We should develop Alaska, because it speaks and indicates the growing life of the Nation. Any nation growing is safe. Any nation standing still is in danger. For us to take the latter course, when the former is open to us with every inducement of profit and sentiment and patriotism, would be most foolish and unwise.

We should develop Alaska, because the trifle spent, in comparison to the benefits to be derived both to us and to Alaska, would never be felt or noticed. For should the Government announce that this railroad would be built, cities would spring up as by magic and the town sites of such cities alone would reimburse the Government for the money spent in constructing the railroad, while the cheapening in the Nation's coal bill for the people of the United States would repay all the money spent in building the railroad ten times over a year.

We should develop Alaska, because thereby we avoid the probability of any naval defeat in the Pacific Ocean, and therefore remove the temptation to attack us at any time, and thus avoid all the calamities of war.

We should develop Alaska, because we would thus perform a service and put in motion a movement for which future generations would rise up and call us blessed. We would make a bigger, better, stronger United States of America, where labor would be lighter, life sweeter, and the earth a better place to live upon; and upon our work, if consummated in justice, honor, and honesty, would rest the gratitude of future races to be and the benign benedictions of the skies. [Applause.]

Railroads in Alaska.

EXTENSION OF REMARKS

OF

HON. JAMES T. LLOYD,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 18, 1914,

On the bill (S. 48) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. LLOYD. Mr. Speaker, Alaska was purchased from Russia in 1867 for $7,200,000. It has an area of 577,390 square miles, about the size of the States of Texas, California, and New Mexico combined; an area eight times as large as the State of Missouri. It has a variety of climate. It is astounding to those who are not familiar with it. There are places in Alaska where it is so warm in winter that they can not secure ice enough for summer use, and there are other places away from the coast so cold that ice is found in summer within a few inches of the top of the ground.

Alaska has proven to be a valuable asset to the United States. There are fully developed at the present time along the western shores the finest salmon fisheries in the world, the output of which amounts to more than $10,000,000 annually. Alaska furnishes the greatest number of fur seals of any country; these are confined to the waters about Pribilof Islands, and are worth more than one-half million dollars annually. The seals have been unnecessarily destroyed in the last few years, so that this industry has been languishing, but under existing laws and the careful surveillance of the United States the seal is now being protected, so that this industry will be much more profitable in the future.

Vast sums of gold have been secured from that Territory. There is obtained from the mines there from fifteen to twenty million dollars per annum. There are other mines in that Territory of great va'ue; the copper district is supposed to be as good as could be found in any other place on the globe. These are being developed and about $1,000,000 per year is being produced. A railroad 200 miles long has been constructed, which connects these mines with the seashore.

There are vast deposits of coal in that Territory, much of it supposed to be of a superior character. These fields have not been developed, first, because private ownership could not be acquired, and, second, no satisfactory system of leasing has been devised. The general impression seems to be that if the coal fields were opened up to private ownership, or if a satisfactory system of leasing was provided, that private enterprise would build the necessary railroad from the coast to these mines. About 175 miles of road is all that is necessary to reach these mines.

In my judgment the Government should do that which is necessary to give the people of the United States the benefit of the Alaskan coal production, and I am gratified to know that legislation looking to this end is now being framed and will soon be presented to Congress for action. I am anxious to see Alaska developed. These coal fields ought to be mined, and some kind of system ought to be adopted by which this valuable asset in Alaska could be profitably utilized.

At the present time the industries named almost entirely cover the field of activity. Much is said about Alaska as an agricultural possibility, and it may be that the beautiful picture of agricultural development and farming population may be realized in the years to come, but thus far farming as a business enterprise in Alaska has not been a success. There have been experiments made to show what that country could produce, and there can be no doubt but that under proper conditions crops that mature quickly and vegetables of the same character can be raised in Alaska. But the trouble is at present it costs too much to prepare the land for cultivation. I quote from the report of Seth Mann, who was the personal representative of the President on a tour through Alaska, and in his report he makes this statement:

The land is covered with a thick growth of small timber, consisting of spruce, birch, poplar, cottonwood, and aspen. Owing to the freezing of the soil in the winter season, the trees in this section have very shallow roots, reaching down only about a foot or so below the surface of the soil. The trees are small and valueless except for fuel. They are easily uprooted, and when the clearing is completed the cover of moss and tundra, about a foot in thickness, must be removed and the soil exposed to the summer sun. The initial expense in preparing the ground is in many cases considerable, reaching as high as $125 per acre.

With this condition existing one could hardly expect this country to be developed for farming purposes by the class of people who are now seeking homes in the United States. What is desired by our people is cheap homes for those who need them; but in this cold climate, where there are but a few months of the warm period, one could hardly expect to make farming a success where it was necessary to make an expenditure which might amount to $125 per acre in preparing the lands for cultivation.

We have in our part of Missouri splendid lands and in good state of cultivation, and yet these lands to-day, with their improvements, can be purchased on an average for much less than $125 per acre. So that the man who desires to farm will naturally remain in the States, where he can get cheaper land and enjoy the benefits that come with permanent settlement.

The President makes a beautiful statement in his message with reference to conditions in Alaska, and says that it is necessary to unlock the interior, and that the railroad is the key which will unlock it. Speaking for myself, I am perfectly willing to unlock at once the vast deposits of coal which may be utilized at once by constructing railroads to the coal fields, and this can be done with an expenditure of about $8,000,000 and the building of 175 miles of railroad. I can see no excuse for any other expenditure in railroad building at the present time. As I have explained, the other purpose for which railroads would be builded would be to open the agricultural lands to settlement and make possible the location of farms in that far-away country. But, as I have also explained, this is at present impracticable. As the lands grow more valuable in the States there will be greater likelihood of Alaskan lands being used. But, aside from the development of the coal fields, there seems to be no possibility of business enterprise being sufficient to meet the operating expense of any railroad that might be built, much less to meet the interest that might accrue on bonds or pay any part of the investment.

It is claimed by some that Alaska is now under the control of the Alaska Syndicate, the stockholders of which syndicate are the Guggenheims and Morgans, and that something should be done to remove their grasp and secure for the people the whole of Alaska. It is urged by those who make this contention that the Alaska Syndicate now owns the transportation lines between the States and Alaska; that it holds and controls the salmon fisheries; that it has secured the fur trade with the Pribilof Islands; and that they own large copper mines in the interior, and a railroad now constructed which leads to those mines, which road has been built at the expense of nearly $10,000,000.

It is claimed, further, that they own the boats on the Yukon and Tanana Rivers. If this be true, they are the owners at present of nearly every important enterprise in that vast Territory, and the development of Alaska by Government aid would result in greater benefit to the Alaska Syndicate than to anyone else. In fact, it would seem that at the outset, at least, the Alaska Syndicate would be the real beneficiary of any aid that may be extended by the Government, excepting the coal-mining industry, which has not been developed and in which they have no interest and can secure none. A railroad constructed so as to open up these mines would be of benefit and would develop an industry which would not be controlled by the Alaska Syndicate.

Mr. Mann, the President's representative, further stated in his report:

> There are two primary requirements for the opening up and development of Alaska: First, the construction of railroads, roads, and trails, and, second, the opening up of the coal fields. These two projects should go forward with equal steps, since each is dependent upon the other.

I am perfectly willing to accept this view and have provision for the construction of railroads to the coal fields, and then secure the passage of laws which will utilize the coal fields for the consumption of those who need coal. I think that these two projects should go hand in hand, and if the pending bill were so amended as to provide for the building of 175 miles of railroad, to cost not exceeding $8,000,000, I would support the bill; but I can not see my way clear to support the proposition which provides for the construction of 733 miles of railroad at the expense of $35,000,000. My vote will be cast in accordance with this conviction, but I will support an amendment to the bill or a motion to recommit the bill which will limit the expenditure to the construction of 175 miles of railroad.

We are in need of the building of public roads in the United States, and the Government is disposed to give aid in their construction. We are needing for the people living in the basin of the Mississippi Valley levees for the protection of the people and the lands, and these levees, if constructed, would result in untold benefit to the American people and would open up for cultivation as fine lands as there are on earth. Much can be done in irrigation of arid lands and in expenditure for conservation of the various resources of the country, and my judgment is that we would first better provide for the States and the development of the interests of the States rather than to make investments in far-away territory which can only result in profit in the distant future, if ever.

The salmon fisheries are on the coast; the fur-seal industry is about the islands of the sea; the copper mines already have a road which connects them with ocean harbors; there are splendid transportation facilities between the States and the Territory of Alaska, and at present there seems to be no special need for the construction of a railroad, excepting for the purpose of developing the coal fields, and, as I have repeatedly stated, I will take pleasure in supporting a bill for the construction of a road to these coal fields.

I am aware of the fact that the most important thing to do at present in securing the development of Alaska is to unlock the door of opportunity to those who wish to enter its lands or secure the right to develop its mines.

It is almost impossible to secure a homestead in Alaska. Mr. Mann, in his report, referred to above, said of one farmer, as an illustration for the rest:

> One farmer on the Yukon kept at the problem of proving up on his homestead for five years, and then gave it up.

Then he says:

> Everywhere one hears a similar story.
> The complaint is general throughout Alaska, both along the coast and in the interior, that the process of proving up on Government land is always interminable, with one inspection following another, and all of them reported back to Washington, and with mail communication between Washington and the interior of Alaska very infrequent during seven months of the year, when the rivers are frozen.

I dislike to differ from the chairman of the Territories Committee, Mr. HOUSTON, one of the most conscientious and honorable men we have in the House, but I am fully convinced that I would not be warranted in supporting this measure and thus provide for so large an expenditure of money for which there could be no return, and on account of which, if the railroads that are built other than to the coal fields are operated, they must be operated at a loss.

I do not wish to practice economy to the extent of parsimony. I do not wish to be considered an obstructionist to any kind of progress, but it seems to me at the present time that the passage of this bill and the building of the 733 miles of road at an expense of $35,000,000 is providing for the wasting of at least $27,000,000. And since I view the matter as I do I must, as a matter of conscience, vote against this bill unless it is so amended before final passage as to provide only for railroads leading to the coal mines, but in order to secure the railroads leading to the mines I do not feel warranted in voting for the foolish expenditure of $27,000,000. In other words, I do not feel at liberty to vote for a proposition which carries the expenditure of $35,000,000 in order to secure a needed improvement of $8,000,000.

I shall take pleasure when opportunity offers in voting for provisions which will open up the coal mines for the benefit of the American people. I will be pleased to vote for a change in the land laws which will make the securing of a homestead in that country easy. I wish to cast my vote for every proposition which looks toward the building up of Alaska. I am especially interested in the platform declaration affecting that Territory, which provides that the people of Alaska shall be given the full enjoyment of the rights and privileges of the Territorial government. I wish in every way I can to secure to them the management of their own affairs and the enjoyment of the full rights and privileges of American citizens, and I hope to see everything done that may be legitimately done to help them to develop Alaska and to make it more profitable to the people who live in that Territory and the States of the Union.

The white population of Alaska is about 35,000, so that it is proposed in this bill to expend an amount equal to $1,000 for every permanent white settler in it. This investment, it seems to me, is entirely out of proportion with present demands and is not warranted either from a business standpoint or from the standpoint of economy to the Treasury, because unless we practice economy somewhere there is sure to be a deficiency in the Treasury next year, and this I am sure the people of the United States would be glad to avoid.

Construction and Ownership of Railroads in Alaska by the Federal Government.

SPEECH

OF

HON. JOHN H. SMALL,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 28, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 1739) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. SMALL. Mr. Chairman, I am opposed to this bill, and in what I hope will be a brief time I shall endeavor in a modest way to give some of the reasons which have brought me to that conclusion.

But it may be wise at this stage of the debate to refer to the bill which is under consideration, to the powers which it contains, and to the purposes which it is intended to effectuate. This bill I shall attempt, therefore, to analyze briefly.

In it the President is given the power to name the railroads, to employ officers and agents, to detail any engineer officer in the Army or in the Navy or any civilian official for service without extra pay, to locate routes for a standard-gauge road or roads connecting one or more open Pacific harbors on the south coast of Alaska with the interior navigable rivers or coal fields yielding coal sufficient in quality or quantity for naval use. It is specified that such roads are intended for the development of the agricultural, mineral, and other resources of Alaska; to induce the settlement of the public lands; to provide for the transportation of coal, munitions of war, and troops. The President is further authorized to construct a standard-gauge railroad or railroads of about 1,000 miles; to exercise the power of eminent domain; and, further, to exercise all of the powers heretofore granted by acts of Congress relating to railroads in Alaska; to purchase all necessary equipment; to build docks and terminals and all other necessary structures; to fix rates of transportation for freight and passengers, subject to the supervision of the Interstate Commerce Commission; to perform all the usual duties of a common carrier for hire; to lease said railroads for a term not exceeding 20 years, and in default of leasing, to operate the same until the further action of Congress; to lease, purchase, or condemn any existing railroads in Alaska; to make joint traffic agreements with other railroads or steamship lines; and to transfer any equipment of the Panama Canal for the construction of such railroads.

Section 2 gives the Interstate Commerce Commission jurisdiction over said roads. Section 3 authorizes the President to borrow $35,000,000, or so much thereof as may be necessary, and issue bonds payable in 30 years, but redeemable after 10 years, at 3 per cent interest, and appropriates temporarily $1,000,000, to be refunded out of the proceeds of the bond issue.

Section 4 creates the Alaska redemption fund, into which shall be paid 50 per cent of sales of lands and minerals, plus the net earnings of said railroads, to be used in paying interest on bonds and redeeming bonds.

Section 5 provides for annual and other reports, and section 6 authorizes the President "to do all other lawful acts and things to carry out the purposes of this act."

I give this analysis of the bill in order that it may be seen that it is nothing more nor less than an embarkation by the Government of the United States upon the construction, ownership, and operation of railroads. Under this bill Congress gives authority for the construction of railroads in Alaska, authority for their operation and all of the incidental powers possessed by a common carrier for hire.

I am opposed to this bill because it does embark us on a policy of Government ownership of railroads and because no reason justifying it appears upon the face of this bill or in the records; nor, in my humble judgment, can any reason be found to make an exception to that policy in the case of Alaska. I believe that the people of the United States are opposed to the nationalization of our railways in any State or Territory.

If we should pass this bill and it should become a law, it would mean substantially the beginning of Government ownership of railroads in the United States. I further believe it is a fair statement to make that no Member of this House can unreservedly vote for this bill who is not in favor of Government ownership of railroads.

Mr. STEPHENS of Texas. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. SMALL. I do.

Mr. STEPHENS of Texas. I desire to ask the gentleman if he is not the author of a bill providing for the expenditure of several million dollars for an intracoastal canal to run along the Atlantic seaboard, and does not the gentleman favor that bill?

Mr. SMALL. I have the honor to have been somewhat active in support of an intracoastal waterway, but the improvement of waterways and harbors is an entirely different proposition from governmental construction of railroads. For years the Federal Government and the Congress have been committed to the construction of waterways.

Mr. STEPHENS of Texas. For what purpose?

Mr. SMALL. For the purpose of promoting interstate commerce.

Mr. STEPHENS of Texas. The transportation of commodities from one point of the country to another under Government ownership.

Mr. SMALL. I understand the gentleman to contend that Government construction and ownership of railroads is on a parity with the improvement of waterways?

Mr. STEPHENS of Texas. Is not that intracoastal canal largely to be built through the gentleman's State and along the Atlantic seaboard?

Mr. SMALL. It is to be along the entire Atlantic seaboard. But I do not wish to be diverted to talking about any waterway project in the United States, whether it is in the Mississippi Valley or in the State of Texas or along the Atlantic seaboard. And I take it that the gentleman is not opposed to improvement of waterways.

Mr. SIMS. Mr. Chairman, may I ask the gentleman a question?

The CHAIRMAN. Does the gentleman yield?

Mr. SMALL. Certainly.

Mr. SIMS. If this bill passes, will the gentleman regard it as committing us to the policy of Government ownership of railroads?

Mr. SMALL. I fear so; and I hope to give some substantial reasons, if I may, before concluding, for contending that there is no more reason for the Government constructing and operating railroads in Alaska than in other sections of the country.

Mr. STEPHENS of Texas. Mr. Chairman, will the gentleman yield for a question?

Mr. SMALL. I will yield for a brief question.

Mr. STEPHENS of Texas. I understand the gentleman believes in building roads, dirt roads, in the States by the Federal Government, does he not?

Mr. SMALL. I have not reached a satisfactory conclusion on that question. I would favor Federal aid under proper conditions. The gentleman certainly knows, though, that it is within the constitutional power of Congress to construct post roads either independently or in cooperation with local communities and States.

Mr. STEPHENS of Texas. Will the gentleman tell us the difference, then, between the United States Treasury paying out funds for the purpose of building roads in his State and building railroads in Alaska for identically the same purpose—for the benefit of the country and the benefit of the people?

Mr. SMALL. I am opposed to Government ownership and operation in any part of the country, and if I understand the gentleman from Texas [Mr. STEPHENS], he is in favor of the Government ownership and operation of railroads. To that extent we differ.

Mr. STEPHENS of Texas. The gentleman misunderstands me. I have said nothing that would lead him to make that statement.

Mr. SMALL. I hope to convince the gentleman that there is no reason for the Government owning or operating railroads in the Territory of Alaska.

Mr. HOUSTON. I believe the gentleman has said that there is no question of the authority of the Government to build post roads. Is not a railroad a post road? Has it not been so declared time and again?

Mr. SMALL. Mr. Chairman, in the brief time I have for the discussion of this bill it is not my purpose to enter upon the constitutionality of this measure. I am going to assume that Congress has the right to build and operate railroads in Alaska if it desires to do so. I assume that for the purposes of my argument.

I was adverting to the dangerous innovation which we are making in providing for the construction and operation of railroads in Alaska, and that I feared it was the beginning of the nationalization of railroads, and I desire to call your attention to some of the results that policy carries with it.

We have in the United States to-day railroads with a total mileage of 248,888 miles. The railroad employees in 1911 were 1,668,809. The employees of the telegraph, telephone, and express companies numbered 322,044, together making 1,990,853, or nearly 2,000,000 salaried employees.

The taxes which are paid annually by the railroads to the State and local communities now amount to $103,873,193. Any legislation which shall open the door and give a plausible excuse for Government ownership of railroads throughout the country is fraught with danger to our institutions, danger to the perpetuity of our form of government, and an economic wrong which can not be justified.

It may be said here in passing, simply by way of comment, that not only is the consensus of sentiment in the United States against Government ownership of railroads, but that it favors the maintenance of private ownership under present Government regulation. I believe, and I take it that every Member of this House believes, in the strict regulation of common carriers, to the end that the public shall receive the most efficient service, without discrimination against any section or any individual. Under that policy we have the most efficient service. We have the lowest rates, and, with a few conspicuous exceptions, we have the best management of railroads of any country in the world.

Mr. LAFFERTY. Will the gentleman yield for a question right there?

Mr. SMALL. Certainly.

Mr. LAFFERTY. Has the gentleman any statistics to back up the statement he has just made? If he has, will he put them in the RECORD?

Mr. SMALL. Oh, yes; even a superficial reading of records and official reports will furnish the gentleman this information and corroborate my statement. I do not care o be diverted to that now, but I am sure the statement I have just made can be justified by the highest authority, much of it official, and that it can not be controverted.

I ask, What reasons are given why we should make an exception in favor of Government construction and ownership of railroads in Alaska? I take it there are many Members of this House like the gentleman from Texas [Mr. STEPHENS], as I understood him to say a moment ago, who are opposed to Government ownership and who are yet in favor of this bill for the construction of railroads in Alaska. Let us look for a few moments and see what reasons are given for making an exception.

They say that railroads are necessary to open up Alaska. Who closed Alaska, if it is closed? It is a fact that during the history of Alaska there have been only two completed patents for coal lands, amounting to less than 200 acres. During that entire time there have only been 163 patents of homesteads in Alaska. About 8 or 10 years ago, under the spur and inspiration of the then chief of the Forest Service, Mr. Pinchot, after the discovery that there were valuable minerals in Alaska, this Government adopted what has been termed intense conservation or ultra conservation. Under that policy we have absolutely closed up every avenue for the development of the resources of Alaska. We do not have conservation there. We have, as some have expressed it, reservation, so that the Government has reserved unto itself every one of those resources out of which products are to come which are to make traffic for the railroads which are to be constructed. A policy of fear, timidity, and quiescence, under the guise of conservation, has been adopted in that distant Territory for these last 10 years, and now we hear lamentations and wails because the resources of Alaska have not been developed, and now, as usual, we are disposed to lay the blame elsewhere than on ourselves. Apparently the easiest way out of this dilemma is to borrow money and build railroads. Shall we search ourselves for the truth, shall we maintain our mental poise, or shall we follow the hungry crowd on the Pacific coast and vote millions for railroads in a vast frozen area with a meager population of only 35,000 white folks?

Railroads in themselves do not make for commerce or for traffic. There must be some resources to be developed—forests, minerals, soils to be cultivated—something which must come out of the earth in one form or another, or out of the sea, which shall be made into valuable products for the use of man and thereby create products for traffic of any railroad. Here it is proposed while Alaska is still bottled up, while no man except under such conditions as make it impracticable, may enter a homestead in Alaska, where no man, however strong his desire may be to obtain a patent of coal lands in Alaska can get one, it is proposed, in the first instance, to put the cart before the horse and build a railroad at a cost of $35,000,000 into that Territory.

It has been urged most insistently and seriously by the Delegate from Alaska [Mr. WICKERSHAM] that greedy monopolists are attempting to monopolize the resources of Alaska. It may be said by way of parentheses that very few of the resources of Alaska have been permitted to get into private hands and there is very little to monopolize. But insistently, and evidently with entire sincerity, he refers to the Alaskan Syndicate and other monopolistic combinations of corporations in Alaska, and insists that they stand as a barrier in the development of its resources. He said they were monopolizing the wagon roads, constructed for public use. He enumerated the eating houses, and to take literally the statement of the Delegate from Alaska, there is scarcely a public utility in that Territory which is not monopolized in the manner which he describes. And he insists that by reason of this condition primarily the Government ought to construct railroads there.

It has been urged as another reason that the 463 miles of railroad which are now in existence in Alaska were monopolies and not operated in the interest of the public. That is given as another reason why the United States should build railroads there. Others have said, and the majority report of the committee amplifies that proposition, that these railroads should be built by the United States for governmental uses. What governmental uses are there to justify an expenditure of $35,000,000? Great emphasis has been laid on the proposition that coal for our Navy could be obtained from the interior coal fields of Alaska; and yet it appears, and I will insert it in my remarks—clipping from a recent issue of the Star—to the effect that tests have been conducted by the Navy of 600 tons of coal from the Bering River coal fields, and that it is inefficient and not of proper quality for use on our naval vessels:

ALASKA COAL A FAILURE—VALUELESS FOR NAVY, ACCORDING TO OFFICIAL REPORT OF TESTS.

Preliminary tests of Alaskan coal from the Bering River district have been very discouraging to officials who hoped they might develop a new fuel supply for the Navy. Rear Admiral Griffin, in charge of the investigation, has reported to the House Naval Affairs Committee that the Bering River coal tested has fallen so far under expectations in practical use as to be of no value, but that from the Matanuska fields and other sections of the Bering district, from which coal is yet to be tested, the Navy is hoping for better results.

Chemical tests of the Bering River coal indicated that it contained a higher efficiency of thermal units than the Pocahontas coal of West Virginia, but when put to firing tests in the Navy, notably aboard the cruiser *Maryland*, it developed only 43 per cent of the same efficiency and caused a great deal of trouble. It made immense clinkers, which clogged the furnaces and covered the grate bars with a molten substance like tar, which shut off the draft and hampered steaming.

Congress has appropriated $75,000 for experiments with coal from the Matanuska district, and these will be carried on.

Those who are opposing the Alaska railway bill, now being debated in both Houses of Congress, are pointing to the admiral's testimony before the Naval Committee as an added argument in their favor. One of the arguments advanced by the supporters of the bill is that a Government railroad is needed to tap the northern coal fields and bring a fuel supply to tidewater for the Navy.

As was said the other day, in a large degree our ships of the Navy are to be operated in the future with petroleum as a fuel. There is only one other coal field in Alaska, and that is the Matanuska field, which, it is contended, will furnish naval coal. That has not been tested. Let us hope that at least one of these fields, when it is finally reported upon, will show that its coal is efficient and of proper quality for use on our naval vessels.

I submit that there are no governmental uses which justify the investment of this large sum of money and the construction of railroads in Alaska.

But it has been said that the United States Government owns Alaska, and, therefore, it should build the railroads and develop its own property. I have not been able to understand the consistency of that proposition. For what purpose does the United States own the public lands? Is it a part of its policy to exploit them? Shall it mine for coal, as the gentleman from Washington [Mr. BRYAN] said that he favored? Shall it engage in Agriculture? Shall it establish fisheries? For what purpose does the United States own its public domain? For only one purpose, and that is to vest it into the hands of its citizens, under proper conditions, so that the settler may obtain grants for farm lands, if any can be found fit for profitable agriculture, and so that its coal and mineral lands may be leased or otherwise conditionally granted. Thus may the resources of Alaska be developed under terms of genuine conservation. In a general way this has been the policy of the United States regarding the public domain from the beginning, and that ought to be the policy of the United States in this great domain of Alaska, comprising one-fifth of the territory of continental United States.

Therefore, coming back to the proposition of the effects of conservation, the policy which ought to be adopted is one which would open up these mineral lands, these agricultural lands, if there are any, and the other resources of Alaska, so that the initiative of enterprise and public spirit of the American citizen

might utilize and exploit them for their own profit and for the profit and wealth of all the people in the country. [Applause.]

I said I did not understand why gentlemen could seriously advocate the proposition that because the United States owned more than 90 per cent of the lands of Alaska that, therefore, it should build railroads for the purpose of developing those lands. Let me submit another query. Is it the purpose of the Federal Government, under the theory of unearned increment of lands, to build railroads there, then to develop alternate sections of mineral and agricultural lands, and thereby add to the value of the lands before putting them on the market, or is it the proper policy for the Federal Government to permit its citizens to get patents to alternate sections of agricultural or mineral lands or otherwise secure some degree of title to the resources of Alaska and develop them and let our citizens, the men of thrift, create an added value for the remainder of the lands still reserved by the Government?

The policy which we ought to adopt in connection with the opening up of Alaska is for Congress to pass remedial laws by which the resources, in so far as they may be attractive and valuable, shall be opened to citizens of the United States, and not under such paternal policy as is sought to be adopted in this bill. I want to make this proposition, and if any gentleman in the Chamber can controvert it, I want him to do so: There is not an evil condition, there is not an economic or industrial wrong existing in Alaska which has been mentioned during this debate as justifying the construction of railroads by this Government in Alaska which it is not within the power of this Congress to remedy by legislation other than the building of railroads. If there is a single one of these conditions which Congress has not the power or which it may not in a practical way remedy, then I ask any advocate of this bill to name it now. I pause for an answer to this challenge. If there has been monopoly of railroads there, monopoly of wagon roads; if there has been any attempt to exploit Alaska to the injury of the people there or to the injury of the people of the whole country; if there has been a single reason given in this debate reciting evil conditions in Alaska, I ask any Member who has advocated the construction of railroads by the Government as a remedy for these evils to answer the question whether by appropriate legislation, other than the building of railroads, a proper and complete remedy may not be afforded? The proposition is unanswerable. I state again, and I state it emphatically, that every evil condition which exists in Alaska to-day, every monopolization of its resources or of public utilities which have been urged as a handicap to the development, growth, and progress of Alaska, that it lies within the power of this Congress to provide a remedy for, other than the building of Government-owned railroads. If during the brief time which I shall occupy the floor a Member can think of a single one of those evils which we have not the power to remedy, I hope he will so state.

What are the resources of Alaska about which so much has been stated? I am in sympathy with the desire to utilize the resources of Alaska for the benefit of all the people of this country. I desire its development. I am willing to vote for any legislation which does not violate the settled policy of this country and which involves no economic error for the development of Alaska. But what are the resources there which we are asked to develop? I do not desire to disparage or minimize its resources. Probably they are greater than I conceive them to be, but certainly no one could have listened the other day to the gentleman from Oklahoma [Mr. FERRIS], who described the agricultural conditions in Alaska and the possibilities of cultivation and the development of that soil for production of crops, without being deeply impressed with the thought that agriculture in Alaska for any development of any pretensions was a long way in the future. I think it may be stated with entire truthfulness that the only possibilities for agricultural development in Alaska are such as may arise around mining towns or other industrial communities there for the purpose of supplying local demand. Even the personal representative of the President, Mr. Seth Mann, stated that it could not be foreseen when there would be sufficient agricultural products in Alaska for export, and for many years, at least, not sufficient to meet the local demand of the people of Alaska.

The CHAIRMAN. The Chair will state to the gentleman that he has five minutes left.

Mr. SMALL. Mr. Chairman, I am assuming that the mineral resources of Alaska are varied and valuable. I do not care to go into the details of that. The point I wish to reiterate is that whatever resources are there are bottled up by the policy of preceding administrations and of this administration, and that every avenue to open them up is closed by the inaction and indifference of the Congress of the United States, and that before we undertake the building of railroads to develop these mineral resources or any other resources in Alaska we ought first to open the door of opportunity wide to the people of the United States and of other countries, as it may be, who desire to settle in Alaska to obtain a foothold by purchasing the lands of the Government, to mine its mines, to take out its minerals, cultivate its lands, and in other ways to do the work which has always fallen to the lot of the hardy pioneer.

In conclusion, I would like to emphasize the statement that no reason has been given why railroads should be constructed by the Government in Alaska that will not apply to many other sections of the United States, that every evil which exists there, every economic wrong, every one of the allegations made, and which have been urged as justifying the construction of railroads, may be removed, and new and appropriate conditions restored by appropriate legislation upon the part of Congress.

Now, the gentleman from Oklahoma [Mr. FERRIS], who made such a clear and informing talk upon this proposition, stated that in his opinion the remedy was the leasing of the mineral lands upon such conditions as would enable the lessees to obtain the minerals in sufficient quantities for profitable production, and at the same time to surround the leases with such conditions as to prevent spoliation and to preserve them or conserve them in an appropriate degree for the use of the people of the United States and to posterity. That, it seems to me, was a proposition which was well taken and which must appeal to the good judgment of Members of this House. What we should do is through the appropriate committees of this House to propose and enact legislation which shall first open up Alaska, which shall permit its agricultural lands to be obtained, which shall permit its coal and mineral lands to be obtained and leased under proper conditions, thereby attracting settlers, which settlers, just as they have done in the Rocky Mountain States, just as they have done on the Pacific coast, just as our forefathers did in the great Mississippi territory, be left alone to work out their salvation and in doing so to develop the resources of Alaska.

Mr. Chairman, I regret that I felt constrained to oppose this bill. It appears that the Secretary of the Interior, Mr. LANE, has advocated it, advocated it because, as I understand him, he does not care to be bound by any past policy, but because he says we have new conditions, and we must meet new conditions with new policies. The question of the unsoundness of the policy of Government ownership apparently did not appeal to him. I regret it further because the President of the United States, who is one of our greatest Presidents, and whom we greatly admire, said in his message to Congress that railroads were only the key to the opening up of Alaska. Yet my own convictions were so strong that I could not yield them, and I believe I also represent the views of my constituents. In my judgment it would be the entering upon a policy fraught with such danger to our institutions and to the future commercial and industrial growth of the United States that it is a precedent which should be honored in the breach. Right in the beginning we should realize its great dangers, right in the beginning we should thwart those who are seeking to adopt Government ownership, and right in the beginning we should resolve that the Congress of the United States will embark upon a policy of Government ownership and operation of railroads in no part of our country. [Applause.]

Railroads in Alaska.

EXTENSION OF REMARKS

OF

HON. BRYAN F. MAHAN,

OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 18, 1914.

On the bill (S. 48) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes

Mr. MAHAN. Mr. Speaker, I shall vote for this bill. Alaska contains about one-fifth the area of the whole United States and is owned practically in its entirety by this Government. We have been the proprietors of this great expanse for nearly 50 years, and to-day its population is only about 30,000.

It is argued that Alaska is not growing in population and can not be developed. To prove that we are prone to mistakes in that respect it is only necessary to cite the case of our sturdy young neighbor on the north, a large section of which up to a

few years ago was supposed to be uninhabitable. That theory was shattered by the introduction of the railroad, and so, too, I believe, will be the popular conception of Alaska.

That Territory cost us seven millions in 1867 and we have since taken from her more than $400,000,000; yet the surface has been hardly scratched. Alaska is a country of vast possibilities, rich in gold and silver and containing apparently inexhaustible mines of coal.

Mr. Speaker, it is claimed by those opposed to this measure that the use of the millions required to build this road can not be justified. Our experience in the past does not bear out this view of the situation. In the construction of our transcontinental lines large subsidies of money and lands were freely given by the Federal Government.

The results of this policy, I think, speak for themselves. Private capital alone could not have accomplished the task any more than to-day private construction of an Alaskan railroad is to be thought of.

We have not been miserly, to say the least, in providing transportation facilities within our own immediate borders. In addition to the subsidies to which I have referred and the more recent liberal expenditures of millions on the Panama Railroad, we are appropriating annually nearly $50,000,000 for the improvement of our rivers and harbors, with a grand total to date of three-quarters of a billion.

Let us dwell for a moment on the most recent accomplishment of the Canadian Government, with a population of 8,000,000 people. Beginning at the Atlantic and crossing the Provinces of New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia, ending in a $2,000,000 dock at Prince Rupert, on the Pacific, the Dominion has practically built the Grand Trunk Pacific Railroad. The eastern half of the road was paid for outright by the Government, and the first-mortgage bonds of the western were guaranteed by it.

Along much of this ocean-to-ocean line, 100 miles on either side, there is no human habitation and the foot of a white man had seldom trod upon it until the building of the road.

I do not need to tell you of the transformation which this deserted region has since undergone.

And here are we, representatives of a Nation of 100,000,000 people, actually shivering at the thought of investing a fraction of what our little neighbor did to develop our northern treasure house. I venture a prediction that some of the younger Members of this House will look back on their legislative careers and feel that in voting for this bill they achieved a real stroke of statesmanship. And we of Democratic faith who favor it will have the knowledge of having upheld a principle of the Baltimore platform and of carrying out an expressed wish of President Wilson.

I agree with Secretary of the Interior Lane, when he says:

> I favor the adoption of this policy. I believe it to be that under which Alaska will develop most safely and most speedily and under which the resources of that Territory will most certainly become available to the whole people.

Mr. Speaker, I believe that we, as representatives of the people, owe it to ourselves, our constituents, and to the Territory of Alaska to expedite the development of that great storehouse of wealth by providing for rapid increase of population through easy communication with the outer world.

Construction and Ownership of Railroads in Alaska by the Federal Government.

EXTENSION OF REMARKS

OF

HON. WALTER ELDER,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 18, 1914,

On the bill (H. R. 1739) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. ELDER. Mr. Speaker, I am opposed to giving $36,000,000 to start a railroad in Alaska, for several reasons, any one of which is sufficient, in my mind, to defeat the proposition. It is well recognized that, owing to outside pressure, the final passage of this bill is assured. However, pressure without sound reasons should not be sufficient to pass bills in this House, and if some here had backbones instead of cotton strings we would come nearer being a Congress representing the American people than puppets in the hands of some others. No doubt many of you are voting for this bill from pure, conscientious belief and reasoning, and to such, while I differ with you, you have my respect and admiration; toward the others I had perhaps best not express an opinion.

In the first place, there is no necessity for this expenditure. We hear a great deal about the corporations grabbing Alaska, and that this is the only method to keep them from it. Because the Government may own and operate at the cost of maintenance a railroad in Alaska it will not prevent corporation control of the mines and all its other resources. We can unlock Alaska by a leasing system which will return a fair yield to both the Government and the investor. We can prevent the corporations gobbling up Alaska by providing that no corporation or person can directly or indirectly own or operate above a certain amount of land in that country, and put such a penalty for violation, both civil and criminal, that no man would dare to violate the law. For such a law I would gladly and readily vote.

In the second place, I can not bring myself to believe in the Government ownership of railroads. I know of at least one bill which will follow this urging the Government's operation of a railroad in Michigan, using this bill as a precedent. However, even if I believed in Government ownership of railroads, I would not support this bill because the operation of the railroads in Alaska can not be a financial success owing to climatic conditions. They would have only about three or four months in the year in which to operate, and the only tonnage of any size which they could possibly haul would be the coal deposits, which have not yet, in spite of two tests by the Government, proven a success as a heating proposition. We do not need the coal of Alaska at this time and should leave its development to the future generations that may need it.

The Government reports show we have already discovered and located enough coal to run this country for 7,000 years, which is far enough ahead, at least for my mind to calculate and provide for. They will have to operate through mountains of snow and ice and haul only a few trainloads for each season. They say we will haul out on this railroad, when built, a great deal of gold. Up to this time Alaska has been only a placer-mining country, and all the millions of gold which have been brought out of Alaska could be brought in two or three carloads, the freight on which, from a hauling standpoint, would have perhaps brought the Government a thousand or fifteen hundred dollars. However, if I was sure that billions and not millions of gold would be mined in Alaska by ten or fifteen thousand promoters and gold diggers, who would leave this country for the chances of those barren fields, and would bring back these billions of gold with them, from an economic standpoint, and looking at it from the standpoint of the poor people of my district, I could not vote for it. The larger the production of gold the higher the cost of living. Unquestionably, from an economic standpoint, if all the gold of Alaska was dumped into the banks of America to-morrow, what we would buy to-day for a dollar would to-morrow cost us $2, and the only ones who would secure any benefit out of this money would be those who risked their time, their lives, and their pleasure in digging it, and those who would follow in their trail on the Great White Way of New York City. They would have produced no actual material wealth, and the payment would be made by the people of the country who are the producers. If it would develop a great agricultural country, there might be some reason for it, but every month in Alaska, leaving out the small territory on the coast, and which the railroad would not benefit, there is a killing frost, the ground is frozen to the depth of 50 to 200 feet, and agriculture is impossible, except under hothouse conditions. If agriculture could be produced that would help to feed and clothe the world, then it would be of some economic value, and the Government would get its pay not out of the railroad but out of the production of material wealth in the country.

In the third place, there are only about 40,000 white people in Alaska. We start by giving them an expenditure of almost a thousand dollars per capita, and it is not denied that it is going to take about $150,000,000 additional appropriations to give them anything like the roads they say they need and that we know they desire. If you would give me $1,000 per capita, I would not need the four or five thousand which we are undoubtedly going to spend on them per head; but give me $1,000 per capita for the people of my district and I could macadamize every public road there, build a $5,000 schoolhouse in every precinct, and drain a territory 80 miles wide and 100 miles long made of the finest alluvial deposits; the soil is as rich as any in America or as rich as the valley of the Nile, a country, when drained, sufficient to support a million people and sufficient to produce enough agricultural products to feed the

entire State of New York and at least ten times as much agricultural products as all that bleak Alaska can possibly produce when it has been fully developed. That is not all. It would leave a sufficient sum to pay our State and parish debts, and the interest of the remainder would pay all the State and parish taxes of that district forever. Instead of that you give us $15 a mile for post roads and Alaska $100,000 a mile for railroads. To the man who is an humble citizen of this country, living his toilsome life, paying his taxes and supporting the Government, and receiving small benefit therefrom, away from the use of the public buildings and from many interesting things of city life, a man who is always subject to the call of his country, you give a paltry sum, a sum that he has paid in taxes many times over in his life; but to the man who is daring and bold, and who is not satisfied to stay at home and make the ordinary, sort of citizen, but who wishes the wild dreams of millions for his work, and who can not possibly produce anything that will economically enrich the rest of his country, you are starting out by giving a thousand dollars apiece, which we all know will be increased several times in amount. The comparison, in my mind, does not seem fair. Some of you have heard the whispering of the leaves, some of you are profoundly sincere in these beliefs, and I regret that my judgment causes me in this matter to differ with a majority of this House.

Railroads in Alaska.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. FIELDS,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 18, 1914,

On the bill (S. 48) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. FIELDS. Mr. Speaker, I am opposed to the passage of House bill 1739, which proposes to authorize the construction of a railroad in Alaska at the expense of the Federal Government, which means at the expense of the taxpayers of this country. In opposing this measure I will not go as far as some gentlemen have gone who have said that the time will never come when it will be either feasible or profitable for the Government to open Alaska by constructing a railroad across or into her territory, but I do not consider it proper to do so at this time, nor do I believe it will be the act of good judgment or economy to do so for many, many years. And we, Mr. Speaker, who hold the purse strings of the Nation should exercise business judgment and sound discretion in the expenditures of the public funds intrusted to our management by the constituencies who send us here.

Now, there is not a single valid reason why we should expend $40,000,000 of the peoples' money on this project, and every reason why we should not do so.

First, we are under no platform pledges to do it because our party has not spoken upon this subject, and every man is at liberty to think and act and vote according to the dictates of his own conscience and the will of his constituency without violating any political obligations or repudiating any platform promises made to the country. It is a new proposition with which we are confronted, and should receive the careful thought of each Member of this body before it is written into law; for in my opinion the $40,000,000 proposed to be expended by this bill is only the beginning of an expenditure of countless millions that will be expended on Alaska, on which we will never receive an adequate return. That is one phase of the proposition, and the next phase of it is that we are endangering the Federal Treasury, which may result in a bond issue to meet the current public expenses; and history teaches us that that is a dangerous proposition for any political party, and has resulted in the undoing of every administration which has had to resort to it.

The next phase of this question is whether or not it is the proper field in which to invest if we have the money to spare, and with this phase I shall deal more extensively. The proponents of this bill claim that by building railroad lines into the coal fields of Alaska we shall be able to make the Pacific coast a naval base by reason of the fact that it will enable us to get a coal more cheaply and with less delay with which to supply our Navy. But that argument has been undermined by the recent report of the Secretary of the Navy, which shows that Alaskan coal is unfit for naval use. This information was received from the Secretary of the Navy by the gentleman from Oklahoma [Mr. DAVENPORT], who is a member of the committee which framed this bill, and I quote same that it may go into the RECORD. It reads as follows:

NAVY DEPARTMENT,
Washington, December 15, 1913.

Hon. JAMES S. DAVENPORT,
Committee on Territories,
House of Representatives, United States.

MY DEAR MR. DAVENPORT: The report of the coal investigations in the Bering River fields have not yet been completed. At the present time the progress is as follows: The conditions in the Bering River field have been observed and a large sample of coal mined. It has been estimated that the field contains an adequate supply. The sample of run-of-mine coal contained a much larger percentage of ash than former investigations of the field indicated, and possibly on account of this large ash content and the clinkering of the coal the test by the U. S. S. *Maryland* proved that run-of-mine Bering River coal is unsuitable for naval use. A portion of the coal was screened and washed at the naval engineering experiment station, Annapolis, Md., and an evaporate test will be made on December 17 and 18 to show whether the washed and screened coal from the Bering River field is suitable for naval use.

The department regrets that your letter was not received in time to forward you this information at the hour requested by you.

Sincerely, yours,

JOSEPHUS DANIELS.

And, Mr. Speaker, after they made this test at Annapolis, the Acting Secretary of the Navy on December 27, 1913, made the following report:

NAVY DEPARTMENT,
Washington, December 27, 1913.

Hon. JAMES DAVENPORT,
House of Representatives.

MY DEAR MR. DAVENPORT: The preliminary report of the tests of Bering River washed and screened coal at the engineering experiment station, Annapolis, Md., notes that under similar conditions Bering River coal produced only about 75 per cent of the power gotten with Pocahontas.

The department therefore notes with regret that the Bering River coal sample has thus far proved unsuitable for naval use.

Sincerely, yours,

FRANKLIN D. ROOSEVELT,
Acting Secretary of the Navy.

Mr. Speaker, I deem it advisable to give some consideration to this report of the Secretary of the Navy, especially since the argument in favor of a naval base on the Pacific coast is the greatest argument in favor of the construction of these railroads in Alaska by the Government. And another argument against the contentions that we should expend this money to secure Alaskan coal for our Navy is the fact that all of our most modern battleships are steamed with oil, and those now under construction will be steamed with oil when put into service. The Navy is rapidly passing from the use of coal as a fuel. Therefore the expenditure of this vast sum of money for the purpose of securing Alaskan coal for the Navy, which is unfit for use in the Navy, and which will not be needed within a short time, even if it were of superior quality, is absolutely unwarranted, and can there be a single argument advanced that the opening of the Alaskan coal fields would cheapen the price of coal for home consumption in the continental United States by the people who are to bear the burdens of this taxation? No; not one. If any man will disprove my statement I will support the bill, for I am anxious to see the consuming public get their fuel at the cheapest price possible.

But let us make a brief comparison between the coal fields of Alaska and the coal fields of this country, which are operated in 31 States of the Union. There are three coal fields in Alaska. Two of them, the Bering and Manatuska, are down on the coast region, where they already have water transportation, and where the proposed railroad would not improve their value. The other, the Nenana coal field, is in the interior of Alaska, and its value would be greatly enhanced by the construction of a railroad into it if the coal was of such a character as to stand long shipment. But the Nenana coal is a lignite coal, the quality of which is so inferior that it is not fit to ship a great distance. In support of this statement I wish to read from the hearings a portion of the testimony of Dr. Alfred H. Brooks, of the Geological Survey, who was a member of the railroad commission. Dr. Brooks has long been a resident of Alaska and was of such prominence that President Taft appointed him on this railroad commission; and, whether you are for the bill or against it, you must concede that Dr. Brooks is authority on Alaskan coal fields. In the testimony Dr. Brooks said, in speaking of the Nenana field:

I have measured coal about 20 feet in thickness in this field. That is about the workable limit of commercial mining. So I prefer to think there is no coal quite so thick as indicated by the picture, because I do not think it would be worth much. But whatever may be said about the thickness of any individual bed, there is an enormous amount of coal in the field. Our party made an estimate on the basis of the actual quality in sight—and our surveys were not detailed—of some 9,000,000,000 tons, which is more lignite coal than we estimated in all Alaska at the time we made the report of the Conservation Commission. There is an abundant supply of coal there. So far as we know,

it is all lignite—a fair grade of lignite—and can be used to advantage in local industries.

But, Mr. Speaker, does any man on this floor believe that a ton of lignite coal is of such quality as to warrant its haul across Alaska to the coast and then stand a 2,000-mile water haul to the United States? This proposition is absurd, and no man would attempt to defend it from an economic point of view when we have in the State of Wyoming alone, as shown by the 1908 report of the Geological Survey, enough coal to last this country 1,000 years at the rate of 400,000,000 tons consumption a year, and this field is from 2,000 to 4,000 miles nearer our western coast cities than the Alaskan fields. In addition to the Wyoming fields, we have the fields of Washington and California, Idaho and Nevada, Utah and Colorado, Iowa and Kansas, all closer to any point on the western side of the country than the fields of Alaska.

We have in the continental United States, according to the last report of the United States Geological Survey, enough coal to last this Republic 7,000 years; and, as I have previously said, it is distributed throughout the length and breadth of the land, as shown by a table from the Geological Survey on the coal production of the United States in 1911, which reads as follows:

Coal production of the United States, 1911, by States.

[Value per ton and price per ton per employee.]

States.	Tons.	Average per ton.	Tons per employee.
Alabama	15,021,332	$1.27	662
Arkansas	2,106,789	1.61	372
California and Alaska	11,647	2.00	.....
Colorado	10,157,383	1.45	710
Georgia and North Carolina	165,330	1.49	.....
Idaho and Nevada	1,821	2.68	.....
Illinois	53,679,118	1.11	701
Indiana	14,201,355	1.08	670
Iowa	7,331,648	1.73	442
Kansas	6,254,228	1.54	538
Kentucky	13,706,839	.99	628
Maryland	4,685,795	1.11	779
Michigan	1,476,074	1.89	444
Missouri	3,760,607	1.71	376
Montana	2,976,358	1.79	770
New Mexico	3,148,158	1.54	788
North Dakota	502,628	1.43	.....
Ohio	30,759,986	1.03	688
Oklahoma	3,074,242	2.05	350
Oregon	46,661	2.32	.....
Pennsylvania (bituminous)	44,754,163	1.01	860
Tennessee	6,433,156	1.12	601
Texas	1,974,156	1.66	.....
Utah	2,864,667	1.69	821
Virginia	6,864,667	.91	929
Washington	3,572,815	2.29	550
West Virginia	59,831,580	.90	896
Wyoming	6,744,864	1.56	851
Total	405,757,101	.....	.....

Mr. Speaker, the Federal Government has spent almost incalculable millions of the peoples' money in the improvement of our waterways, and in railroad grants to extend lines of transportation into these various fields, that their products might be carried not only to the markets of this country, but to the markets of the world. And we can purchase our coal from these fields more cheaply than we can ever hope to purchase it from the fields of Alaska. We can purchase it from the fields of the continental United States cheaper than we could freight it from the inland fields of Alaska if it were given to us there loaded on the car. Therefore this proposition is a farce from the standpoint of coal for consumption in the United States.

Mr. OLDFIELD. Mr. Speaker, will the gentleman from Kentucky yield for a question?

The SPEAKER. Will the gentleman from Kentucky yield to the gentleman from Arkansas?

Mr. FIELDS. I yield to the gentleman.

Mr. OLDFIELD. The gentleman said a moment ago that we could get coal more cheaply from our own fields than we could get it from Alaska if it were mined and loaded there free of cost. Does he think that the city of Seattle, Wash., could purchase and transport its supply of coal from Pennsylvania more cheaply than it could transport it from Alaska if on his proposition it was loaded on car there free of cost?

Mr. FIELDS. Well, Mr. Speaker, that might not be the case as between Seattle and the coal fields on the eastern side of the country, but fortunately for Seattle there is much coal in the United States lying hundreds of miles nearer to it than either the fields of Pennsylvania or Alaska; and I apprehend that Seattle will not suffer for coal before the Alaska fields are ready to supply it over the railroad, the wind work of which we are now erecting, or buy it any cheaper after the real railroad is completed, notwithstanding the fact that it will have cost $40,000,000 of the money that belongs to the taxpayers of this country.

Mr. Speaker, there is not one single point upon which the proponents of this measure can hang their defense of it from the standpoint of cheaper coal for this country. Then where and how can they defend it? Can they do it on the ground that the commerce between the States and Alaska will justify it? Of course they can not. The statistics on the commerce will not bear them out in any contention of that kind, even though we have heard some glaring statements about the products that come from Alaska. But mere statements are one thing, and facts are another; so let us see what the facts are.

The total products that have come from Alaska from 1868 to 1911 were $428,000,000. Two hundred and six millions of this amount were mineral products, including coal, gypsum, marble, and tin. Two hundred and twenty millions, or over half of it, were sea food and furs, which does not need a railroad, for it comes by water, and that class of goods will continue to come by water after your much-desired railroads are completed.

Mr. Speaker, a great deal has been said about the precious metals of Alaska. But that is no argument for the construction of a railroad, for precious metals do not amount to anything in tonnage, and the prosperity of a railroad depends upon the amount of tonnage it handles. So, what have we left to justify the expenditure of this money? Nothing but the agriculture possibilities of Alaska. Let us take the testimony of Prof. Piper in the hearings, who is another member of the railroad commission, and who had charge of the Alaska Agricultural Station for many years. Prof. Piper says:

> The development of the Copper River region anticipated at the time that the station was there established did not materialize.
>
> When it comes to predicting the future agriculture of Alaska from these experimental results, backed up by the results of many farmers scattered over Alaska, one is confronted with a difficult problem. Before I touch on that, I may state that most of the work done at those experiment stations has been done on small plats. The yield of oats has varied from 50 up to 60 bushels per acre, and of barley from 50 to 60 bushels. Yields of 50 to 60 bushels of barley were, I understand, secured last season at Fairbanks in pretty large-sized fields. No wheat, so far as I know, has yet been grown in fields of any area, or at least where considerable fields have been planted the winter killing has been so severe that the yields have been small.
>
> There can be no question from these results that there is a possibility of the production of grains in the agricultural lands of Alaska. Just here I may say that the amount of tillable land in the interior of Alaska has been estimated by most of the men who have attempted to make an estimate of about 30,000 square miles, of which it is assumed that at least one-third is tillable, and that of that tillable land probably more than two-thirds is in the interior. So there is a very large area of land which, if capable of raising profitable crops of grain, would furnish a large amount of freight. As I said a moment ago, I do not think there is any question as to the possibility of growing these grains, especially the oats, barley, and rye. In fact, I think there can be no doubt that sufficient of them will be grown for all local needs. As to whether quantities will be raised that could be exported, I am very far from being sanguine. There is, as I understand, in the interior of Alaska no large area of land on which a farmer can go and plow up as he could on our western prairies. I therefore do not see any chance for rapid development of that region in the matter of grain production such as is taking place in Alberta to-day, and which took place in our western prairie States.

Mr. Speaker, the testimony of Prof. Piper, that eminent expert on Alaska soil, is sufficient to convince any farmer that Alaska is not an agricultural country. He says they can raise rye and oats and barley up there, have already produced these crops in small quantities, and he feels confident that they can produce enough of these crops for home consumption after they get their lands cleared; and we can all realize that the clearing is a matter of small concern, as it only costs from $50 to $200 per acre to do it. And after it is done, the farmer only has to wait from a year to two years for the soil to thaw out to a depth of a foot or two, which enables him to plow and plant his crop.

Mr. Speaker, the testimony of Prof. Piper is a beautiful inducement to hold out to the American home seeker, and in my imagination I can see in the not far-distant future great delegations of our stalwart men rushing northward with their eyes closed to the 3,000,000 acres of public lands in the United States, thousands of acres of which are unexcelled in fertility anywhere, to take up their abode in the ice-laden and moss-covered regions of Alaska—the land of rye and barley. And after they have spent from $50 to $200 per acre clearing their land and waited a year or two for it to thaw out so they can farm it, they can probably produce enough of these precious staples, rye and barley, to supply their local demands. And then, Mr. Speaker, they can sit back and enjoy six months of winter darkness and think of their brethren whom they have left behind them to till the soil of their native land, the Egypt of the West, and grow rich from its bounteous crops.

Mr. Speaker, I do not think that any good business man or any successful farmer would take the action that it seems

that this Congress is determined to take in this matter. Nor do I believe that there is a Member of Congress who would do so were he in possession of both the United States and Alaska. I believe, sir, that should any Member be in absolute control of both countries he would decide that he could spend his $40,000,000 to a better advantage in many ways in the continental United States. I fancy that before going to Alaska to break the Ice Trust by building a railroad through it, he would take a look at his two and a half million miles of public roads in this country that need improvement so very much.

I think, sir, that before he attempted to build a railroad for the special attraction of the handful of farmers in Alaska he would heed the urgent demands of the 6,000,000 farmers of this land who are begging for Federal aid for their public roads so that they may get their produce to the markets with greater dispatch and less cost. Before he would go into Alaska to employ men to build a railroad he would spend his time and means devising and putting into operation new appliances and new improvements on the rolling stock of his railroads here that would lessen the loss of life and limb among the employees of the railroads of this country. Before he would delve into Alaska's earth to take therefrom her useless coal he would look with greater care than this Government has exercised into the problem of conserving human lives in American mines. Before he proceeded to extend post roads into the unpeopled regions of Alaska he would give more attention than this Government is giving to the postal facilities of this country. And, Mr. Speaker, if he were looking for an opportunity to spend his money for charitable purposes, he would not go to Alaska to spend it lavishly upon a few while the hand of charity is reaching to him from every side for assistance to the suffering millions around his own door. Mr. Speaker, I repeat what I have said. I do not believe that there is a Member in either branch of Congress who would entertain the proposition for a moment if it applied to his own individual business; and I feel that we, in acting collectively for the people, should be as much concerned as to the general welfare as we would be if acting individually for ourselves. And, acting in that spirit, I am compelled to vote against this bill, and I hope it will fail to pass. [Applause.]

Drainage of Swamp Lands.

REMARKS
OF
HON. CHARLES G. EDWARDS,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 24, 1914.

Mr. EDWARDS. Mr. Speaker, one of the most vital questions that confronts this country, and one which has been ignored and neglected by Congress, is that of the drainage of the swamp and wet lands of the United States.

In a speech delivered by me on this subject in the House of Representatives on February 10, 1911, I pointed out that in Senate Document No. 443, Sixtieth Congress, first session, on the subject of "Swamp Lands of the United States," that it is shown there are in the United States 79,005,023 acres of wet land, and in addition to that there are 150,000,000 acres of what are now known and occupied as farm lands which are too wet for the most profitable cultivation and whose production would be increased 20 per cent by proper drainage. These figures are enormous, and to one who has not given the matter considerable study, I may add that they are surprising.

Showing how the 79,005,023 acres of unreclaimed swamp and overflowed lands are distributed, I wish to read the following, taken from the Senate document that I have just referred to:

The following is an estimate of the number of acres of swamp and overflowed lands in the several States which may be reclaimed for agriculture, exclusive of the coast lands which are overflowed by tidewater. The acreage given is that obtained from the most recent information secured by correspondence with officials of the counties in the States represented:

	Acres.
Alabama	1,479,200
Arkansas	5,911,300
California	3,420,000
Connecticut	30,000
Delaware	127,200
Florida	19,800,000
Georgia	2,700,000
Illinois	925,000
Indiana	625,000
Iowa	930,500
Kansas	359,380
Kentucky	444,600
Louisiana	10,196,605
Maryland	192,000
Maine	156,520
Massachusetts	59,500
Michigan	2,947,439
Minnesota	5,832,308
Mississippi	5,760,200
Missouri	2,439,600
Nebraska	512,100
New Hampshire	12,700
New Jersey	326,400
New York	529,100
North Carolina	2,748,160
North Dakota	200,000
Ohio	155,047
Oklahoma	31,500
Oregon	254,000
Pennsylvania	50,000
Rhode Island	8,064
South Carolina	3,122,120
South Dakota	611,480
Tennessee	639,600
Texas	2,240,000
Vermont	23,000
Virginia	800,000
Washington	20,500
West Virginia	23,900
Wisconsin	2,360,000

The lands above enumerated are not all permanently unfit for cultivation in their natural state, but part of them are swamp or are subject to such frequent overflows from streams as to be entirely unproductive, while a part are only periodically rendered unfit for cultivation by reason of their wet condition. The lands named in the foregoing list are properly those which may be wholly reclaimed from either a permanently or periodically swamp or overflowed condition.

It will be observed that Georgia has 2,700,000 acres of swamp and overflowed lands that are susceptible of improvement and reclamation.

It is my information that the Government this year will spend $23,000,000 for irrigating the arid lands of the West. With the exception of the mere pittance that is being used in the Agricultural Department with which to investigate the question, which will not amount to a hundred thousand dollars a year, the Government is doing absolutely nothing toward this great question. If it is right to irrigate the arid lands, it is right that the wet lands should be drained. If it is not right to drain the wet lands, it is not right to irrigate the arid lands. The reasons for drainage are much stronger than for irrigation. Once the lands are drained the expense is practically at an end, for the seasons in the sections needing drainage are such that the land can be cultivated and made to add millions each year to the country's wealth in annual productions. These swamp lands are located where the rainfall will be sufficient, with other favorable climatic conditions, to make crops at a much less cost than in the arid country. To drain the swamp and wet lands of the country would serve the triple purpose (1) of reclaiming at least 75,000,000 acres of fertile land at a reasonable cost; (2) of adding approximately a billion dollars a year to the country's agricultural productions if the lands were reclaimed and put into cultivation; and (3) of going a long way toward eradicating malaria in this country.

This Congress has passed a bill over my feeble protest to build a railroad to open up the possibilities of Alaska. This will cost at least $35,000,000, and perhaps a hundred million, on the theory that we need new territory and resources opened up, and yet we can not get a nickel out of the Treasury to open up and help develop our millions of acres of waste and undeveloped lands in our own country.

On the subject of malaria, upon which drainage has a direct bearing, I wish to quote the remarks of Dr. William H. Deaderick, of Hot Springs, Ark., secretary, section on malaria eradication of the National Drainage Congress, as follows:

THE NECESSITY FOR A CAMPAIGN AGAINST MALARIA.

The discovery of malaria was not accomplished with the dramatic suddenness of that of hookworm disease; it does not sweep the country in devastating epidemics as did formerly yellow fever and smallpox nor is its case mortality so appallingly high as that of cerebrospinal meningitis, but in economic importance, through loss of time, money expended, diminished efficiency and earning capacity, reduction of real estate values, difficulty of inducing immigration, retardation in schools, etc., it must be placed at the head of the list of diseases in the localities in which it prevails.

Malaria is caused by an animal parasite which infests the red-blood cells of man. It is transmitted from one patient to another by anopheles mosquitoes.

Though there are no accurate statistics available, it is probable that there are upward of 4,000,000 cases of malaria annually in the United States. Though the mortality of malaria is low, it causes many deaths and besides the high morbidity it leaves its subjects anemic and neurotic and is responsible for inertia, loss of will power, intemperance, and general mental and moral degradation.

The use of screens is largely preventive; therefore the disease occurs especially among the poor class and the rural population, the negroes, and the ignorant whites.

The annual economic loss through malaria has been variously estimated as follows:

Texas (Woldert)	$5,333,320
Missouri (Harris)	3,000,000
Southern States (Deaderick)	50,000,000
United States (Harris)	100,000,000
United States (Howard)	100,000,000

There exists widespread ignorance among the people as to the cause and prevention of malaria and apathy among a considerable proportion of the medical profession as to the importance of preventive measures.

No campaign has ever been conducted for the eradication of malaria from the United States. Not a dollar is or has ever been available for such a campaign.

Malaria is a curable disease. For its treatment quinine is more nearly a specific than is now known for any other disease.

Malaria is preventable. A break in the life cycle of the parasite at any point from patient to patient prevents the disease. Malaria may be prevented by destroying mosquitoes, by preventing the access of mosquitoes, and by destroying the parasites in the blood by the use of the specific.

Results of preventive measures against malaria are numerous and striking. The reduction in the malaria death rate of Habana is shown as follows:

	Deaths.
1899	909
1900	325
1901	151
1902	77
1903	51
1904	44
1905	32
1906	26
1907	23

At Ismailia, on the Suez Canal, where prior to 1903 there were 1,800 cases annually, the disease has been completely eradicated.

The campaign at Kiang and Port Swettenham, in the Federated Malay States, was very fruitful. Kiang had 3,576 inhabitants in 1901. Port Swettenham, 5 miles away, had about 700. The population of the district surrounding the two towns was about 14,000. The antimalaria campaign was confined to the two towns and began in 1902. The following table shows the mortality from malaria within the towns as compared with that of the unprotected district:

	1900	1901	1902	1903	1904	1905
Towns	250	368	59	46	48	45
District	173	206	227	230	286	351

The prevalence and economic importance of malaria, together with its preventability, constitute a sufficient excuse for urging a campaign against the disease, and it is believed that the time has never been so propitious as at the present. The public-health movement has arrived, as evidenced by the loosening of the purse strings of philanthropy, legislation and appropriations by legislatures, health platforms of political parties, and the space devoted to health topics by the press.

The prospective campaign against malaria must be divided into two stages: First, getting the funds necessary to finance the movement; secondly, spending them efficiently and economically. The first is much the more difficult problem.

The appropriating bodies of our cities, counties, and States are still too inattentive to the health needs of their citizens to be depended upon to supply the hundreds of thousands of dollars necessary. Our only hope then lies in philanthropy and our first efforts must be directed toward putting the matter up to the private giver who is anxiously awaiting an opportunity to benefit a large portion of the public by the prevention of disease, which is a much greater service than the endowment of a hospital or a medical school.

While all legitimate avenues of publicity must be used, we must depend chiefly upon the lay press. It is believed that a few articles in lay publications had more to do with obtaining funds for the hookworm campaign than the thousands of pages which had been contributed to the medical press. The contribution of these articles should not be a matter of individual inclination, but an organization should make it its duty to solicit a number of popular articles with illustrations and to place them in suitable periodicals. "It is the constant dropping of the water of publicity that wears away the stone of indifference."

Concrete facts elicit a louder appeal than do indefinite generalizations, and such facts relating to the prevalence of malaria in particular localities and the economic loss estimated in dollars, where possible, should be collected and given the proper publicity.

A system of publicity would serve the twofold purpose of attracting givers and enlightening the public and can be begun without money.

Informing one person on the etiology and economic importance of malaria would avail more than the distribution of a pound of quinine. Even better than doing the thing is getting it done.

Publicity in such a campaign should differ only from commercial advertising in that it should tell the truth absolutely. Literary dignity should become secondary to the importance of the end to be attained. The appeal to givers should have the ring of the want column.

There are a number of forces in this country which should be marshaled in this publicity campaign against malaria. These are the United States Public Health Service, the malaria section of the National Drainage Congress, the Commission for the Study and Prevention of Malaria, and the various State, county, and city health organizations.

The following is an effort to correlate the efforts of these forces and to outline a program:

A national publicity committee should be one appointed jointly by the malaria section of the National Drainage Congress and the Commission for the Study and Prevention of Malaria. This committee should obtain a number of illustrated articles in popular style, dealing especially with the economic side of malaria, and place them with publishers, who would be glad to receive them. The influence of the magazine is stronger and more permanent than that of the newspaper, but the latter may be very profitably used. This committee should also take up with the large film concerns the production of moving-picture films relating to malaria, as has already been done with tuberculosis and infant mortality.

The United States Public Health Service is having made in various States malaria surveys, which should be used for full value. These surveys are destined to supply us with the concrete facts which have hitherto been well-nigh lacking and physicians should cooperate in every way possible with this work. Reports of these surveys will probably be published in the Public Health Reports, and it is possible that reprints may be obtained in large numbers for distribution. If properly approached, it is not unlikely, that lacking a Federal board of health, the Public Health Service would detail an officer to standardize and coordinate the antimalaria work of the State boards of health.

Several of our State boards of health are already in position through their monthly bulletins and annual reports to conduct efficient educational campaigns, and a large part of their efforts might be turned into antimalaria channels. The use of the State papers and cooperation with the State board of education would be beneficial, and it should be one of their duties to try to influence legislative appropriations. Exhibits at State fairs and public symposia on malaria at the State medical society meetings should be held. The work of the county and local health officers would be stimulated and supervised through the State board.

The county and city health officers, being in close touch with the people and local conditions, are in position to do good service. Every local paper should have a health column. It should be the duty of these officers to give school lectures and cooperate with women's clubs and civic organizations and to keep in touch with local physicians through the county medical societies.

By thus making use of the forces at hand the day will be hastened when the antimalaria campaign will boast of a field force, laboratories, publications, exhibit cars, and the other machinery necessary to the modern health campaign. Publicity is the forerunner of efficiency.

Hay-Pauncefote Treaty.

EXTENSION OF REMARKS

OF

HON. WILLIAM KENT,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 24, 1914.

Mr. KENT. Mr. Speaker, I recently wrote to Hon. Joseph H. Choate, who was ambassador to England at the time of the ratification of the Hay-Pauncefote treaty, requesting that he should inform me as to his views of the wording of the treaty and of the intent of those engaged in making the treaty. In reply, he referred me to an address which he had delivered before the Chamber of Commerce of the State of New York on February 13, 1913. I desire to publish this address for the information of Congress.

REMARKS OF THE HON. JOSEPH H. CHOATE BEFORE THE CHAMBER OF COMMERCE OF NEW YORK FEBRUARY 13, 1913.

Mr. President and gentlemen, I come here to-day as a member of the Chamber of Commerce, hoping to help it to decide right in the matter that is now before it, because I consider a wrong decision would be not only a serious blow to the good name and honor of the Chamber of Commerce but of the country itself.

It is true that I had something to do with the negotiation of this treaty. In the summer of 1901—you will remember that this treaty was ratified by the Senate in November, 1901—I was in England until October and was in almost daily contact with Lord Pauncefote, who on his side represented Lord Lansdowne, the foreign secretary, and was also in very frequent correspondence with Mr. Hay, our Secretary of State, under whom I was acting. As the lips of both of those diplomatists and great patriots, who were each true to his own country and each regardful of the rights of the other, are sealed in death, I think it is quite proper that I should say what I believe both of them, if they were here, would say to-day—that the clause in the Panama Canal bill exempting coastwise American shipping from the payment of tolls is in direct violation of the treaty.

It is true, as Mr. Douglas has said, that we can not decide this question, but we can decide whether, as men of conscience and honor constituting this Chamber of Commerce, we shall support Mr. Root's motion to strike out a single provision of that Panama Canal bill, which is believed by him and by us and by the almost unanimous voice of the American press, I think, to be in conflict with the treaty. Why, the merest schoolboy can pass upon the question.

I am going to read you the two clauses, and I would like to challenge any member to show how they can possibly be reconciled:

The canal shall be free and open to the vessels of commerce and war of all nations on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise.

That is what the treaty says. In the canal bill the clause covered by Mr. ROOT's motion to amend by striking out is this:

No tolls shall be levied upon vessels engaged in the coastwise trade of the United States.

Can you put those two things together and reconcile them in any possible way? Of course it is an utter impossibility, and even Mr. Douglas has not ventured to show how the two could by any possible construction mean the same thing.

No newspaper, no President, no public authority whatever that I have heard of has ventured to take the plain words of the treaty and the plain words of that clause of the canal bill and say that the two mean the same thing.

I hope you will give Mr. Douglas a chance to expatiate further beyond his half hour to show how those two things mean the same thing. If he can convince you of that, he will carry his motion to lay upon the table; otherwise not.

I venture to say now that in the whole course of the negotiation of this particular treaty no claim, no suggestion, was made that there should be any exemption of anybody. How could there be in face of the words they agreed upon? Lord Pauncefote and John Hay were singularly honest and truthful men. They knew the meaning of the English language, and when they agreed upon the language of the treaty they carried out the fundamental principle of their whole diplomacy, so far as I know anything about it, and in the six years I was engaged with them their cardinal rule was to mean what they said and to say what they meant. [Applause.]

They had something to guide them. You will remember that in the previous year there was a canal treaty arranged between Mr. Hay and Lord Pauncefote which was so amended in the Senate that another treaty was negotiated and substituted for it and took final form in the treaty that is now under consideration. Mr. Cushman K. Davis, who was chairman of the Committee on Foreign Relations in the Senate, made a report which was very direct on this particular subject, and I read now from Mr. ROOT's argument in the Senate delivered very recently:

In view of that report [the report of Cushman Davis], the Senate rejected the amendment which was offered by Senator Bard, of California, providing for preference to the coastwise trade of the United States.

That is pretty direct authority, is it not? That motion was made in the Senate, on the discussion of the previous Hay-Pauncefote treaty, which never was finally approved by the Senate. This is the amendment which was proposed:

The United States reserves the right in the regulation and management of the canal to discriminate in respect of the charges of trade in favor of the vessels of its own citizens engaged in the coastwise trade.

That was pretty direct, was it not? Mr. ROOT adds:

I see the Senate rejected that amendment upon this report which declared the rule of universal equality without any preference or discrimination in favor of the United States as being the meaning of the treaty, and the necessary meaning of the treaty.

That was something they had to act upon, and there was a great deal else besides.

From the time that this question of a canal through the Isthmus or a canal from the Atlantic to the Pacific, whether through the Isthmus or by way of Nicaragua or Tehuantepec or anywhere else, was agitated, the universal declarations of public men, of Presidents and Secretaries of State, and other public men on both sides of the Atlantic, were to the effect that the canal, if it ever should be built, should be built for the benefit of mankind, on principles of universal equality of the vessels of all nations, and without any discrimination in favor of any.

Another thing: They had a direct ruling of our own Government under the treaty of 1871. That was the treaty, you remember, under which the Alabama claims were finally disposed of. They inserted in that treaty as one of its later clauses a provision almost exactly like this, bearing on the same subject, in respect to the canals, that constituted a part of our great waterways through the Lakes, the Welland Canal on the British side, and the St. Claire Canal, I think it was, on this side; and it was stipulated in that treaty, as I recall it—you gentlemen will correct me if I am wrong—that the vessels of both nations should have equal rights, without discrimination, and have the right to use the canals on both sides for their traffic on terms of complete equality and without discrimination in favor of either. After a while our Government found that Canada, although charging 20 cents per ton, I think it was—the rate fixed by the treaty or by the agreement between the two Governments—was remitting on its own traffic in Canadian vessels to Canadian ports 18 cents and remitting nothing on American traffic to American ports passing through the same canals, the result of which was that while our traffic paid 20 cents the Canadian traffic paid only 2 cents. This being brought to the attention of the Government of the Dominion, that exemption was abandoned; they took the American view of the subject, and from that day to this the vessels of both nations have passed through these canals on terms of perfect equality. [Applause.]

That is sound American doctrine. It was asserted by us to be the only honest interpretation of that treaty, and that interpretation was accepted by the other side.

It has been said that in this connection we have nothing to do with the question of arbitration. I say we have everything to do in this connection and on this occasion with the subject of arbitration. What country has been the champion and leader in the cause of arbitration since the very foundation of our Government? Why, the United States, of course. We have insisted, first, last, and always, not only by the voice of the people as represented by the press, but by joint resolutions of the Senate and House of Representatives, by declaration of every President from John Quincy Adams down, that arbitration is the only mode in which there can be a settlement of international disputes without resort to war. I do not believe that England has any disposition to resort to war. I do not believe that under any circumstances you could provoke either England or America to go to war with each other. All possibility of that has been left behind us for a hundred years.

We made a treaty in 1908 which is still existing. It was made by Mr. ROOT as Secretary of State. The treaty provided that when a difference arises between the two countries which is incapable of settlement by diplomatic means that it shall be referred by arbitration to the court at The Hague, always provided that the independence or the honor or the vital interests of either nation be not involved.

Nobody can pretend that the vital interests or the independence or the honor of the United States is involved in this question. What is involved? Why, a few paltry hundred thousands of dollars a year; that is all. If the trade goes on increasing as the last speaker has said, it may amount to a few millions a year; but what is that to a nation that is spending over a billion dollars every year and is likely, so far as I can see, to spend two or three billions unless somebody calls a halt? [Applause.] We are bound to submit this question under the treaty which was made by Mr. ROOT and the British Government in 1908. President Taft has said that the possibility of the question being decided against us is no reason at all why we should not arbitrate it. That is all the more reason why we should take the first opportunity to arbitrate it. [Applause.]

To my mind there is no reason that will hold water against the passage of the resolution offered by this committee. There is no reason why we should not be honest and fair and courageous in our dealings with other nations. [Applause.]

We are now about to celebrate the one hundredth anniversary of peace, continued and unbroken peace, between the United States and England. How have we maintained that peace? Why, I believe by treating each other fairly on both sides; and there have been questions ten times as difficult, ten times as important, as this, and we have never failed to settle any of them by arbitration. [Applause.] That is the way we have got to settle this, whether we like it or not. We have agreed that it shall be arbitrated. Somebody says the treaty expires in June of this year. I do not think the people of the United States will tolerate any attempt to sneak out of it in that way. [Loud applause.] Nor do I believe that the people of the United States will tolerate, upon serious consideration of this matter, any attempt to break faith with Great Britain or with any other country. [Applause.]

I was asking you how we have kept faith with them so long. It is by dealing fairly with them. Here is a question of the interpretation of language used in a treaty upon which important men differ. I will agree to that. Mr. Douglas and I differ and Mr. Taft and Mr. O'GORMAN differ from Mr. ROOT, but we have positively agreed by the treaty of 1908 that if such a question comes up and it can not be settled by diplomatic means it shall be settled by arbitration. Everybody seems to think that if it is referred to arbitration, no matter whether the arbitration is to The Hague Court, or to any local court in the city of New York, or to the Supreme Court of the United States, or to The Hague Tribunal, all we have to do is to get up and read these two clauses, the clause from the treaty and this clause from the bill which we consider so obnoxious. The tribunal would then decide against us. Which is better for us, to have an arbitration which will almost inevitably decide against us, or, like men, settle the matter ourselves? [Applause.]

Let us admit we have made a mistake and go forward and reverse it, and support our noble Senator, to whom we can not by any possibility give too much praise for his effort to have it stricken out.

Address by Hon. William M. Calder, of New York, on the Future of the Progressive Party.

EXTENSION OF REMARKS
OF
HON. EDMUND PLATT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 21, 1914.

Mr. PLATT. Mr. Speaker, I ask unanimous consent to insert in the RECORD a speech by my colleague [Mr. CALDER] delivered in a debate with Mr. Bainbridge Colby on February 7, 1914, at the Logan Club, Brooklyn, on "The future of the Progressive Party"

The SPEAKER. The gentleman from New York [Mr. PLATT] asks unanimous consent to extend his remarks in the RECORD by printing an address made by his colleague [Mr. CALDER]. Is there objection?

There was no objection.

ADDRESS BY CONGRESSMAN WILLIAM M. CALDER AT THE LOGAN CLUB (PROGRESSIVE), BROOKLYN, N. Y., FEBRUARY 7, 1914.

[Subject: "*Resolved* There is need for the continuance of the Progressive Party." Mr. CALDER spoke in the negative.]

Mr. Toastmaster, ladies, and gentlemen, it is a great pleasure for me to be present this evening and participate in the celebration of the birthday of Gen. John A. Logan. As your Representative in Congress it has been my privilege to associate with men who were his intimates during his service in both Houses of Congress. I have often talked with such men as the late Senator Cullom, of Illinois, the late Senator Hoar, of Massachusetts, former Speaker Cannon, of Illinois, and others who knew him well. All of them join in praise of the character of the man, and for that reason it is a source of great pleasure for me to be a member of the club that bore his name. I have been a member of the Logan Club for many years, and, as many of you know, was its president some ten years ago. I have retained my membership with you, for I feel confident that after a while the club will return to its old political affiliations. While it is true there are only a few of the old members of the club who were active in the days when it was a factor in the Republican politics of Brooklyn, nevertheless the traditions of those days still encourage me to believe that at some time in the future we may again agree.

When your president invited me to speak here this evening on the question "There is need for the continuance of the Progressive Party," I gladly accepted, for it afforded me an opportunity of speaking frankly with men who for many years had been my political associates, and it occurred to me that I might say something to them that would bring them to understand that there was very little difference fundamentally between the rank and file of the Republican and the Progressive Parties; and I was particularly pleased when I learned that my good friend, Mr. Bainbridge Colby, would discuss the other side of the question. We have worked together before, Mr. Colby and I. In the recent municipal campaign he managed the campaign of Mr. McAneny and I managed that of Comptroller Prendergast. We learned that it was possible for both of us to stand on the same platform, to use the same kind of language, and to advocate the same principles. In fact, we discovered that we were just two plain citizens of the great city of New York, anxious to obtain for the people of our city the best kind of government. Although a Republican, I feel quite sure that Mr. Colby did not notice that I possessed horns, nor did I argue from any different premises than did he, and during the campaign at least I learned that we were really for about the same thing.

As for myself, I have no quarrel with any living thing. I have been elected oftener to Congress than any man of my party in this city since the party began, and despite the candidacy of a Progressive in the 1912 election, who received 9,300 votes, I received a plurality of 8,400 votes. I approach this discussion with the sincere hope that in a friendly way I may say something that will convince my hearers that there is no further need for the continuance of the Progressive Party. In what I say it is my intention to refrain from discussing individuals or dealing in personalities.

Following the usual practice, Mr. Colby has discussed some of the men who have been and are to-day active in the Republican politics of this State and Nation. He did not refer, but I will, to former Senator Crane, of Massachusetts, for 20 years an intimate friend and associate of Theodore Roosevelt, who stood for everything that Mr. Rosevelt favored except that he would not agree to his renomination. For that reason is he to be condemned?

Let us take the senior Senator from this State, Hon. ELIHU ROOT, recently awarded the Nobel prize as a recognition of his great work in favor of universal peace between all the nations of the world. Mr. Roosevelt himself said that Mr. ROOT was the greatest statesman of this decade, and in the Senate, among men of every political party, he is looked upon as the most profound statesman in that body.

Mr. Colby has mentioned Senator PENROSE, in whom I have no interest whatever. He was defeated in the Republican primaries in his State in 1912, and I have not heard that he has regained control of his party in that State. I believe it is Senator PENROSE's purpose to submit himself to the people of Pennsylvania at the elections the coming fall, and they will decide whether or not he is entitled to their confidence.

There has been talk of Mr. Barnes, of this State, with whom I have not always agreed, but who, every man who loves a fighter knows, is perhaps one of the best in any political party in this Nation. He was a good man once, appointed to office by Mr. Roosevelt, but now is the most denounced of any hereabouts. My Progressive friends know that Mr. Barnes did not control the organization of the assembly this year, and he says he did not try to. Be that as it may, the man he would have favored was not selected as speaker.

I am not going to criticize some Progressive leaders whom I have in mind at this very moment, and who in times past have stooped to the smallest kind of politics. It would not be an illumination of the subject we are talking about and would only cause controversy and would do no good.

In what respect are we really at variance?

Let us discuss for a moment the difference between the national platforms of 1912 of the Republican and Progressive Parties. Except for a difference in language, both parties are for a protective tariff and for the appointment of a nonpartisan tariff commission. The only practical difference between the platforms in this respect is in the method of expression.

On the question of trusts the difference in the platforms is hardly worth commenting on.

The question of primaries is a State matter, and nearly every State in the Union, through the agency of the Republican Party, has on its statute books a direct primary law of the most advanced character; and in this State the Hinman-Green bill would have been a law long before the Democratic Party considered the question had it not been for the active opposition of the then chairman of the Republican State committee. By the way, he was my very dear friend and your late county chairman.

It is true that the Progressive platform deals at length with the social uplift of the people. These are questions that every man favors. Everyone favors an eight-hour workday; everybody is in favor of preventing accidents; everybody is in favor of abolishing child labor; everyone is in favor of protecting our girls and women; every decent human being favors all the things that will make the race better, cleaner, stronger.

There is no difference of opinion in regard to a parcel post, direct election of United States Senators, a Department of Labor, a local self-government for the Territory of Alaska, publicity of campaign contributions, an effort to obtain an international agreement or the limiting of naval forces, enactment of legislation providing for the physical valuation of railroads under authority of the Interstate Commerce Commission, legislation seeking to conserve the resources of the Nation and continuing as a part of the public domain the remaining forests, oil and coal lands, water power, and other natural resources of the Nation by the Federal Government; also legislation affecting the operation of the Panama Canal and forbidding its use by ships owned by transcontinental railroads, and the provision that American ships should use the canal free of tolls. All of these were secured largely by the action of Republicans in Congress and every one of them was favored by the speaker.

In the matter of woman suffrage, advocated by the Progressive Party, the Republicans of this State in convention assembled, and the Republican members of the legislature at Albany, in compliance with the mandate of that convention, have voted for a submission of a referendum to the voters of this State on this question in the elections of 1915. This is the only way it could possibly be considered.

I could discuss all of the provisions of both of these platforms with you and would come down finally to but a few fundamental things upon which we really differ.

From the viewpoint of some people we seem to differ, for instance, as to how far we are willing to go on the initiative and the referendum. This is only a question of degree, for in this State for many years we have had a referendum on some of the greatest questions, and I am sure that every reasonable

man, when he stops to think, will agree that we have gone quite far enough, at least in the matter of referendum.

Let us take the vote on the constitutional amendments referred to the people in the election of 1913. There were four of these amendments. The second one, which dealt with the question of workmen's compensation, was the most discussed and in every corner of the State it was considered, and still the total vote cast both for and against this amendment was only 605,411 votes, barely 40 per cent of the total vote cast for the respective candidates for chief justice of the court of appeals. Can one contend that when so grave a question as this stirs such a small degree of interest that the people are prepared for its further extension? I am rather a believer in the theory that the people would much prefer to elect their representatives to the legislature and hold them personally responsible for the working out of these different theories of legislation. You can trust the judgment of the people on the men they elect to public office nine times out of ten, but you can not, as has been evidenced many times, induce the people to come out and even express a preference on these great questions when referred directly to them. It seems to me, therefore, that this subject can be passed without more discussion as a thing which at least the people of this State are not really interested in. I am told by those who have studied this subject that only about the same degree of interest is expressed in other States in the Union.

We will come to what really seems to separate us:

On the question of the recall of judges and judicial decisions, personally I am absolutely and unequivocally opposed to submit to the people in the heat of passion the question of whether a judge who has decided a grave question should be removed from office for so doing. It is a matter of such great import to the stability of our Government that I can not for a moment concede it is for the best interests of the people. The country has lived through stormy times, and while the courts have occasionally displeased, still no man can successfully challenge their integrity. We have laws on the books to-day which provide for the trial of corrupt judges. Let us strengthen them if you will, but do not, for the sake of the permanency of our institutions, depart from the system that has for so long a period preserved the stability of the Union. Let us not drag down one of the strong arms of this Government, but rather teach the youth of the country a greater respect for the judiciary than we have been wont to in some of the recent years.

RECALL OF JUDICIAL DECISIONS.

There is undoubtedly a good deal of misconception regarding this particular question. Some people have the idea that this recall of judicial decisions refers to any character of question which might be submitted to the courts. Of course this is erroneous. As I understand it, the basis of the Progressive claim is explained in Col. Roosevelt's article upon the Progressive Party, which appeared in the November Century. This holds, "that the people themselves should have the right to decide for themselves, after due deliberation, what laws are to be placed upon the statute books, and what construction is to be placed upon the Constitutions, National and State, by the courts, as far as it concerns all laws for social and industrial justice." This is a general statement. The time which should elapse before a decision made by a court could be acted upon by the people is not stated. In fact, I do not believe any specific plan which has received the sanction of party authority has ever been promulgated. I am aware that Col. Roosevelt says that anyone who does not subscribe to this doctrine can not be a Progressive, for adherence to this particular principle must be a part of the general party creed. Now, I am not so sure whether we differ so very much upon this question or not, and I have been impelled to this thought by reading an editorial which appeared in the Evening Mail of Saturday, January 24, 1914. I presume the Evening Mail can be relied upon to correctly expound Progressive principles. In this editorial the action of the people in voting upon the constitutional amendment last November, under which a workmen's compensation act could be based, is very strongly commended. The article goes on to say that there is no valid reason why other matters vitally affecting the people's interests should not be treated at the polls in the same way when occasion requires. It also says, "It was a deliberate and orderly proceeding, fraught with no peril to the State." Far from being perilous, indeed, such a recall stands for safety to the State's highest interest. Not one word of protest has been spoken against the proceeding, even by the 194,497 voters who opposed the amendment.

Now, I hope you will bear in mind that this orderly proceeding to which the Mail refers is the same constitutional method which has been in force in this State for many years, under which the people have brought about changes in their constitution. I also want to remind you that in declaring the previous workmen's compensation act unconstitutional, Judge Werner, who wrote the opinion, pointed out the way in which the constitution should be amended in order to make such an act legal. The matter then passed through the different stages of legislative sanction in two successive sessions and was then submitted to the people. If the Mail thinks that this is the orderly method for recalling judicial decisions, then I do not disagree with the Mail nor with any Progressive who holds the same view.

I want to ask you why, if this method of changing our constitution has worked so beneficially in the case of the workmen's compensation act, what justification is there for any different method? The Progressives must agree that when any changes are to be effected in the constitution they should be entered upon with deliberation. Col. Roosevelt subscribes to that idea. Now, what kind of deliberation must it be? Could there be any better method of deliberation than to insist that the measure should be acted upon at two successive sessions of the legislature and then submitted to the people? This is exactly what we have been doing in this State for years. It has been found efficacious. I ask you again, Why is there any necessity for changing this practice? What better results can you secure under any other method? This method is one which has been tested by experience. What human experience justifies the general plan of recalling judicial decisions which my Progressive friends have been advocating?

I might discuss our troubles of 1912 and the Republican convention of that year at Chicago. All of this is a matter of history. Let us, however, compare the organization of the Progressive Party in 1912 with the period that produced the birth of the Republican Party. The Republican Party was founded on the demand for the abolition of human slavery and the preservation of the Union. It did not come into life simply as a result of a difference of opinion between a few men on questions that were not really fundamental. The Republican Party is the constructive party, and will continue to be the constructive party, moved from time to time by the necessities of changed conditions to advocate and put into effect such progressive legislation as is needed to meet the needs of the country. The Republican Party is not a reactionary party. Its history from the beginning up to the present time indicates that it is not. All of the most important legislation which has been enacted since the Civil War was put through as a result of its labors.

Upon what is the Progressive Party actually founded? The chagrin of many people of this country over the failure of the Republican convention to nominate Theodore Roosevelt. I regard him just as highly personally as any man in this room. The large vote for him was cast because of the sincere regard in which a large portion of the people of this country held him, and the additional fact that, whether right or wrong, the opinion was prevalent that he had not had a fair deal at Chicago. Everyone in this room knows that if he should pass away tomorrow his party would die. He received a great vote for President, the second both in popular and electoral vote. This was simply a vote for him personally and not founded upon any great principles.

Let us look into the situation and see what has happened since to indicate that I am right and the American people have treated it as such. As expressed in the elections last fall, they indicate a tremendous falling off of the Progressive vote compared with that cast for Col. Roosevelt in practically every locality where there has been a recent election, with the possible exception of Massachusetts; but even in that State, aside from the gubernatorial contest, there was a decided slump. On the other hand, the Republican strength has correspondingly increased over the Taft vote of 1912. It is true, however, that while the Progressive vote has dwindled in many instances it has been sufficient to accomplish the defeat of Republicans and elect Democrats.

An election was held in the State of New Jersey in November last for governor and other State officers. The Democratic nominee was James F. Fielder, the Republican candidate Edward C. Stokes, and Everett Colby was the standard bearer of the Progressives. The Progressives were very hopeful that Colby would at least obtain second place, and many of the Progressives of the Nation campaigned the State.

In discussing the situation prior to this election one of the shrewdest political writers in the United States, Mr. Samuel G. Blythe, in an article in the Saturday Evening Post, which paper has been extremely friendly to the Progressive cause, made these observations touching the New Jersey situation:

It is claimed by political experts that Mr. Roosevelt's Progressive Party is steadily losing ground, that such elections as there have been have shown retrogression instead of progression. And these experts say

that this means that the men who voted for Roosevelt in 1912 are returning to the Republican Party. Of course, there will be no adequate test of this, except in New Jersey this fall, where Colby, Progressive, is running for governor against Stokes, Republican, and Fielder, Democrat. That vote will show how well the Progressives in New Jersey are holding in line. There will be no test in Massachusetts that will be of particular value.

The result in New Jersey was as follows:

Fielder, Democratic nominee, who was elected, received 173,148 votes; Stokes, Republican nominee, 140,298 votes, while the vote of Colby, the Progressive nominee, was 41,132, nearly 100,000 less than the vote of Stokes, the Republican nominee. The vote of Roosevelt in New Jersey in 1912 was 145,410. The Taft vote in November, 1912, was 88,835, the vote of Stokes showing a Republican gain of over 50,000. The test in New Jersey clearly demonstrated that the Progressives in that State are returning to the Republican Party.

In Pennsylvania justices of the superior court only, a State court, were chosen in the recent election. Under the law candidates for judicial offices go upon the ballot without a party designation. This precluded a State-wide test of the relative strength of the three principal parties. The registration, however, disclosed that in practically every section of Pennsylvania the Progressive vote had fallen off between 60 per cent and 80 per cent. In Philadelphia, for instance, over 100,000 Republicans registered and but 14,000 Progressives. In the recent city election the Democrats and Progressives united against the Republicans. The fusion ticket was defeated by a majority of nearly 30,000, the Republicans making a clean sweep. In Pittsburgh, Armstrong, the Republican candidate, won for mayor over Congressman PORTER, the candidate supported by the Progressives, by a substantial majority, although PORTER, reading the signs of the times, registered as a Republican. PORTER had the active support of William Flinn, who led the Roosevelt forces in Pennsylvania in the 1912 primaries and general election. In nearly every instance Republicans won, the Bull Moose candidates running as bad thirds. The condition of business throughout the State is having the effect of strengthening the Republican Party. Thousands of workingmen have been laid off in the various manufacturing establishments, which is charged to the Democratic tariff.

A United States Senator was chosen in Maryland at the November elections. As this was one of the first States to elect a Member of the upper House of Congress under the constitutional amendment recently adopted providing for the direct election of Senators, more than ordinary interest was manifested in the campaign. BLAIR LEE was the Democratic nominee. He was opposed by Thomas Parran, Republican, and ex-United States Senator George L. Wellington ran as the regular nominee of the Progressive Party. As Wilson carried Maryland in 1912 by a plurality of 54,000, it was expected that LEE would be elected. The chief significance of the election was the complete rout of the Progressives, who, prior to election were loud in their claims, predicting that the vote of Wellington would show a large gain for the Bull Moose Party. Parran, the regular Republican nominee, obtained a vote of 73,000. The vote of Wellington, the Progressive, was only 7,033, a falling off from the Roosevelt vote of 1912 in Maryland of 50,753. Roosevelt ran ahead of Taft in this State. On the other hand, the vote of Parran, the Republican, exceeded that cast for Taft in 1912 by 19,244. The Maryland returns have resulted in a Progressive stampede to the Republican Party.

The result of the recent State election in Massachusetts, Progressives claim, was a great victory for the third party. Charles S. Bird, Progressive nominee for governor, ran, according to official returns, 11,050 votes ahead of AUGUSTUS P. GARDNER, the Republican candidate. As a result of the Republican disaffection, the Democratic nominee, David I. Walsh, was elected by a plurality of 55,512. A careful analysis of the vote makes it somewhat doubtful whether the Progressives have much cause for jubilation. In the first place, Gov. Eugene N. Foss ran as an independent, receiving 20,171 votes. Recently Foss repudiated the Democratic Party, declaring himself a protectionist. Formerly a Republican, Foss, running upon a platform favoring protection, naturally drew Republican votes, having antagonized every Democrat in the State by publicly repudiating that party. Congressman GARDNER, the Republican candidate, had a very bitter fight at the primaries, winning over his opponent by a very close vote. As soon as nominated GARDNER repudiated the then chairman of the Republican State central committee, requesting him to resign, and thereby antagonizing many Republicans.

When the Republican State convention met to frame a platform the instrument agreed upon did not suit GARDNER, his anger being aroused by a refusal of the gathering to incorporate some of the radical planks he suggested. Bird, the Progressive candidate, is a manufacturer of large means and a man of very high character. I am informed that in towns where he spoke he presented a large American flag to each community. In citing the vote of Bird over GARDNER, Progressives are careful not to direct attention to the vote for other State officers. In every case the Republicans outdistanced their Progressive opponents by excess votes of between 40,000 and 70,000, far exceeding the 11,000 lead of Bird over GARDNER, although every State Democratic candidate was elected. For instance, the Republican candidate for lieutenant governor, Goetting, ran 45,943 votes ahead of Cosgrove, the Progressive. For secretary of state the Republican candidate had a majority over his Progressive opponent of 50,573. In the contest for attorney general, Swift, the Republican, received 76,003 votes more than his Progressive opponent, Newton. These figures are significant in showing which is the dominant minority party in Massachusetts.

There was one congressional contest in Massachusetts to fill a vacancy in the third district, caused by the death of Representative Wilder. In this election the Republicans won, although the Progressives put up a stiff fight. The following is the vote in this district: CALVIN PAIGE, the Republican, received a vote of 11,173; O'Connell, the Democratic candidate, 10,831 votes; and the Bull Moose candidate, Marshall, 5,284 votes.

In the State of California, the home of Gov. Johnson, the Progressive candidate in 1912 for Vice President, in the party registration held recently for the first 30 days nearly 70,000 Republicans enrolled, but 45,000 Progressives and 33,000 Democrats. Despite the vote cast for Mr. Roosevelt in California in 1912, the Republican enrollment is far in excess of that of the Progressive Party. Every careful student of politics in California knows that at the election next fall a Republican United States Senator and governor will undoubtedly be elected, despite the great personal popularity of Gov. Johnson.

NOTE.—Since this speech was delivered an election for Representative in Congress was held in the second Iowa district. In 1912 Mr. Roosevelt's vote in this district was 13,602 and Mr. Taft's vote was 8,303. At the election referred to, held on February 10, 1914, the vote cast for Hull, Republican, was 10,608, and for Hanley, Progressive, 3,718, a Progressive loss of 9,930 and a Republican gain of 2,532 votes. It is true that the Democrat, Mr. VOLLMER, was elected by about 1,800 votes over the Republican candidate, but the vote cast for Mr. VOLLMER was one-half the vote cast for Mr. Pepper, Democrat, who was elected in 1912.

Need there be any further evidence than this to indicate that the Progressive Party in the great Middle West is fast receding and the Republican Party is coming back into its former position?

In our own State everywhere the Republicans made substantial gains. They control the assembly, having 79 members to 71 for all other parties, including both Democrats and Progressives. The significance of this result is apparent when it is recalled that the last assembly had two-thirds Democratic majority, which was overturned. The total vote cast in the Democratic column last year for chief justice of the court of appeals was 564,834 votes; the vote for Judge Werner under the Republican emblem was 597,357, and for Judge Hand, under the Progressive column, 195,097 votes. This vote for Judge Werner indicates that in this State there was an increase in the vote in the Republican column of 32 per cent and a decrease in the Progressive column of 50 per cent, an unanswerable indication, I am sure, that in this State, at least, the Progressive Party is fast receding, while the Republican Party is just as surely coming back into control of politics here.

Let us look at the condition in this county. In 1912 the vote was as follows:

Wilson	107,748
Roosevelt	71,173
Taft	51,239

In 1913 the vote for chief justice of the court of appeals in Brooklyn, eliminating the vote for Judge Bartlett in the Independence League column, leaves the vote cast for the respective candidates in the Democratic, Republican, and Progressive columns as follows:

Bartlett	81,000
Werner	83,492
Hand	29,173

This shows an increase in the Republican vote in Brooklyn of over 60 per cent and a decrease in the Progressive vote of about the same amount, the Progressive vote in Brooklyn being only about twice the vote of the Socialist Party; in fact, in at least two assembly districts here the vote of the Socialists nearly equaled the Progressives.

In the twelfth assembly district, in which this club is located, in 1912 Wilson received 5,489 votes, Roosevelt received 3,597 votes, and Taft received 3,080 votes. In the recent election in

this district the Democrats and Progressives united on a member of assembly, their candidate, Mr. Sullivan, receiving 4,813 votes, and the Republican candidate, Mr. Simpson, received 6,345 votes, a majority for the Republican candidate of 1,532 votes, while in 1912 the total vote for Wilson and Roosevelt exceeded Taft by nearly 6,000 votes, a change in majorities of 7,[illegible] votes.

As Comptroller Prendergast has well said in a recent statement:

The votes cast for the respective presidential candidates of the Republican and Progressive Parties can not be accepted as indicating the relative strength of the two organizations. The votes cast for the congressional candidates would be a much safer test of party strength, and this vote undoubtedly shows that while many Republicans had voted for either the Progressive or Democratic candidate for President, they had maintained their party loyalty as far as other candidates upon the Republican ticket were concerned. For one, I have never believed that the vote received by the Progressive presidential ticket was any indication of third-party strength. With many others, I have always believed that its vote represented the great popularity of Col. Roosevelt and the influence of his tremendous personality.

In less than a year we will elect a new House of Representatives. There are men who now propose that the Progressive Party should nominate straight Progressive candidates in every congressional district. Is it not evident that any such plan will mean the return of another overwhelming majority for the Democratic Party in the next Congress? The people are best governed when the margins of strength of the two dominant parties are slight. No one will dispute that the Republican Party presents to-day the most cohesive, effective force with which to combat the Democratic Party. The question before us is, Shall we concentrate our strength upon this most effective fighting force and make a real effort to carry the next Congress or dissipate our strength upon unnecessary candidacies and organizations? I for one am emphatically in favor of the first course and shall work to accomplish it.

Every Progressive who stops to think must concur in what the comptroller has said if he really believes in perpetuating the things that he at heart hopes will come about. In Washington during this session of Congress the Republicans and Progressives have in nearly every instance acted together. Practically all of us opposed the Underwood tariff bill, which has proven so disastrous to the business interests of the country. The Progressives at Washington are, in the main, our kind of people. They talk the same language and think the same things. I wonder have the people in this audience stopped to consider just the condition of the business of the country and the complete resumption that would come about if the morning after the next election it was demonstrated that the Republican Party had gained control of the House of Representatives. I presume you have read the report of the bureau of charities of the city of New York, published in the New York papers last Tuesday morning, which indicates that nearly 300,000 men were walking the streets of New York unemployed, most of them heads of families, and that nearly 1,000,000 men, women, and children depended upon these idle workers for their very existence; and I wonder how many of you have read the reports for December, 1912, of the imports and exports of this country, as compared with those of 1913. Let me tell you this condition of affairs:

December, 1913.		*December, 1912.*	
Imports:		Imports:	
Free, 63 per cent	$117,339,147	Free, 51 per cent	$90,051,367
Dutiable	$66,395,589	Dutiable	$64,044,077
Total	$183,732,736	Total	$154,095,444
Exports for December, 1913	$233,488,512	Exports for December, 1912	$250,315,807
Average ad valorem on dutiable goods, per cent	32.4	Average ad valorem on dutiable goods, per cent	37.86
Average ad valorem on all goods imported, per cent	11.7	Average ad valorem on all goods imported, per cent	15.73

This shows a shift in the balance of trade under the Underwood law for the month of December alone of over $46,000,000, and if this continues during the year it would mean a loss of trade to the people of this country of $552,000,000.

Mr. Colby in his remarks has referred to the southern representation in the Republican national convention of 1912, and severely condemns the action of the Republican national committee because of the seating of these delegates. He also finds fault with the recent action of the national committee when it sought to reduce this representation, and he states that it has only been reduced by one-third. Now, the facts are that at the recent meeting of the Republican national committee in Washington a plan was adopted which reduces the representation from the Southern States, where there is a very small Republican vote cast, almost one-half what it was formerly; and, ladies and gentlemen, permit me to call your attention to something Mr. Colby has not told you. At the Republican national convention in Chicago in 1908 a resolution was offered by Mr. BURKE of Pennsylvania providing for the representation in the Republican national convention to be held in 1912. The resolution in effect reduced the representation from the Southern States more than one-half. A careful canvass was made of the convention, and it seemed on the evening before the vote was to be taken that enough pledges had been obtained to pass it and forever after end the scandal arising from this outrageous system. Next morning, however, word reached the convention from the White House and orders were delivered that President Roosevelt did not wish to have this representation from the Southern States disturbed. A fight was made on the floor of the convention, which lasted all morning, and had it not been for a break of the delegates from California the motion of Mr. BURKE would have prevailed and the story of the convention of 1912 might have been different. This is all attributable to the attitude of Mr. Roosevelt, and I am confident, if submitted to him, he would not deny it. I voted in that convention as a delegate from this district for the motion of Mr. BURKE.

I do not need to recall to any man here the condition of politics of this State and the low level to which it has sunk. Every man in this room recalls with pride the administrations of the Republican governors of this State, from Morton to Hughes. We have no apologies to make for Morton, Black, Roosevelt, Odell, Higgins, or Hughes. We point with equal pride to the administration of the distinguished Republican district attorney of New York County, Hon. Charles S. Whitman, and the distinguished Republican district attorney of Kings County, Hon James C. Cropsey. I have been informed that both Mr. Whitman and Mr. Cropsey voted for Theodore Roosevelt, but both felt that the future of the State could best be served through their continuance in the Republican Party.

Let us just look at the last three years of government in this State and the scandal surrounding it. This is Democratic government. How long is it to continue? Will the rank and file of the Progressive Party in this State stand for a continuance of this kind of government? The recent elections indicate that the Republican Party is again in the ascendency in this State and the Progressive Party is a very minority. Will the leaders in that party throw their influence in favor of the nomination of a third candidate this fall and the continuance of Democratic domination here?

Let me say to all of you, particularly the members of this club, actuated as I believe they are with a desire for the best possible government for this State, just as sure as you attempt to bring about a condition of affairs that will encourage the Democratic Party in this election, just so sure will the people of the State repudiate you, and just so sure will you be left without a following among the rank and file of the people. There is no doubt, in my judgment, of the success of the Republican Party in New York this fall, but we want you back to share the success. We want you back to participate in direct primaries which we now have, where every man is given an equal right to aspire for office and have the votes counted that are cast for him. I have been for these reforms all my life, and so has the very best element in the Republican Party.

I hope that something I may have said this evening will have convinced the people of this community that there is no further need for the continuance of the Progressive Party. I am sure, from a careful observation of all these matters of government, that the very best interest of all the people will be served if your party, the Progressives, should determine to leave the field. You have contributed much in your short life in many directions. I think that you have served your purpose.

Address of Hon. William E. Humphrey, of Washington, at the Lincoln Day Dinner, at Indianapolis, Ind., February 12, 1914.

EXTENSION OF REMARKS

OF

HON. C. BASCOM SLEMP,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 26, 1914.

Mr. SLEMP. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting therein an address delivered by Hon. WILLIAM E. HUMPHREY, a Member of Congress from the State of Washington, at the Lincoln Day dinner at Indianapolis, February 12, 1914.

CONGRESSMAN HUMPHREY'S GREAT SPEECH AT LINCOLN DAY REPUBLICAN EDITORIAL BANQUET.

In his letter of acceptance that great statesman and great Republican, Benjamin Harrison, said the free trader "studies maxims not markets." It was one of the striking traits of his

greatness that Benjamin Harrison had the genius to state the entire case in a sentence. In four words he expressed the fatal weakness of the free trader. He is still studying maxims and not markets. This is true to-day from the scholarly President down to the lowest worshipper of this theory. Studying maxims and not markets is what is the matter with the country to-day. If we could get the Democratic Party to study markets our deliverance would be at hand.

THE FARMER.

From the days of my youth I have heard our Democratic friends declaim that a protective tariff was a benefit only to the manufacturer; that it was a fraud and a delusion to say that it benefited the farmer. The farmer of America to-day is eating the bread of experience. Under a Republican tariff practically no farm products were brought into this country. For the first time in the history of this Republic we are largely buying our food from abroad. I ask the American farmer to study these figures of the farm products that have been brought into the country under the new tariff law.

IMPORTS OF FARM PRODUCTS 1913.

Cattle, value, November, 1913, $3,306,723.
Cattle, value, October, 1913, $3,398,000.
Fresh meats, October, 1913, 5,752,207 pounds.
Fresh meats, November, 1913, 10,998,732 pounds.
Potatoes, October, 1913, 80,000 bushels.
Potatoes, November, 1913, 401,063 bushels.
Wheat, October, 1913, 233,000 bushels.
Wheat, November, 1913, 127,033 bushels.
Oats, October, 1913, 2,524,793 bushels.
Oats, November, 1913, 5,132,308 bushels.
Corn, October, 1913, 473,000 bushels.
Corn, November, 1913, 1,632,643 bushels.

The value of the corn imported in November was $1,182,673. Three million bushels of corn have already come into the United States since the new tariff law was placed upon the statute books. Ten million bushels will be sent from Argentina from this year's crop. This means $9,000,000 worth of corn bought from the foreigner. This means more than $9,000,000 worth of corn consumed by the American producer that the American farmers will not furnish. This means $9,000,000 in gold sent abroad that should have been kept at home.

In spite of all these great importations of foodstuff I ask if any consumer in America has noticed a decrease in the cost of living. I ask any candid man to study the facts and figures and give an honest interpretation of the story they tell. When are we favored? When we feed the other nations of the world or when the other nations of the world feed us, which condition spells prosperity for this Nation?

Our Democratic friends tell us that the present tariff law will enable us to capture the markets of the world. This is a Democratic catch phrase. Yet since the present law went upon the statute books, for the first time in 16 years, for the first time since the other Wilson tariff law was repealed the balance of trade has been against us. In December, 1913, the Nation lost in revenue, as compared with December, 1912, $6,000,000. In December, 1912, we sold $17,000,000 more abroad than in December, 1913. In December, 1912, we bought abroad $29,000,000 less than we did in December, 1913. In that month, the last for which the figures can be obtained, the balance of trade against us was $46,000,000. If December, 1912, be an index, the balance of trade for 1914 will be more than $350,000,000 against us. For many years under a Republican administration the balance has been more than $500,000,000 annually in our favor. If this is the Democratic way of capturing the foreign markets, then we should pray that they would give us some plan for the foreigner capturing our markets.

The President declared that what the American producer needed was to have his wits sharpened by competition with the rest of the world. Free trade personified: "Studying maxims, not markets." We have tried it, and we have had both our wits and our appetites sharpened.

DEMOCRATIC PROMISES.

If ever there existed in a civilized nation an aggregation of learned, self-satisfied, scholarly dreamers and theorists, then those directing the destiny of the Democratic Party can certainly claim that distinction. They have no doubts upon any question; that is, they did not have nine months ago. They had convinced themselves that if prosperity did not follow the reduction of the tariff that it would be because the American people were too stupid or too obstinate to take advantage of their opportunities. They declared that if any business depression came after they had revised the tariff that it would be due to a political conspiracy. Even the President seems to have been impressed with this belief. In a speech in New York he warned such offenders that he would build for them a scaffold as high as Haman's. Secretary Redfield, the great "efficiency" expert of the administration, declared that he would investigate if any mills dared to close and give the real facts in relation to the matter. Secretary Wilson, of the Department of Labor, announced that he would help to bring before the bar of public opinion any manufacturer that reduced wages or shut down his mills by helping in such investigation. Mr. UNDERWOOD, the distinguished leader of the majority on the floor of the House, declared in debate that any manufacturer that closed his establishment and gave as his reason adverse legislation would be investigated. He warned the country that the Secretary of Labor had power to make such investigation, and that it would be exercised. The President expressed himself as in entire accord with this proposition as proclaimed by Mr. UNDERWOOD and his Cabinet officers. Mr. UNDERWOOD further declared that after the Secretary of Commerce had made such report, after an honest investigation, that if any injustice had been done any legitimate industry, that the Democratic Party would rectify that wrong by changing the law.

Were these threats made in good faith, or simply for political purposes? I felt it was a patriotic duty to put these threatening Democrats to the test. If such declarations were made in good faith then their attention should be called to closed mills in order that the law might be changed. If they were made for political purposes, then their attention should be called to the closed mills to expose their hypocrisy.

On the 16th day of last December I read upon the floor of the House and placed in the RECORD a list of 194 shingle mills in my State, more than 60 per cent of all the mills in the State of Washington, and in producing capacity representing almost half of all the shingle mills in the United States. I also gave a list of 33 idle lumber mills. I gave the name, the location, and the owner of each mill and asked the administration to see whether these mills had closed for industrial or for political reasons.

On the 14th of last month I called the attention of these same gentlemen to a list of 123 stacks that had blown out since last March in the iron and steel mills of the country. I gave the names of the mills, the names of the owners, and their location. These 123 stacks represent 38 per cent of the entire steel production of the country. I called attention to the fact that the closing of these iron and steel mills had thrown out of employment more than 1,000,000 men.

I called attention to the automobile industry, where more than 50,000 men had been thrown out of employment.

I called attention to the fact that 270,000 miners were idle.

I asked that an investigation of these various industries be made and the truth given to the country. The country is waiting for the report.

The New York Times, a leading Democratic paper, published the list of steel mills that I named and wired the owners to know if my statements were correct. My figures were confirmed in every instance. So far no mistake has been found in the facts I gave.

I hold in my hand a telegram received by me since I began speaking. It tells its own story, and sufficiently answers the statements of those who claim that if there has been industrial depression, it is now at an end. It comes from the principal publication of the iron and steel trade in this country:

CLEVELAND, OHIO, *February 12, 1914.*

Hon. W. E. HUMPHREY,
Claypool Hotel, Indianapolis, Ind.:

Replying to inquiry, we feel it is no exaggeration to definitely state that fully 50 per cent of men employed one year ago in iron, steel, and machinery trade of United States are now idle, and the country is running at one-half capacity in those industries. Since January 1 there has been slight increase in blast-furnace and rolling-mill activity, due to effort of owners to secure business for future delivery by quoting low prices very often, especially in pig-iron and steel business, at less than cost. In the iron and steel industries at large there are still hundreds of thousands of men idle and working short time. The future is entirely dependent upon the confidence that investors may have in propositions submitted for their consideration and the feeling that our Government is anxious to build up and encourage rather than disorganize and disintegrate business. Sentiment is improving slowly, but actual orders in many lines are at their lowest ebb.

DAILY IRON TRADE.

The country wants to know whether the owners of these mills and these factories closed them, lost their money, and forced their men into idleness to discredit the administration, or whether it has been done because of business conditions.

The country is waiting to know whether the Democratic Party is going to keep its promise, whether it will change the tariff law or execute these malefactors.

I may have some selfish motive in urging these investigations. My State is the greatest timber State in the Union, and if every man in the country who has closed his mill or reduced wages or decreased his output is to have built for him a gibbet 50

cubits high, as the President promises, it will certainly start a boom in the lumber business in my country.

I have reason to believe that I have done a great public service in calling the attention of the country and Congress to the business condition of the Nation at the time I did. I have reason to believe that it gave pause to those in power in regard to carrying out the program that they had mapped out. It was time some one told the truth. Is it a patriotic part for public men to keep silent and sound no word of warning until the whole country is done to industrial death by academic doctors and efficiency experts, by gowned theorists and scholarly dreamers, by pedantic pundits, Chautauqua performers, and learned illusionists?

FOREIGN POLICY OF THE PRESENT ADMINISTRATION.

I realize that in talking of foreign affairs the question should be approached with caution and spoken of in terms of moderation. It takes some effort to observe this rule in talking of our present foreign policy. It is hard to approach vaudeville with solemnity.

Our foreign policy seems to have been formulated by the President with a college textbook on international law and the latest volumes on the rules of rhetoric, backed by the great premier of State, with a lecture on peace in one hand and a bottle of grape juice in the other.

Mr. Bryan, the preacher of direct primaries, of the rule of the people, was elected by the votes of the Democrats of Nebraska as a delegate to the Baltimore convention and instructed to vote for CHAMP CLARK for President; but the expressed will of the people and a majority of the convention was betrayed and CHAMP CLARK was defeated by the most amazing exhibition of human selfishness and human ingratitude in the political history of this country. But verily Mr. Bryan has received his reward, for he has been appointed to an office where he can draw $12,500 per year, without in any way interfering with his Chautauqua performances. I do not think it can be fairly said of Mr. Bryan that he would not well fill the office of Secretary of State. He simply can not find time to try. It was freely predicted that Mr. Bryan would be the thorn in the flesh of this administration and that he would interfere in legislation and would stir up opposition in Congress. Behold the shrewdness and the wisdom of the President. He put Mr. Bryan in his Cabinet and kept him out of Washington City.

I am violating no state secrets when I say that it is generally understood that Mr. Bryan has expressed an anxious willingness to visit Mexico and deliver his lecture on "Peace" to each of the contending forces—just as soon as they can guarantee the regular prices. After he does this I suggest that he visit some battle field and there listen to the groans of anguish and agony of the wounded and dying and look upon the white upturned and bloated faces of the dead with the waiting vultures circling above him and there deliver the one, "The price of a soul," then see if he can not reconcile himself for a brief season to forego popular applause and money getting and devote himself in this hour of his country's great need to the mighty responsibility of his great office.

In dealing with foreign nations here at home there should be no party and no partisanship, but there can be no higher form of patriotism than to protest against the action of any party or person that is likely to lead us into trouble with foreign nations and lessen our prestige and standing or endanger our interests.

If those who do not approve of the present foreign policy of the administration should longer remain silent and trouble should come, then they could, and with some show of justice, be charged with the most arrant cowardice for not speaking before the event occurred. They would in such case be charged with simply taking advantage of what had happened to criticize when before, either through ignorance or cowardice, they kept still when the result might have been avoided if they had but protested.

Considering the provocation, I certainly think that great restraint has been exercised by those not approving our foreign policy in not criticizing it. But the last few days have brought about conditions in which the highest interests of the country seem to be threatened, and the situation should not longer be silently endured.

Our foreign policy has been weak and vacillating from the very beginning. Almost immediately after the party came into power it announced that it would not place the influence of this country behind loans made in China. This was the reversal of the policy formerly pursued in that country. By this action we lost trade and prestige in China. The administration announced that this new policy was established as a matter of principle. A few days thereafter, in expressed terms, a different policy was declared in relation to Mexico. What difference in the atmosphere makes right in Mexico what is wrong in China? The methods of the Chautauqua circuit seems to have been followed too largely in our foreign policy. It has been apparently too much influenced by popularity and applause instead of the best interests of our country in the years to come.

When the administration came into power it was entirely free to deal with the Mexican situation as it desired. Huerta had just assumed control. The Republican administration wisely and properly left the matter entirely open.

The administration saw fit to disregard either the assistance or the suggestion of the ambassador of Mexico or to make use of his information. The President's personal representative was a certain Dr. Hale, an ex-minister who quit preaching to become a professional muckraker. He is an expert on scandal. He was not accredited to this country nor a credit to the country. It was through this yellow medium that the President saw the situation at the time in Mexico.

The Committee on Foreign Relations in the Senate contains such illustrious names as Senator Bacon, who has seen many years of service; Senator LODGE, who perhaps knows more of foreign affairs than any other man in the United States; ELIHU ROOT, a man of great learning and great ability, who at one time occupied the office of Secretary of State; and many other distinguished Senators. The committee of the House of Representatives also has among its members eminent men. None of these was consulted in regard to what we should do in Mexico, a departure from long-established policy of the Presidents.

But solely upon their own responsibility, from information apparently furnished from private individuals, the President and the Secretary of State established our Mexican policy. Such action showed a sublime self-assurance or an amazing ignorance of the situation.

The policy then announced, stripped of all diplomatic language, was, first, that this Nation would not recognize Huerta; second, that we would not intervene; third, that we would not permit other nations to interfere. And in this circle we have been traveling ever since. It was not long until Congress and even the President and the Secretary of State awoke to the fact that the situation was a serious one. Members of the Senate and House were then consulted, but an irretrievable mistake had already been made. We had been placed in a helpless position from which there was no escape. By this attitude the President placed himself where he was practically at the mercy of Huerta. He could not force him to resign nor control his conduct while he remained in power. The President, under his declaration, was helpless to restore order in Mexico, and at the same time he insisted that no other power should do it. He had taken an attitude that took from Huerta the strongest incentive to establish order. In this position the only reply that the President could make to American citizens appealing for help to protect their lives and their property was for them to leave the country. The citizens of other nations in Mexico were left in the same position. In taking the position that other nations should not interfere in Mexico and that we would control the situation, the President had the unanimous backing of the American people, but surely other nations had the right to believe that we would not abandon Mexico to its fate.

To-day, so far as the two nations are concerned, it has almost degenerated into a personal quarrel between the President and Huerta. The Mexican people ask with great force what authority did the President have to dictate affairs in Mexico? When did his jurisdiction extend to that country? If he could tell Huerta that he must not be a candidate for President, then he could dictate who should be. If he could exclude one candidate, he could exclude all. It is almost inconceivable that the President could have expected Huerta to obey his commands, especially as he coupled with them the expressed avowal that he would not intervene to enforce them.

After Huerta, then what? If the same rule applies to those who are to follow, when will the end come? It is popular and it pleases the public to talk about free and fair and honest elections in Mexico. We all approve such sentiment, but we know that no such thing ever has occurred in that country and there is not the slightest hope that it will occur in years to come.

Days, weeks, and months have gone by and the condition in Mexico has remained the same—one of indescribable horror. Huerta still remains in power. Famine, murder, robbery, and plunder still devastate the unhappy country. Other nations are impatient. But we must wait until the country is completely exhausted or all but one faction completely exterminated. This is called the euphemistic policy of "watchful waiting." But how long are the other nations going to submit to this program? Their rights are daily in danger. Let the President and the

Secretary of State preach their policy of peace. We all believe in it and like to hear it; but while doing this, must we daily drift aimlessly toward war with no apparent effort to avoid it? It appears now that while Bryan has talked and the President has waited the other nations of the world have not been so content.

We are just completing the Panama Canal. It was built on American soil. The American flag floats over it. The American people paid for it. We have expended almost half a billion dollars in its construction and will continue to spend millions in relation to it so long as the Nation shall stand. More than 10 years ago we made a treaty with Panama. It was known to all the world. For 10 years we proceeded to expend our millions without a word of protest from any nation. When we passed laws regulating the use of the canal one of the provisions in that act prevented vessels owned by the Canadian Pacific Railway from having the same advantages as American vessels. Canada paid nothing, but wanted every privilege. The Canadian Pacific Railway is largely the Government of Canada. A delegation was sent to England from Canada. England wanted Canada to build battleships. Then for the first time, after 10 years of acquiescence, England contended that we had violated the Hay-Pauncefote treaty when we made our treaty with Panama. Then for the first time she contended that we had violated that treaty when we gave preference to American ships in the coastwise trade, although for more than a century she had taken exactly the opposite position.

The question was thoroughly discussed. Congress decided against this contention of Great Britain, and wrote their declaration into law. The Democratic Party decided against this contention in convention and wrote it in their platform. The American people decided against this and recorded their repudiation at the polls. But the other day the people were startled by the announcement of the President that this provision should be repealed. What grave necessity has arisen that he would suggest this disregard of the platform promises of his party, of the action of Congress, and of the expressed will of the people? Why this proposed complete and humiliating surrender to the Canadian Pacific and other great transcontinental railways?

It seems that while we were indulging in "watchful waiting" that Japan and Great Britain had not been unmindful of their great opportunities in Mexico. Japan had been secretly increasing her influence in that country. Her note to the State Department has remained unanswered since last August while Mr. Bryan was dividing the shekels and the applause with the tango artist and the alpine yodeler. Now comes from her the significant statement that there are "other ways" than correspondence to settle disputes. Great Britain taking advantage of the situation now demands as the price of her friendship that she be given equal rights with us in the use of the Panama Canal.

The administration has made an irretrievable mistake and now attempts to save itself with the Hay-Pauncefote treaty.

It will not do to say that the President takes this position because he now believes that we violated that treaty. That would be to accuse him of lack of sincerity and candor. If the Hay-Pauncefote treaty has been violated, it was violated when the Democratic Party met in convention and declared, "We favor the exemption from toll of American ships engaged in the coastwise trade passing through the canal." These are plain words and can not be misconstrued. If the Hay-Pauncefote treaty has been violated, it was violated when Mr. Wilson became a candidate upon that platform. That provision brought him many votes. It will not do to say that he kept silent for political purposes when it was his duty to speak. Certainly the friends of the President will not contend that it was not his duty as a candidate to yield his opinion to that as expressed by his party platform, or else plainly proclaims that fact when he was nominated. This is a law so plainly written in American politics by public opinion that it has never been violated. In justice to the President we must assume that conditions have changed and that only the gravest of reasons would persuade him to thus disregard the expressed position of his party, of Congress, and of the American people. But when before were we ever compelled to purchase the influence of another country? When before have we been placed in a position when we must buy friendship? When before have we ever been placed in the humiliating position of yielding to the demands of another nation after Congress and the people had specifically repudiated such demands? As one citizen I refuse to remain silent and see my country brought to such low estate. As a citizen of the Pacific coast I refuse to remain silent and see my section of the country robbed of the measureless benefits of the Panama Canal and see these benefits given to British Columbia. I refuse to remain silent and witness this disgraceful surrender to the great transcontinental railroads. I refuse to remain silent and see in shame and humiliation the interest of my country sacrificed to purchase the friendship of England, to conceal the egotistical stupidity of this Democratic administration.

Fortunate, indeed, will be the American people if the future does not disclose that the most humiliating, if not the most discreditable, chapter in our history is now being written.

Do not misunderstand my position. I am protesting in the interest of my own country. In any contest with any other country, like every other Republican, I will stand by the President without question and will vote to give him any power or any sum of money he may desire. When it passes beyond the stage of diplomacy then I believe in that grand old toast, "My country, may she ever be right; but, right or wrong, my country."

THE HIGH COST OF LIVING.

The Democratic Party promised if it went into power that it would reduce the cost of living. Has it kept that promise?

The Democratic Party is guilty of procuring the votes of thousands of people in this country under false pretenses. They told the people, and so declared in their platform, that the tariff was responsible for the high cost of living. Who believes this statement to-day?

The Democratic Party has lowered the tariff, but what change has there been in the cost of living? They placed leather and leather goods and shoes on the free list. How much cheaper are shoes?

They placed wool on the free list. The farmer receives less for his wool; his flocks are disappearing. How much less do you pay for a suit of clothes?

They greatly reduced the tariff on oats. The price of oats to the farmer has been greatly decreased. How much less are you paying for your breakfast food?

They placed wheat and flour on the free list. How much less are you paying for bread?

They placed corn on the free list. It is claimed that by this action they have already given to the corn-food products combine, supposed to be owned by the Standard Oil Co., more than $3,000,000. The whisky distillers of the United States have profited by free corn more than $2,000,000. Do you buy your meal or your whisky for less, although perhaps I should not ask that last question of this audience.

They placed cattle and meat on the free list. How much less do you pay for a beefsteak?

Foreign products are flooding the country. The Government is losing more than $6,000,000 per month in revenue. Who is being benefited by it?

But they reply, "Give us time." Well, they have had time to turn the balance of trade against us. They have had time to close mills and factories. They have had time to throw millions of men out of employment. Everyone but a partisan Democrat knew that these things must come first.

When the Democratic Party promised to lower the cost of living and increase wages it was either insincere or insane, or both.

When we remember that 90 per cent of the value of everything we eat, of everything we drink, of everything we wear is represented by the labor that it takes to produce it, how absurd and insincere to talk about greatly reducing the cost of living without reducing wages.

The high cost of living, I believe, will be reduced. I believe we are on the road; the general business depression prevailing is the first step. I will tell you when the high cost of living will be reduced. It will be when the farmer is impoverished; when land is cheap; when farms are being sold under mortgage; it will be when wages are reduced and when labor is in beggary and want. Then and not until then will the cost of living be reduced.

A protective tariff has nothing to do with increasing the cost of living except as it increases general prosperity.

The Democratic Party was guilty of pretense and hypocrisy when it preached that the high cost of living was in itself a calamity.

High prices and prosperity are synonymous.

High prices and progress are synonymous.

High prices and civilization are synonymous.

As the nations have advanced prices have advanced. The cost of living has advanced. This is true now. It has been true from the dawn of civilization. In the days of early Greece people protested because they had to pay a dollar for an ox. That was barbarism. One hundred years later they protested because they had to pay $4 for an ox. They were progressing.

In Shakespeare's time they protested because they had to pay 4 cents for a hen. They declared that in the good old days they could buy them for 2 cents. They were becoming civilized.

All through the centuries high prices have been a measure of progress. The cost of living grows higher as people live higher physically, morally, and mentally, and it will always be so.

Where do we have the most starvation, misery, and want? Where prices are low.

Where do we have panic and poverty and bankruptcy? Where prices are low.

Where do we have the most progress and prosperity and happiness? Where prices are high.

Where do we have high prices in this world? In the United States, in South America, and in Canada.

Where do we have low prices? In India, in China, and other Asiatic countries.

The countries of low prices are poor; the countries of high prices are rich. The community with high prices is prosperous; the community with low prices is poverty stricken.

We had low prices in this country once. Four years of starvation and misery have burned those low prices into my mind until I can never forget them. I lived in Seattle in those days. I spent much of my time looking for a place where I could get the most to eat for 15 cents, and so did many of you. It was under the other Wilson law. Those were days of cheapness. Food was cheap, clothing was cheap, men were cheap. Millions of bushels of wheat sold for 15 cents per bushel. Potatoes sold for 10 cents per bushel. Salmon, the best fish in the world, sold for one-half cent per pound. One morning I stood on the streets of Seattle and saw 1,500 men march by in one line. Were they complaining of the high cost of living? Were they demanding an increase of wages? Not so. They were begging for an opportunity to work for their bread.

There was one billboard that I used to see in those days that I can never forget. It was on the side of a little wooden building that then stood where now stands the office of one of the greatest daily newspapers in the world. It contained the bill of fare of the little restaurant within, and it read:

BILL OF FARE.

Soup, one kind of meat, potatoes, bread, one kind of pie, one cup of coffee. Price for meal, 5 cents.

There were 3,000 people in the city of Seattle that stopped, read that sign, and went away hungry. They did not have the nickel.

God grant that these days of cheapness may never come again. But that they are coming seems certain. We can not buy the products of other nations without impoverishing our own. When we give our work to foreign labor we place our own in idleness and rags.

THE PARALLEL.

Between the administrations of President Harrison and President Taft there is a most striking parallel. I took part in the Harrison campaign in Indiana, as I did in the Taft campaign in Washington. Under the administration of Benjamin Harrison all the mills and factories were running; all the fires and furnaces were blazing; the farmers were getting better prices than ever before; they were growing independent faster than ever before; wages were higher than ever before; more men were employed than ever before; the purchasing power of a day's wages was greater than ever before; this country was more prosperous than any other nation in the history of the world had ever been before. Just exactly the conditions that existed under the Harrison administration existed under the Taft administration. The description of the one precisely describes the other. The world had never seen such prosperity as blessed this land at the close of the Taft administration after 16 years of Republican rule.

In the Harrison campaign as in the Taft campaign the Democratic Party was preaching free trade. They were arraying class against class. They were crying out that the tariff was the mother of trusts; that the tariff was a tax; that the tariff increased the cost of living. They made exactly the same speeches in the Harrison campaign that they did in the Taft campaign.

In the Harrison campaign Blaine, Reed, and McKinley, and other great Republicans, pleaded with the people not to desert the policy of protection. They told them what the result would be, that depression and ruin must follow.

I have recently reread Blaine's great speech in that campaign, in which he pictured in detail what would be the result of Democratic success. He said that business depression would follow; that we would have panic and hard times and that the mills would close; that wages would be reduced; that men would be thrown out of employment; and that misery and poverty and ruin would follow. If that great genius were living and standing before you to-night, he could not more truthfully and accurately describe the conditions that came in the Cleveland administration than he did in that speech when he warned the people not to vote for free trade. This speech has been called Blaine's prophecy. It was not a prophecy. It was simply familiarity with the history of his country. He was simply pointing out what history demonstrated. Such results must follow the adoption always of the free-trade policy.

Remember that 90 per cent of the value of every article is labor. When labor is prosperous, the country is prosperous. When labor is poorly paid, poverty is nation wide. Whenever any man can show me that I can buy an article made abroad and not at the same time rob the American workman of just that much work and that much wages, and not at the same time send that much money out of the country, and to that extent enrich some other nation and give that much wages and that much work to the foreigner, then I am ready to become a free trader.

By his single illustration, that when we buy a ton of steel rails from England that England has the money and we have the steel, but when we buy a ton of steel at home we have both the money and the steel, Lincoln answered every free-trade argument that ever has been made or ever will be made.

In an editorial a few days ago the News, of this city, said that if we could purchase a manufactured article cheaper in Europe, that we had the right. If we do this, what becomes of the men that work in the factories and the mills of this country? Where are they going to get their work and their wages? Where are they going to get bread? How long will we buy cheap goods from the foreigner after he controls our markets?

If we have a right to purchase cheap goods abroad, why should we not purchase cheap labor? If the argument be true in the one case, why not in the other? If the argument of the News is correct, then we should lose no time in changing our exclusion laws. Across the Pacific are countless millions of honest and patient toilers upon whom the highest blessing this world could bestow would be to permit them to come here and do all the work of the field, the mine, and the factory for a fraction of what American labor will do it for. If we have a right, as the News argues, to buy where we can buy cheapest, we should welcome these oriental laborers. If we have the right to buy what cheap labor produces, why not the right to buy the labor that produces it?

I challenge the News to point to a single illustration in the history of this Nation where a protective tariff has ever been placed upon an article that it increased the price. I point to tin plate and steel rails and to every one of the thousands of articles upon which a protective tariff has ever been placed as demonstrating the truth of the statement that it always decreases the price. The entire history of this Nation shows that we can manufacture goods for less than we can buy them from foreign countries and at the same time keep our work and our wages at home.

We have a recent striking illustration on the seas of the ways of the foreigner. A few years ago the Navy Department employed foreign ships to carry coal from the Atlantic to the Pacific. Then there were a few American ships left. Foreign ships charged from $3 to $3.25 per ton. Now the American ship has disappeared. The foreigner now fixes the price by agreement. The foreign ship now charges from $6 to $8 per ton. The foreigner never sells for less than we can produce at home only to secure the control of our market.

I am surprised at this argument of the News. Few free traders even have the courage to-day to advocate it. I fear that the plain story of disaster told in the Treasury figures, which the News quoted in the same article, forced the editor into this indefensible and un-American position. But exactly this same argument was the principal one made in the Harrison campaign by the News more than 20 years ago. You will remember that it then claimed that American brain and American ingenuity could not make tin plate. The News said we could buy it cheaper abroad and it was our privilege to do so. The people, in an evil hour forgetting the history of their country, as they forgot it in the last campaign, listened to these Democratic sophistries and Democratic promises urged by the News and other free traders 20 years ago and placed that party in power. Democratic success then, as does Democratic success now, withered our prosperity as does the hot winds of the desert the blossoming harvest. Certainly no person now living who passed through it can forget the panic and poverty of the last Cleveland administration.

With the change of the administration and the threat of free trade there came fear and distrust and uncertainty. Banks closed their doors; business houses assigned; the balance of

trade was against us; bonds were issued; labor was forced into unwilling idleness; we had deserted mills, smokeless factories, and silent machinery; the ship swung at anchor; the loom stood silent in the mill; the pick lay unused in the mine; the hammer rusted on the anvil; the reaper rotted in the field; we had tramps and beggars and soup houses and industrial armies, the pale faces of starving women, children crying for bread; at a million hearthstones sat white-lipped famine, pitiless and cruel; millions of men were out of employment and asking for work to earn bread to feed the starving lips of those they loved.

William McKinley was elected, the system of protection was restored, and in less than 90 days a million idle men had gone to work.

Can any parallel be more striking or more deadly? We had a Dr. Wilson then. We have a Dr. Wilson now. We had a Wilson free-trade law then. We have a Wilson free-trade law now. Could a more illuminating example, a more complete illustration of history repeating itself be found in all the records of the race? Let us follow that parallel further.

I have tried to paint you a picture of the conditions of free trade during the Cleveland administration. What of to-day under the Wilson administration?

EFFECT OF PRESENT TARIFF LAW.

Remember that the Democratic Party did not get into power until last March, so that the year 1913 included two months of Republican administration and nine months of a Republican tariff law. And then listen to these figures of comparison between 1912 and 1913, and forget not that practically all of the disaster that has come upon the country has been within the last four months. I can not obtain the figures separately for months, so will compare 1912, the last Republican year, with 1913, nine months of which were Democratic.

The bank clearances in 1912 were $4,175,000,000 greater than in 1913.

The number of corporations recorded in 1912 show $713,000,000 more than those recorded in 1913.

There were 171,700 more idle men on the 1st day of January, 1914, than there were on the 1st day of January, 1913.

The United States Steel Corporation on January 1, 1913, had orders for 7,850,000 tons of steel. On January 1, 1914, it had orders for 4,250,000 tons.

On the 1st day of January, 1914, 123 stacks in the steel and iron plants of the country, representing 38 per cent of the entire productive capacity of the country, were blown out.

On the 1st day of January, 1914, $125,000,000 was invested in idle iron and steel plants.

More than 1,000,000 men in the steel and iron industries were idle.

More than $2,000,000 in wages each day was wiped out.

An annual pay roll of $746,000,000 gone.

More than 270,000 miners are idle that were earning $12,000,000 per month.

Seventy-five thousand men in the automobile industry are out of work.

The wage earners of this Nation in January, 1913, were earning $4,000,000 more each day than they earned in January, 1914. This vast sum of $4,000,000 each day is taken from the channels of trade. This means disaster to every business.

There are 325,000 idle men in New York, 150,000 idle men in Chicago, 100,000 idle men in Pittsburgh, 50,000 idle men in Detroit, 25,000 idle men in San Francisco, 25,000 idle men in St. Louis. And the soup house and bread line is in every city.

Ten months of Democracy, the "New Freedom," and free trade. Look at that record. Yet when the Republican Party went out of power less than a year ago all these mills were running and all these men were working.

Every day that the present tariff law has been upon our statute books this Nation has gone in debt more than a million dollars. Every day that law has been upon our statute books we have lost in foreign trade more than half a million dollars. Every day that law has been upon the statute books the business of this Nation has decreased more than $10,000,000. Every day that law has been upon our statute books mills and factories have closed. Every day that law has been upon our statute books the wage earners of this country have lost more than $2,000,000. Every day that law has been upon our statute books more than 10,000 men have been forced into idleness.

A certain distinguished, and also extinguished, gentleman last campaign dramatically exclaimed—

Pass prosperity around.

Certainly the party he helped to place in power has passed poverty around.

PREACHING CALAMITY.

Our Democratic friends claim that we should not call attention to these closed mills and idle men. They dare not dispute the facts, but they say it is preaching calamity and that such talk injures business. They do me too much honor. The Democratic Party of this country for 16 years in continuous unbroken chorus howled calamity. Their tales of woe made the lamentations of Holy Writ sound like pæans of praise. Yet during those 16 years we enjoyed the greatest prosperity in all the world's history. Democratic calamity howls alarm no one. They only preach it in times of prosperity. But to-day, amid the gloom and silence of closing mills and dying fires, for the first time in 20 years they begin to preach prosperity.

The Democratic Party to-day reminds me of an old man I knew in the days of my youth. He was something of a philosopher. He suffered much with the toothache. One day I met him and I said, "Uncle Rease, how is your toothache?" He said, "Well, you know I have had the toothache so long that I never notice it any more unless the damned thing stops."

Our Democratic friends claim to-day that there is no business depression, and then with true Democratic consistency say the times are going to improve. Every Democratic paper and every Democratic speaker now declares that business is getting better. It may be so. It is a "consummation devoutly to be wished." But how can the patient get well if it has never been sick?

The Democratic Party declares that present conditions are not due to the tariff, just as they always claim that Republican prosperity was not due to the tariff. They assure us that these conditions are due to natural causes. It may be so, but how unfortunate that the Democratic Party always gets into power just ahead of a panic. But in Democratic times does the glorious sun cease to shine, the life-giving rain to fall; do the seasons fail to come and go, the harvest to bloom and ripen? Does the friendly earth lose its fertility?

The first man as he lay in his den devouring the quivering flesh of his dying victim heard the roar of the thunder; he was filled with fear and dread, and in his terror he cried out that it was the voice of an angry god. He did not know and he could not understand. When the first man crawled from his cave and through his matted hair with blinking eyes looked upon the majestic sun, when he saw all nature burst into throbbing life and beauty under its glorious rays, he fell down and worshiped it. He did not know and he could not understand. When the first man walked forth at night and looked upon the glories of the starry firmament he thought each light of beauty was a wandering spirit. He did not know and he could not understand.

And so it has always been, and when the Democratic Party declares that Democratic disaster and Republican prosperity are due to Providence they give to them the tribute that ignorance and credulity always pay to what they do not know and what they can not understand.

One thing we do know, and that is that when the Democratic Party is in power we have panic and poverty, and that when the Republican Party is in power we have prosperity and plenty.

REPUBLICANS WILL UNITE.

If any of you are cast down and faint-hearted, I ask you to remember the history of your country. Our Democratic friends are constantly shouting that a majority of the people declared for the policies of that party at the last election. As a matter of fact, the Democratic Party is not a majority party. President Wilson is not a majority President. The majority of the American people to-day are opposed to the tariff policy of the Democratic Party.

There is but one thing that will prevent overwhelming Republican success at the next election, and that is a division in our own ranks. The issue of the coming campaign will be the soup house and the bread line. It will be to give employment to our idle men. It will be to give our work and our wages and our markets to our own. It will be to establish the system of protection. This issue of prosperity will overshadow all others, and upon this issue Republicans of all factions and all beliefs can unite.

THE PROGRESSIVES.

The Progressives are protectionists. Their candidate for President in the last campaign declared that if Wilson was elected and a Democratic tariff law placed upon the statute books that it would bring upon the country the greatest industrial disaster in the history of this Nation. The experience of the last few months has largely demonstrated the correctness of his prophecy.

The Progressives believe in the great principles of the Republican Party. They are proud of its traditions and its memories and its mighty achievements. They are proud of its glorious history. They are proud of its great leaders—Lincoln, and Grant, and Harrison, and Blaine, and McKinley. They believe in the teachings of these great men as we believe in them. They believe in the principles for which these men fought. The

rank and file of the Progressive Party are now and always have been Republican. Their differences with the Republican Party has been one of method more than of principle, one of procedure more than of policy.

With the great issue of protection, the Progressives will again proudly take their places under the banner of the grand old party. Most of them are under that banner now. Most of them left the Republican Party because of personal admiration for Col. Roosevelt, and because they were misled by a few selfish papers and a few selfish, disappointed, discredited, repudiated, and self-appointed leaders. Of course, these leaders, whose only hope of office and of political preferment lies in keeping the Republican Party divided, are preaching that there must be no uniting of parties. Do not blame these leaders for this. It is a case of life or death with them. But the great rank and file of the Progressive Party are honest, sincere, and intelligent men and women. Not many of them will be deceived again. They know that they must choose between the Democratic and the Republican Party; that they must choose between prosperity and disaster. Their self-selected leaders will fail to deceive the rank and file again.

A Progressive is not a Democrat and he is not going to help keep that party in power. The leaders who call themselves progressive and made possible the election of a Democratic President and helped to bring upon us all the disaster that has followed will discover the truth in Lincoln's words, "That you can fool some of the people all the time; you can fool all the people some of the time; but you can not fool all the people all the time." These gentlemen will discover the day after the next election that they have fooled very few.

FUTURE OF THE REPUBLICAN PARTY.

I remember the dark days following the defeat of Harrison as vividly as I remember those that have followed the defeat of Taft. I remember that I was at that time much discouraged. At that time I left Indiana and went to the West. There seemed to be no hope for the future of the Republican Party. Many of its strongest followers had lost faith, as some have done to-day. Had I known the history of my country as well then as I know it now my faith would have remained unshaken. In four short years the people discovered, as they are discovering now, that the Democratic Party is only a party of opposition; the people have discovered once more that the foundation policy of the Democratic Party is free trade. It is again being demonstrated that our Nation can not prosper under a Democratic tariff law. After four years of experience the people, looking upon the universal depression, upon the idle men, upon the closed mills and smokeless factories, upon an empty Treasury, will again in those unhappy days remember the history of their country; they will remember Republican prosperity; they will remember the Republican Party. They will again place that party in power. Again the system of protection will be restored, as it was under McKinley. Again the dust of idleness will disappear. Again the wheels of industry will be set in motion. Again the door of opportunity will open wide to both labor and capital. Again the balance of trade will be in our favor. Again the golden stream will flow into the National Treasury. Again we will see the eager sails of commerce whitening the seas, the cattle on a thousand hills, the golden harvest laughing in the sun, the smoke of industry painting the sky. Again there will be work and bread for all. And again the Republican Party will enter upon another 25-year period of unbroken power.

Never was my faith stronger in the Republican Party than at this hour.

I may fall in the ranks, but I will never be shot as a deserter.

Standing here to-night in the land of my birth on the day Lincoln was born, with the memories of Harrison and Hay and Morton and Wallace, and of the other great Indiana Republicans crowding in upon me, in the land it made free, in the country it kept prosperous, beneath the flag it made stainless, I am proud to belong to the Republican Party.

LINCOLN AND THE FLAG.

I can not close without a word of tribute to him, the foremost name of all Americans, whose birthday we celebrate to-night, the first of all Republicans—Abraham Lincoln.

The greatest orator that ever pronounced the English language used these words:

> Lincoln, the greatest of our mighty dead. His memory is as gentle as the summer breeze that blows when reapers sing amid the gathered sheaves.

The story of his life makes us proud of our party and of our country. It brings to us new faith and new hope. It strengthens our love of the Republic, of the institutions of our country, and our faith in the American people and in humanity.

I believe that the world grows better. I believe that this is the best day that ever dawned, but I believe that to-morrow will be better than to-day. I believe that the men of to-day are as honest, as brave, as patriotic, as any that have gone before. I believe that the women of to-day are the brightest and best, the most beautiful and true, of all the daughters of Eve. I believe that most men are honest, that most women are virtuous. For every man that betrays a trust there are a hundred that walk upright to the end of life in spite of all temptations, weaknesses, and snares. For every woman that falls there are a hundred that remain true—angels of purity and faithfulness. Let us not forget these things.

If no man is honest, if no woman is virtuous, if there is no patriotism, if there is no love, then may I never know the truth.

I have faith in my country. I have faith in the institutions of my country. I have faith in the men and women of my country. I believe that the Stars and Stripes still float over the grandest heritage of the human race. I believe that more men are ready to die for the Old Flag than ever before.

The flag of our country! How fitting the colors! The red, the passionate red of the queenly rose, blushing beneath the amorous kisses of the wooing sun. The red, the sacred red of the heart's blood of the hero that stains the field of battle as he dies in defense of home and country. The white, the perfect white of the unsunned snow. The white, the pure white of the beautiful lily with its golden heart of fire. The blue, the beautiful blue in woman's eyes, in the eyes of the one we love. The blue, the true blue of the infinite heavens that arch above us. With stars as stainless as those that shine in the fathomless abyss of a cloudless night. This is your flag and my flag.

> Your flag and my flag, and how it flies to-day;
> In your land and my land and half the world away;
> Rose red and blood red its stripes forever gleam;
> Snow white and soul white the good forefathers dream;
> Sky blue and true blue, with stars that gleam aright;
> A gloried guidon of the day; a shelter thro' the night.
>
> Your flag and my flag, and oh how much it holds!
> Your land and my land secure within its folds;
> Your heart and my heart beat quicker at the sight;
> Sun kissed and wind tossed, the red and blue and white;
> The one flag, the great flag, the flag for me and you;
> Glorified, all else beside, the red and white and blue.

Railroads in Alaska.

SPEECH

OF

HON. TIMOTHY T. ANSBERRY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 28, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 1739) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. ANSBERRY. Mr. Chairman and gentlemen of the committee, I agree with my colleague from Ohio [Mr. WHITE] on the proposition that a great many exaggerated statements have been made with reference to this subject. I believe, however, my colleague should have said further that these statements were not confined to one side of this question. I confess that I had always thought it was the consensus of the best opinion in America—in fact, I have never heard it disputed before this bill was discussed on the floor of this House—that Alaska is rich in almost every desirable resource; rich agriculturally, rich in minerals, and rich in all the things that are thought desirable in any country. But after listening to some of these pessimistic gentlemen, notably to the gentleman from Oklahoma [Mr. FERRIS], I reached the conclusion that there could be absolutely nothing grown in Alaska with the exception of potatoes, and those of a very poor quality. In spite of that fact, I intend to vote for this bill. [Applause.]

I do not believe that the success of the operation of this railroad in Alaska depends upon the agricultural wealth of Alaska. I think that if a railroad was projected into any country, even the Desert of Sahara, if it was contiguous to America, if it was as near the United States as Alaska is, and had the water outlets and ports that Alaska has, so that we could transport by water over the intervening sea, the Sahara Desert—and that is the most extreme illustration I can think of—would furnish enough tonnage to make that railroad a paying proposition eventually.

The gentleman from Oklahoma [Mr. FERRIS] made a statement here which I am going to accept as a fact, on the theory

that he is an adverse witness, testifying to a fact that he thought supported his contention. He told us that the great transcontinental railroads that were aided by governmental subsidy of lands were given a kingdom which would now be worth over $1,000,000,000. If that be true, and I assume that it is, the men who gave that $1,000,000,000 of land to encourage the building of these transcontinental railroads did the right thing, in my opinion, according to their lights. In other words, they recognized this fact, which is admitted as the result of 75 years of experience, that, next to the printing press, the railroad is the greatest civilizer and the greatest developer of a new country. Therefore, despite the fact that these men gave away land the value of which they did not begin to realize, I think it has been worth that sum of money, though it be $1,000,000,000, to the great country west of the Mississippi River which was opened up by the building of these railroads. [Applause.]

But, fortunately, we do not need to go to that extreme. It is not necessary for us, sitting here on behalf of the American people, to vote that stupendous sum of money to procure a railroad to open Alaska. And when we do that, it has been well said that we are only developing that which is our own, for practically all of this great country is owned by the Federal Government.

Some one said that the expenditure of that $1,000,000,000 worth of land in the way of a subsidy to these railroads produced about 6,000 miles of track. This being true, it follows, then, that these railroads have cost more per mile than any other railroads, either Government or individually owned, which have been constructed, not excepting those which were built in Great Britain, and they cost in the neighborhood of $300,000 per mile. The difficulty is that, in spite of the fact that the Government of the United States paid a thousand million dollars for these transcontinental railroads, the Government has no more interest in them than it has in railroads built in Ohio or in any other State that were built without Government aid; that is to say, that although the Government paid more in land than it would cost to reproduce them, the Government does not own them. Viewed in this light, it strikes me that it would be good business policy to keep our land in Alaska, pay for the construction of the railroads out of the Public Treasury, and then recoup ourselves by the sale of the land at the enhanced price which will be the natural consequence of the construction of the railroad. It matters not if it be true that these railways will not pay, and that is the contention of the gentlemen who oppose this proposition in the House. It is not a matter of the first importance whether the railway pays or not. Does the owner of a large tract of undeveloped land expect a highway which he constructs upon this land to pay a dividend? No; the owner of the land has no such narrow vision; it is clear enough to him that he will get his benefits out of the sale at an increased price of his land by getting it in touch with the market, so that its timber, its coal, its oil, and all of its natural wealth can be brought in closer touch to a market by the construction of a highway to it. His carping neighbors, who point to the pennies he spent on road construction, can not understand his folly, as they term it, for they know that the highway as such will not pay dividends, whereas the wise landowner counts the dollars he earns in a larger way, and so it is with the United States in this Alaskan railway venture. We care not for dividends, because we are only developing our own land; for every acre of land that is privately owned in Alaska the Government owns uncounted thousands.

RAILWAY OWNERSHIP ABROAD.

The gentleman from Michigan [Mr. FORDNEY] has spoken against this bill. Time was when I doubted my own judgment after listening to the gentleman from Michigan when he spoke on this floor on economic and governmental questions; but if the things that he has spoken of heretofore and his conclusions thereon are no better founded in fact than his statements with reference to railroads that have been governmentally built, owned, or purchased, then my doubts, caused by his statements, have been ill founded. I will preface my remarks concerning Government ownership by saying that I do not go as far as the gentleman who preceded me [Mr. BRYAN].

Indeed, I do not think that question is necessarily involved here, and it need not be involved in a correct solution of this problem; and I term a correct solution of this to be voting "aye" on this proposition. You need not be in favor of governmental ownership of all the railroads in the United States in order to vote "aye." Usually the men who are opposed to Government ownership of railroads base that opposition on one of two theories. The first is that they fear that it would bankrupt the Government because of excessive cost of construction and operation. The second, because they fear that the millions of employees of the railroads in the United States would control the political parties of this country, and thus would dominate the actions of this Congress, practically making their own wages, hours of service, and so forth. We must all confess that we sometimes have bowed our unwilling heads to organizations which seemed to be backed by the individual votes of its members; but, fortunately, such incidents are rare and can generally be accounted for on the broad general ground of humanitarianism.

ALLEGED DANGER TO GOVERNMENT.

There can be no question but that there is a great deal of danger in the second proposition—that is, that nearly 1,700,000 men now employed by the American railroads if employed by the Government in this same employment would present questions not easy of solution. However, fortunately, that question is not involved in the Alaskan proposition, for indeed none of the citizens of Alaska have very much to say in the conduct of governmental affairs. We have only the experience of foreign countries to guide us on this phase of the question, and, unfortunately, conditions are not the same politically, and in fact in many other ways which might have a bearing on this question. Prussia has no trouble of this kind, for the reason that the Prussian lawmaking bodies, one of which is hereditary and the other elective, are not affected by the same four hundred thousand and odd railway employees.

In the lower house, elective though it is, the electors are divided into classes according to their wealth, and under this arrangement about one-sixth of the voters have two-thirds of the voting strength, and of course you know that these one-sixth are not engaged in the laborious work incident to railway employment; and the minister of public works has but one constituent, the Kaiser, and his tenure of office is for life. However, I do not believe that either of these objections are insurmountable; indeed, I might say that they are not involved at all in the solution of this question so far as it pertains to Alaska.

I believe the Government of the United States, whether it purchases anything, whether it buys a man's labor, material, or constructs a building, pays more than it would cost most anyone else, but I also believe and know that when the Federal Government builds anything, when a State government builds anything, when a city government builds anything, it builds it better, it builds it more durable, it builds it not for one generation but for generations to come; and for that reason they use the very best materials obtainable; and of course a man who is carrying out the will of the Government, expressed by an act of Congress or of the legislature, is not spending for himself, weighing every penny—he is prodigal rather than parsimonious; and for these reasons anything that the Federal Government or any other government builds is the best that money can buy, and of course costs more. But even though the principle of Government ownership of railroads were involved in this, it would make little difference. Look, if you will, at the extra money the Government pays for the building of railroads, for the building of public buildings, and contrast it with the large sums of money that have been wasted, that have found their way into the pockets of promoters and into the pockets of men who juggle great railroads in this country, and there are very few railroads that have not been juggled in the way I point out. There are very few railroads that have not been milked for the benefit of the few. If we eventually do come to the Government ownership of railroads in this country—and I do not fear it as much as some of my colleagues seem to fear it—it will be due to the fact that the people of the United States, patrons of the railroads, outraged, as they have been, by every possible excess of frenzied financiers, will awake and demand the right of transportation for themselves and commodities at reasonable prices and on an equable basis, and will be refused at the hands of the men who control the trunk lines of the country for the alleged reason that the alleged excessive charges are necessary to produce money sufficient to pay dividends and interest on outstanding securities, even though a large proportion of these securities represent not money expended in construction or betterment, but money diverted from that purpose into individual pockets.

RELATIVE COST OF AMERICAN AND FOREIGN RAILROADS.

Whatever may be said relative to the increased cost of Government-constructed as compared with privately constructed works or buildings, the fact remains that it would require an extremely vivid imagination to picture a railroad which the Government might construct, in Alaska or elsewhere, which would cost more per mile than the privately constructed railroads in America, if the capitalization and securities which are liens on such railways are any criterion by which to judge their cost; and of course these securities draw interest or dividends must be

earned for them, as they are now firmly lodged in the hands of innocent third parties who were duped into purchasing them. Of course, there are some railroads in America whose capitalization per mile—indeed, I think the average capitalization per mile of the American railway—is lower than the Government-constructed railroads of continental Europe; and, for that matter, they are proportionately lower also than the privately constructed railroads of continental Europe, and cost a great deal less than did the privately constructed railroads of Great Britain.

The point, of course, being that rates both for merchandise, products of the soil, and passenger fare must be sufficiently high to take care of these securities, and any securities which have been issued in excess of the actual cost of the road, of course, is an additional burden upon the public.

HIGH FINANCE.

The history of railroad financing in the United States is a story of exploitation without parallel—a story of frenzied financing running riotously mad—and we need not search in the dim past for its origin, for some of the wildest kind of financing has been carried on during the past few years, notably a great system in the New England States, while in the not too distant past looms large the Frisco deal, the Alton scandal, and others equally as bad. And so, it seems to me, it requires a great deal of a peculiar brand of courage for Members of this body to raise the bugaboo of excessive cost of Government-constructed railroads as a reason for voting against this bill. It is my expectation that the Government will construct this road or the roads authorized by this bill out of the best possible materials and equip them with the best obtainable cars and engines at a cost well within the capitalization of any of the trunk lines of this country; and, in view of the fact that the Government will not be operating these roads for profit, but for the exploitation of Alaska in the interests of the whole people, excessive rates will not be charged for transporting freight and passengers.

GERMAN STATE OWNERSHIP A SUCCESS.

The gentleman from Michigan [Mr. FORDNEY], in speaking against this bill some time since, sought to injure this great project by condemning the policy of Government ownership and apparently feared that support of this bill meant the support of the entire proposition of Government ownership of all the railroads in this country. As I have stated, one need not be in favor of the principle of Government ownership of all our railroads in order to favor this proposition, but even though this were so, he did not produce any facts to show that Government ownership of railroads in Germany was not successfully conducted. It is true he cited Germany as a horrible example of the economic folly of Government ownership of railroads. I suppose anyone who has ever read anything on this question, and who has ever given it serious thought, would have cited Germany as the one great power in this world that owns its own railways and which has made these railways and their operation a success. I do not say, because I do not know, that the same system would operate in the United States in the same way it operates abroad, but I am too good an American to doubt that we could not administer the affairs of the railroads of this country as well as they are administered by any other nation. Our railroad managers understand their business and know more about the science of railroading and are more efficient in that line than are the same class of men in any other country of the world; and, of course, even under Government ownership, the railroads would not work automatically, but would be managed by the selfsame gentlemen who are managing them now. The gentleman from Michigan laid down the proposition that the railroads in Germany charge a higher rate—I believe he quoted it at $0.123 per ton-mile, whereas in this country it is $0.076 per ton-mile. I say to you, gentlemen, that that statement can be easily shown to prove nothing, because the railroads of Germany—perhaps I should say the railroads of Prussia, as Prussia dominates the railroads of the German Empire—out of a total of 34,500 miles of State-owned and 2,200 miles of private-owned railroads, two-thirds of the State-owned, or, to be accurate, 23,335 miles, is owned by the State of Prussia. Out of all the railroads operating in Germany, 91 per cent are publicly owned by the State. I think there is about 2,500 miles owned by the Empire in common. They are in Alsace-Lorraine, and they took them over after the Franco-Prussian War. Those are operated in connection with the Prussian railway system. The railways of Germany, perhaps, do get a total of $0.123 per ton-mile, as compared with the railroads of America, which get $0.076 per ton-mile. But that proves nothing, for the reason that in Germany they have, perhaps, developed the canals and rivers for transportation purposes to a greater degree than any other country in the world, except France. The canals of Germany carry a large portion of the low-grade freight—that is to say, the products of the soil, both mineral and cereal. Such being the case, it restricts the railways to the highest class of freight, and that explains the apparent high cost of freight in Germany of $0.123 per ton-mile, compared with American railroads at $0.076 per ton-mile.

PARCEL POST IN GERMANY.

Then, it must not be forgotten that in Germany there is very little traffic by express. Many shippers in Germany practically discard the railways and transmit entirely by parcel post. Particularly is this true with those who deal in fancy or light goods. Because of this fact the German parcel post does a vast amount of the small-parcel business, which in America is done by the express companies. The railway companies receive a very high tonnage revenue, which the German railroads do not receive, for the reason that early in the history of railroad construction in Germany one of the conditions inserted for the protection of the State in railroad charters was that the German railways were obliged to carry postal matter either without charge or at very low rates, this being one of the conditions on which the private companies by whom the lines were originally constructed obtained their concessions. In 1875 the position was more clearly defined by a Prussian law which provided that each train forming part of the ordinary service should carry, when required to do so by the post office, one mail car, which was provided by the Government, free of charge. All sorts of mail matter, including parcel-post packages, could be carried in this car, with the exception of parcel-post packages which weighed more than 22 pounds. This restriction on the size of parcel-post packages that could be carried in the free transported car did not work out in practice as it was thought it would, for the shippers simply, when desiring to ship 100 pounds, made it into five 20-pound packages, so that the railways were not only working for the post-office department at a loss—in fact, absolutely free—but it also suffered the loss of revenue incident to having the high-class package business which they should have received for transportation in the regular way at high transportation cost.

I assume I need not point out the relationship between this and the question of the difference in tonnage per mile cost on American and Prussian railways. Of course, the American railways transport at a high cost the tonnage of the express company.

Mr. BRYAN. Will the gentleman permit me to suggest further that the railroad haul in Germany is 70 miles, while here it is 244 miles?

Mr. ANSBERRY. The gentleman properly says that the average haul in Germany is much shorter than in the United States. It is something under 70 miles, and the average haul in the United States is something over 244 miles, although some authorities give the average length in the United States as but 138 miles. The significance of that is the terminal charges, and the terminal charges have been estimated by some writers, and I do not doubt it, to amount to about half the total charge.

Mr. HARDY. In connection with that, is the gentleman prepared also to state what amount of revenue the Prussian railway pays to the Prussian Government as a profit?

Mr. ANSBERRY. I will come to that in a few moments, and I thank the gentleman for the suggestion. As I have pointed out to the committee, they have no express in Germany except this: There is a provision whereby you can have freight carried—and, of course, it must be very high-class freight—for four times the ordinary charge, the carriage to be by fast train. Of course, that goes to make the average price of transportation in Germany higher per ton-mile. Also, in that connection, the German railroads are operated primarily for the good of the German Empire. They are operated for the good of the north German ports and to encourage exports. In other words, 63 per cent of the total tonnage of the German railways goes at a rate lower than the rate given to the ordinary shipper; that is, at a preferential rate.

Mr. BRYAN. To stimulate exports?

Mr. ANSBERRY. Exactly; to bring trade from Russia, from Austria, from Switzerland, across to the German ports, rather than to the French, Dutch, Belgian, and the ports on the Adriatic. So that 63 per cent of the tonnage gets a preferential price. Then, again, they are operated at an immense profit. Those railroads were taken over, I believe, somewhere between 1880 and the present day, and they were paid for, I think, on the basis of 8 per cent more than they cost, or 8 per cent more than the capitalization. The cost per mile was about $110,000. Despite the facts that those railroads cost about twice as much as Government railroads built in New Zealand, in Australia, in India, in South Africa, and Government-aided railroads in the Dominion of Canada, the tonnage charge compares very favor-

ably, when you take all of these things into consideration, with the American tonnage charge.

Mr. BRYAN. And the rates in Germany are about one-third of what they are in England under private ownership.

Mr. ANSBERRY. Yes; that is true. But it is not exactly fair to state it in that way, for the reason that the railroads in England do more for the people who have to transport goods over the railroads than do the railroads of Germany. I think it is the custom of British railways to call for and deliver freight. They give them better facilities for warehousing. They give them a great deal better delivery, and in England I think they get the best delivery of any railroads in the world. The English railroad must charge higher rates, however, for another reason. The English railroads cost more than $300,000 a mile to build, because of the extremely high cost of real estate and for other reasons that do not appear on the face of an ordinary discussion of this kind. I did not see any difference, so far as accommodations for passengers are concerned, between English and German, or, for that matter, any continental railroad, either privately or State owned, except I think the Belgian roads are below the standard for passenger transportation anywhere.

PRUSSIA'S LARGE PROFITS.

Now, as to the profits of those German railroads taken over between 1880 and this time. Those railroads, despite the fact that they are giving a service which I have attempted to describe at the price which I have stated, have turned into the German treasury nearly as much as, and some writers say all of, the money that they cost the Government. They were paid for in Government 3, 3½, and 4 per cent bonds. The last year we have a report on, 1910, I think, they turned into the public treasury more than $150,000,000. It has been said that had all of the net earnings been used to reduce the capital debt it would have been substantially wiped out, but that at least one-fifth of all of the needs of Prussia have been paid from the railroad earnings. However, the railway debt has been steadily reduced. The policy of the management toward the men has been liberal for Prussia; about 40,000 houses have been built near the right of way for employees whose work demanded that they live close to it. And a liberal pension policy has been inaugurated. The policy of the railway was formulated by Prince Bismarck, and it was only a part of his policy, the keystone of which was the solidifying of the German Empire, although his enemies held that it was merely the glorification of Prussia. It was his announced intention not to run the railroad for a profit, but to gradually lower the rates as it was found expedient to do so. As has been pointed out, a part of this policy was abandoned, although freight rates as well as passenger rates were materially reduced.

TAXATION.

Under a law passed in 1853 the private railways then in existence in Prussia were required to pay a tax, the proceeds from which were to accumulate to form a fund for the eventual purchase of the lines by the State. However, in 1859 the Government being in need of funds, this money was diverted and applied to general State purposes, and this plan was abandoned.

It is said that there is no taxation on German railroads and there is on American railroads. In 1909 the American railways paid about $90,000,000 in taxes. In Germany they pay only a local tax, and that local tax is assessed not on the value of the property but on the number of men that are employed in connection with the railway in the city, town, or district, and they paid the same year about $4,500,000 in local taxes. There is also an imperial tax on railway consignment rates and passenger tickets. They have about one-tenth as much mileage as we have in this country, and therefore under similar conditions they should pay only about one-tenth of the taxes that we pay in this country. That would make about $9,000,000. Compare that $9,000,000 with the $170,000,000 which they turned into the public treasury and you must conclude that the Government ownership of railroads in Germany, no matter what it might be in this country, has been a marvelous success from every viewpoint.

The Prussian State railways pay 8 per cent on an actual cash investment of approximately $2,250,000,000. However, as they are carried on the books of the Government on a 4 per cent basis, their capitalization is called $4,500,000,000. The 13 privately owned railroads of Germany do even better, from an earning point of view, as indeed they should, for they charge higher rates. On the whole, I think that nowhere in the world can railways be built as cheaply as in the United States, and nowhere is labor more efficient. Fuel is cheaper, and no roads are better equipped to haul the traffic of the country economically than are the railroads of the United States. No problem of railroad management is better understood elsewhere than here by the experts who manage the railways of the United States, and still I think I have shown beyond question that the average cost per ton-mile, when you take into consideration the difference in the distances of the average haul and the quality of the freight, that the cost of transportation is as low in Germany as it is in America.

Our railroads employ 1,700,000 men; the Prussian railways, with about one-ninth of the mileage, employ 400,000 men. The Prussian freight cars average about 26 feet in length, and most of them have a capacity of but 15 tons. The passenger-car density in Prussia is about 222 per 100 miles of track, and they have 84 locomotives for every 100 miles of track, while in the United States we have but 20 passenger cars and 25 locomotives for every 100 miles of track. I submit that the American railways, with all of these advantages, do not make a favorable comparison with the railways of Prussia.

The Prussian railways have more employees per mile than have the railways of the United States; they have more cars per mile, both passenger and freight. It is true that these cars will not carry as many passengers or tons of freight as will the American cars, as most of the freight cars are of a very low tonnage, 35 per cent of them having a capacity of but 10 tons, 60 per cent 15 tons, and 4 per cent 20 tons, as compared with the American cars with many more times that capacity, and it is generally admitted in Germany that if the German railroads were equipped with locomotives and cars of the great capacity of those in the United States the cost of transportation by rail in Germany would be materially reduced. Another feature which I have not heretofore referred to is the difference in passenger transportation in Prussia and America; the Prussians in a given year transported on the Government-owned railroads 112,000,000 more passengers than did the railways of the United States, at a considerable less charge. It is true that a large percentage of these passengers traveled under conditions that Americans would not tolerate, but, on the other hand, passenger trains in Germany have very comfortable quarters for second-class passengers at a lower rate than first-class passenger service in America, and there is just as much comfort in a second-class coach as in a first-class coach—indeed, I have traveled in a car which was divided into first and second class compartments, and, of course, the second class was as good and comfortable, if not as exclusive, as the first. I would compare our first class as about equal to their second class, and our Pullman to their first class.

Yes, gentlemen, public ownership of railroads has been a success elsewhere, and, as I said before, I do not know what it might be in this country, and I am not prepared to state that.

Mr. BRYAN. The gentleman better get ready to do it. The Democratic Party will have that in its platform in 1916.

Mr. ANSBERRY. I do not know as to that. I do not know that I shall try to keep it out or that I shall try to put it in; that depends somewhat on the settlement of the question as to what we shall do with the 1,700,000 American railway employees and their connection with the Government; but I believe the gentleman is correct when he states that we must all meet that issue, and soon.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. ANSBERRY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Indian Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. JOHN H. STEPHENS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 20, 1914.

On the bill (H. R. 12579) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1915.

Mr. STEPHENS of Texas. Mr. Speaker, page 10, lines 6 and 7 of the Indian appropriation bill, reads as follows:

For expenses of the Board of Indian Commissioners, $4,000, including not to exceed $300 for office rent.

When this item was under discussion on February 17, 1914, the following colloquy took place (CONGRESSIONAL RECORD, p. 3788):

Mr. COX. The question I should like to ask is, whether or not this commission still consults the Commissioner of Indian Affairs in regard to the purchase of Indian supplies? Does the commission advise with them in any way?

Mr. STEPHENS of Texas. I have been present at one of the lettings at Chicago, which occurred last fall, and there was none of them there, and I have never seen a member of that commission before the Committee of Indian Affairs in my 17 years' service except when they wanted their appropriation increased.

Mr. COX. Can the gentleman tell what beneficial purposes they serve as far as the Indians are concerned?

Mr. STEPHENS of Texas. The gentleman has asked me a question I can not answer. I do not think they serve any beneficial purpose.

Mr. MANN. Will the gentleman yield?

Mr. COX. Yes; I want information.

Mr. MANN. Has the gentleman happened to see the last report of the commissioners, issued a few days ago?

Mr. COX. No; I have not.

Mr. MANN. In the last report it was stated, and I know it to be true, that a member of the board, by direction of the board, was in Chicago at the time of the letting, at St. Louis at the time of the letting, and one of the members went to San Francisco. They have watched quite carefully the letting of the contracts for the Indian Service.

Mr. Speaker, this colloquy raises a plain question of veracity between myself and the gentleman from Illinois [Mr. MANN]. I asserted that I was at Chicago at the letting last fall and that no member of the board was present. Mr. MANN denies this and asserts that a member was present, and he says that I know it to be true, meaning that he [MANN] knew it to be true. Mr. Chairman, as proof of the fact that I am correct when I said that I was present at the letting at Chicago last fall and that none of the commissioners were there, I offer the following statement of Mr. Vaux, chairman of the commission, found on page 234 of the hearings on this bill.

I as chairman of the subcommittee asked Mr. Vaux this question about letting the said contract at Chicago:

The CHAIRMAN. How much work did you do in September of this year?

Mr. VAUX. I was not able to do anything in September this year. I was not well myself and was away from home under the doctor's orders.

The CHAIRMAN. Did the commission have anyone there?

Mr. VAUX. The commission had no one present at that time.

The CHAIRMAN. Both Houses of Congress were represented there—meaning at the letting of the contracts.

Mr. VAUX (interposing). Yes, sir; but, of course, you understand that we are serving without pay and many of us are busy men, and when I am trying to conduct my law business at the same time I am not always able to make my professional engagements fit in with the dates fixed by the Commissioner of Indian Affairs.

Mr. Speaker, I submit that Mr. Vaux's statement clearly proves that I was correct in stating that I was at Chicago last fall—September being a fall month—and that no member of the commission was there at the letting of the contracts. Mr. Speaker, the gentleman from Indiana [Mr. Cox] asked me, as I have before stated, this question:

Mr. COX. Can the gentleman tell what beneficial purposes they (meaning the Indian commissioners) serve as far as the Indians are concerned?

I replied:

I do not think they serve any beneficial purpose.

Mr. Speaker, it follows, if I am correct, that this appropriation should be stricken from this bill, and in my judgment this should be done. It is a useless waste of public money. Mr. Speaker, I further stated to the gentleman from Indiana [Mr. Cox] that in my 17 years' service on the Indian Committee of the House that no member of this commission had ever appeared before the committee except for the purpose of getting a larger appropriation for their use. This was the purpose of Mr. Vaux, chairman of this commission, who, on page 233 of the hearings on this bill, appeared before the subcommittee and made this voluntary statement, viz:

Mr. VAUX. If I may be permitted, Mr. Chairman, I would like to request that the committee in framing the bill depart from the report submitted by the department and increase that item not to $5,000, but to $15,000. The board, as you are all aware, dates back to 1869, when it was created by a few lines in the Indian bill, within a few weeks after President Grant came into office; the object being to form an outside commission that might stand in a sense between the Government and the American people and the Indian, with the idea of strengthening Indian administration along proper lines in all directions. The powers that were originally conferred were broad, and really were in conflict with those that are allotted to the Indian Bureau at the present time. Subsequently the powers were somewhat reduced, because with the improvement of administrative methods in the Indian Bureau there has been not the same broad work for the Board of Indian Commissioners to perform. At the present time the duties of the board are largely advisory, and, as we report directly to the Secretary of the Interior, they are largely advisory to the Secretary, and also to the Commissioner of Indian Affairs. The board has powers of visitation and examination on the various reservations and in the branches of Government that have to do with the administration of Indian affairs; and it is also the duty of the Commissioner of Indian Affairs to consult with this board respecting the purchase of supplies for the Indian Bureau.

The Book of Estimates for the current year (see above hearings, p. 224) contains the following statement relative to this appropriation:

The estimates contain an item for an appropriation of $5,000 for the Board of Indian Commissioners. Congress has heretofore for a number of years appropriated $4,000 for this board. The act of May 17, 1882, modified sections 2039 to 2042 of the Revised Statutes and subsequent acts of Congress relating to this board, and provided as follows (22 Stat. L., 70):

"For the expenses of the commission of citizens, serving without compensation, appointed by the President under the provision of the fourth section of the act of April 10, 1869, $4,700, to be distributed as follows, namely: For secretary, $2,000; for messenger, $600; for rent of office, $400; for traveling expenses of the commission, $1,500; and for contingent expenses of office, $200. And hereafter the commission shall only have power to visit and inspect agencies and other branches of the Indian Service, and to inspect goods purchased for said service, and the Commissioner of Indian Affairs shall consult with the commission in the purchase of supplies. The commission shall report their doings to the Secretary of the Interior."

Mr. Meritt, Assistant Indian Commissioner, on page 224 of the hearings, stated, in reply to a question in regard to the duties of this Board of Indian Commissioners, as follows:

This board had at one time under the Grant administration very large authority, but its authority has been very materially limited by the act just quoted, and the only duties required by the law are to confer with the Commissioner of Indian Affairs in connection with the purchase of supplies and to visit and inspect agencies and other branches of the Indian Service.

The CHAIRMAN. What have you to suggest as to the number of times they have visited agencies, or what they have done to carry out the provisions of this act, as far as you know?

Mr. MERITT. The board, up to very recently, has not been very active. Prof. Morehead, one of the members of the board, did some good work in connection with an investigation of the White Earth Reservation, and he and Mr. Vaux have also made some investigations in Oklahoma.

The CHAIRMAN. Does this act authorize them to make these investigations?

Mr. MERITT. The act provides that hereafter the commission shall only have the power to visit and inspect agencies and other branches of the Indian Service, and to inspect goods purchased for such service.

The CHAIRMAN. Has the Government been paying out of the $4,000 appropriated their expenses in going to and from these agencies, hotel bills, etc.?

Mr. MERITT. Yes, sir.

The CHAIRMAN. What other duties have they performed or do they have to perform for the purpose of letting contracts for goods?

Mr. MERITT. Mr. Fry could answer that question better than I can, because he has been more intimately connected with that work.

Mr. FRY. Well, as stated before, when I attended the lettings of 1902 to 1904, or thereabouts, I was given the impression that not very much real benefit resulted from the presence of the representative of the board. So far as I could see, he devoted some little time to the work allotted him and carried it through, but my understanding is that he did not follow up the work at the lettings as closely as has been done lately. That, at least, was the idea I obtained. Since Mr. Vaux has been attending these lettings he has gone into the matter very thoroughly. He has been one of those assisting in making the awards. In fact, he has determined some of the awards himself, subject to the approval afterwards of the former acting commissioner.

The CHAIRMAN. Is he an expert along the lines that he is acting?

Mr. FRY. Oh, no; but he had the expert advice of the inspectors who were on the job. He was acting more as an administrative officer than as an expert in any particular line. He is a lawyer by profession, and so far as I know has had no particular training in the purchasing of supplies, but is very observant.

The chairman and Mr. BURKE asked this witness the further question (see p. 226 of hearings):

The CHAIRMAN. Would it be possible for the office to get along without his assistance or without the assistance of any of these commissioners?

Mr. FRY. The office did get along without their assistance for several years, so I understand, and I presume could get along without their assistance again.

The CHAIRMAN. Do you know of any other department of the Government that has a board to supervise its purchases—for instance, the Army or the Navy? Do you know of any other department that has to be supervised in this way?

Mr. FRY. No, sir; I know of none having supervision through outside commissions or boards such as this.

Mr. BURKE. The commissioners serve without compensation?

Mr. FRY. Yes.

Mr. BURKE. And their function, so far as inspecting is concerned, is in the nature of being there for the purpose of making it more certain that there will be no lettings where there might not be good inspection or where there might be corruption? That is really their function?

Mr. FRY. Yes, sir.

Mr. BURKE. They were not to be an administrative force to aid in any way, but theoretically it was thought there ought to be somebody to watch these lettings not directly connected with the Indian Service.

Mr. FRY. You know this has been a sort of hand-me-down proposition; that is, referring to my understanding as to what their duties were. I got my information from those who preceded me in office, and I have always understood that the Board of Indian Commissioners was organized originally because in the earlier days there was graft in the Indian Service in the purchase of supplies.

Mr. BURKE. And the sentimentalists, generally, who take an interest in Indian affairs have sort of looked upon this commission as a desirable thing, as I understand it?

Mr. FRY. Yes, sir.

Mr. BURKE. Now, I wish you would furnish for the record, in connection with your justification, the names of the present commissioners.

Mr. MERITT. The names and addresses of the members of the Board of Indian Commissioners are as follows:

George Vaux, jr. (chairman), 1606 Morris Building, Philadelphia, Pa.
Edward E. Ayer, Railway Exchange Building, Chicago, Ill.

Isidore B. Dockweiler, Los Angeles, Cal.
Samuel A. Eliot, 25 Beacon Street, Boston, Mass.
Dr. Merrill E. Gates, 1309 Rhode Island Avenue, Washington, D. C.
Rev. William H. Ketcham, director Bureau of Catholic Indian Missions, Washington, D. C.
Frank Knox, Manchester, N. H.
Warren K. Moorehead, Andover, Mass.
Daniel Smiley, Mohonk Lake, N. Y.
William D. Walker, 367 Elmwood Avenue, Buffalo, N. Y.

Mr. Speaker, the Quarterly Journal of the Society of the American Indians, published in this city, on page 337 of its last publication, gives its views in regard to this Board of Indian Commissioners, for whose support we are asked to make this appropriation of $4,300. The editor, a real Indian, expresses his views of this commission as follows, viz:

THE ANTIQUE BOARD OF INDIAN COMMISSIONERS.

Every morning when the editor alights from the elevator that takes him to his office he sees in a glass museum case the figure of a fish. It is not a real fish, and nothing like it lives now. It is a painted plaster restoration of the *Coccosteus dicipiens*, which lived during the Devonian period of geology. It is a fish with a particularly large head and a peculiarly long, whip-like tail. No doubt it used to lash the water with great fury. Once it was a very good fish, a splendid fish. Its head indicates a great capacity for brain; its whip-like tail is long. Nowadays we only know this *Coccosteus* as a fossil. Scientists with iron-rimmed spectacles and long whiskers dig up this fish now and then and find it cemented so tightly in the Devonian rock that it is a part of the rock. It no longer lives or moves. It is only a petrified placoderm—an ancient fossil.

Once upon a time, in the age of "Grant's peace policy," there was a Board of Indian Commissioners created. It had great capacity for thinking. It has a long tale and it has lashed the waters with fury. But, my friends, to-day it seems to be a fossil body. Long ago the environment for which it was created passed away. This is a new era. Practical men, who need no glasses, gaze upon this placodermal commission and wonder why it still is kept in the aquarium. What good is it; what does it do; what is there for it to do except to perpetuate its own memory? Shall it be placed on the shelf of some palæopolitical museum? Or, after all, is this creature "playing possum," and like the fabled toad will burst its marble walls, unseal its eyes, and move? If it would only move a fin, draw in oxygen with its gills, we would apologize for our lack of appreciation. We wish to cooperate with things that move and move with definite purpose. We would then be glad to be "in the swim" with *C. dicipiens*, providing we surely knew that there was not a Jonah inside pulling strings to make the fins wiggle.

Mr. Speaker, this now useless and antiquated Board of Indian Commissioners was created by act of April 10, 1869, 45 years ago, and have been paid out of the Treasury of the United States several hundred thousand dollars, for which great sum of the people's money this commission has never been able to show how they have rendered any services of any value to the Indians. The Indians themselves have repudiated them, as is shown by the above editorial. The Society of American Indians, through their secretary and treasurer, Mr. Arthur C. Parker, himself an Indian, in the following letter to me, of date January 26, 1914, repudiated this Board of Indian Commissioners:

[The Society of American Indians, a national organization of Americans organized at Ohio State University April, 1911. Membership: Active, associate, and junior. Active: Persons of Indian blood only. Headquarters: Washington, D. C., Barrister Building.]

WASHINGTON, D. C., *January 26, 1914.*

Hon. JOHN H. STEPHENS,
Chairman of House Committee on Indian Affairs,
House of Representatives, Washington, D. C.

MY DEAR SIR: The Society of American Indians is an organization of progressive Indians, most of them fully acquainted in their various localities with Indian affairs and conditions. It prosecutes investigations at its own expense and holds an annual conference in which constructive measures are discussed.

The consensus of opinion of the executive board of this society is against the continuance of the Board of Indian Commissioners, and as secretary of this society I wish to register my sentiment as against the further support by Congress of the Board of Indian Commissioners. My reasons for this objection are as follows:

1. The Board of Indian Commissioners has outlived the usefulness that demanded its creation under the Grant administration. Conditions have not only changed, but the public now has many avenues of information on Indian matters not open 40 years ago.

2. If it is argued that the Board of Indian Commissioners stands as the intermediary between Indian welfare and the designs of crooked politicians, I would bring to your notice that there are other organizations that occupy this position as effectually, if not more efficiently, than this board, and that if the said board is justly entitled to appropriations, that every other organization instituted for like purposes is entitled to an appropriation.

3. If other organizations are able to carry their financial responsibilities without appropriations from Congress, then this Board of Indian Commissioners should be able to do so likewise if, in fact, the commissioners and their friends are as earnest in their endeavors as are members of this Society of American Indians and others.

4. The opinion is quite prevalent that the Board of Indian Commissioners as presently constituted is not organized in such a way as to give any great value to its deliberations or recommendations, notwithstanding the high quality of citizens represented on that board. It would therefore appear that this board is acting like sand in the wheels of good administration rather than as a lubricant, as originally intended.

5. The very fact that the Board of Indian Commissioners is lending its influence, weight, approval, and association with the so-called Wanamaker expedition of citizenship is very good evidence of its lack of good judgment, for it appears that this so-called expedition is a clever advertising scheme and not really intended for the uplift and the advancement of the Indian or for better administration. A close examination of the real facts in the case of this so-called Wanamaker-Dixon expedition reveals many ridiculous and presumptuous actions entirely discreditable to the Indian, to the Government, and to Mr. Wanamaker. These charges I can substantiate by witnesses, documentary evidence, and affidavits.

6. It is not publicly known, nor is there any demonstration of the fact that at present there is needed a Board of Indian Commissioners, and its continued existence would seem to indicate a simple design to perpetuate a memory, justified solely by the Grant administration creating such a commission. The expungement of this Board of Indian Commissioners would in no way hamper Indian administration or cause any lack of efficiency, vigilance, or defeating of justice for the Indian, and no just argument can be produced, as far as this organization knows, which would be of sufficient weight to demand its continued existence.

7. It is not shown that the Board of Indian Commissioners has assisted the Indian Office during the past few years in the way of suggesting constructive measures or pointing out abuses, and if it has responded to those requirements, other organizations and other individuals have been more than equally vigilant and respondent. Some of these organizations, we believe, have done more in the way of suggesting constructive measures than the Board of Indian Commissioners, and we point out the annual conferences of this society, its annual platform, as an evidence that an organization composed of American Indians has pointed out publicly and circulated widely through the press, through its own magazine and literature, great measures and valuable ideas. This it has done entirely at its own expense as a voluntary factor. This organization has not come upon Congress demanding that Congress appropriate a salary for its secretary or for its printing, nor have other organizations equally valuable.

8. It appears to the thinking Indians of the United States, most of them members of this society, many of them citizens or prominent men in their respective tribes, that the personnel of the Board of Indian Commissioners, with few exceptions, notwithstanding its high standing in citizenship, indicates that it is incapable of thoroughly understanding the Indian situation, since only a small portion of their time is devoted to study of the Indian, since many of them represent interests that prejudice open-mindedness and complete understanding; many of them occupy positions so far remote from the Indian country and the interests of the Indians that their vision is far from clear.

This society, therefore, as I understand its sentiment, would demand the total abolition of the Board of Indian Commissioners in the interest of good government, more efficient administration of Indian affairs, and of economy.

Very respectfully,

ARTHUR C. PARKER,
Secretary-Treasurer.

Mr. Speaker, I further desire to add to the above objections of Indians the testimony of the leading and greatest of all Indian educators, Gen. R. H. Pratt, the founder of the Carlisle Indian School, to show the misguided activities of this useless Board of Indian Commissioners. His letter is as follows, viz:

THE KENESAW,
Washington, D. C., January 26, 1914.

Hon. JOHN H. STEPHENS,
Chairman House Committee on Indian Affairs,
Washington, D. C.

DEAR SIR: I ask the attention of your committee to the affinity existing between the Board of Indian Commissioners and the so-called Rodman Wanamaker Expedition of Citizenship to our Indians.

In a few days there is to be an exhibition at the Bureau of Ethnology of the vast collection of moving and other pictures taken by Dr. Dixon, the manager of that expedition, during its trip to all the tribes. Three members of the board are to be present and take part in addition to Dixon.

I am widely informed from all parts of the field in regard to the incidents and quality of this expedition, and its purpose is plainly apparent in the overshadowing greed for pictures of costumed Indians. Dr. Dixon's great effort was to picture extreme Indianism, and many of his utterances in that connection are scandalous sophistry.

His claim that our flag is first carried by him to our Indian tribes or to any one tribe is not true. Every Government Indian school in every Indian tribe has had the American flag flying and given lessons therefrom to Indian youth in patriotism. Scarcely an Indian tribe but has sent soldiers and scouts into our Army service to follow the flag to the death. What preposterous arrogance, then, for Dr. Dixon to multiply assertion and publish everywhere that he is the first to carry the flag and its message to all of our Indians.

I have said all this that you might see the unwarranted connection between the Board of Indian Commissioners and this hypocrisy. The chairman of the board and its secretary stand alone as the officials or semiofficials of the Government present to give welcome and indorsement at the return ceremonies in New York Harbor at the close of the expedition.

Nothing that the Rodman Wanamaker expedition has so far accomplished has in any way advanced our Indians' respect and confidence in our civilization, but has had rather the contrary effect. The moving pictures and photographs of feather bedecked and alleged wild Indians so eagerly sought everywhere will only serve to keep the public mind confused and misinformed about the Indian race.

I protest that the participation of members of the Board of Indian Commissioners in these deceptions and the officious efforts of the board's secretary in promoting them discredits the high purpose of the law creating the board and renders it a useless and even hurtful body.

The law provides that the members of the board shall be "men eminent for intelligence and philanthropy." These qualities should voice truth only and protect both the Indians and the public from misrepresentation, else they fail in the great opportunity given them and their duty to harmonize the races.

Very truly, yours,

R. H. PRATT.

Mr. Speaker, the last issue of The Quarterly Indian Journal, before alluded to by me, on page 363, gives the Indian side of this Dixon-Wanamaker (and Indian commission) advertising expedition. This editorial fully sustains the just criticism of Gen. Pratt—that grand old man—who has spent the best years of his eventful and useful life in behalf of Indian education and Indian welfare. The editorial is as follows:

THE GREAT ADVERTISING HOAX HAS FLAGGED CIVILIZATION.

The "Wanamaker expedition of citizenship to the Indian" has returned to its Philadelphia store. The plan was for a certain Mr. Dixon to give a flag to every reservation in the country and pledge the Indians to loyalty. This was an assumption that the Indians were not loyal. Newspapers said that the Indians had never seen a flag. This is an absurdity, and the whole expedition was a flagrant insult to the United States authorities and an insult to the Indian, all for the benefit of Wanamaker advertising. We suppose now that the Tobacco Trust will start "The Dukes Mixture expedition of Christianity to the Indian" and present a Bible to every tribe on the assumption that missionaries and educators have not done their duty or that Indians are not Christians. We venture to say that Maj. McLaughlin is disgusted with the job the Government gave him of being Dixon's lackey. We venture that Mr. Dixon does not love the Indian more despite his protests of affection. He is a pretty good fakir. A short time ago he called the Crow Indians together and photographed "The last grand council of the American Indian." A Crow council convened by Dixon is hardly the last council of Indians. The Crows are not the only Indians, even though they are good ones. But the late Mr. Barnum's maxim will hold good.

Lo, the poor Indian; Lo, the deceived Government, but all hail the "prince of advertisers."

Mr. Speaker, I desire in this connection to most emphatically protest against educating the American people—by means of such fake expeditions as above described and like fake moving-picture shows—to believe that the Indians of our common country are yet a race of ignorant, vicious, uncouth barbarians. Nothing is further from the truth. But, Mr. Speaker, I do again most seriously object to paying $4,300 per annum to this Board of Indian Commissioners, which in the language of the law are "to consist of not more than 10 persons, to be selected by him—meaning the President—from men eminent for their intelligence and philanthropy," and so forth. I am sure that each of the 10 men now and heretofore composing this board would swear that they are men of intelligence and philanthropy; but, Mr. Speaker, the question is, What has this body ever done to earn the money we are annually appropriating for their support?

Mr. Speaker, in my judgment this board as now constituted is, in addition to being a useless body of pap suckers, a decided hindrance to the proper administration of the Bureau of Indian Affairs. As now organized, they are a body of faultfinders, using their semiofficial influence to discredit the activities of the present officials composing that bureau. As evidence of this fact, it is only necessary to state that Mr. F. H. Abbott, former acting and for a long time Assistant Indian Commissioner in said Indian Bureau, has been recently, by the present Secretary of the Interior, removed from his position in said bureau for reasons satisfactory to the official head of the bureau. This Board of Indian Commissioners have selected and elected this discredited, disgruntled, and discharged employee as their secretary, and thus he is the resident representative of that body in this city. If we arm—by passing this appropriation—this discharged employee with this semiofficial authority, he will be able to use his official prestige to demoralize the Indian Service and to hinder its successful operation by the party in power. Can any Democrat vote for such a measure?

Mr. Warren K. Moorehead, one of these commissioners, shows clearly that he would abolish the Indian Bureau at Washington and substitute his commission for it. But, Mr. Chairman, I will insert his own language in an address before the last Mohonk conference, and let the country judge for itself whether I am right in my conclusion that this man is an avowed enemy of the Washington Indian Bureau, and would overthrow it and substitute his commission for it if he could do so. His language is as follows, viz:

For more than two generations we have had Commissioners of Indian Affairs at Washington, and in spite of their best efforts the same problem confronts us to-day. The only salvation of the Indian lies in a total change of policy; the abolition of the Commissionership of Indian Affairs, the appointment of a commission of nine men—the best obtainable men in the United States, and men who understand Indians, and no political appointees. This commission should be appointed for at least 10 years and if possible 15. It should publish its findings every three months, and all its hearings should be public. It should have in its charge every Indian person and all cash belonging to Indians or tribes, farm lands, mines, oil wells, and other properties. The rulings of this commission should be absolute and final. It should eliminate all educated and competent Indians, making of them citizens.

It is clear that because of the interference of interested persons, through Congress and otherwise, it is utterly impossible for one man to manage successfully the intricate problems connected with Indian welfare in this country.

Mr. Speaker, this man Morehead never raised his voice against the Indian Bureau while his Republican associate Abbott and others were in charge of it. Not until administrations changed and Abbott and some of his henchmen were expelled from office did he ever suggest that the Indian Bureau should be abolished and his commission, or one the same as his own, as he describes it, substituted for the discarded Democratic bureau. This man Morehead also, in a report to the Secretary of the Interior, used language slandering the Democratic Members of this House and of the Senate from the State of Oklahoma. This language was so abusive, unwarranted, and untruthful that the Secretary of the Interior refused to receive and print it. Is not this the probable reason that this man wants this bureau abolished and his commission or one like it substituted for it? Will any Democrat lend his aid to such a transparent scheme by voting to keep on the pay rolls of this Government such a body of Democratic defamers?

Mr. Speaker, this commission should be abolished because of the hostility of Mr. Abbott, its secretary. Mr. Chairman, to show the total unfitness of this man Abbott to hold said office I desire to read the following statement made by the secretary of a similar association in its thirtieth annual report. The statement is as follows, viz:

[From the Philadelphia Public Ledger, June 13, 1913.]

IS THE AMERICAN INDIAN BEING ROBBED?—CAUSTIC CRITICISM OF A SERVICE "WEAK IN THE HEAD, WEAK-EYED, AND HARD OF HEARING"—ABUSES EXPOSED.

(Specially written for Public Ledger by M. K. Sniffen, secretary of the Indian Rights Association.)

The thirtieth annual report of the association, recently published, summarized the situation as follows:

"Corruption and inefficiency have for years past held a strong hold upon the Indian Service. We have been greatly hampered in our work by the efforts of certain officials who endeavored to protect employees in the service and others who preyed upon the Indian from just exposure and removal.

"One of the greatest drawbacks to the service is the pernicious effect of political influence, which still curses the whole bureau in one form or another. Theoretically, the civil-service rules now cover all positions in the department, with the exception of the commissioner, his assistants, and a few holders of confidential positions, but in reality many of those under the commissioner do not seem able to get away from the old idea that their loyalty goes first to some influential backer outside of the service and then to their immediate superior officer. Commissioners come and go, but the bureaucrat wants to remain forever." * * *

"Many inspectors do not inspect, especially if the one they are sent to investigate has any 'pull'; or, when they do inspect and unearth unsavory conditions, it is possible for some of the bureaucrats to hold things back, or so misrepresent the situation that nothing is accomplished—unless some one not connected with the bureau knows enough about the particular case vigorously to oppose such influences and show the commissioner the plain, ugly truth."

Naturally, such a condition has greatly demoralized the service. There are hundreds of honest and efficient employees who are sincerely interested in their work, but they have been made to feel, from the experience of others, that it is better to be blind and dumb to service abuses that may be flourishing under their very eyes than to attempt to have them corrected. For example: Only a few months ago one of the best employees in the service hearing that a certain school superintendent was seeking appointment as Commissioner of Indian Affairs gave to our association some facts indicating the applicant's unfitness for the place, and we, therefore, filed a protest with the President. The superintendent in question is a close friend of Acting Commissioner Abbott, and the latter has since been endeavoring to force the removal or demotion of our informant, because of his desire to protect the service. In other words, the acting commissioner was more concerned with the alleged "disloyalty" of the informant than with purifying the service.

Mr. Speaker, this man Abbott is now the secretary of the Board of Indian Commissioners, and, according to Mr. Sniffen, was trying to protect Supt. Freeman, of the Carlisle Indian School, who since that time has been fully investigated by the joint commission of the Senate and House, the charges against him fully sustained, and his removal requested by that commission from the Indian Service. And he has been suspended as superintendent of that school by the Indian Bureau, and may yet—as he should—be entirely dismissed from the service. Mr. Sniffen's charge against Abbott has thus been fully sustained.

Mr. Speaker, many other charges have been made against Mr. Abbott for incompetency, misfeasance, and malfeasance while in the service of the Indian Bureau. On this subject I desire to submit the following letter from another former employee of the Indian Bureau, viz, Mr. William E. Johnson, of Westerville, Ohio. The letter and charges therein contained are as follows:

THE NEW REPUBLIC,
Westerville, Ohio, January 29, 1914.

Hon. JOHN H. STEPHENS,
Chairman Committee on Indian Affairs,
Washington, D. C.

MY DEAR MR. STEPHENS: As you know, I was for five years chief officer of that section of the United States Indian Service which has to do with the suppression of the liquor traffic among Indians. I am writing you these suggestions as to definite points which, in my judgment, should be made a matter of inquiry by your committee in its consideration of the proposed reorganization of the Indian Service, and especially in considering the abolishment of the Board of Indian Commissioners, which, while originating in a laudable purpose, has degenerated into a mere political machine to balk the efforts of the present administration to carry out sorely needed reforms in the service.

All of these points relate to the conduct of Frederick H. Abbott, now secretary of this so-called Board of Indian Commissioners, but formerly the political Assistant Commissioner of Indian Affairs. I believe that the information to substantiate affirmatively each and all of these points can be obtained from the files of the Indian Office, and I urge that you formally call upon Hon. Cato Sells, Commissioner of Indian Affairs, for any and all information that may be in his office relating to these specific items. I have the fullest confidence that Mr. Sells and his associates will, without evasion and without favoritism, seek to aid you to the limit in your search for the exact truth.

Inasmuch as many of these items involve the present inspection force of the office, which has not yet been reorganized, I earnestly suggest that in case the committee finds need of special help in investigating these matters that some one independent of that force, some one of known integrity, ability, and fearlessness, like E. B. Linnen, of the Interior Department, be called in to pursue any further needed research.

The specific points to which I call your attention and ask that you call upon the commissioner for information in respect thereto are the following:

(1) Did not Mr. Abbott use Government transportation to go to his home in Nebraska to vote at an election while acting as assistant commissioner?

(2) If Mr. Abbott had not arranged to attend the last Republican national convention in Chicago on Government transportation and was prevented from doing so by reason of being summoned as a witness before the Graham investigating committee of the House of Representatives.

(3) Has not Abbott spent thousands of dollars of Government funds traveling around over the country on the pretense of Government business, but, in fact, was he not busy for three years in building up a political organization in the Indian Service and undermining Valentine, former Commissioner of Indian Affairs? And did he not by his actions thoroughly disorganize the Indian Service and bring about a deplorable and chaotic condition in that service?

(4) Has not Abbott carried his family with him around the United States on his alleged trips to the Indian country, which were in fact trips building up a political machine at great expense to the Government and without authority of law?

(5) Has he not kept his family on Indian reservations at expense to the Government and without expense to himself for months at a time, namely, at the Mescalero, the Navajo, the Tulalip, and other reservations, and has he not crossed the continent from Washington to visit his family at Government expense, but while on alleged visits to the Indian country?

(6) Investigate and report whether or not a detailed statement of Mr. Abbott's traveling expenses and his trips will not show a disclosure of wrongful and corrupt expenditure of Government funds sufficient to warrant his indictment and prosecution by the Department of Justice?

(7) Did not Mr. Abbott use his official position to retain in the service Charles H. Bates, an allotting agent, at a large salary for months after he had been indicted and admitted his guilt of introducing intoxicating liquor on the Pine Ridge Indian Reservation, and even after he was convicted of the offense and sentenced by the court to 60 days in jail? Did he not use his official influence to balk justice by aiding in securing a pardon for Bates in return for the political influence of a former Senator, then chairman of the Indian Committee, and in return for the further political influence of said Charles H. Bates in the attempt to make Mr. Abbott Commissioner of Indian Affairs?

(8) Did not Mr. Abbott render a wrong and corrupt decision in the Tiebolt heirship case from the Winnebago Agency, involving property worth more than $10,000, to favor a certain Senator, an attorney in the case, who was his political backer, and certain other political henchmen in Nebraska? Will not the record in this case disclose sufficient evidence of practicing before the department while a United States Senator to constitute a violation of law which imposes a fine and a penitentiary offense, and is not this case similar to the case which resulted in Senator Burton, of Kansas, going to jail and being heavily fined?

(9) Did not Mr. Abbott order former Supt. Johnson, of Cushman Indian School, recently dismissed for scandalous conduct, and other superintendents of the Government service to Washington last winter at Government expense in order to do political work for Abbott and try to land him the appointment as commissioner?

(10) Did not Mr. Abbott appoint J. L. Norris, former chairman of the Oklahoma Republican committee, superintendent of the Wind River Reservation in Montana as compensation for the political influence of Norris in behalf of Abbott, and in order that Norris might do certain political stunts for the political machine of Wyoming?

(11) Did not Abbott permit Supt. Norris, the Republican politician, to spend more than $6,000 for a house for himself on the Wind River Reservation, which money was needed for Indian school purposes by school officials of the Indian Service?

(12) Did not Abbott appoint his father-in-law a forest guard at Tongue River Reservation and permit him to draw a per diem in addition to his salary while he lived at the agency and performed no services as forest guard? And did not Supt. Eddy, of Tongue River, get frightened at the time of the change of administration on that reservation and as a result of which Abbott transferred his father-in-law to the jurisdiction of his faithful political henchman, Norris, where he is now employed?

(13) Did not Mr. Abbott order Supt. Eddy, of Tongue River Reservation, Mont., another political henchman, to Washington, where he spent months last winter at Government expense, doing political work for Abbott? And is it not true that Supt. Eddy was away from his agency about one-third of the time during the last year of Abbott's administration a part of the time traveling at Government expense doing political work for Abbott?

(14) Did not Abbott permit his political henchman, Supt. Eddy, of Tongue River Agency, to expend about $7,000 for the purpose of building a palatial residence for himself, which money was needed for providing school facilities for Indians out of school?

(15) Was not Supt. Nicholson appointed superintendent of the Menominee sawmills at a big salary without ever having had any experience in sawmill work, solely for political purposes? And did he not supplant a faithful Democrat? Is it not a fact that this position is not under civil service? Have not the Menominee Indians protested against Supt. Nicholson and asked for his removal for incompetence?

(16) Is it not true that Supt. Nicholson was ordered to Washington, in fact, to do political work for Abbott at Government expense; and did not Nicholson spend a month in New York State doing political work for Abbott; and as a result of this work did not Abbott promote Nicholson in salary several hundred dollars a year?

(17) Did not Abbott retain in Washington, drawing a per diem of several dollars each day, officials in the Indian Service, and divided the per diem of such officials by renting rooms in his (Abbott's) residence at high rates? For example, Chief Supervisor Holcombe, Irrigating Inspector Hill, and other Indian Office officials.

(18) Did not Abbott accept the political and professional services of a certain Washington attorney and attempt to repay him by giving him a $5,000 contract with certain Indians; and is not this the same attorney who, as an inspector of the Indian Service, recommended giving certain leasing privileges at a ridiculously low rental, and which Commissioner Valentine refused to consider, and later leases the same grazing rights for more than $100,000 in excess of what this inspector recommended; and did not this man, after he was forced out of the Indian Service, subsequently represent these same Crow lessees as their Washington attorney; and did not Abbott extend to these Crow lessees and this Washington attorney special favors and considerations?

(19) Did not Abbott's family spend a summer as the guest of one of these Crow lessees who had received special favors from Abbott?

(20) Did not Abbott misrepresent the law and facts in his speech before the last Lake Mohonk conference regarding the rights of the Navajo Indians who have taken allotments on the public domain off the Navajo Reservation; and does not the CONGRESSIONAL RECORD of a recent date and the speech of Senator ASHURST, of Arizona, disclose that Abbott was a complacent and willing tool of the railroads in the matter of the attempted exchange of worthless railroad lands within Indian reservations for exceedingly valuable lands on the public domain?

(21) Is not Abbott using the Board of Indian Commissioners as a cloak of respectability under which to carry on his crooked political work in an endeavor to retain in the Indian Service his crooked political henchmen, and also to embarrass the Indian officials in an endeavor to reform the service and make more efficient Indian administration?

(22) Did not Mr. Abbott use his influence to retain in the service Clinton N. Crandall, former superintendent at Santa Fe, N. Mex., after it was shown that he was an illicit liquor dealer at the same time, and after it was proven that the Indians under his jurisdiction had suffered serious abuses for nine years, had been despoiled of thousands of acres of land under his mismanagement or connivance? Is it a fact that Mr. Abbott continued to protect Crandall after all these things had been proven and after Commissioner Valentine had demanded and received Crandall's resignation on account of this malfeasance in office? I suggest that in this connection you specifically call for the report and accompanying papers and affidavits presented to the Secretary of the Interior by Shelby M. Singleton, attorney for the Chicago Citizens' Association, who made a searching official investigation of three months into this matter for the Secretary and recommended Mr. Crandall's immediate dismissal from the service.

(23) Is it not true that Clinton N. Crandall asked for and received authority to expend $1,000 of Indian money to "improve the roads in and about the Indian pueblos," and that, in fact, he expended this money in the construction of an automobile speedway for politicians at La Bajada Hill, N. Mex., which is 9 miles from the nearest Indian or Indian pueblo and on a road less used by the Indians than Pennsylvania Avenue in Washington? And did not Mr. Abbott condone and use his official position to protect Mr. Crandall in this misapplication of Indian money?

(24) And because the Santa Clara Pueblo Indians protested against these abuses, protested against their being robbed of their lands by the politicians, and protested because Mr. Crandall sold liquor contrary to law, is it not true that Mr. Abbott, in order to punish the Santa Clara Indians, planned to deprive them of 30,000 acres of executive-order reservation lands and to turn the same over to all of the Tehaus Indians?

I believe that there is evidence within the reach of the Indian Office itself to substantiate each and all of these items, and that if you will call upon the Commissioner of Indian Affairs for reports on each of these items that the facts will be forthcoming.

Respectfully,

WILLIAM E. JOHNSON,
Former Chief Officer United States Indian Service.

Mr. Speaker, a few days after receiving the above letter I received the following supplemental letter from the same person, together with a memorial from the Santa Clara Pueblo Indians, and the resolution of the Territorial Convention of the Woman's Christian Temperance Union of New Mexico, all of which tend to substantiate some of the charges made against Mr. Abbott in his (Johnson's) first letter to me.

These documents are as follows:

THE NEW REPUBLIC,
Westerville, Ohio, January 29, 1914.

Hon. JOHN H. STEPHENS,
Chairman Committee on Indian Affairs,
House of Representatives, Washington, D. C.

MY DEAR MR. STEPHENS: On January 24 I wrote you at some length, making suggestions as to matters upon which I believe you could secure valuable information from the Indian Office. Item No. 23 of these specific points refers to the construction of an automobile speedway at La Bajada Hill, near Santa Fe, N. Mex.

The facts regarding this particular item are these: The automobile owners of Santa Fe and Albuquerque had combined to bring about the construction of an automobile road or speedway between the two cities. Clinton J. Crandall, now Indian superintendent at Pierre, S. Dak., was then Indian superintendent at Santa Fe, N. Mex., while this speedway scheme was being worked out. Crandall asked for and secured two different authorizations from the Indian Office—one of $1,000 and the other of $500—to be used in "improving the roads in and about Indian pueblos." The $1,000 was expended on the construction of this speedway along La Bajada Hill.

I am mailing you herewith a photograph showing the exact spot where this $1,000 was expended. This speedway is 9 miles from the nearest Indian pueblo. It is very seldom, if ever, used by the Indians, and was not constructed for the Indians. This particular spot where the $1,000 was expended is on the estate of THOMAS B. CATRON, now United States Senator from New Mexico.

Mr. Crandall was superintendent of these Indians for about nine years. By his social abilities and political intrigue, by the judicious disposal of fat Indian contracts, he secured considerable popularity among a certain class of politicians in New Mexico. The Indians, however, complained lustily and vigorously against the abuses to which they were subjected in Mr. Crandall's administration. This squandering of $1,000 of their money to build this automobile speedway was only one of the long category of their complaints. At different times inspectors were sent down there to investigate the Indian complaints. The inspectors would inspect in the usual way that was in vogue in the Indian Service inspection. They would go to Crandall's home as his guests and remain there during the time they were carrying on their inspection. They would not go near the Indians, and pay little or no attention to the getting at the facts. They would simply go there on a visit to Crandall.

Assistant Commissioner Abbott himself went down there in the winter of 1911–12. He became also Crandall's guest and went around with Crandall conducting a pretended investigation, denouncing at the same time the complaining Indians, telling them that they were wrong, and demanding of them that they cease their complaints and do as Crandall ordered them to do. Mr. Abbott's report was only another coat of whitewash upon this situation.

Secretary Fisher thereupon requested Shelby M. Singleton, of Chicago, secretary and attorney for the Chicago Citizens' Association, to go to New Mexico and make a thorough investigation as his personal representative. Singleton did so, spending a couple of months or so in the work. His report, dated June 20, is the result of the first real investigation that had been made into Pueblo affairs and revealed such a scandalous condition of affairs that Secretary Fisher suppressed the report, even refusing access to it by Members of Congress and the Committee on Indian Affairs.

But while suppressing, and thereby discrediting, this report he made haste to carry out nearly every reform recommended by Mr. Singleton. He recommended the immediate dismissal of Supt. Crandall from the service. In a supplemental telegram to the Secretary of the Interior Mr. Singleton reported that he found Crandall of such a character that he would not believe him under oath.

Commissioner Valentine afterwards went to New Mexico, looked into the matter personally, and demanded and received Crandall's resignation.

Assistant Commissioner Abbott, however, fought the acceptance of this resignation and brought so large political pressure to bear on Crandall's behalf that a compromise was made whereby Crandall was transferred to a superintendency at Pierre, S. Dak., where he now is.

I recommend that you call upon the Indian Office specifically for the report of Shelby M. Singleton, dated June 20, 1911, and all the papers accompanying the same, including Singleton's supplemental telegram to the Secretary of the Interior, written from Albuquerque, N. Mex., and from other points in the Southwest, relating to this same subject. I also suggest that you call for a report made by Dr. Joseph A. Murphy, medical supervisor, to E. P. Holcombe, chief supervisor, dated October 27, 1910, in reference to correspondence regarding Dr. Martin. The subject matter of this letter was a liquor-selling drug store at Santa Fe, organized by Crandall, who became president of the corporation. The Indians' complaints regarding the scandals connected with this drug store was one of the subject matters of Mr. Singleton's report.

I am mailing you herewith copy of one of the memorials of the Santa Clara Pueblo Indians, dated October 11, 1911. I am also inclosing you copy of the resolutions adopted at the territorial convention of the New Mexico Women's Christian Temperance Union, held at Las Vegas, October 19, 20, and 21, 1911.

I am also mailing you a copy of a pamphlet, written by myself, the story of Juan Cruz, which treats of one phase of this scandal. I am also mailing you various copies of the New Republic, containing articles referring to Mr. Abbott and his habitual protection of crooked employees of the Indian Office when they have had a political pull.

Respectfully,

W. E. JOHNSON.

MEMORIAL OF THE SANTA CLARA PUEBLO INDIANS.

ESPANOLA, N. MEX., *October 11, 1911.*

DEAR FRIEND: We are forced to make an appeal to you in hope of securing some redress of grievances and wrongs which we have suffered and are suffering at the hands of the Indian Bureau.

We own several thousand acres of well-watered land. Part of this is an Executive-order reservation and part is fee-simple land owned by ourselves under a Spanish grant confirmed by the United States courts.

For seven years something like a thousand head of cattle belonging to politicians have overrun our lands, eating up our pasture, breaking down our fences, destroying our crops, devastating our fields, and depriving us of our principal means of livelihood. The Indian Office compels us to submit to these wrongs.

Several months ago the Secretary of the Interior sent an honest man down here to investigate—Mr. Shelby M. Singleton, attorney for the Chicago Citizens' Association. He reported fully the outrages perpetrated upon us by representatives of the Indian Office, and not only recommended but personally pleaded that justice be done us. Mr. Singleton's report was suppressed by the politicians and he was disgraced for recommending that the abuses be corrected. We beg of you to call upon the Indian Office for a copy of Mr. Singleton's report and get the whole truth.

We solemnly protest against a notorious liquor dealer, who is president and director of a drug store in Santa Fe which we have repeatedly caught selling liquor unlawfully, being retained as superintendent of the school where we have to send our children.

We plead with you to call for and make public the report of Mr. Singleton and help us protect ourselves against the wrongs heaped upon us by the Indian Office in the interest of corrupt politicians and liquor dealers.

Santiago Naranjo, governor of Santa Clara Pueblo; Victoriano Sisneros, lieutenant governor; Florentino Sisneros, captain of war; Candito Tafoya, sheriff; Jose Maria Naranjo, cacique; Jose Manuel Naranjo, priest of the Winter Clan; Leandro Tafoya, ex-governor; Francisco Naranjo, ex-governor and chief of the General Federation of Pueblo Indians; Manuel Tafoya, principale; Pedro Cajete, principale; Pedro Baca, principale; Ulogio Naranjo, principale; Jose Domingo Ogustierrez, councilman; Vida Ogustierrez, councilman; Valentine Naranjo, councilman; Severo Naranjo, councilman.

Resolutions adopted at the Territorial Convention of the New Mexico Woman's Christian Temperance Union, at Las Vegas, N. Mex., October 19, 20, 21, 1911.

Be it resolved, That this convention congratulates the Indians of Santa Clara Pueblo on their attitude in the liquor-suppression question, and commends that village for its splendid record of nearly 300 Indians who have become total abstainers through the reform movement instituted in New Mexico by Chief Special Officer of the Indian Bureau W. E. Johnson

We deplore the present conditions of the liquor-suppression department of the new State, resulting from official departmental hindrances and an effort to sustain in position over the Indians men of notorious character and men directly interested in the unlawful sale of intoxicants.

We deem the matter of sufficient importance to warrant the widest publicity of our sentiments, and shall supply to the officials in charge of Indian affairs, the Secretary of the Interior, and the chairman of the Indian Committee in the House and Senate copies of this resolution.

Mr. Speaker, Mr. Johnson's last letter says that the Indian Office—then presided over by Mr. Abbott, as I understood—refused access to the Singleton report then on file in that office. This charge is within my personal knowledge true, and I believe that the charges made by these Indians and the Woman's Christian Temperance Union ladies are also true; and I am certain that Mr. Abbott did everything in his power to shield this man Crandall, as charged by Mr. Johnson. Mr. Johnson is a man in whose veracity I have the greatest confidence. I also state that I have the photographs of the road built out of Indian funds, over their protest, and for the benefit of Mr. Crandall's and Abbott's white friends, which photos I received from Mr. Johnson, as stated by him in his letter to me.

Mr. Speaker, since Mr. Abbott retired from the Indian Office I have been permitted to examine the Singleton report mentioned in Mr. Johnson's letters, and I made a copy of that part of the report mentioned in Mr. Johnson's letter touching the culpability of Supt. Crandall and his alleged collusion with and protection by Mr. Abbott, then Assistant Indian Commissioner. These excerpts from this report are as follows:

[From Singleton's report, bearing date of June 20, 1911.]

Recommendation 15, on page 41:

The headquarters of the agent in charge of the Pueblos in the Santa Clara district should not be located in Santa Fe, but at Espanola, from which place a number of the Pueblos are readily accessible. On account of the long period of neglect and misrule which these Pueblos have experienced at the hands of their superintendent there is a crying need for a close personal supervision from the new superintendent, who should visit each pueblo frequently.

It is clear that a superintendent is needed who will cheerfully live where he can best devote all his time to personally looking after the interest of the Indians under his charge. A man who is unwilling to actually live among the Pueblos, where he will be comparatively free of the political and social influences which have worked to the detriment of the Pueblos heretofore, is not fit to be intrusted with this responsible position under the present conditions. I am informed that a building or buildings amply sufficient for storing supplies needed for the Pueblos can be temporarily had at Espanola or at the Santa Clara pueblo, and that a rough warehouse for permanent storage purposes can be constructed at Espanola without heavy expense.

Recommendation 17, page 43:

Since Clinton J. Crandall, by numerous acts of commission or omission, has shown his utter unfitness for the position which he has held heretofore and the one which he now holds, I emphatically recommend that he be entirely eliminated from all official connection with the Pueblo Indians.

Mr. Crandall has incurred so many animosities and has so thoroughly forfeited the confidence of the Indians that his continued connection with their affairs in any capacity will be a disturbing and detrimental factor which will retard the proper solution of the Pueblo problems.

In my opinion Mr. Crandall has richly earned summary dismissal from the service.

HEALTH CONDITIONS IN THE PUEBLOS.

On page 26 of Mr. Singleton's report he says:

In his annual report for 1910 Superintendent Crandall says: "This school and agency has been comparatively free from tuberculosis; in a few of the smaller pueblos there is possibly one, if not more, cases of tuberculosis." In conversation with Mr. Crandall he made about the same statement and also spoke rather lightly of the seriousness of trachoma, which he admitted was prevalent in the pueblos, but which he said was not as dangerous as it was formerly thought to be.

I was informed by Miss Elizabeth Richards, the highly competent day-school teacher at San Ildefonso pueblo, that there had been at least four or five deaths from tuberculosis in that pueblo during the last two years in a population of about 120. Miss Richards stated that when she was sent to the pueblo two years ago she was informed that it had a population of 150. She found that the actual population was only 118, and learned that about 40 of the inhabitants of the pueblo had died during the preceding two years. So far as she had learned there had been no epidemic in the village during this time, and its 40 deaths had resulted merely from the fact that "the Indians had not had enough to eat." According to Miss Richards, every child in the pueblo had been found to be suffering from trachoma, and all have been carefully treated for that disease by Miss Richards during the entire school year.

I was informed by the mother superior of St. Catherine's Catholic Mission School, at Sante Fe, where 300 Indian children are being educated, that tuberculosis has been and is a great scourge in all of the pueblos, and that it is especially prevalent, according to her knowledge, in San Ildefonso and Cochiti. This very intelligent woman, who is evidently devoted to her work, said in part:

"Tuberculosis is extremely prevalent in the pueblos, and I have known of a number of deaths from that cause. Recently there was a death in a home at San Ildefonso, from which one of our girls comes. She will go back there soon and live in the same room in which her father lingered for months, probably without any steps having been taken to eradicate the germs of the disease. Probably one-fourth of our pupils were found by Dr. Harrison to be suffering from trachoma."

Last sentence on page 27.

In my opinion conditions among the pueblos have not materially improved during the 12 years I have been cognizant of them.

On page 28.

I was informed by Dr. A. H. Dunn, the Government physician stationed at Jemez, that out of 57 school children examined at Jemez at least 55 were found to have trachoma, and that similar conditions prevailed in the other pueblos. Dr. Dunn stated that he had found many persons who had become blind from trachoma in the pueblos which he

had visited. I am informed by Dr. Dunn, although many Indian deaths are not reported, the reported number of deaths at Jemez per annum during the years 1906–1910, inclusive, was 48 per 1,000, while at Cochiti pueblo it was 52 per 1,000, and at San Domingo was "even higher." It would seem that such an enormous death rate in a region possessing one of the most healthful climates in the world could be greatly reduced by intelligent and humanitarian effort.

On page 30.

THE LIQUOR SITUATION.

I am informed that until within the last year most, if not all, of the pueblos have been fearfully demoralized by drunkenness. Yet in his annual report for 1910 Supt. Crandall says:

"Little or nothing has been done during 1910 to break up the liquor traffic in the pueblos. * * * The pueblos of Taos, Picuris, San Juan, Santa Clara, San Ildefonso, Nambe, and Tesuque are among those under me that are given more or less to drink. No regular arrests have been made outside one, perhaps, at Santa Clara." Supt. Crandall also adds that during the year there were no convictions, no seizures of liquor, and no confiscations.

During the last year a remarkable change has taken place in the attitude of several of the pueblos, notably Santa Clara and San Ildefonso, toward the liquor traffic. As a result of the missionary work done in these two pueblos by Miss True, and by efficient work under her direction and that of Chief Special Officer Johnson in suppressing the sale of liquor to the Indians in the vicinity of these two pueblos, the Indians in these two villages have practically ceased to use intoxicating liquors. I was told by the headmen at Santa Clara that there are now only three men in this village of 300 persons who use liquor at all. Such a striking change within such a short time indicates that the evils resulting from the liquor traffic might have been materially decreased in these villages in former years if vigorous steps toward suppression had been taken by the superintendent.

On page 31.

There seems to be a general complaint upon the part of the pueblos that the superintendent has habitually shown indifference to their complaints in regard to tresspasses upon their lands, and other grievances.

Miss Richards, whom Mr. Crandall told me was a good teacher, is emphatic in declaring that the superintendent has seriously neglected the Indians of the San Ildefonso pueblo.

INDIANS NOT TAUGHT FARMING.

Although these Indians are wholly dependent upon agriculture and stock raising as a means of livelihood, little or nothing has been done or is being done by Supt. Crandall to teach them better farming methods or to aid them in improving their stock.

On page 32.

EFFORTS TO BETTER CONDITIONS SUPPRESSED.

I regret to say that as the result of a careful study of the evidence taken by Assistant Commissioner Abbott last fall, and of my personal investigation, I can not avoid the conviction that Supt. Crandall, because of his arbitrary tendencies and because he disliked to have attention called to unpleasant conditions in the pueblos, has habitually resented the attempts of his subordinates to call bad conditions to his official notice. This unfortunate attitude has caused him to discourage, and where it was possible, to suppress such efforts. This indictment is supported by the fact that Mr. Crandall has antagonized and apparently lost the good opinion of such capable subordinates as Miss True, Miss Dissette, Miss Richards, Miss Ross, and Mr. Dagenette, all persons possessing, I believe, initiative and force of character and actuated by an earnest desire to better conditions among the Indians. In summing up the manner in which Supt. Crandall has performed his duties as superintendent of the pueblos allotted to his care, Mr. W. E. Johnson, who accompanied me during a greater portion of my trip of investigation, said, "Mr. Crandall's management of these pueblos constitutes the worst case of maladministration that I have ever seen in the Indian Service." Permit me to say that, although I am not as familiar as Mr. Johnson with Indian affairs, I emphatically share this opinion.

Mr. Speaker, this is not the first effort to dispense with the services of this commission, composed of 10 persons described in the law creating the commission as men "eminent for their intelligence and philanthropy." Many like efforts have been made to repeal this law. These men, so philanthropic and eminent for their intelligence, have well shown their superior intelligence by always preventing the repeal of the law creating the commission, and thus they have kept their hands in the United States Treasury and extracted therefrom several hundred thousand dollars, thus demonstrating the well-known fact that it is much easier to create than to dissolve a commission.

Mr. Speaker, this commission—created 55 years ago for a temporary purpose only—are so philanthropic and intelligent that no Congress has ever been powerful enough to pry them away from the national pie counter. An unsuccessful effort of this kind was made on March 1, 1882. The House on that day had the Indian appropriation bill under consideration, when the Clerk read the following paragraph (CONGRESSIONAL RECORD, 47th Cong., 1st sess., p. 1531):

For the expenses of the commission of citizens serving without compensation, appointed by the President under the provisions of the fourth section of the act of April 10, 1869, $5,000, to be distributed as follows, namely: For Secretary, $2,000; for clerk, $1,200; for messenger, $600; for office rent, $1,000; and for contingent expenses of office, $200.

Mr. HUTCHINS of New York. I move to strike out that clause. I make this motion for the purpose of obtaining some information from the gentleman who has this bill in charge. The act under which 10 eminent citizens were appointed by the President to see to the distribution of $2,000,000 among the Indians provided the sum of $25,000 to pay the expenses specified in this paragraph. I wish to ask the gentleman who has reported the bill whether that amount of $25,000 has been used and whether this sum of $25,000 is an addition to the sum appropriated by the original act?

Mr. RYAN. I will answer the gentleman by saying that the sum of $25,000 he speaks of was appropriated to defray the expenses of the board at the time the board was created. That was 13 years ago. It was to pay their expenses for the current year for which the appropriation was made; and in every succeeding year since that time an appropriation has been made by Congress to defray the expenses of this board until the last Congress. The last Congress at its last session refused to appropriate anything whatever for the expenses of this board. And I want to state, so far as the history of that is concerned, that the action of this House was intended at the time to abolish the board enirely, but the Senate dissented.

* * * * * * *

Mr. HOOKER. I move to strike out the last word. The gentleman from New York [Mr. Hutchins] has anticipated me in making the motion to strike out the clause in the bill to which he refers. The original act was passed in 1869, and I have had occasion in speeches heretofore made in Congress to demonstrate that the purpose and object of the act of 1869 was to create a temporary board, acting in conjunction with the General of the Army. A specific appropriation of a very large amount of money was made, an appropriation of $2,000,000, and the President was authorized to appoint a board of commissioners of eminent citizens, who were to serve without compensation. It was evidently the purpose and object of the act to create this board for a specific purpose, and when that purpose was accomplished the board was then functus officio—had no duties to perform, possessed no powers, and ought not to have been continued beyond the time when the first appropriation was expended.

I send to the Clerk's desk to be read section 4 of the law originally passed by Congress, so that the committee will see from that section precisely what is the character of the board as originally created.

The Clerk read as follows:

"*And be it further enacted*, That there be appropriated the further sum of $2,000,000, or so much thereof as may be necessary, to enable the President to maintain peace among and with the various tribes, bands, and parties of Indians and to promote civilization among said Indians and to bring them, where practicable, on reservations to relieve their necessities and encourage their efforts at self-support, a report of all expenditures under this appropriation to be made in detail to Congress in December next. And for the purpose of enabling the President to execute the powers conferred by this act he is hereby authorized, in his discretion, to organize a board of commissioners, to consist of not more than 10 persons, to be selected by him from men eminent for their intelligence and philanthropy, to serve without pecuniary compensation, who may, under his direction, exercise joint control with the Secretary of the Interior over the disbursement of the appropriation made by this act, or any part thereof that the President may designate. And to pay the necessary expenses, transportation, subsistence, and clerk hire of said commission while actively engaged in said service there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $25,000, or so much thereof as may be necessary."

Mr. HOOKER. It will be seen that this was an act creating a commission to act in conjunction with the Secretary of the Interior for a specific purpose, and it appropriated $25,000 to carry out that purpose. Now, you might as well say that the power would have been continued in the Secretary of the Interior and in this board if no appropriation was made as to say that this board was authorized by law to continue from year to year. A specific amount of $25,000 was appropriated at the time to pay the expenses of the commission, which amount has long since been exhausted. Now, though the purposes for which the act was passed have long since passed away, though the Indians have become peaceful and civilized, comparatively speaking, yet for 13 years there has been an annual appropriation of $10,000 for the support of this peace commission, a commission acting without bond and without any other authority than simply the nomination of the President. It was clothed with authority to act in conjunction with the Secretary of the Interior in simply expending the $2,000,000 which was originally appropriated for the purpose of securing peace among the Indians, and also clothed with authority to expend the $25,000 and no more which was appropriated for their expenses. Yet for 13 years successively this appropriation of $10,000 has been made for the support of this commission. I say that if we have officers of the Government to expend the money appropriated by us, they should be bonded officers, and they should expend it under the sanction of law and the responsibility of their bond. They were appointed to serve without compensation—the $25,000 was simply to pay their expenses—and yet for 13 years we appropriated $10,000 annually to pay the expenses of this commission. That annual appropriation was made without question until two years ago, when we in this House made the first assault on this commission, and showed what an irresponsible body of men it was, unknown to the law, created for a specific purpose, and that purpose having been performed no longer in office. * * * I have but a few more words to say.

As I have said, it will be observed that the law which I have caused to be read by the Clerk created this commission for a specific purpose, and that purpose having been accomplished, this commission or board has had no existence except what it obtained by virtue of its recognition for 13 years by Committees on Appropriations of Congress. It therefore has been kept alive simply by the appropriations which we have made. It will be seen by the very section which I have caused to be read that this commission was directed to make a special report of their action to Congress in the next December, showing clearly that it was the purpose and intent of the legislative mind when that appropriation was passed to make it a temporary board created for a specific purpose. And when that purpose was accomplished the board could no longer have existed without further action by Congress. And for 13 years and more it has been kept in existence by this appropriation. The very clause reported by this appropriation committee demonstrates that if $5,000 will pay their expenses, then for 13 years we have given them $10,000 a year when we should have given them but $5,000. The very same argument which shows the propriety of cutting down the extravagant appropriation heretofore made for traveling expenses, clerk, office rent, etc., of this irresponsible board applies still more strongly in favor of absolutely sweeping the board out of existence.

* * * * * * *

Mr. ATKINS. I move to strike out the last word, and I yield to the gentleman from North Carolina, Mr. Scales, so much of my time as he may desire.

Mr. SCALES. I thank the gentleman for his courtesy. I want to give a little history of this matter for the benefit of the House. We attacked this commission about three years ago, and expenses have been coming down by degrees ever since. From $15,000 we have reduced the appropriation to $5,000. They die hard. First this House took action abolishing the board, but when the bill went to the Senate a provision for the continuance of the commission was put on, which came back here and was passed, without the knowledge, without notice, so far as

I am informed, of the change of this House. At the last session we again voted to abolish the commission. The bill went to the Senate, and in conference it was agreed that the commission should be continued without any appropriation whatever. Now, I ask Members of this House, without distinction of party, whether it is necessary to throw away the sum of $5,000, for I grant that if the commission was at all necessary $5,000 would not be too large. But I contend that there is no necessity for the existence of this board, as the experience of 13 years has demonstrated. The Committee on Indian Affairs, after investigation, determined in the Forty-sixth Congress that this commission was unnecessary and wrong and should be abolished, and this House has affirmed the action of the committee, and for three consecutive years past voted to abolish the whole thing. I hope, therefore, the House will complete the work which it has been doing for the last three years, that it will strike down the commission by cutting off the appropriation. Do not put these men as a watch over your officers, as honorable, it may be, as they and much more responsible. To be consistent the House should appoint a similar commission with similar powers to watch over your Post Office Department. Are there not frauds there? Are there not "straw bids and straw bonds there"? Are there not "ring" men who cheat and defraud the Government?

If this commission has done good work, let another be appointed to assist in ferreting out the frauds and robberies practiced on the Post Office Department. But they will do no such thing for this department, nor for the War or Navy Departments; they know it will accomplish nothing. But these wealthy citizens are in; they like the position; they have influence; and an effort is made in every Indian appropriation bill to retain them. But I defy them, as I have heretofore, to point to any work, yea, or even one act, which they have done to justify the continuance of the appointment and appropriation.

* * * * * * *

Mr. HOOKER. Section 2041 defines the duties of these commissioners. It says:

"The board of commissioners mentioned in section 2039 shall supervise all expenditures of money appropriated for the benefit of Indians within the limits of the United States and shall inspect all goods purchased for the Indians, in connection with the Commissioner of Indian Affairs, whose duty it shall be to consult the commission in making purchases of such goods."

Now, sir, it is evident that the second of these sections which I have read violates the very principle upon which this board was created. They were to be selected from men of great philanthropy, and I doubt not many of them have been men of great philanthropy. I doubt not a great majority of that board have been such men. But they are but human beings, subject to all the influences, passions, and emotions that sway mankind at large. And would it not be a good thing to appoint another board to watch that board? You might get them better—more philanthropical—you might have a superior race of men to select from. If the principle is a correct one, then you ought to have a board of supervisors to supervise the purchase of Navy supplies, a board of supervisors to supervise the purchase of Army supplies, a board of supervisors over every department of the Government, without bond, without salary, without pay, and without any other responsibility save that which is to be derived from their high character and standing.

* * * * * * *

The question being taken on the motion to strike out the paragraph, there were ayes 33, noes 54; so the amendment was not agreed to.

Immigration.

Common sense requires us to keep immigration within strict bounds. We shall lessen immigration, not because we wish to do so, but because we *must* do so in defense of the American standard of living.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 25, 1914.

Mr. GARDNER. Mr. Speaker, under the permission granted me on February 25, 1914, I present herewith a series of extracts from my remarks made while the immigration bill was under consideration on January 31, February 3, and February 4, 1914.

For the purpose of lucidity, I have slightly changed the text in a few unimportant particulars. I have also inserted additional subheadings wherever they seemed necessary.

The matter referred to is as follows:

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. GARDNER. * * *

The policy of the American people for the greater part of our history has been to admit every able-bodied immigrant of good character. For a good many years, however, we have recognized the necessity of departing from that policy. Accordingly we have passed a succession of more or less inadequate laws designed to prevent the admission of laborers under contract and to hinder the introduction of immigrants who do not come here of their own initiative. Further than that we have never yet gone; but for many years past an effort has been afoot to secure legislation which will result in a substantial reduction in the volume of our immigration, even if we are obliged to exclude many desirable men and women.

* * * * * * *

HISTORY OF THE LITERACY TEST.

The efforts of those who desire this reduction have, for the most part, been centered on the passage of a law which requires an immigrant at least to be able to read in his own tongue. Such a bill has four times passed the Senate and three times passed the House. Twice it has reached the President only to encounter a veto. President Cleveland vetoed the bill in 1897. The House passed it over his veto, but the Senate upheld the President. President Taft vetoed the bill in 1913. This time the Senate passed it over the veto, while the House upheld the President.

THE ISSUE.

We are now once more face to face with the great problem. Let us not attempt to befog the issue by a discussion of details. The real question is this: Has the time come when we ought to restrict immigration for the express purpose of reducing the number of immigrants, good, bad, or indifferent?

If you believe that the country needs and ought to receive every able-bodied man and woman of good character, you will have no hesitation in voting against this bill. If, on the other hand, you believe that we are admitting too many immigrants every year, I shall have no difficulty in persuading you to vote in favor of this bill, even though you may think that some plan for restriction better than the literacy test ought to be devised.

COMMON GROUND.

In order to clear the ground of unnecessary encumbrances, I am willing to concede the truth of statements made on this floor to the effect that the foreigners who came to us between 1820 and 1870 have been successfully assimilated and that the immigration of that period has proved a blessing. I also concede that much of the immigration which comes to us to-day is likely to prove a blessing. I am also prepared to admit it as my belief that there is an annual shortage of labor on farms at certain seasons of the year and an occasional shortage of labor in other industries.

STATISTICAL—WHO WILL BE EXCLUDED?

Before embarking on my argument I invite your attention to a few figures. It appears from the report of the Commissioner of Immigration that 1,427,227 aliens were admitted to this country in the year ending June 30, 1913, and 611,924 aliens departed from this country during the same period, leaving a net increase of over 800,000 in our population.

The report of the Commissioner of Immigration shows that of the aliens over 14 years of age admitted last year, 300,108, or about 24 per cent, were unable to read in any language. The ratio of illiteracy varied from 45 per cent in the case of Lithuanians, down to less than 1 per cent in the case of English, Irish, Scotch, and Scandinavians.

So you see that this bill, if passed, will exclude 45 per cent of the Lithuanians, over 40 per cent of Sicilians, and less than 1 per cent of the English, Irish, Scotch, and Scandinavians.

The report of the Commissioner of Immigration also shows that from September 30, 1819, down to June 30, 1903, a period of nearly 84 years, 21,095,614 immigrants came to this country, whereas during the 10 years from June 30, 1903, to June 30, 1913, no less than 9,713,330 immigrants have arrrived. Think of it! Nearly one-third of all the immigration of the last 100 years has arrived since June 30, 1903.

The Canadian and Mexican figures are necessarily very incomplete. The proposed literacy test would affect Mexicans to a very marked extent. It would scarcely touch immigrants from Canada.

HISTORIC ARGUMENT.

So far as I understand it, the historic argument in favor of unlimited immigration is this: Time has proved that is was a wise policy to admit an unrestricted flow of immigration from foreign lands when this country was unsettled and when we had thousands of square miles of arable land to give away; therefore, it must still be a wise policy to admit an unrestricted flow now that the country is settled and no free available land remains.

* * * * * * *

THE DEMAND FOR LABOR.

How about these claims as to the necessity of vast supplies of labor to develop the Nation? To be sure, in times of prosperity we could give employment to hundreds of thousands more Europeans if we could only get them to work cheap enough.

If we were only willing to admit the Chipese, we could employ millions of them building railroads, factories, and all manner of good things. If some one could only import a race which would

work for even less than the Chinese, every cent of capital and credit in the world would be commandeered for the promotion of enterprises on which they would be employed. The demand for their labor would be almost inexhaustible. But how about the rest of the workingmen in the country? Where would they find their jobs? A few of them, of course, would become foremen and shopkeepers, but how about the vast majority?

* * * * * * *

DISTRIBUTION.

Every year at certain seasons, when we hear of the demand for farm labor, gentlemen on this floor will pull long faces and solemnly express an opinion that a proper distribution of immigration would solve the problem. I venture to predict that until the employing farmer can offer a steady job to all whom he employs we shall never be free from this cry as to the shortage of farm labor. As to distribution, for eight years we have had a law intended to encourage it. South Carolina has tried it. She imported direct some 700 immigrants. All of them left her. Distribute men to your heart's content. They will not stay distributed. They will go where natural forces draw them.

WHEN TWO MEN ARE LOOKING FOR ONE JOB.

If I were to tell my manufacturing friends in Massachusetts that competition does not lower prices, they would start to discourse on the incapacity of Members of Congress. Yet those very manufacturers will turn around and tell me that immigration has no effect on wages in the textile industries. Perhaps they may be right; but if so, labor is the only commodity in the wide, wide world whose price is not reduced by competition. To be sure, in flush times the effect of immigration may only be to keep wages from rising as fast as they otherwise might. When two jobs are looking for one man no amount of immigration will lower wages; but wait until two men are looking for one job and then see what happens.

* * * * * * *

SUMMARY.

To sum it all up, Mr. Chairman, 1,400,000 people came into this country from abroad last year—1,400,000 men and women thrust in a single year into our labor market as present and future competitors.

To be sure, many of them were birds of passage, who competed with our people only for a season. Six hundred thousand aliens returned home, but 800,000 remained as a permanent addition to our population.

They are good men and women, I dare say, but they are used to a poor standard of living. They are willing to accept a poor standard of living. They are willing to go to work for less wages than our own people ought to work for. Do you think that American workmen can raise their standard of living while we are admitting each year over a million competitors to cut it down? If you know anything about workingmen's problems, you must realize that it is hard for them to maintain their present standard of living. Of course it is hard. In the last 10 years we have admitted 10,000,000 people to help keep it down.

Some one has convinced many of our foreign-born voters that they want their cousins to come over here. All right; let the cousins come; but do our foreign-born voters want 1,400,000 cousins every year? Is not 700,000 a year quite enough for us to assimilate and educate up to our standard of living?

You, sir, sitting in the gallery listening to this debate, are earning $12 per week. You would like to get $14 per week. You think that you are worth it, do you not? How do you expect to get $14 a week, if we admit 1,400,000 cousins a year who are willing to take your job at $10 per week?

We legislators are not merciless; we have the deepest sympathy for the alien who has never had the chance to learn to read. We wish him well; nevertheless, we are not sent here to legislate for him, but for our own people.

If an immigrant is afflicted with undeserved disease our pity goes out to him; but we think of our own people for whose health we are responsible, and sadly we close the gates.

Likewise if an immigrant is poor and ignorant and desires to better his condition our pity goes out to him as well and to the extreme limit of safety we welcome him; but when the poor and the ignorant come to us in such numbers that their poverty and their ignorance become a menace to the welfare of our own people, then we conceive it to be our duty to stem the tide. The hour has now arrived not to close the gates but to narrow the passage and control the flood.

* * * * * * *

WHAT THIS LITERACY TEST IS.

Mr. Chairman, just what is this literacy test for immigrants? It provides that any immigrant over 16 years old must be able to read a little in his or her own language. Even to this mild restriction there are generous exceptions. Families are not to be broken up. If only one of them can read, he or she can bring in pretty much all the rest of the household, except grown-up sons. If a reading test had been in force last year for aliens over 14 years of age, some 300,000 of those aliens who came in here would have been excluded. That is a pretty big slice to exclude, I think. Of course the steamship companies would probably have brought quite a number of other immigrants in place of those excluded. That would have lessened the dimensions of the slice, to be sure. On the other hand, many an immigrant untruthfully told the inspector that he was able to read, and no one was able to show up his ignorance. Unfortunately, no provision exists in our laws for verifying the truth of an immigrant's assertion as to his reading capacity. If the literacy test reduces immigration by 300,000 per annum, that is the most which can be expected of it.

No man in his senses would claim that the literacy test is an ideal contrivance for sifting immigration. Everyone knows that such a provision of law will admit many a bad man and will exclude many an honest one. The real question is whether the literacy test will exclude more that are undesirable and less that are desirable than will other suggested methods of restriction.

WHY THE LITERACY TEST WAS PROPOSED.

A dozen years ago every restrictionist favored a different method of restriction, and every pretended restrictionist stoutly asserted his abiding belief in some method or other of restriction which stood no chance of adoption. Gradually the restrictionists in the House and in the Senate came to see that the literacy test could command the greatest amount of support. Meanwhile the labor organizations came to the same conclusion. Along in 1907 the Immigration Commission was appointed, nine experts in all. At first Prof. Jenks, of Cornell, and Dr. Neill, of the United States Bureau of Labor, both members of the commission, were doubtful about the literacy test. Finally, after two years of study eight out of the nine commissioners joined in recommending the literacy test as the most important step to be taken. That it is perfect no one will contend, but surely we must all admit that 300,000 aliens who can read would probably make better citizens than the 300,000 illiterate aliens whom we admitted last year. To hold otherwise is to indict our common-school system. However, the commission recommended the literacy test, not as a selective measure but as a means of curtailing the congested oversupply of unskilled labor. The superiority of the individual immigrant under this system was regarded as a fortunte incidental advantage.

For many years I have listened to the argument that the anarchist and the gunman and the procurer can read, while many a horny-handed honest laborer does not possess that accomplishment. I freely admit the fact. It is also true that honest men can be found in gambling houses and that thieves can be found in church. Yet for all that I should not recommend the passage of any legislation based on the supposition that the frequenters of gambling houses are more desirable citizens than are the churchgoers.

* * * * * * *

BIGOTRY.

"Bigotry is at the bottom of this demand for the restriction of immigration," says some one. Bigotry, forsooth! Was it bigotry which impelled the legislatures of 17 States to petition for the literacy test? Was it bigotry which guided the footsteps of Samuel Gompers to our committee room, when he came to plead for this law? Was it bigotry which caused the American Federation of Labor time and again to call upon Congress to enact this very same measure which we are now considering? Is there bigotry in the heart of Edward Dwyer, of Brooklyn, N. Y., secretary of the Irish-American Societies? Have you all forgotten his open letter to William Sulzer, praying for support for this same measure?

Call us all bigots if you so desire. Let our motives be as contemptible as you choose. Our motives, good or bad, can not add one jot to the argument against this legislation nor detract one tittle from the arguments in its favor.

* * * * * * *

A "YANKEE" CONSTITUENCY.

The gentleman on my right has spoken jauntily to the effect that it is easy enough for me to support this bill because, as he puts it, I represent a Yankee constituency. A Yankee constituency I surely represent, but not in the sense in which he uses the word "Yankee." I believe it to be the fact that less than half the voters of my district are of English or Scotch descent. More than half, I suppose, are either Irish or French Canadians by descent, but we are all so mixed up together that it is pretty hard to tell the difference except by our names. We do not

have much of this race or religious prejudice business down our way.

Of course the Irish and the French Canadians would not be affected to any extent by this literacy test. All Irish and Canadian children are taught to read nowadays, and the old people would be admitted anyway, whether they could read or not, provided that any of their family could read.

It is different with the Jews, however, and there are a good many Jews in my district. About one Jew in five who comes to this country is unable to read, so this restriction strikes home in Jewish circles. There is no denying the fact that this legislation would exclude a good many pretty wholesome Jews who might desire to come over here. On the other hand, it would protect many an equally wholesome American Jew against an overstocked labor market.

All honor to the Jew who desires that his brother in Russia shou'd share in the liberty and prosperity of the United States. All honor to the Italian who is willing to risk an oversupply of the labor which is his only capital if he may but share his opportunities with his own race. Such men as these may be prejudiced; they may be unjust to us who disagree with them; but at least they are unselfish. The seekers after cheap labor are indeed fortunate to have such allies.

The Late Representative Roddenbery, of Georgia.

MEMORIAL ADDRESS

OF

HON. J. THOMAS HEFLIN,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 8, 1914,

On House resolution 407, paying tribute to the memory of Hon. S. A. RODDENBERY, late a Representative from the State of Georgia.

Mr. HEFLIN. Mr. Speaker, again the flag above the House of Representatives hangs at half-mast and another Member of this body has answered his last roll call.

Judge RODDENBERY has answered the summons that awaits us all. In the midst of life we are in death. His service here was brief, but he crowded into that brief service industry and ability of a high order and served his people faithfully and well. He was enthusiastic and thorough in whatever he undertook to do. He was an untiring worker, and I fear that he overtaxed his strength. He was an able lawyer and one of the best parliamentarians in the House. He was a splendid debater and a conscientious, fearless, and faithful representative of the people.

The House mourns his loss and deeply sympathizes with his good wife and children and the people that he represented so ably and loved so well.

Fisheries in International Waters between United States and the Dominion of Canada.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 2, 1914,

On the bill (H. R. 13005) to give effect to the provisions of a treaty between the United States and Great Britain concerning the fisheries in waters contiguous to the United States and the Dominion of Canada, signed at Washington on April 1, 1908, and ratified by the United States Senate April 13, 1908.

Mr. CLINE. Mr. Speaker, I am in favor of the passage of this bill for several reasons. First, it is the evidence of that good faith that ought always to be kept with reference to our treaty relationship with other powers. This treaty was ratified by the United States April 13, 1908, and particularly provided that there should be a commission appointed that should draft regulations for the purpose of protecting food fishes in the waters contiguous to the United States and Canada.

There was a provision in that treaty providing that immediately upon the ratification of the treaty the two Governments would perfect the commission provided for in the treaty, and that thereupon the commission should proceed to establish regulations that should provide a uniform system of international regulation for the protection and preservation of the food fishes in the waters prescribed in article 4 of the convention. It is further provided that these regulations should be approved by the two Governments. Immediately upon the publication of the treaty the regulations set out in the bill were formulated and were approved by the Canadian Government. Nothing up to this time has been done by the United States to carry into effect the treaty. Canada threatens that unless the United States proceeds in good faith to carry out the agreement in the treaty that it will rescind its indorsement of the regulations and proceed to withdraw from the treaty. This will leave the fisheries in international waters without any regulation whatever. They will be left wholly to the mercy of men who care nothing about protecting this article of food; and the labor of formulating a new treaty with consequent new regulations will have to be gone over again, during which time the international waters will be largely depleted of the various fish products that the States bordering upon these waters, as well as the Federal Government, seek to protect. The necessity for protecting the fish products is shown by the fact that the five or six Commonwealths of the United States bordering upon these waters have passed the most stringent legislation for the protection of food fishes. Another significant fact is established in that this bill has the indorsement of fish and game wardens of all of these States, as well as that of the Federal fish commissioner.

It has been asserted by gentlemen who are opposed to this bill that it is unfair to the United States and was written in favor of Canadian interests. Not a single point was made by any of the objectors to this bill to illustrate that it was unfair to the United States, and no specific objection was pointed out. It has been said that the small fisherman engaged in the business along the south shore of Lake Erie would be driven out of business. How that result would be accomplished is not apparent. That the bill has the general indorsement of the patriotic fisherman engaged in the business is shown in the hearings by the testimony of Dr. Smith, the Commissioner of Fisheries, representing the United States on the commission. I quote from the hearings, page 9, as follows:

Mr. HARRISON. Now, these regulations, attached to this bill, would be really a part of the law if passed—are they along the same lines with respect to the tentative understanding between the various States and those Provinces in Canada, or is there much difference between these rules and the regulations that the States have tried to put in force?

Dr. SMITH. The laws of the different States were adopted by the internal commissioners, and are incorporated in this section. There is no radical departure from existing legislation on behalf of the States. In some cases the States were unable to act, but as far as they do these regulations have really been strongly indorsed by the States. I have letters from the proper officials of all the boundary States, with perhaps one exception, strongly advocating this bill or a similar bill that will give effect to the treaty

Mr. HARRISON. Is there much opposition from parties fishing in these waters to this legislation?

Dr. SMITH. No more than there would be on the part of interests affected by legislation generally. There is always some opposition on the part of the fishermen to any kind of legislation, but I am not advised that it is particularly strong in these waters.

Mr. HARRISON. Are some of the fishermen in favor of the legislation?

Dr. SMITH. I think that the vast majority of independent fishermen, who have large interests at stake, would like to see something of this kind done.

It is a matter of common knowledge that there is a class of fishermen who object to any regulation whatever and who have fought every attempt of the States bordering upon international waters to restrict their depredations upon the fisheries that belong to these countries. A free and unrestrained hand to loot the waters of the fish products they contain is what a certain class of fishermen denominate as their rights that ought not to be interfered with. The very fact that some of the most valuable food fishes have been depleted 80 per cent of their volume, and which fact is not disputed by the opponents of the bill, is a sufficient reason why some restriction should be laid down. The men who are fighting this regulation are the men who employ the most effective devices—those that will come the nearest in the shortest possible time of exterminating the fish resources. It has been said that the fishermen along the southern shore of Lake Erie are so well acquainted with the habits of certain species of fish like the black bass, the sturgeon, whitefish, and lake trout that they constantly watch these respective species as the spawning time arrives, invade the spawning grounds, and take every possible fish within the limit of the law, regardless of the effect such taking will have upon the future quantity of the specie. As I said before, they use the most scientifically constructed nets and traps, so that it is practically impossible for a school of fish to escape these marauders of international waters. And this is the class of fishermen that makes it necessary restrictive legislation.

This bill ought to pass, because it would be at least a belated exhibition of our intention to keep good faith with other governments in our agreements and treaty relationships entered into with them.

Speech of Gov. Hatfield, Delivered at Charleston, W. Va., February 25, 1914.

EXTENSION OF REMARKS

OF

HON. JAMES A. HUGHES,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 3, 1914.

Mr. HUGHES of West Virginia. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by Gov. Hatfield delivered at Charleston on Wednesday, February 25, 1914.

The address is as follows:

PARTY HARMONY INSISTED UPON BY GOV. HATFIELD—POWERFUL APPEAL DELIVERED AT REPUBLICAN COMMITTEE MEETING—SAYS PLEDGES MADE MUST BE FULFILLED—NEEDS OF THE STATE AND METHODS FOR PROVIDING THEM FULLY DISCUSSED BY THE CHIEF EXECUTIVE—SOME PARTY HISTORY AND PARTY PROMISES RECALLED.

In addressing the meeting of the Republican State committee at Charleston on Wednesday, Gov. Hatfield said, in part:

"Mr. Chairman, gentlemen of the State committee, and fellow citizens, I thank you for the privilege of speaking to you on this occasion. I am glad to see so many present, representing every section of the State. Your presence will prove an inspiration to the committee to go ahead in the important work before us in the campaign now upon us. You gentlemen of the committee were chosen in a primary election, the first ever held in the State for the purpose. This is an added reason why it is your duty, as I doubt not it is your pleasure, faithfully to represent and carry out the sentiment of the majority. Political party committeemen, like all public officers, are the servants of the people who chose them.

"A fundamental, vital need is more revenue. Our State institutions are stinted for lack of funds, while the profit arising from the exploitation of our natural wealth is making thousands rich.

"We need much more money for the public institutions we already have, and funds to build and equip several we need, must have, but have not. And good roads—where are the counties and the State to obtain the great sums of money so much needed for this great development? No one can compute the almost infinite benefit that would accrue from a network of improved highways covering every county of the Commonwealth. But we must first have the money, for good roads can not be built for nothing. There are many other objects for which we need more money that I have not time to mention. To make this situation stand out more gravely before us, we have to take into consideration that the State's present revenue will be decreased by more than $600,000 when the prohibition law goes into effect next July."

Referring to the need for additional revenues for State purposes, the governor said:

"A fair tax on production of our natural resources and on royalties received from such production would yield us a handsome sum. I know of hundreds of thousands of dollars in coal, oil, and gas royalties going out of the State, the lands producing which were purchased in some instances at 25 and 50 cents per acre, and even less, as forfeited and unappropriated lands. The recipients of these royalties pay no taxes to our State, but live in other States and other nations and care nothing for our future. Hundreds of thousands of acres that have been acquired in the same way, still undeveloped, are held by large corporations of other States, from which this State is receiving only a paltry tax consideration yearly. The holdings of these corporations that were purchased a few years ago for a mere song have multiplied and are multiplying in value. A very large portion of these great natural products as they are being developed are transported in their raw condition without our State. Indeed, very few industries of the finished-product class are located within our borders.

"If our forefathers had not given away for a mere song this great natural wealth, placed here by the Creator for the benefit of all, we could do as Minnesota is now doing—run our free schools on the income from coal, oil, and gas lands that the State practically gave away. Had the State retained these valuable lands, they could have been leased and the immense income therefrom would go far to supply present needs and provide for the future generations.

"While we can not undo what has been done, we can do something along the lines I have indicated. If we do not, coming generations, when these vast resources shall have been exhausted and there is left only the empty shell, will rightfully blame us for such a course of folly. We were the legal heirs of this heritage, to be handed down by us in turn to our posterity. I want to say to you, and through you to send a message back to the people of the State, that this is the beginning of the battle for the fair rights of the people in this regard—a battle we shall carry on with malice toward none, but with justice and a square deal for all. We purpose to be just to the owners of this vast natural wealth, and we purpose that they shall be just to the State.

"I believe the great majority of Republicans in our State are in favor of the true progressive policies, and not only in this State, but in the Nation as well. I believe we can accomplish those great objects sooner through the Republican Party than any other way. Especially do I believe this to be true in West Virginia. When my party refuses to stand for these great principles, then will I fail to stand with it—then, and not until then. I do not believe that the Republican Party has outlived its usefulness. Ever since its birth it has been the progressive party of the country. Its deeds and achievements are illustrious.

"Some of the Progressive leaders in this State are most intemperate in denunciation of the Republican Party, a party to which they belonged all their lives until a few short months ago. Why this passion and hate? We can not escape the conviction that they come—perhaps unconsciously in some cases—from personal enmity, envy, unsuccessful ambition, or the like. They say that if we want progress we must adopt their name and march under their banner.

"The national committee has gone to the very limit of its power and authority to change and reform the regulations of our party respecting the constituting of our national conventions. It proposes to cut down the representation from the Southern States more than 80 votes. Had this been done previous to 1912, we would to-day have a Republican national administration and West Virginia would have had its choice for President. It is worthy of note that this basis of representation, which it is now proposed to change radically, has existed since 1860, when Abraham Lincoln was nominated for President. Notwithstanding the fact that persistent efforts have been made since 1880, at least, to cut down the representation from Southern States, and the fact that the committee on basis of representation in the national convention of 1884 made a report in favor of it, which report was favored in committee and concurred in by the member of the committee from West Virginia, nothing has been done. This unjust basis continued under Garfield, Harrison, Blaine, McKinley, and Roosevelt. Upon this basis each of these great leaders received his nomination for President.

"Other reforms proposed by the national committee is to put it in the power of every State to elect their delegates to national conventions in any fair way they please, especially by primary election. The committee has divested itself of the power that is inherent in every committee that calls a convention, of making up a temporary roll of the delegates, and proposes that each State shall decide all of its own contests, this to be done, of course, by law. Many States already have presidential preference primaries. It is believed that practically all the remaining States, especially Republican States, will, before 1916, enact such laws. Certainly West Virginia will do so. I feel sure she will if our Progressive brethren will join with us in electing a legislature.

"I am ready to do service in helping to eliminate those who have crept into our party and who have abused their position for selfish motives and have hindered the progress of our party and catered to bossism and domination rule. I am opposed to such tactics, and stand ready to help eliminate the arbitrary class which has heretofore directed in part the administration of our party. I am quite sure that a majority of the voters can be depended upon to do this at all times. There is no reason why we should transfer our banner to some other party because we have had a few self-constituted bosses. It seems to me to be the patriotic duty of our party to eliminate those who stand for a rule by the minority. Very few, indeed, you will find of this class occupying positions of trust and confidence in the Republican Party to-day, for the reason that the people are strong enough to eliminate all who may be found unworthy, and it will be accomplished long before the convention of the party in 1916. Was this not effectually impressed in the last campaign? Has this fact not been admitted by the national committee in their unprecedented revolutionary actions in the meeting at Washington in December, 1913?

"Let us consider for a moment what has been done since 1912 in fulfilling the pledges we made to the people in the Huntington platform.

"The 'blue-sky' law was enacted, a distinctly progressive measure, preventing our people from being plundered by 'get-rich-quick' concerns and other like dishonest practices. It is being vigorously enforced.

"A legislative referendum bureau has been established, and we have a man at its helm who is second to none in ability.

"The workmen's compensation law, another progressive measure, just in its provisions, is a success. With a few amendments, one of which will be to make this department self-supporting, it will be almost perfect in its operation. Basing my statement upon the recorded facts, I can assure you that there is no question as to its success. The comfort it will bring to the home of the unfortunate family that may be deprived by fate of him who is its sole support can not be told in cold words.

"The public-service commission law has brought a new era to our citizens. The broad and liberal construction given to this statute by our supreme court, I am sure, has met with the hearty approval and commendation of the citizens of the State. This construction of the supreme court guarantees the power of regulation of rates and adjustment of schedules of all public-service corporations, including those which supply water, light, and heat to the homes of the people, which will eliminate unjust burdens and bring about conditions of equity and fairness—a relief long looked for by the great masses of the people.

"The gas corporations of our State have in the past submitted to no regulation. The people were at their mercy. But the dawn of better days is at hand. The citizen is now assured that regulation of gas companies will be forthcoming, and that while they will be permitted an equitable and fair rate upon their investment, unjust charges and extortion will not be permitted.

"The hydroelectric law was passed in the nick of time by the last session of the legislature. The repeal of the power of eminent domain by water companies places our great wealth of water power in a condition to be protected, so it can not be bartered away and gobbled up by a few, as has been the case with our other natural resources.

"The State is abreast with other States in moral trend and civic righteousness. The prohibition law is left to us for execution, and I assure you it will be an extreme pleasure for me to see the will of the people carried out with all the power at my command. I have the assurance of the support of the people, and when I feel that I am doing their bidding I accept the task regardless of its strenuosities. I am eager to go forward with this work. The time is rapidly approaching when the people will rise up in their might and eliminate this evil which is destroying more human lives, directly and indirectly, than all other causes combined.

"There remains much to be done; many promises we made to the people are yet unfulfilled. Most earnestly and sincerely do I want to see every one of these pledges fulfilled, not only in the letter, but in the spirit of them. I made my campaign upon the platform containing these pledges. I now appeal to the people and shall appeal to them in the campaign now opening up to aid me in carrying out the program we entered upon in 1912 as contained in the Huntington platform of May 16, and also in the Charleston platform of July 30. There is, indeed, but little difference between the two. I can see no reason why any Progressive or Republican should not stand faithfully by me in the purpose of accomplishing the pledges that we made to the people.

"I appeal to my Progressive Party brethren that if they are sincere in the claim they make, they join with the State administration and those who are in sympathy with these reforms, and let us march forward for the realization of these great purposes, to which they helped to commit us in the last campaign. This campaign must go forward. If we lose, it shall not be my fault. I propose to do my whole duty. Never were we in better condition to fulfill the promises made to the people if we stand united. Why should we falter? We started out in 1912 at Huntington undivided and with a common program to which we are all committed. The work is unfinished, but it ought to be and must be accomplished. If there exists divisions nationally, still our pledges abide; these divisions do not release us from the obligations we took upon ourselves. United for the purpose, we can fulfill our pledges. Why should we divide? There is no issue between us. We can accomplish the enactment of these pledges by continuing united, but should we be divided, our chances will be meager—in fact, hopeless. If this division results in our defeat, which will result in a victory for the Democratic Party, where will the blame lie? I am determined it shall not lie with me."

Not One Good Argument in Favor of War with Mexico.

EXTENSION OF REMARKS

OF

HON. ARTHUR B. ROUSE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 3, 1914.

Mr. ROUSE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an editorial from the Kentucky Post, Covington, February 27, 1914.

The editorial is as follows:

NOT ONE GOOD ARGUMENT IN FAVOR OF WAR WITH MEXICO.

Without having any inside information as to his state of mind, but judging solely by his public statements and acts, President Wilson is not going to send the United States Army into Mexico unless he is forced to do so by an irresistible public sentiment.

As a Nation we have absolutely nothing to gain by war with Mexico.

As individuals we have nothing to gain by war with Mexico, excepting those few of us who have invested some of our millions in Mexican mines or railways.

As a Nation and as individuals we have everything to lose by a war with Mexico.

The cost to us in lives and money of such a war is beyond computation.

We have every confidence in the intention and ability of President Wilson to keep the United States Army on this side of the border where it belongs.

The great danger in the situation is that the men whose financial interests will be served by a war with Mexico will take advantage of some untoward event, such as the killing of Americans or other foreigners in Mexico, to create a war sentiment in this country which even so strong a man as President Wilson will not be able to resist.

As we view the Mexican situation, we can scarcely conceive of anything happening on the other side of the border that would justify the sacrifice of the lives of thousands of Americans that would inevitably result from sending the United States Army into Mexico.

That the Mexican situation is fraught with grave danger to this country must be admitted by every man who analyzes it even superficially.

The situation calls for cool-headedness on the part of every loyal American from the President down.

Let us all keep cool and not lose sight of this vital fact: A Mexican war will mean thousands upon thousands of dead and crippled Americans; thousands upon thousands of broken-hearted American women; thousands upon thousands of fatherless American children; hundreds of millions of dollars added to the tax burden, every dollar of which must finally be paid by the working people of this country.

We are about due for some eagle-screaming speeches in Congress by men who will be in their clubs when the fighting is being done.

Let us not be carried away by any of that sort of "argument."

Safety Appliances for Railroads.

EXTENSION OF REMARKS

OF

HON. S. HUBERT DENT, JR.,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 28, 1914.

Mr. DENT. Mr. Speaker, I ask the indulgence of the House for a few minutes to submit some remarks upon the subject of safety devices as applied to railroad transportation. The subject is becoming more and more important because of the large number of recent frightful railroad wrecks throughout the country.

I submit a table from the reports of the Interstate Commerce Commission showing the number of accidents, the number of people killed, the number of people injured, and the damage to road and equipment and the cost of clearing the wrecks from

the year 1902 to the year 1913, both years inclusive. This table is as follows:

Year.	Number of accidents.	Killed.	Injured.	Damage to road and equipment and cost of clearing wrecks.
1902	2,156	45	1,110	$1,739,005
1903	2,662	72	1,233	2,139,043
1904	3,163	93	1,346	2,565,930
1905	3,612	90	2,244	3,446,053
1906	4,098	80	2,410	3,144,209
1907	4,706	117	2,909	3,745,142
1908	4,211	82	2,392	3,262,619
1909	3,342	52	1,791	2,577,735
1910	3,855	82	1,967	3,139,309
1911	4,049	121	2,249	3,386,534
1912	5,724	170	3,963	4,706,493
1913	6,325	119	3,475	5,004,966
Total	47,903	1,123	27,089	38,857,035

Mr. James T. Andrew, of Montgomery, Ala., claims to have invented a device which will either entirely prevent or greatly minimize accidents due to derailments. His invention has been patented according to law. This device may be described in the language of the inventor as follows:

A train of the standard railroad at present has nothing to protect it from serious results when a derailment takes place. Derailments are very frequent for the reason that too much dependence is put upon the little flange of 1 inch on the inside of each regular wheel to hold the rolling stock on the rail. If a flange of a wheel should break, that pair of wheels would leave the rails and there is nothing to prevent their going onto the crossties, and, as these crossties are usually very rough, the bumping of the wheels on them usually places the trucks crossways of the track. Of course the momentum of the train tears the trucks from the center plate fastenings of the car, or the wheels which are off the track run off of the crossties entirely and the cars are turned over. Therefore anyone can see the need for supplying a method of preventing disastrous results from derailments. To do so this appliance supplies extra or auxiliary wheels on the inside and outside of the regular wheels to take the place of the regular wheels when they become derailed and prevent them from getting onto the crossties and sluing the trucks. In other words, the purpose of the appliance is to hold the train to the rails upright on the track as safely and securely as when it was rolling along on its regular wheels before a derailment took place. Every pair of regular wheels fitted with this appliance has an inner pair of auxiliary wheels securely fastened to them and to the axles. Under each journal box on the outside of each pair of regular wheels there is also a small wheel. Each auxiliary wheel has a face of 10 inches. The regular wheel has a rail face of only 6 inches. Therefore a pair of wheels equipped with this appliance has a face of 26 inches instead of 6, as is now the case. It is a physical impossibility, when a derailment occurs, for the car to jump to one side or the other far enough for one of these auxiliary wheels to fail to catch the rail, and as the appliance automatically applies the air to the brakes of the whole train it is gradually brought to a stop upright on the rails with none of the wheels down on the crossties. Every auxiliary wheel takes the place of its regular wheel on the rail, and they support the weight of the cars and engine. On the occurrence of a derailment the inner auxiliary wheel takes one rail and the outer (the one under the journal box) takes the other. The auxiliary wheels under the journal box, upon contact with the rails, rise up half an inch and open air valves which apply the air brakes automatically to the entire train. This appliance will entirely prevent derailments which are caused by the following seven kinds of accidents: Broken axles, broken journals, loose wheels, dropping brake shoes, dropping brake beams, broken arch bars or equalizers, and broken center bolster rigging. It will protect the train against the harmful results of the following nine kinds of accidents: Broken flanges, crushed wheels, broken rails, spread tracks, broken frogs, bad road crossings, bad alignment of track due to expansion and contraction of the rails, broken switches, and low joints or bad fishplate connections. In addition to the auxiliary wheels, this appliance supplies auxiliary axles which encircle the regular axles and prevent them from flapping about when they break. There are also auxiliary equalizer beams and a base-uniting beam which passes directly under the brake riggings from one side of the truck to the other, preventing any part of the brake equipment from dropping down in front of the regular wheels which often causes derailments. This base or uniting beam not only prevents harmful results from dropping brake rigging, but it unites the base of the trucks and prevents loose wheels and broken axles from causing trouble by holding the back of the journal box against the face of the wheel and preventing a spread of wheels.

I have introduced two bills—H. R. 4929 and H. R. 4930—one providing for the adoption of the Andrew safety appliance, in so many words, and the other providing for the adoption of a device that will accomplish the results claimed for the Andrew safety appliance.

It is objected to the bill which names the Andrew Safety Appliance that it seeks to create a monopoly. The Constitution itself gives monopolies to inventors, and is, therefore, one of the exceptions in the law in this regard. But aside from this, the companion bill is equally satisfactory, in that it will ultimately compel the railroads to put on the appliance in accord with the claims presented by the patentee and owners of the patent. This bill is drafted in line with the Ash-pan Act, approved May 30, 1908, the Sill-step, Hand-brake, and Grab-iron Act, approved April 14, 1910, and the Automatic Coupler Act, approved March 2, 1903.

The material difference between the bills introduced upon this subject and the bills referred to is that, in the beginning, it is proposed to give the railroads the right to charge an additional compensation when this device is adopted.

In the year ended June 30, 1911, according to the Statistics of Railways in the United States, published by the Interstate Commerce Commission, the passenger traffic in the United States amounted to 33,201,694,699 passengers carried for 1 mile, and the average rate charged was $0.01974. The following table shows what revenue was earned by this passenger traffic and the increment which would be earned if the rate were increased by 2½ per cent, 5 per cent, and 10 per cent, respectively:

33,201,694,699 passenger miles, at $0.01974	$655,401,453.36
Increase in earning if rate is increased by 2½ per cent	16,385,036.33
Same if rate is increased by 5 per cent	32,770,072.66
Same if rate is increased by 10 per cent	65,540,145.32

According to the same publication, there were at that time in the United States 14,301 locomotives and 49,818 cars engaged in passenger traffic. Mr. Andrew gives the cost of his safety appliance as $200 for cars and $500 for locomotives.

14,301 locomotives, at $500	$7,150,500
49,818 cars, at $200	9,973,600
Total	17,124,100

The bill provides for an increase of 10 per cent of the present rate of railroad fares, but this is merely tentative, and a comparison of the two foregoing tables, showing how much the 10 per cent increase would earn for the railroads and how much it would cost them to equip their rolling stock with the Andrew safety appliance, serves to show that 10 per cent is entirely too much. In fact, it is doubtful if any increase should be allowed in view of the great saving this appliance will give to the railroads on account of damage suits for personal injuries and loss of property.

I have submitted these facts because I have personally observed the operation of this appliance in a number of tests made to the committee of Congress in charge of this measure and to a board of experts selected by the Interstate Commerce Commission, and have seen its successful operation. I am not an expert mechanic, but "seeing is believing."

In view of the loss of life and destruction of property from accidents due to defective equipment, both in the trains and the roadways of the country, and in view of the liberal provisions of the bill, I know of no reason why Congress should not compel the railroads to adopt this device, as they have in many other instances, several of which I have referred to above.

If the committee in charge of the bill objects to it because it would grant a monopoly, I have only to answer that the Constitution itself does this in favor of those whose brains have worked out some useful invention for the sake of humanity and the betterment of mankind. But, in addition, I may say that the Ash-pan Act and others referred to, while not specifically naming the inventions, gave to those who owned the devices monopolies, because, in fact, the inventions had no competition. Such the hearings show to be the situation of the Andrew Appliance.

Centennial Celebration of Union Chapter, No. 7, Royal Arch Masons.

EXTENSION OF REMARKS

OF

HON. EDWARD W. TOWNSEND,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 5, 1914.

Mr. TOWNSEND. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a historical address on New Jersey, which I, a guest, delivered at a banquet in Newark, N. J., held as the centennial celebration of Union Chapter, No. 7, Royal Arch Masons.

The address is as follows:

SOME HIGH PLACES IN NEW JERSEY HISTORY.

In 1676 Gawen Lawrie, a London merchant, who had settled in Elizabethtown in 1674, and Nicholas Lucas, a maltster, of Hertford, England, and William Penn, wrote to their Quaker brethren in England a joint letter, known to historians as the Penn, Lawrie, and Lucas epistle. This epistle was designed to set the real facts concerning New Jersey before the Quakers of England, and it is interesting to note that the distinguished authors of the epistle, after quaintly saying:

That there is such a Province as New Jersey is certain—

Added this early testimony to the excellence of our State:

That it is reputed of those who have lived and have traveled in that country to be wholesome of air and fruitful of soil, and capable of sea trade, is also certain; and it is not right in thee to despise or dispraise it, or dissuade those that find freedom from the Lord, and necessity, put them on going.

This quaintly worded testimony to the excellence of our State, written only 12 years after James, the Duke of York, received the grant of New Jersey from his brother, Charles II, could be repeated with good taste to-day as a rebuke to those who have thought it right to despise or dispraise New Jersey.

In rummaging through old historical data of New Jersey, one with a taste for that sort of work finds it difficult to make rapid progress. Constantly you come upon interesting early evidence of certain characteristics of the State observed by writers as long as 250 years ago which a present-day writer would be likely to make note of. An unknown author published in London in 1681 a paper relating to New Jersey, which he called "The Present State," and, speaking of the farmers, he says:

The increase of their corn being considerably greater than in England, of which they make good bread; and brew good beer and ale for their use.

I am informed by those competent to testify that even unto this day there is excellent beer and ale brewed in New Jersey for the use of those who care for those beverages.

The same historian finds that provisions are plentiful:

As fish, fowl, deer, pork, beef; and many sorts of fruits, as grapes, peaches, apricots, cherries, and apples of which good cider is made.

Two and a half centuries nearly have passed, and yet even unto this day New Jersey is noted for the apples from which good cider is made, and another beverage distilled from cider, variously known as "applejack" or "Jersey lightning."

NEW JERSEY'S AID TO GEN. WASHINGTON.

It has often seemed to me that the sufferings and sacrifices of the people of New Jersey during the Revolutionary War have been but slightly dwelt upon. This may be because other States have supplied more historians to tell of the sacrifices their people made. It seemed to me well, in browsing through odds and ends of historical writings, to extract a few sentences to show under what sufferings New Jersey soldiers remained loyal to the cause of Washington. I read in a little publication issued by one of the State's historical clubs, relating to Washington's retreat from Howe across our State, that—

Hessians and Tories were let loose under orders from Gen. Howe, who directed that all salted and meat provisions which may be judged to exceed a quantity necessary for the subsistence of an ordinary family is but considered a magazine of the enemy and seized for the King.

The farmers throughout the whole section of the country were compelled to deliver over their stores into the hands of the British. Buildings were plundered and frequently fired; barns were torn down to supply timber, and some of the most wanton cruelties were inflicted. In New Brunswick the British troops burned the Presbyterian church.

These outrages, you will bear in mind, were committed on the persons and properties of noncombatants, but they had the material effect of making combatants of many of those who suffered. Maj. Stockton, an ancestor of the present distinguished family of that name in this State, organized a force consisting in part of these outraged farmers, attacked a British fortified post under circumstances which read more like one of Kipling's accounts of some daredevil charge than the story of a midnight performance by New Jersey farmers. History tells us that on that occasion one British captain, several subordinate officers, and 55 privates were taken prisoners and a quantity of munitions of war were captured. It is pleasant to read that Gen. Washington issued an order highly complimenting the commanding officer of this affair and "the secrecy with which he had executed this most successful expedition."

It is worth while just here to note that such successful expeditions as I have briefly referred to delayed the British general, Howe, and gave Washington his opportunity to recruit his forces and plan his future movements. One historian remarks:

The mighty train of Revolutionary events rolled on to its end. The battles of Trenton, Princeton, and Monmouth have taken their place in the history of the greatest revolution of modern times. The events which took place in and about New Brunswick contributed in no small degree to the independence of the United States.

Had Washington failed in New Jersey, there would never probably have been a surrender at Yorktown. It was within a radius of 30 miles of the district I represent that American independence was won. It should not be forgotten that the losses to New Jersey, in proportion to her population and wealth, were greater, probably, than to any other member of the Confederacy. It was within her borders that Washington encountered his greatest distresses and difficulties. It was here that the patriots fought half starved and almost naked, that the light of freedom should shine for their posterity.

OATH OF NEW JERSEY PATRIOTS.

There is nothing theatrical, nothing sensational, in the mere expression of patriotism, perhaps; and yet, to my mind, such expressions may be made under circumstances which entitle those who make them to be mentioned, even if one is talking about the high spots of history. I have referred briefly to the way the farmers in the northern part of our State harassed Howe's army and delayed it when Washington was making his retreat toward the Delaware. The farmers and others of the southern part were no less sturdily patriotic. I was pleased when I came across, in some historical collections of our State, to find that just when things looked darkest in the Revolutionary period, in 1778, before the Battle of Monmouth, a time and place when to deny allegiance to the King was almost equivalent to signing one's own death warrant, 85 citizens of Cape May County, in order that all men might know where they stood and what their sympathies were, gathered together, and each signed this brief but splendid oath:

I do sincerely profess and swear I do not hold myself bound by allegiance to the King of Great Britain, so help me God. I do sincerely profess and swear that I do and will bear true faith and allegiance to the government established in this State under the authority of the people, so help me God.

This oath, it was a little personal pleasure to me to find, was signed by three men named Townsend; and I hope that my further investigations may show that they not only took that excellent oath, but that they then took down their muskets and joined Washington when he returned into our State to fight the Battle of Monmouth.

CAPT. MOLLY PITCHER.

No sketch of the history of New Jersey, even so slight a one as this, would be complete without a reference to Molly Pitcher. Certainly that hearty woman is one of the most picturesque figures of all of the picturesque persons of the Revolution, and, unlike most heroines, the exact truth as to what she did in the Battle of Monmouth Courthouse, although somewhat different from the earlier stories, does not in any way distract from the glory which is Molly's. She seemed to have loved the military from the first, because she had married when quite young an artilleryman named John Hayes. He gave up his life for his country, and then Molly became the wife of Sergt. George McCaulley, of the Artillery. You recall that on the day of the Monmouth battle the heat was almost unbearable and the artillerymen, especially, suffered from the heat; and so Molly, according to the old stories, brought her husband's battery water from a well or spring. And, indeed, to-day a mile west of Freehold there is, or not long ago was, a signboard with these printed words thereon, "Molly Pitcher's well."

As a matter of fact, the fearless woman carried water from Wenrock Brook, which flowed then as it flows to-day, at the base of Combs Hill. She supplied the men serving her husband's command with water until her husband, Sergt. McCaulley, fell, whereupon Molly ceased to fetch water, and took her husband's place and continued to do his work in serving that cannon throughout the remainder of the battle. Washington never did give her a commission as a lieutenant, as is sometimes asserted, but he personally complimented her for her bravery and, as Molly, when she was presented to Washington, wore a military coat, it is quite probable that Gen. Washington called her "Captain," and so she was known until the day of her death.

NEW JERSEY'S GREAT CONSTITUTIONALIST.

Following independence came the work of providing a suitable instrument for the government of the independent colonies. Washington presided over that great Constitutional Convention in Philadelphia in 1787, and one of the ablest members there was a delegate from New Jersey—William Paterson. It is not State pride which makes me declare that Paterson was one of the ablest members of the Constitutional Convention. President George Washington, who had unequaled opportunity to study him in the convention, afterwards appointed Paterson an Associate Justice of the Supreme Court of the United States, and in making the appointment wrote to Paterson a letter of peculiarly high praise, a letter which I have seen but which, in my recent hurried search, I could not find. William Paterson was not a native Jerseyman, for, according to W. J. Mills, the editor of Paterson's papers, Paterson was born in County Antrim, Ireland, in 1745. According to other authorities he was born at sea, while his parents were voyaging to this country. He was a Jerseyman in all other respects but birth; he was graduated from Princeton College, was a member of the colonial legislative council, was our attorney general, our delegate to the

Continental Congress, and, as I have said, one of our delegates to the National Constitutional Convention. He was a Senator from New Jersey, was our governor, and finally was New Jersey's representative upon the bench of the Supreme Court of the United States, appointed by Washington in 1793, and serving on the Supreme Court until he died in 1806.

Students of the Constitution will recall that in the Constitutional Convention Paterson proposed a form of government which has become famous in constitutional history as the New Jersey plan. I assume that you are all familiar enough with that to make it unnecessary for me to describe it, but I can not refrain recalling to you that Paterson's plan provided for a Supreme Court to be elected by Congress, not to be appointed by the President. This is too delicate a subject for a politician to touch upon; perhaps, nevertheless if that part of Paterson's plan had been adopted it may be fair to assume that we would not have had to wait so many years before Congress succeeded in framing a law to tax incomes, which would be found constitutional by the Supreme Court.

PRINCETON'S PATRIOTISM.

There is something very emphatic in much that can be found of utterances of New Jersey patriots during the Revolutionary War and the critical times which preceded it. One of the early presidents of Princeton College, John Witherspoon, held that office during the revolutionary period. It is almost inevitable, in reading of Witherspoon, to compare him with a later president of Princeton, for we find that Witherspoon was more than a teacher. "He was," writes Dr. Lyman Powell, "a practical statesman. He seems to have brooded more on the rights of man than on human depravity, more on law than on theology." In the convention which framed the constitution of New Jersey he amazed the other delegates by his knowledge of administration, and led in their constructive labors; he assisted in the overthrow of William Franklin, the royal governor, was elected to the Continental Congress, and in the critical hour spurred all the lagging Members who hesitated to take the fatal step of authorizing their President and Secretary to sign and issue the Declaration of Independence. Upon that occasion, with solemn emphasis, he declared:

> For my own part, of property I have some, of reputation more. That reputation is staked, that property is pledged on the issue of this contract; and although these gray hairs must soon descend into the sepulcher, I would infinitely rather that they descend thither by the hand of the executioner than desert at this crisis the sacred cause of my country.

With such a President, is it not to be wondered at that Princeton College was aflame with the fires of patriotism? It must be remembered that the Tory influences, both in New York and in Philadelphia, affected New Jersey and undoubtedly kept many of the prominent families from espousing the cause of the patriots. This sort of influence, one would suppose, would keep Princetonians not only out of Washington's army, but out of the service of the new Government of patriots. Such was not the fact. Besides the great number of Princetonians who fought for independence there were many who devoted their services to the cause along civil lines. In the 10 years from 1766 to 1776 Princeton College graduated 12 who sat in the Continental Congress, 6 who sat in the Constitutional Convention, 1 President of the United States, 1 Vice President, 24 Members of Congress, 3 judges of the Supreme Court, 1 Secretary of State, 1 Postmaster General, 3 Attorneys General, and 2 foreign ministers. I do not recite this as a tribute to Princeton, but rather to show what all the influences in New Jersey produced. Our State has lacked poets and historians to do justice to all her services to our country when services were most needed, and it seems to me that the mere recital of the occupations preferred by the men who were in Princeton during that decade is evidence that the controlling passion in this State at that time was one of intense and deep patriotism, and in spite of strong Tory influences.

NEW JERSEY'S SOLDIERS.

In the War with Mexico, New Jersey wrote brilliant pages in her history, and names which are familiar to every Jerseyman appear in that chapter. Gen. Stephen Watts Kearny, who had served in the War of 1812, in our War with Mexico established civil government in Santa Fe, and fought the Battle of San Pasqual; and the manner in which he fought that battle made him a major general. In 1847 Gen. Kearny was appointed governor of California. Commodore Robert F. Stockton, of that Jersey family some members of which have been prominent in every war and almost every battle in American history, joined with Gen. Frémont in the conquest of California. It was Stockton who captured Los Angeles and organized a government there.

This is not the occasion to tell the splendid story of New Jersey in the Civil War. It is well, however, to recall that, in response to a call for three-months volunteers, the New Jersey brigade which was mustered into the service in response to that call was the first brigade to reach Washington, and that when, a year later, Lincoln called on New Jersey for three regiments, enlisted for three years, New Jersey's governor promptly responded, "The regiments are ready and awaiting orders." The total call upon New Jesey for troops during the Civil War was 78,248, and she responded with 88,305. Just this word as to the reputation Jerseymen made when they were called upon to fight. When Gen. Phil Kearny was intrusted with a particularly desperate enterprise he asked that he might select the men who were to follow him, and when his superior officer asked what troops he wanted, Kearny responded, "Give me Jerseymen; they never flinch." Our war governor was Joel Parker. During the Confederate invasion of Pennsylvania, Gov. Parker sent several regiments there, and for his promptness and vigor in thus aiding the administration he was warmly thanked by President Lincoln.

CAUSE FOR STATE PRIDE.

In this little sketch I have sought, by selecting a variety of historical incidents, to emphasize the fact that at all times New Jersey has been prompt to furnish loyal men, willing to fight and to die for their State; that at all times New Jersey has been able to supply for the Nation great statesmen and great jurists; that at all times New Jersey has had in the country's battle fields brilliant and dashing officers to command men who never flinched. If by directing your attention to these facts I shall have aroused a little more State pride, I will have accomplished what is close to my heart. A proper kind and degree of pride is good in a whole people as it is in an individual. It has sometimes seemed to me that, with all our just cause for pride in our State, we have not always felt the degree of it which we should. Possibly too many of us in north Jersey divide our State feeling with New York; too many in south Jersey divide our State feeling with Pennsylvania. I wish that we all knew more about, felt more, and cared more than perhaps some of us do for our own State, because New Jersey is worthy of the affection, the pride, and loyalty of any man; because having that affection and pride and loyalty she would respond to it with greater and more splendid progress in the future—yes, even with more of that splendid progress which has so notably marked her in the past.

Sensational Indictment of Mexican Policy.

EXTENSION OF REMARKS

OF

HON. W. D. B. AINEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 5, 1914.

Mr. AINEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article written for the Public Ledger by Cassius E. Gillette, former major of Engineers, United States Army, and at present largely interested in Mexico.

The article is as follows:

SENSATIONAL INDICTMENT OF MEXICAN POLICY—MAJ. GILLETTE SEES IN "WATCHFUL-WAITING" POLICY OF THE ADMINISTRATION A SCHEME TO FORCE HUERTA INTO INITIATIVE TO CREATE "WAR PRESIDENT" OF UNITED STATES—EFFORT TO OVERCOME THE PARTY PLEDGE AGAINST A SECOND TERM FOUND IN ATTITUDE TOWARD LATIN REPUBLIC—"TO SAVE HIS FACE" IS REGARDED AS AN IMPOSSIBLE EXPLANATION OF TACTICS SO FAR PURSUED—PART PLAYED BY THE OIL INTERESTS—SPECIFICATIONS PRESENTED WHICH FORM A VERY STARTLING CULMINATION OF CURIOUS ACTIONS.

[Written for the Public Ledger by Cassius E. Gillette, former major of Engineers, United States Army, and at present largely interested in Mexico.]

For almost a year the world has wondered what President Wilson's policy toward Mexico really was.

At first, owing to the skillful press-agent work of Sherburn G. Hopkins, carried on almost under the shadow of the White House, the world assumed it was simply a high-minded resolve not to recognize a man who had achieved the Presidency of a Latin-American Republic by assassinating his predecessor.

Later, when Europe generally recognized Gen. Huerta and the truth began to permeate that he was neither a traitor, assassin, nor usurper, directly or indirectly, and the awful aspects of what nonrecognition by the United States under the

Monroe doctrine extended really meant to Mexico, being partially appreciated, people attributed adherence to his remarkable attitude to a somewhat enlarged determination or obstinacy.

Nonrecognition prevented Mexico from borrowing money, while savages like Villa, who do not need to borrow money, since they loot, rob, and extort ransoms like other bandits the world over, gradually destroyed the country.

Then the mysteries of real diplomacy and the natural desire of public men and editors to uphold the hands of the President, together with the deference almost necessary in connection with still undistributed patronage, gave an apparent public sanction to a policy still unknown.

Then the newspaper men, at least, came to the conclusion he had no policy at all, and never had had one, his unswerving determination to "oust Huerta" being due merely to a desire to appear infallible and "save his face." But that theory is untenable. It does not fit the character of the man. No human being with believable instincts possibly could contemplate the suffering and destruction of property with the determination with which President Wilson has watched the results of his keeping the civilized faction from borrowing the money absolutely necessary to protect civilization from savagery merely to "save his face."

The President even has reversed himself in Mexico. The recent recognition of Peru and Haiti are a complete reversal of all his avowed reasons for refusing to recognize Mexico. So that will not account for his unyielding obstinacy in Mexico.

PREELECTION AGREEMENT.

The following sequence of events may suggest the true reason:

When Mr. Bryan became convinced at Baltimore that he could not be nominated this time, he forced the nomination of Wilson, previously "tying his feet" with the provision committing the party to a single term. No President who has fought a war during his first term has ever been refused a second, and, if he were a peace lover like McKinley, it did not take much of a war. There was nothing in sight that would give the necessary wave of popularity to overcome this plank in the Baltimore platform, except to be "unwillingly" forced into intervention.

To encourage the "patriots," while the good press-agent work of Hopkins, counsel for the Maderistas and the Waters-Pierce Oil Co., keeps the American people in the preposterous belief that those bandits, essentially Geronimo's Apache band over again, were patterned after our revolutionary sires; to nag Huerta until some overt act like the sinking of the *Maine* should inflame the American people so much that even a real lover of peace could not stop them, just as they overrode McKinley; these were natural methods. Then another quick, sharp war and an overwhelming election to a second term.

THE PRESIDENT'S ACTS.

The following is a list of the striking things Mr. Wilson has done to Mexico. Every one of them fits the above explanation and they fit no other:

First. Prompt refusal to recognize Huerta. This occurred only three days after the inauguration. It had been determined upon. Mr. Wilson's closest adviser right along has been Mr. Cleveland H. Dodge, the largest contributor to his campaign fund and a director in the National City Bank, a Standard Oil institution. Mr. Hopkins, counsel for H. Clay Pierce, wanted recognition refused.

Everyone who knows anything about Mexico realizes that had Huerta been recognized promptly, and thereby been permitted to borrow money, all this carnage, destruction, and outrage would have been avoided.

Incidentally, Huerta seems stronger to-day than before. American injustice has united the civilized elements with him.

Second. President Wilson paid no attention to information and warnings on the subject. I myself wrote him the true situation in March and warned him that unless he recognized Huerta he would soon have to give up the Monroe doctrine or start an unjust, expensive, and bloody war.

I repeated this in a long letter from Mexico in August, giving him the facts of my fresh observations. Doubtless hundreds of others did the same thing. He refused to discuss Mexico even with Congressmen of his own party, for which he must have had some secret personal reason.

RECOGNITION REFUSED.

Third. He was really the State Department "when foreign affairs were concerned." Whatever Mr. Bryan did or refused to do was presumably in compliance with Mr. Wilson's wishes. In March I spent more than two hours with Mr. Bryan, explaining to him that the real trouble in Mexico was due to the fact that the peons owned no land; that this was due wholly to the fact that only lands actually cultivated were taxed; that even Diaz had not felt able to tackle this problem, since the congressmen were the landowners; that only an outside power could correct this; and suggested that he here had an opportunity to do more for real democracy than he ever had done or ever could do by sending John Lind down there to promise recognition provided the leaders would promise to put a graduated tax on uncultivated land, that in, say, 10 years would be large enough to force its cultivation or sale. His answer was we could not have "conditional recognition." Now we see John Lind down there peddling "conditional recognition" and offering assistance to get loans as a bonus, but under impossible conditions. The four Wilson requirements which John Lind demanded of Huerta were as preposterous as if he had asked him to jump over the moon. Yet to Americans, unfamiliar with the real conditions and misled by the oil press agent, they seemed quite reasonable and on the lines of true democracy.

John Lind could not be sent down there to lay the ground for a future democracy, but could be commissioned to nag Huerta into doing something to justify intervention.

GOADING HUERTA.

Fourth. The systematic efforts to irritate Gen. Huerta are remarkable.

The secret sending of William Bayard Hale, formerly a clergyman, is a case in point. This man did many things to irritate Mexico, coming as a secret sort of an ambassador, using the embassy code, and officially intruding in many disagreeable ways.

Then went John Lind, bearing impossible requirements; a Scandinavian from the far North, speaking no Spanish, and with a point of view as far as possible removed from that of the Latin races, and therefore slow to realize and sympathize with the difficulties of governing turbulent Mexico; a man too old to go to see the horrors of Durango, Torreon, or Chihuahua, and at the mercy of local American influences in Mexico City—and there are many there who, for personal reasons, want intervention, while rumors and lies there are as thick as dust in a March wind.

Although Mexico City is as safe as Philadelphia, and with a delightful climate the year round, he keeps John Lind sweltering in the discomforts of the hamlet of Vera Cruz under the guns of our warships, as though in fear of his life—irritating to Mexico and misleading to the rest of the world.

In this work of "super irritation" the President is most ably assisted by Mr. Hopkins, the oil press agent, who, by telegrams and misleading views given out by the "junta" from his office, does everything possible to irritate Gen. Huerta, especially by misleading the American people.

Pages of this could be given, but not one misleading statement from this source has been corrected by Mr. Wilson or his State Department, so far as I can find; and, although Mr. Hopkins's work is notorious and calculated above all things to bring on intervention, not once has he been rebuked or even mentioned. If the President did not really want intervention, would he not do something to inform the people about this?

THE WARNING TO AMERICANS.

Fifth. Last August he ordered all Americans posthaste out of Mexico, furnishing them with cattle-boat passage or a second-class ticket on the regular lines. This precipitate action has never been explained. Is not the desire to make a lot of ruined Americans demand intervention the best reason in sight?

Sixth. He has made strenuous personal efforts to prevent the established Government getting loans. He lifted the embargo on arms to be "fair to the constitutionalists." Why did he not then be fair to the civilized side by stating that he would do nothing subsequently to interfere with the payment of loans made to the Mexican Government? The constitutionalists do not borrow. They steal. To bolster up the weaker side and weaken the stronger paves the way to intervention.

He personally directed the Postmaster General to press Mexico for a settlement of about $1,000,000 difference in the postal matters. To weaken the stronger side?

Seventh. Henry Lane Wilson won the admiration of everybody by the masterly way he handled the situation during the time Madero and Huerta were fighting Felix Diaz last February. Yet the President dismissed Mr. Wilson in disgrace because his recommendations were not in accord with "the policy" (sic) of the administration. Had these recommendations been followed, intervention would have been impossible. Was not that the real clash of policies?

Eighth. Professing a horror of war, he has maintained near the border a large army, only one-third of it used to maintain the embargo on arms. The remainder is at Texas City ready for emergencies. Does "watchful waiting" mean waiting for some one to "sink the Maine"? Does the maintenance of 14 warships on the Mexican coast look like preparation for war?

They were kept there under courtesy of Mexico until October 1. Now "wearing out their welcome" seems another intentional irritant—a chip on the shoulder.

Ninth. For 48 hours after the capture of Victoria, a city of 15,000 people, Mr. Wilson "viewed the situation with complacency." The facts have never come out, but beyond doubt the savages were allowed the regular 24 hours of "liberty" immediately after the capture. This "liberty" means license to loot and rob, and there is no reasonable doubt that during those 48 hours of complacency not less than 1,000 young girls and women suffered. The known proportions at Durango would make it more than this. Could any human being stand for this merely to "save his face"? No; it must be a profoundly important reason, like a second term of the "New Freedom."

SUGGESTIONS REPELLED.

Tenth. Last August, about the time Carranza probably died and his unknown brother was slipped into his place for press-agent purposes, the junta in Washington was much discouraged and ready to quit. An American acting for them sent a letter to the President that if he would send John Lind to Carranza and ask him in the name of the United States to lay down his arms, he would do so. All he wanted was to save his face.

This letter was ignored totally, and some weeks later, when the writer of it informed the President in writing that he could suggest a feasible plan to promptly end all the bloodshed (it was by getting Porfirio Diaz to return), he was sent, by direction of the President, to see Secretary Bryan on the subject. Bryan grossly insulted him while his guest in the State Department carriage before he had his plan half stated. The President, although promptly informed of the matter, did nothing to relieve himself of the charge of sending a gentleman to be insulted by his Secretary of State. This was not merely to "save his face."

UNJUST STRICTURES ON HUERTA.

Eleventh. He deliberately has misled the American people in his official messages. He has called Huerta a "usurper," which he is not, and President Wilson must know he is not. He said in December, "There is no government in Mexico"—carefully weighed words. Yet at that time all the functions of government were going on normally over two-thirds of the area and five-sixths of the population of Mexico. The courts were in session, the Congress was in session, every executive function was normal. In Mexico City, Guadalajara, Morelia, Puebla, Guanajuato, Oaxaca, San Luis Potosi, Tampico, Pachuca, Manzanillo, and Merida, large and important cities, all was peace and quiet, and also in the rich and populous States in which they are located, barring a few stray bandits, lesser lights than Mr. Zapata, who is frequently "storming the gates of Mexico City" in the Hopkins type of news, just as he has been storming them every few months, during Madero's régime and all, ever since Madero started him on the warpath. The storming consists in sneaking out of the surrounding mountains 25 to 40 miles from the city, murdering a few peons and robbing a few henroosts, and then sneaking back to his mountain hiding place.

Mr. Wilson must know these things. Can any other reason be advanced for his bold statement that "there is no government in Mexico" except to lay the foundation for a future unwilling intervention?

EMBARGO ON ARMS.

Twelfth. The embargo on arms was never really effective, and Gen. Bliss so stated in his annual report last July. It could with ease have been made perfect. Why was it not done?

Lifting it only made it easier for the bandits to get arms, and made it possible to get cannon, against which the embargo had been effective.

The embargo prevented the 2,000 Federals cooped up in Ojinaga, whence they had come from Chihuahua, to save the women from Villa's "patriots." A nation can not very well smuggle arms like "patriots" of the Villa stripe do. Had the embargo been lifted a little sooner they could have gotten plenty of ammunition and held their ground. Now, we have an official boarding house for 5,000 of them, including the fugitive women and children.

So long as arms were only smuggled no claim could be urged against the United States for damages done with those arms to Mexican citizens and others. Now, the case is exactly parallel with the Alabama claims our people collected from England. Can we be consistent and not pay such claims? In international law the legality of Huerta's becoming President cuts no figure. England might have asserted Lincoln was not legally elected, as a great many of the States did not vote, but such a proposition was never even suggested. A pretty bill we will have to pay. Why was this cruel and expensive move made except to make intervention necessary?

Thirteenth. Chargé d'Affaires O'Shaughnessy was required to hold President Huerta responsible for newspaper criticism of President Wilson. What does President Wilson do to stop the atrocious lying about President Huerta that the press agent works into our papers? But the action is calculated to irritate Huerta.

INQUIRY SUGGESTED.

Fourteenth. A congressional investigation into Mexican affairs on the ground would have cleared the matter up long ago. It has been proposed several times. Somebody smothers it. The President never has lifted a finger to further it. Why not, if he felt he was right?

Fifteenth. He has worked, tooth and nail, to undermine Huerta by saying that he was "crumbling"; that the "end was coming"; that his real condition would "presently be revealed." This was last August. The "revelation" has not arrived yet, but it has helped to prevent Mexico from borrowing money so that "intervention presently will be revealed."

Sixteenth. Propositions for Pan American good offices to settle the trouble have never been favored by Mr. Wilson. They would be futile, in fact, but not if the situation were in line with his actions and speeches. Why has he not furthered it?

THE BENTON CASE.

Seventeenth. He has done many things to keep England from intervening. There would be no glory in that for the New Freedom. Sir William Tyrrel assented to his request to "let him handle it," but said England will look to the United States, not to Mexico, for every dollar of damage and every English life lost."

That is what is bothering now in the Benton case. Hopkins, naturally, does not want the succession to go to Villa. He is impossible and his oil sentiments are unknown. Carranza (real or "ringer") is more civilized, more possible, and more tractable. Since he sent many Hopkins-like telegrams from Nogales, when he actually was 600 miles from that point and 200 miles from a telegraph office, he easily sent the other day a message revealing a knowledge of diplomacy and international law possessed only by specialists. It takes an unwonted time to get his as yet unreceived reply to Bryan's response—probably has to import it from Washington.

Eighteenth. The Panama Canal was built large at enormous cost to develop our West and our East by reducing the freight rates between. To put a toll on our coastwise trade is precisely equal to the abandonment of a part of the canal or a part of its value. Even self-stultification cuts no figure. England must go into Mexico only through President Wilson.

DEBTS AND CLAIMS.

Nineteenth. The floundering for a reason for not recognizing Huerta has taken some curious slides. At first it was pure altruism; peaceful change of Governments. Two lives had been lost. Balance them with the thousands lost since, the hundreds of millions of bridges, public buildings, and other property destroyed, and the real beauty of this altruism appears.

A few months later Senator SWANSON, of Virginia, a member of the Senate Committee on Foreign Affairs and close to the late chairman of that committee, about the only man with whom the President appears to have consulted with on Mexico, told me, "The reason we won't recognize Huerta is because he has incurred debts, and recognition would put those debts ahead of our claims."

Shades of dollar diplomacy! Can that be a real reason? Some reason was necessary or intervention would not follow.

Later, in the beautiful Mobile speech, the reason had taken another plunge downward. It was concessions, and oil concessions at that. Is there enough oil this side of the South Pole to justify the destruction of a nation that our oil kings may get it?

But it served as an excuse for nonrecognition.

BENTON AND VERGARA.

Twentieth. The State Department has maintained a most remarkable silence on things Mexican. I believe they have records of about 135 Americans being killed since American money helped Madero to "break out"—all killed by bandits who are trying to destroy Mexico, not by Mexico. If those are "let out" suddenly and attributed to "Mexico" after some Constitutionalists posing as "Federals" shall have "sunk the Maine," it would make intervention certain and a scholarly but unwilling "war hero" would be born and maybe reelected.

Note the difference between the energy of the administration to-day in the Benton and Vergara cases. "General" Villa, the leader Mr. Wilson is supporting, undoubtedly foully murdered this well-known, prominent Englishman. The administration has piffled over the matter until decomposition has destroyed the evidence. On the other hand, Clemente Vergara,

good old Yankee name, an American citizen whose picture does not look like it, is alleged to have been decoyed across the river by some horsethieves, who posed as Federals, and "maybe" killed him. Gen. Huerta is 1,200 miles away and can not exercise jurisdiction because we permitted a "revolution" against his country by a man who said he got his money from Standard Oil, and because we are helping bandits to destroy his jurisdiction. Yet far more diplomatic energy has been spent to make Gen. Huerta account for that farce than was put on Benton's real case right under our noses, while all the other Americans that Villa seems to have murdered in the last month are almost in "innocuous desuetude."

Have you not noticed that every time Villa does something unspeakable the press agent "coppers it" with something similar on Huerta? When Villa thoughtlessly murdered every prisoner he captured in Juarez, that just as soon as there was time to concoct the scheme a written order was found in the same vicinity purporting to be an old order of Huerta to do the same thing? Gen. Huerta is a soldier and a gentleman, trained at the West Point of Mexico. If he were brute enough to order such a thing, do you think he would be fool enough to put it in writing? Verily we are easily fooled. But do you think the President was fooled? With his sources of information he ought not to be; but such things help to bring on intervention.

AFTER HUERTA, WHAT?

Twenty-first. The very plans or lack of plans to answer the question, "After Huerta, what?" are illuminating. President Wilson's only expressed plan is a "hope"—and a futile, queer hope at that. He said at Mobile some months ago, speaking of Gen. Huerta:

> By a little every day his power and prestige are crumbling, and the collapse is not far away. We shall not, I believe, be obliged to alter our policy of watchful waiting; and then, when the time comes, we shall hope to see constitutional order restored in distressed Mexico by the concert and energy of such of her leaders as prefer the liberty of their people to their own ambitions.

This "crumbling," mind you, was to be done by the atrocious Villa. How many leaders of concert and energy, think you, would Villa leave to displace him in power? The only "concert" possible would be the low bass rumble of revolvers fired into the stomachs of those energetic leaders, like poor Benton, but the only music about it would be to ears waiting to intervene, since armed force alone could then have any influence in that distracted land.

Even to-day the President is "making it very plain" that drastic measures may soon be necessary. Has not enough appeared to justify the belief that if Huerta personally, instead of Villa, had shot into Benton's stomach, drastic measures would have been taken already?

Gen. Huerta is carefully guarding the American Club in Mexico City. He will not let fakers "sink the Maine" there. But the possibilities are potential; and I earnestly entreat the American people and our representatives in Congress to take no action on anything that may be charged to the "Federals" in Mexico without the most calm and searching investigation.

The *Maine* was blown up from the outside, but no sane person now believes Spain had anything to do with it.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 5, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. BORLAND. Mr. Speaker, since it has been published that I have introduced a resolution in Congress demanding a full and fair investigation of the charges of Representative SHACKLEFORD that money is being raised and a lobby maintained to subsidize the press and influence Senators and Members of Congress in opposition to the road bill I have been requested by various parties interested to see that they were given a hearing. This is a very proper and honest request, and I am very glad to aid in giving a square deal to any man or organization affected. Those who come forward promptly and join in the demand for an investigation give evidence of their good faith and prevent what should be a great beneficial movement in favor of good roads from degenerating into a mere personal or political squabble. Let us try to clear away this smoke of battle and see whether there is not, after all, only a mere difference of opinion as to methods.

Among others I have received a letter from Hon. John A. Wilson, president of the American Automobile Association. Mr. Wilson is a brother of President Woodrow Wilson. My acquaintance with him is slight, as I am not now and never have been a member of the American Automobile Association or any other similar association. However, I have no hesitation in complying with the courteous request of Mr. Wilson to permit him to state his side of the case:

MARCH 3, 1914.

Hon. WILLIAM P. BORLAND,
House of Representatives, Washington, D. C.

MY DEAR SIR: As the head of a nation-wide body of road users, speaking in organized form for a million and a quarter motor-car owners, my attention has been called to the extraordinary attack on the American Automobile Association recently made in the House of Representatives by the chairman of the Committee on Roads. In noting that you propose a committee of inquiry in connection with Mr. SHACKLEFORD's statements and allegations, I am prompted to ask your assistance in answering at once the insinuations and other misinformation contained in the address of the Missouri Member. This matter would have received prompter attention on the part of myself and fellow officers if a prolonged business trip had not kept me away from the American Automobile Association's Washington headquarters.

The quite general editorial criticism that spontaneously came forth against the so-called Shackleford bill unquestionably was prompted almost entirely by the inclusion in it, in an optional form, of the untenable Shackleford roads rental plan. Mr. SHACKLEFORD overcomplimented us when he charged that the American Automobile Association was responsible for the protest that arose in every section of the country. The press has made and undoubtedly will continue to make sufficient reply to the amusing insinuations relating thereto.

It is my belief that many who voted for the committee's compromise bill did so because of the feeling that section 4, referring to "roads rental" would be eliminated by the Senate, and that there would also be a "tightening up" of section 3, whereby cooperation between the highway department of a State and the Secretary of Agriculture would guarantee a positive and economical progress in improvement.

In every important road convention in which the American Automobile Association has been concerned in the past three years we have never failed to give Mr. SHACKLEFORD an opportunity of putting forward what he considers the correct plan for national good-roads legislation, for while we have disagreed with him there has been no objection on our part to a thorough consideration of the subject from every angle. Since there are a great many people even in Missouri who disagree with Mr. SHACKLEFORD'S ideas, it would appear that the motorists of the country in an organized form have a similar right to express themselves and contend for that which they believe will best meet the needs of the situation.

It is the evident desire of Mr. SHACKLEFORD to make it appear that we have used our organized strength in an antagonistic attitude toward Members of Congress who do not agree with us in roads legislation. Outside of the trouble which Mr. SHACKLEFORD is having in his own State, we are not aware of any similar condition of affairs elsewhere in the country, in so far as it relates to a Member of Congress.

In an association which has over 500 local and State organized units it is neither possible nor desirable that the parent body should intrude itself into the affairs of a district club. If the majority of the people in any civil subdivision are not in accord with the procedure of their Representative, it is fair to assume that they have a right to convey to him their wishes. If he does not see fit to regard these wishes, the matter is one which concerns the voters and the one elected to office. If a Member of Congress from Missouri has a difference of opinion with the citizens of that State over a matter which concerns the Commonwealth as a whole—and assuredly that is the case in the roads question—it is inevitable that the two parties will settle their own argument either before or on election day. Apparently Mr. SHACKLEFORD is serving his own district to its satisfaction, though some sections of his State may not look upon his congressional services as being such as one should expect from a national Representative.

If President H. D. Train, of the Kansas City club, saw fit to contend that a Congressman from Missouri should not be returned because of his attitude on Federal roads aid, that matter would be one to be passed upon by the Missouri club. Certainly the national body had no participation in the premises except that the Missouri club was, like some 500 other clubs, a member of the American Automobile Association, and as such followed out the policies laid down by the association as expressed in annual meeting or through the work of the several national boards, one of which has a distinctive good-roads function.

It is undoubtedly true that Mr. Train exaggerated the efforts of the American Automobile Association in what happened to the Shackleford measure of 1912 when it reached the Senate as a "rider" on the Post Office appropriation bill, and at that time glaringly stood forth unclad and unashamed as a "pork barrel" roads rental plan. True it was that the American Automobile Association clubs wrote to Senators in protest against such a ridiculous Federal form in which to hope for roads betterment. One only has to read the speeches in the Senate to realize the extent of the feeling at the time against roads rental. Senator JOHN SHARP WILLIAMS quite adequately sized up the matter, and this extract from his address is typical of what others said. Thus did the Senator from Mississippi contend:

"I believe that the Government of the United States ought to devote its surplus revenues to road building. I am opposed to the provisions in the House bill because they are at once dribbling and driveling, and until something substantial can be done I am in favor of the Government not attempting to do anything.

"You must make one road good, then you must make another good, and then a third, and then a fourth. There must be some scheme whereby that could be done with fairness to the States and the several sections of the country."

A previous American Automobile Association president, Robert P. Hooper, was urged by Mr. SHACKLEFORD to get the automobilists to support the rental plan, which its author insisted would be signed by President Taft, as he could not avoid so doing if it passed the Senate in the form of a "rider." It is worthy of note to remember that at an automobile club dinner in New York City Mr. Taft had not hesitated to say that the Federal authority existed to engage in roads building, but he put forth a plea not to do so, for the Government could not afford to enter into such an undertaking at that time.

HEADQUARTERS IN NATIONAL CAPITAL.

With need for national cooperation in most things, every national organization has to have headquarters in some city, and not a few bodies have naturally selected the Capital of the country for clearing-house offices. The American Automobile Association certainly has a similar right. Furthermore, it is reasonable to deduct that as a national association of road users we should present the views of our membership in the now important matter of highways when the subject is approached from the standpoint of participation by the National Government. We need offer no apology for our headquarters in Washington, nor for the work of our duly appointed officers in the proper accomplishment of securing those things which are desired by our membership.

Neither highways nor railroads end at State lines. Railroads are now under the supervision of the Interstate Commerce Commission. We can not conceive any inconsistency in the American Automobile Association seeking the free use of the roads in the several States, and surely the proper place to strive for this result is the seat of the National Government. A decade hence road travel will have multiplied many fold because of the transportation required in the interchange of commodities between city and country and for travel facilities generally. The subject is of such incalculable importance to the welfare of the entire country that the political expedient of hindering its development by the petty distribution of Federal funds is a kind of statesmanship that is slowly but surely passing.

AMERICAN AUTOMOBILE ASSOCIATION KIND OF "LOBBYING."

If in the campaign of education which we have carried on all over the country, in seeking both big and little roads, in contending through our State associations and local clubs for State highway departments and positive attention to county and township roads; if in the vast quantity of publicity that has gone to the hundreds of daily and farm papers throughout the country putting forth the logic of effective and economical roads construction and maintenance; if our interrelated work of this character can be designated as "lobbying," then we stand willingly convicted. And we only hope that as a result we shall be compelled, with thousands of others, to travel over miles of highways connecting community and country, towns and cities, and the States of our great country.

It will be our pleasure to have the opportunity to appear before any committee of inquiry the House may name, for it will make it possible for us to demonstrate our great interest in this great subject, which we approach from the standpoint of any good citizen. Furthermore, it will give an opportunity for the American Automobile Association to completely refute the oft-repeated and untruthful assertion that the association is for special-built highways, which it wants in advance of everything else and to the sacrifice of the other roads that must be included in a comprehensive system.

METHOD OF APPROACH ONLY DIFFERENCE OF OPINION.

Difference of opinion in the roads question now is simply from the method of approach. All are agreed that a comprehensive plan necessarily must embrace, in so far as it is possible to do so, both the big roads and the little roads which connect even the back-roads farm with the nearest market place. What the farms on the back roads produce counts as a substantial percentage of the total food supply of the whole country.

It is nothing more than a simple case of self-preservation on the part of the urban dweller to see to it that every load of farm products possible reach the consumer as cheaply as possible. The country dweller and the city resident are plainly interdependent. One class raises or manufactures what the other must have in order to exist—farm products to the market place and manufactured articles from the market place to the farm.

In a scientific distribution of roads expenditures all four civil subdivisions must be concerned. It is plainly a logical sequence that the township and county units should look to the State not only to be relieved of those roads which assume an intercounty character but also for added cooperation in connection with the smaller market laterals and township feeders.

If the State has financial cooperation from the central source, a large part of the money could be expended on the most-used commercial roads connecting with similar roads in adjoining States. All of which simply means that the State would then have a greater amount of money to distribute through its county and township units on essential roads connecting market with farm.

Roads opinion has not yet crystallized to obtain this logical procedure, to reach which there may have to come a national innings of experience similar to that through which have passed all States that have succeeded in some degree in equitably distributing the growing burden of highways cost, both as to construction and maintenance.

We shall continue to strive for that which will bring lasting accomplishment, cooperating with bodies having similar aims, and accepting a consensus of judgment when it will secure real results. Our membership includes thousands who serve from pure enthusiasm, with absolutely nothing to gain except as they share with others in the fruits of this great work of "threading together the energies of the Nation."

Very truly, yours,

JOHN A. WILSON,
President American Automobile Association.

Rural Post Roads.

SPEECH

OF

HON. HUBERT D. STEPHENS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 10, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. STEPHENS of Mississippi. Mr. Chairman, during the last Congress I made a speech on the subject of "Good roads," in which my views on the right of the Federal Government to aid the States in road building and the expediency of its doing so were fully expressed; therefore I shall not detain the committee very long, especially as it is apparent that this bill will pass by a large vote.

The last national Democratic platform declared that—

We favor Federal aid to State and local authorities in the construction and maintenance of post roads.

The agitation on the subject of good roads and the demand for consideration of the subject by Congress became so strong that at the beginning of this, the Sixty-third Congress, a Committee on Roads was organized. Owing to the fact that the good-roads question is a live issue and affects every individual and every section, this new committee was at once regarded as one of the most important and desirable committees of the House, and a place on it was eagerly sought.

Several Members left other important committees to take a place on it. Among the number were Hon. D. W. SHACKLEFORD, of Missouri, who was on the Ways and Means Committee; Hon. E. W. SAUNDERS, of Virginia, who was on the Committee on Appropriations; Hon. J. J. WHITACRE, of Ohio, who was on the Committee on Agriculture; and Hon. J. F. BYRNES, of South Carolina, Hon. R. L. DOUGHTON, of North Carolina, and myself, who were on the Committee on Banking and Currency. Each one who left one of the great committees for a place on the new one was prompted to do so by the belief that he could perform more direct and greater service to the people whom he represented.

For the past few years there has been considerable discussion in regard to improving our highways. This agitation of the question has come from several sources, and differing views have been expressed. Discussing this matter last fall at Detroit before the American Roads Association the chairman of our committee, Mr. SHACKLEFORD, said:

It can not be doubted that an overwhelming majority of the people want Federal roads legislation; but unfortunately they radically differ in opinion as to what such legislation should provide. They are divided into two general classes which, for the purpose of this discussion, may be designated as the "touring-roads" class and the "business-roads" class. The "touring-roads" class is marching under a banner upon which is inscribed in letters of gold: "See America first." The "business-roads" class is marshalling its forces under a flag which bears the legend: "Cheaper transportation and lower cost of living."

The "touring-roads" class is largely made up of rich automobile owners who desire to spend a part of their leisure in touring the country. These are reenforced by manufacturers of road machinery and road materials who regard Uncle Sam as "good pay," a liberal buyer, and one who would be a valuable customer if only he would embark in the business of building "national roads."

The "touring-roads" class demands that the United States shall limit its road activities to the construction and maintenance of a few ocean-to-ocean and across-country highways of great perfection and then leave the rest of the people to build their own roads or do without, as they may choose.

The "business-roads" class believe that in dealing with roads we must keep in mind their functions and the relation which they bear to the general transportation system of the country; that as the harbor is the terminus of the river and the railroad, so, for practical purposes, the railway station is the terminus for roads; that neither freight nor passengers will ever be carried long distances over roads as cheaply as they could be over railways, and that it is an idle dream to imagine that autotrucks and automobiles will take the place of railways in the long-distance movement of freight or passengers; that the proper function of roads is not to connect antipodal oceans nor the distant capitals of far-away States, but to make easy communication between the farms on the one hand and the towns and railway stations on the other, to the end that the farmer may market his crops at less expense and the town dweller may get farm products more easily and at less cost. They therefore favor a general system of roads radiating from the towns and railway stations out among the farms.

Mr. Chairman, I am willing for those who want to travel for pleasure to have good roads to ride over, but I am more concerned in improving the roads for the use of those who use them in carrying on their business and work. As between the "touring roads" and "business roads," it can be easily determined which would prove more beneficial to the greatest number of the people. Of course, the "business roads" would do this; therefore we should direct our efforts and attention toward that class of roads.

One of the great problems of the age is that of transportation. This is not confined to railroads or water transportation, but it includes every means by which is made the exchange and interchange of commodities between the many millions of the Nation. This, of course, includes rural roads, and they are in reality one of the prime factors.

If the money that has been wastefully and extravagantly expended by the Government for the past 25 years had been used in building roads, we would have a system that we would be proud of. Not only this, but such a system would have saved several billions of dollars. It is estimated that it costs the farmers $1,500,000,000 to haul their produce to market, about one-sixth of the value of the annual production of agricultural products. The per ton-mile cost of marketing such products in this country is estimated at 23 cents. In some of the foreign countries where they have improved highways and where the

Government lends aid to the local communities the per ton-mile cost of transportation is from 9 to 12 cents. The cost is lessened by the saving of wear and tear of both the team and conveyance and also by the saving of time.

Some time ago a joint committee on Federal aid in the construction of highways was appointed. Its membership was composed of five Senators and five Congressmen. Much information of interest and importance was gathered. It was shown that there is no nation of any consequence that has not given assistance to the local communities in the construction and maintenance of highways. There has been much more attention given roads in foreign countries than in our own, consequently those countries have better roads than we have. As early as 1776 France, by a decree of the council of States, classified the main roads into four classes and prescribed the width to be, respectively, 42, 36, 30, and 24 feet. As a result France has the best roads in the world, and this fact has contributed largely to make that country one of the most prosperous of all the nations.

We can figure reasonably well the amount of revenue that will be collected each year. It is certain that every dollar of this money will be appropriated for some purpose. In my judgment, millions of dollars are wasted every year on the Army, Navy, rivers and harbors, and many other things. When the people of this Nation once see the benefits that come to them from Federal aid in the matter of constructing and maintaining roads, then the demands for larger appropriations for this purpose will be so strong that they can not be denied. As the money in the Treasury will not be enough to supply all demands, and millions will be asking for money for roads, while a much smaller number will be crying out for these other matters, Congress will be forced to increase the appropriations for roads and decrease appropriations for useless, wasteful, and extravagant purposes. Thus the tax money of the people will be returned to them in beneficial improvements and the squandering of funds will cease.

Instead of spending $150,000,000 for the Navy, $100,000,000 for the Army, $45,000,000 for rivers and harbors, and many other millions for purposes that are absolutely useless and give no returns whatever, I hope to see a large part of this money used in building a system of roads that will bring large interest to the people in the form of easier and cheaper transportation, as well as in the pleasure that comes from good roads.

The era of national aid to State roads is upon us. Millions of acres of public lands have been given to the railroad companies; vast sums of money have been appropriated to construct canals and improve rivers and harbors; the Panama Canal is just being completed at an expense of nearly $400,000,000; millions have been spent on irrigation projects and the reclamation of desert and arid lands; and we expend yearly many millions on the Army, Navy, and public buildings.

The time has come when something must be done for the benefit of the whole people. No better means can be devised than by making provision for better and cheaper transportation. One phase of the transportation question has been solved by the parcel post; another will be reached by improving the rural roads.

While the bill will not meet the demands, yet it will go far toward the mark. It will aid every community through which a rural or star route runs; it will have a stimulating effect upon road improvement, and will encourage systematic work along this line.

Good roads will benefit every section and every class. The man in the city as well as the man in the country will be helped. Cheaper transportation means cheaper food for the one who buys; it means that the producer can reach market more easily and more readily. Good roads will make life more pleasant for the farmer; and they, with the benefits that come with them, will do much to make life more attractive, and will help to turn the tide back toward the farm and away from the commercialism of the cities.

Sections 3 and 4 of the bill related to the selection of roads on which this money is to be expended. Section 3 provides that in no case shall the United States bear more than one-half of the construction and maintenance of any road under the provisions of this section. Section 4 provides that certain roads in the States which are adapted to use by the United States as rural post roads shall be divided into three classes, to be known as class A, class B, and class C.

Class A shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, well drained, with a road track composed of macadam or other material of equal utility and cost, constructed and maintained in such manner that it shall have a smooth, firm surface.

Class B shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, well drained, with a road track composed of shells, gravel, or a proper combination of sand and clay or other material of equal utility but less expensive than macadam, constructed and maintained in such manner that it shall have a smooth, firm surface.

Class C shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, with adequate drainage and ample side ditches, with a roadway constructed so as to quickly shed water into the side ditches and kept crowned and compacted by dragging or other adequate means, so that it shall be reasonably passable for wheeled vehicles.

Under the latter section there will be an allowance of $60, $30, and $15 per mile, according to the class under which the road falls.

This bill will give nearly $500,000 to my State. It will be of considerable benefit to us, and the benefits will be increased as the appropriations for this purpose increase, as they undoubtedly will if the money is properly expended and it is demonstrated that the people approve of national aid in this regard. Divided among the counties of the State this will give several thousand dollars to each county.

Mr. Chairman, if improved highways mean, as they undoubtedly do, easier, better, and cheaper means of transportation; if they mean better country communities, higher prices for land, larger attendance upon schools and churches; if they mean lighter work, a saving of time, and a saving of horse flesh and vehicles; if they mean a saving of temper and an increase of pleasure to those who use them; if they mean that both the social and commercial life will be benefited, there can be no good reason for anyone to oppose this bill. [Applause.]

Mr. Chairman, one of the objections raised by the gentleman from Texas [Mr. SLAYDEN] was that the States could construct these roads for 65 per cent of what the cost would be if the Federal Government were to construct them. I shall not argue that proposition, because it does not enter into this matter in the least. It is not a question of which can do the work at less expense, because this work will not be done by the Federal Government, but it will be done and controlled by the States themselves.

Some opposition to this bill arises out of the fact that it is feared that the Federal Government will exercise too great authority over the roads. It is not intended that jurisdiction of the States over roads shall be disturbed. There is nothing in the bill that affects such jurisdiction. Roads are local concerns, and they are no less local because the Federal Government contributes to their construction or maintenance. The specter of Federal interference with State or local control is simply conjured up by those who oppose national aid for roads. It causes me no alarm, because there will be no such interference under the provisions of this bill.

Now, in regard to the substitute offered by the gentleman from Missouri [Mr. BORLAND], I have to say that I am opposed to that amendment for this reason: This bill has been carefully studied by the committee. They have worked out a scheme that it seems meets the demands in regard to rural routes.

And let me say here that the purpose of this bill is simply to deal with post roads, such roads as are traversed in carrying the mails, either over rural routes or over star routes.

There are about 2,000,000 miles of roads in the United States. This bill proposes to deal with about 1,100,000 miles, confining itself, as I say, to the roads used by the Government in the transportation of its mails. The purpose of the substitute offered by the gentleman from Missouri [Mr. BORLAND] is simply to open it up not only to the post roads, but to all the roads in the country. It embraces them all. It destroys the classification provided for in this bill.

What would be the situation if we were to undertake to appropriate money to construct 2,000,000 miles of road? How far would this $25,000,000 go? It would not build more than one-fourth or at best one-half mile of road in each county in the United States. The greatest good that can come from this bill, it seems to me, is not so much the amount of money that we intend to appropriate, but it arises from the fact that it is to be an inspiration and incentive as well as a help to the people in the rural communities. [Applause.]

Suppose we built one-fourth of a mile of road in each county. What would that amount to? Absolutely nothing. In a former session of Congress the sum of $500,000 was appropriated for the purpose of experimenting in road building, to build 1 mile of road in each State or in certain parts of the State as an example to the whole people on the subject of road building. It amounted to absolutely nothing. Many of the States refused to accept the money, or, at least, failed to accept it.

Mr. WOODRUFF. Will the gentleman yield?

Mr. STEPHENS of Mississippi. I will.

Mr. WOODRUFF. I will state that while some of the States refused to accept their proportion which was allotted to them, which I believe was something like $10,000——

Mr. STEPHENS of Mississippi. Yes.

Mr. WOODRUFF. It was due entirely to the fact that the laws of the States precluded their accepting the money under the conditions laid down by the department. Under a ruling of the department, made since that money was appropriated, any civil subdivision of any State has been able to secure the amount allotted to that State by complying with the conditions imposed by the department. At this time there is something like $18,000 remaining in that fund, and there have been many applications for that money from the civil subdivisions of the several States, but the department are not allowing that money to leave the Treasury at this time, because they want to be in a condition to complete any roads already in process of construction.

The CHAIRMAN. The time of the gentleman from Mississippi has expired. [Applause.]

Slashing Arsenal Appropriations.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. MOORE. Mr. Speaker, the Democratic desire for peace and economy is manifested in the fortifications bill and the bill making appropriations for the Army, both of which recently passed the House. The principle of Government ownership and direction, as against private enterprise, is also fairly well established in both bills. We are to have more matériel manufactured in Government arsenals, but with .ess aggregate appropriations. Several times in the course of debate on these bills it has been charged, even by Democrats who have some notion that the country is facing serious problems, that any retrenchment just now in the supply of the munitions of war would be in the nature of a "penny-wise and pound-foolish" policy. I am inclined to agree with these suggestions.

In the matter of ordnance manufactured in arsenals, there have been reductions in appropriations that mean a lessening of what is termed "the reserve supply" of arms, ammunition, and so forth. Some of these reductions will fall heavily upon the Frankford Arsenal, Philadelphia. This is one of the real money-making institutions in which the Government has its capital invested, since in 1912 alone it saved approximately a million dollars to the Government on the manufacturing cost of small-arms ammunition and the like, as heretofore explained to the House. Despite this splendid showing, however, the committees in charge of both the fortifications and Army bills are so well satisfied with our military status that in many instances the supply of matériel for the use of the Army and Navy is to be curtailed and the Frankford Arsenal, along with others, is to suffer reductions.

I call attention to the fortifications bill, where the total appropriation was cut from approximately $9,000,000 asked for by the War Department to about $5,000,000; and also to the Army bill, which in the matter of "ordnance service" was actually reduced from last year's appropriation of $300,000 to $250,000. In "ammunition" the reduction was from $200,000 to $125,000, and in "small-arms target practice" from $825,000, asked for by the department to keep up to the standard set for target practice, to $750,000. I mention these three items, because all of them bear upon the work at the Frankford Arsenal which has made such an excellent record for economy and efficiency.

The citizens of Frankford, who are naturally proud of the arsenal, have interested themselves in the matter of appropriations, but they are no different in this respect and are no more subject to criticism for desiring continuous employment than are the people of Benicia, Cal., whose case was ably presented a few days ago by the gentleman from California [Mr. CURRY], or the people of Rock Island, Ill., and vicinity, who managed in the last session to obtain a $250,000 appropriation for an additional building, and who were spoken for in this session by the gentleman from Illinois [Mr. TAVENNER].

In behalf of the Frankford Arsenal I wish also to say this: If it is the War Department's best money saver, it ought to have better treatment in the extension of its buildings and grounds. The employees of the arsenal are crowded into insufficient buildings and the operation of the establishment is badly in need of additional ground space. Rock Island may boast of its nearly 900 acres with ample buildings, some of which are unused, but it is inequitable and dangerous for the employees of Frankford Arsenal to continue in their present cramped quarters. Whether or not the Democratic Party realizes the wisdom of being prepared for war with sufficient men and matériel, it can readily afford to yield the few additional accommodations to safeguard life and limb in the Philadelphia institution, which is capable of saving the Government a million dollars annually in manufacturing costs, and I trust it will do so. In serviceability and labor cost, the Frankford Arsenal will compare favorably with any of the other arsenals and will certainly stand comparison as to fuel or power cost with the best of them.

Mr. Speaker, there are several ways of looking at this question of war supplies. One is strategic and another involves the element of labor. When the new administration announced its Mexican policy "peace" was the dominating thought. A few months of "watchful waiting" on the peace basis have brought us to a point where instead of dealing solely with Mexico we would seem to be concerned with other and more powerful nations. No sane man would willfully plunge this country into war with Mexico or any other power. But what if, by reason of new conditions, we should be forced into war? Where would intervention lead us under the complications that seem to have arisen since the death of Benton, the Englishman? Economy in labor cost in the arsenals, or even in private factories, would be poor economy indeed if when the blow came in spite of all our peace professions we should find ourselves wanting in arms and ammunition. I hope the clouds that have been lowering about Mexico and Panama may be dispelled, but the mere fact that these clouds have been sufficient to induce the President to speak to Congress of "implications graver and more far-reaching" than those contained in any of his other addresses leaves little room to doubt the wisdom of being ready for whatever emergency may confront us as a Nation.

If problems of such gravity are actually upon us, it would not be true economy to save a few thousand dollars by cutting down the labor rolls at the arsenals. It would be far better to keep labor employed in the peaceful work of the arsenals than to send labor to war without supplies. Moreover it is fair to our fighting men who may be so unfortunate as to be suddenly called to battle on the ships or in the field, that they have the assurance that our Government is amply supplied with arms and ammunition to back them up in whatever task may be assigned to them. This we owe to our men of war no matter how solicitous we may be about peace.

The fighting man has been criticized severely for suggesting the need of more ships and more supplies, and some of the things said in debate have not been calculated to fire his ardor to die for his flag, but that is the old story of "Tommy Atkins":

"O it's Tommy this, an' Tommy that, an' Tommy go away;
But it's 'Thank you, Mister Atkins,' when the band begins to play,
The band begins to play, my boys, the band begins to play,
O it's 'Thank you, Mister Atkins,' when the band begins to play."

Mr Speaker, I am moved to make these remarks at this time, because of the trend of the economy program of the new administration as it affects certain Federal institutions in Philadelphia and vicinity. We feel it in the dismissal of customhouse employees—the saving of a few dollars in wages to make up for the loss of thousands in customs duties. We feel it in the failure to duly appreciate the advantages of our great navy yard. We observe it in other ways which I shall not now take time to dwell upon. In the Army bill we have a concrete example of how the economy program works. We are interested at Frankford Arsenal in the manufacture of ordnance supplies for the Army and the Navy. I believe we make all the small-arms ammunition for both. To illustrate the manner in which the economy plan affects these productions, I append appropriation tables, which speak for themselves.

Current expenses (ordnance service).

Act of Mar. 3, 1911	$337,000.00
Act of Aug. 24, 1912	301,018.30
Act of Mar. 2, 1913	300,000.00
Act of 1914	250,000.00

Manufacture of ammunition and materials for small arms.

Act of Mar. 3, 1911	$500,000
Act of Aug. 24, 1912	250,000
Act of Mar. 2, 1913	200,000
Act of 1914	125,000

Ammunition, targets, etc., small-arms target practice.

Act of Mar. 3, 1911	$1,000,000
Act of Aug. 24, 1912	800,000
Act of Mar. 2, 1913	750,000
Act of 1914	750,000

Convict Labor Made Goods.

EXTENSION OF REMARKS

OF

HON. JAMES L. SLAYDEN,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 4, 1914,

On the bill (H. R. 1933) to limit the effect of the regulation of interstate commerce between the States in goods, wares, and merchandise wholly or in part manufactured, mined, or produced by convict labor or in any prison reformatory.

Mr. SLAYDEN. Mr. Speaker, for more than 20 years I have been actively interested in such measures as this, by which it is intended to reduce to the smallest possible degree the competition of convict slaves with free laborers. It is an unfair but in some degree, I admit, an unavoidable competition.

We can not afford to keep convicts in idleness. That would be cruel to the prisoners themselves and a needless burden on society at large. The convict should be self-supporting, but in earning the cost of his keep due regard for the welfare of other and better men must not be forgotten.

I have always thought that the proper employment of convicts is on the highways. In nearly every State and in nearly every community of the States road betterment is urgently needed. Road work is for the good of all the people, and the competition of convict with free labor in road building is negligible.

If the shipment of convict-made goods from one State to another can be regulated, and the sale hampered until it shall cease to be profitable, the result will be to force convicts into road construction; at least that will be the tendency.

It is almost exactly 17 years since I presented a bill in Congress "to make goods, wares, and merchandise made in whole or in part by the labor of convicts subject to the laws of the State or Territory into which they may be transported."

I offered the same bill in the six succeeding Congresses, the only change made in it in all that time being the addition of the words "or reformatories." When the original bill was drawn, I quite forgot that reformatories were penal institutions.

Of course, Mr. Speaker, I support this measure. I feel a sort of proprietary interest in it, for, so far as I am advised, mine was the first bill of this nature ever offered in the American Congress. It was presented by me to the Fifty-fifth and all subsequent Congresses, down to and including the Sixty-first, and would have been offered by me in the Sixty-second Congress if some one else, inspired by the same zeal for reform in this matter, had not anticipated me. Being content to have the law enacted, I did not press my own bill, but am quite ready to support this and hope to see it enacted.

Hog Cholera.

SPEECH

OF

HON. JOHN A. MAGUIRE,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 16, 1914.

The House had under consideration the bill (S. 3439) appropriating funds for the purpose of investigation, treatment, and eradication of hog cholera.

Mr. MAGUIRE of Nebraska. Mr. Speaker, an examination of the hog industry would reveal a very great loss yearly from hog cholera throughout the country. Figures show that there have been some fifty or sixty million dollars' loss each year due to the disease. This is due almost entirely to the loss by hog cholera, as it is practically the only disease that affects that animal. I know something about the very great loss in my own State.

Mr. KIRKPATRICK. Will the gentleman allow me to correct him, to his advantage?

Mr. MAGUIRE of Nebraska. Yes.
